Cattle Ranch To College

By Russell Doubleday Copyright by Doubleday & McClure Co

CHAPTER XVII.

A Cowpuncher in Ernest.

The roundup was now at hand—that great account of "stock taking," literally, the closing of the year's books, as it were, on the cattle range. At its conclusion the ranchman would know whether the previous winter's storms and cold had allowed him any increase or not. The cattle roam at will over great tracts of country bounded only by watercourses and the wire fences along the railways; the herds of one ranchman mingle with those of another, and only during the roundup are they separated and the calves marked with their respective owners' brands.

The date of the roundup is fixed beforehand and all the details arranged, so that when the day arrives every man is ready to take the field. As several owners have cattle on the range, each sends his quota of cowboys to do the riding, and all work together under a general head or roundup boss.

The Sun River ranch had perhaps the largest number of cattle out, and its outfit consisted of 25 men, with two cook wagons and several other vehicles to carry beds and various necessaries.

The morning of May 25, the day set for the rendezvous of the roundup, was as near perfect as one could wish. With the first streak of light in the east all hands were routed out, and after a hasty breakfast every one at once set about making the last preparations to take the field. Some helped the cooks load up their wagons and pack the utensils; some were busy piling the beds into their places and the rest were occupied with their own riding outfits or looking after the large saddle band.

It was a gay crowd; you would have thought it was a gang of boys off for a swim instead of a party of men bound on a very serious undertaking, accompanied, as it was sure to be, with a good deal of danger and no end of hard work and privation.

John was in the thick of it, looking after the horses he had helped to break. Of these there were a goodly number, for from six to eight were required for each man. He noted with pride that "Lite's" bruises had entirely healed and that his bones were almost wholly hidden by the firm flesh and muscle he had gained under his new master's watchful care. The boy was to be one of the gang that represented the Sun River ranch and he looked forward to the roundup as an opportunity to show what was in him.

At last the procession was ready to move, and amid a chorus of "so longs" to those left behind, the shouts of men, the whinny of horses, the rattle and bang of wagons and cooking utensils, the snapping of whips and the beating of hoofs it started.

Little time was wasted in making the journey to the camping place, for all were anxious to get to work. At this time men gathered together from widely separated points, acquaintanceship was renewed and gossip exchanged. The folowing morning found them at the appointed camping ground in convenient proximity to a stream, and at about the center of the territory which it was proposed to sweep clean of cattle. Already the triangle bar and the M T outfits had arrived: their cook wagons were unpacked and their fires built. It was not long before the Sun River boys, called the Three X outfit, from their brand (XXX), were likewise settled. The settling in order was not a very elaborate proceeding; there were no carpets to be laid—"the grass of Uncle Sam" served that purpose admirably—the bric-a-brac consisting of saddles, bridles and some harness, which was slung carelessly on the ground; and the furniture, if the rolled-up blanket beds could be called such (and there was no other), were left in the wagons till wanted.

A hole a foot or so deep and a few feet in diameter was dug in the ground to hold the fire and at the same time prevent it from spreading to the surrounding prairie a thing to be dreaded. The tail of the cook's wagon was let down, thus forming a sort of table and disclosing a cupboard arrangement. An awning was spread over the whole and it was ready for business.

As soon as these arrangements were completed the men broke up into little groups, renewing old friendships and exchanging the bits of news that one or the other had learned. John hung round the cook's wagon, making friends with that important individual. He was no poor hand with the frying pan himself, and the appreciation of the cook's efforts soon won over this personage.

"Well, Billy," John was saying, "you'll be kept pretty busy this trip, I guess."

"Yes, it'll be no easy thing," he answered. "It's a big roundup, and it's so terrible dry for this time of year and so dusty that the boy'll be weary and lookin' for trouble—and it'll all come back on me."

"Oh, I guess not," said John consolingly, as he walked about, kicking the tufted buffalo grass and swishing his quirt about aimlessly. "I tell you what, Billy, it wouldn't take much to start a fire in this"—he slapped the grass with his lash. "With a wind like this we'd have a blaze in a minute that would be harder to stop than—Look out!"

John rushed over to the shallow firepit, shouting warnings as he ran, and began stamping down the thin edge of fire that was eating its way into the bone-dry grass. While the two were talikng a gust of wind had blown a brand out of the pit and into the tinderlike hay. John kept stamping frantically, and in an instant Billy had joined him and was also vigorously engaged in crushing out the dreaded flames. They both shouted lustily, and soon a number of the punchers, seeing the thin smoke and realizing the danger, came over to help.

Fire is perhaps the thing of all others that the plainsman dreads; a prairie blaze once fairly started and sweeping over an expanse of territory is almost impossible to stop, and there is nothing to do but run before it; man and beast, tame and wild, flee from it. Only charred and blackened ashes lie behind the swiftly advancing thin line of flame.

All this came into the minds of the men as they tramped on the red tongues of flame that lapped ever further along and around. There was no time to plow round (even if such an aid as a plow could be had) and so check the fire by turning under what it fed upon. Soon it was seen that it would take more than the trampling of men's feet to put it out, and a line was started down the creek with buckets. Then blankets and gunnysacks were wet and beaten against the flames.

The smoke choked and blinded, and the heat was almost unbearable, but the men kept the blankets going until the spiteful red tongues drew back defeated, and died. It was a hard fight for a couple of hours, and when it was over those who took part were hardly recognizable—faces blackened and eyes reddened by smoke, hair, beards and mustaches singed.

John, who had drawn his smoke-begrimed fingers over his cheeks and forehead, was a sight; Frank saw him thus and said he looked like a cross between a tiger and an ourang outang.

For a day or two after all the outfits came into camp the time was spent in organizing the roundup and planning the campaign. The ranchmen or foremen, as the case might be, were extremely busy during this time, but for once the punchers were at liberty to do as they pleased. All sorts of cowboy sports were indulged in; horse racing (where Lite, like Baldy generally came out ahead, under John's understanding jockeyship), rope throwing and feats of horsemanship. What to an easterner would appear impossibilities were commonplace acts of good riding for a cowpuncher. Picking up a hat from the ground while riding at full speed was a feat of good but not at all extraordinary riding.

The men were full of life and energy—skylarking was going on continually. It was no place for the seeker of peace and quietness; the air was filled with cowboy yells and shouts of laughter. The unwary one, afoot or on horseback, was likely to hear a sudden swish and in a second find himself hugging mother earth and acting as if he was trying to pull a peg with his teeth, the result of some rope throwing in his rear.

As evening draws near the word is passed that "real work will begin tomorrow," and all hands quiet down, realizing that they will need all the strength that rest can give them. Soon after supper the men pull out their bed rolls, spread them and, using their saddles as head rests, turn in.

The Sun River roundup is in camp.. The moon beams placidly down and shows in high relief the white-topped wagons and tents huddled together. Beds are scattered here and there upon the ground, and from each comes the sound of tired men's breathing. Half a dozen saddled and picketed horses crop the grass near by and a small bunch of cattle, guarded by a single rider, who lolls sleepily in his saddle, lie a little further off, their heavy bodies appearing strange and shapeless in the half light. A coyote from a little distance barks and howls, but even its voice is drowsy. The only animated sound comes from a bell on a horse tinkling as he feeds.

At 4 o'clock a little red spark appears near the XXX outfit and the cook can be dimly discerned moving round his wagon. Soon the smoke begins to pour from his fire, and then the cooks of other outfits also show signs of life. Tin pans and kettles are heard to rattle, and breakfast is under way. At a quarter to five the cook begin the reveille of the plains; dishpan in hand, they move about among the sleeping men beating an awakening call neither musical nor poetic, but most effective. Between the strokes comes the long-drawn croy, "Grub p-i-l-e! Grub p-i-l-e!"

Apparently it is no easier to rouse up from the rough couch, knobbed as it is with the inequalities of the surface of the ground beneath, than it is to rise from "flowery beds of ease."

"Cowpunching ain't what it's cracked up to be," said Jerry grumblingly to John as they lay near a XXX wagon. "I'm goin to quit after this roundup and drive a horsecar."

"It is kinder tough," returned the younger. "I haven't got used to Lite's prancin's yet and I'm stiff."

It's the privilege of every working man on land and sea to grumble at the early getting-up time, and the cowpuncher takes all possible advantage of this immemorial right. They obeyed the summons, nevertheless, and by the time the night wrangler came up with the saddle band Jerry and John were on hand with the rest of the punchers, having rolled up and stowed their beds in the wagon. A rope corral was drawn about them which sufficed to keep them together, the cow pony having learned the lesson thoroughly not to run against a rope, even if it is flimsily supported. Each man took his lariat and flung it over the horse he wanted to ride that day. As the noose tightened round the neck of each horse it stood stock still till its owner came up to it. Led a little apart, the 50-pound saddle was flung over, and in spite of more or less struggling the cinches were drawn tight and the heavy bridle buckled on.

The rush for the mess wagon which followed resembled a run on a bank, and for a few minutes the clatter of tin dishes and steel knives and forks drowned all other sounds. A tin cup of strong, black coffee, a slice or two of bacon, potatoes swimming in gravy, and a generous chunk of bread comprised the bill of fare.

With plates and cups filled, John and Jerry go off a little way to a wagon and sitting crosslegged with backs against the wheels, proceed to put away with all possible dispatch the food allotted to them. In a few minutes breakfast is over, when each man brings his dishes and throws them on the pile which cook is already busily engaged in washing. Similar proceedings have been going on at all the different outfits at the same time, and soon all hands converge toward the roundup boss' camp.

John and Jerry joined the gathering crowd near the "captain's" wagon and waited for orders. After a few minutes Kline, captain of the roundup, appeared, a stocky man with a gray beard, slouch hat and greasy, roundup clothes: chaps, flannel shirt and big spurs. The crowd quieted down instantly.

"Barrett, take six men and go to the

The smoke choked and blinded and the heat was almost unbearable.

Bits of Fun for Everyone

Last Shall Be First.

The man who puts safety last usually goes to the hospital first.—Two Bells.

The Scotch of It.

Sandy had just met his girl at the end of the street, where she was waiting for him. She was looking into a confectioner's window when Sandy made his presence known by remarking:

"Weel, Jennie, what are y' gaun to have the nicht?"

She, not inclined to ask too much, replied: "Oh, I'll just tak what you'll tak, Sandy."

"Oh then, we'll tak a walk," said Sandy, as he led her away.—Pearson's Weekly.

Father's Blow to Mother.

Zeke: "Wall, how ye feelin', Jed?"

Jed: "Oh! purty good."

Zeke: "What? Purty good, after me walkin' four mile to see ye?"—Brown Bull.

head of Bar creek and rake the brush like a fine toothcomb," began Kline. Barret swung into the saddle and, picking out six men, rode off with them.

"Haggerty, take six men and clean up Crooked creek; Moore, three men and go up Indian gulch," and so the orders went. Each group started on the instant and, trotting off, disappeared in a cloud of dust. Soon all the punchers had gone; only the cooks, the horse wranglers and a few drivers were left.

Jerry and John had been sent up a small creek to drive in all the cattle they found in that section. The head of the creek reached (it was about 15 miles off), Jerry, who was riding some distance from John, signalled to him to turn back and make a detour so as to get around the animals ahead. At the sight of the riders the wild cattle began to gather into bunches and stare; this tendency to come together made it much easier to drive them.

By the time they had driven two miles a considerable number had gathered, which increased as it moved onward as a snowball gathers bulk when it is pushed along.

When Jerry and John reached the main valley they were driving perhaps a couple of hundred head before them. Herds were pouring in from every direction, and soon the whole valley was filled with a vast mass of variously tinted animals, their horns tossing like a sea of tall grass. Over all hung a great cloud of dust that obscured the sun and made it impossible to distinguish a rider the other side of the herd. "This is fierce," ejaculated John as he tried to peer through the brown-gray cloud at another rider.

"A cowpuncher can't live without dust," returned Jerry, whose face was covered with a gray mask, through which his eyes shone in strong contrast. "My teeth is worn down and my lungs coated with it, but I don't mind it no more. Look out for that cow there!"

An old cow, made angry and brave at once by an apparent menace to her calf, was charging down on John full tilt—tail up, head down, eyes rolling—vengeance in every motion; for a minute it looked as if he would be run down: the charging beast was going at such speed that she would be hard to avoid; but when she was within five feet of the boy's horse he gave a quick pull on the rein, a sharp jab with his spurs, and the clever little cow-pony wheeled sharply round and out of range, the old cow lumbering harmlessly by, her own weight and impetus preventing her from turning.

"You want to keep your eye out for those old cows with calves," admonished Jerry, "they're looking for trouble."

All hands were now busy keeping the great herd together, single animals were constantly breaking out and had to be driven back; sometimes several would start at once, when there would be some pretty sharp riding for a while.

It was about midday, the sun was blazing down from above, the dust rose in clouds below, lining mouths and nostrils of the riders. Since 6 o'clock they had been in the saddle constantly and all felt, as Jerry expressed it, "Plumb empty and bone dry."

The herd presently quieted down somewhat and allowed the men to eat in relays, some watching while others fed. It was the briefest kind of a meal, but it sufficed, and in a half hour every man was ready, mounted on a fresh horse, for the real work of the day—"cutting out."

John and Jerry approached the tumultuous herd, a swirling restless sea of backs and horns. The din was tremendous; every cow lowed to her calf and every calf to its mother; the tread of thousands of hoofs even on the soft earth caused a heavy, rumbling sound that filled the air, and above all was the sharp rattle of one horn against another, of a thousand horns against each other. Into this seething mass of living wild creatures armed with sharp horns, and the tread of whose hoofs was death, must go the cowboy and his intrepid pony. To drive out the cows and their accompanying calves, so that the brand of the mother might be put on the offspring, was the cowpuncher's duty.

Jerry and John were as usual near together, and Jerry as usual grumbling. He declared that this cowpunching was a dog's life and that he would surely quit it after this roundup. John, as was his custom of late, was discoursing on the merits of Lite. "I'll show you what a good cutting-out horse he is today," the younger was saying. "You just watch him." Jerry suddenly rode off to head off a steer that had broken out of the bunch and so stopped the boy's talk. When he came back John was about to dismount to aid a weak calf to rise. "Look out!" was all Jerry had time to shout, as an old cow with horns like spears came charging down on the stooping boy. It was not her calf, but she thought it was. John's horse had become startled and ran back so fast that he could not reach the saddle horn to mount. The infuriated cow was within 20 feet of him, the cattle hedged him in on every side so he could not run, and he reached round for his six-shooter as a last resort. He was about to pull the trigger when Jerry's rope came flying through the air, settled round the animal's hind legs, and down she came in a heap just in time.

"You'll take my word next time when I tell you not to dismount in a bunch of cattle." John said nothing, but he realized that it was a pretty close shave.

Soon the cutting-out process began, to accomplish which the rider enters the main bunch, selects a cow with a calf bearing the brand of his outfit, and drives them out to a place apart, where other riders keep them separated from the main bunch and from the similar collections of other brands. To select his own brand from dozens of others requires a quick and sure eye on the part of the rider and to follow that particular cow through all the turnings and twistings she is sure to take, requires great cleverness and perseverance on the part of the horse.

It was Lite's first experience as a cutting-out horse, but John had full confidence in his ability in this as in every other branch of cow-pony education. "You just watch him"—this to Jerry, who had expressed some doubts. John and Lightning rushed into the sea of cattle. Whether by the gentle pressure of the knees or remarkable knowledge Jerry knew not, but he saw the little horse single out an animal and start it out, following directly at its heels. It turned to the left sharply; Lightning deftly threw his fore legs over its back and stood in its path; it turned to the right—horse and rider were there also. Through the herd they went full speed, twisting, turning, passing through lanes of cattle so narrow that John's legs rubbed their rough bodies on either side; but always they were close at the heels of the XXX cow, and finally they drove her out where Jerry was guarding several others of the same outfit.

"How's that?" said John breathlessly. It was hard work for horse and rider, particularly for the former.

"That's all right," Jerry answered, more enthusiastically than was his wont. "He's got the making of a good cow-horse in him."

(To be continued.)

Question Answered.

The old lady tourist in Florida was interestedly viewing a monster alligator, and finally demanded of the attendant:

"You say you don't have to feed him very often. What kind of food does he like best?"

"Babies, ma'am," replied the man mildly.

"Why, mercy me, how horrible! I shouldn't think the law would allow you to feed him such things."

"It doesn't, ma'am," asserted the attendant. "We feed him fish mostly, but you asked what he liked best."—Selected.

Live Stock in This State

Gets Thorough Attention From Your State Farm Magazine

Live stock is one of the greatest basic industries of this state. It is an industry which is sure to develop steadily in importance, whatever the temporary setbacks, because of our great grazing areas, bumper yields of hay and grain, the by-products from scores of cereal mills ready to be utilized, and a continuous demand for meats from a hungry world.

Here is a state asset to be watched, guarded and encouraged; and to this great task The Washington Farmer is bending its efforts and lending its resources. It is not hampered by distance, for it is right in the field, observing conditions with a microscope, not with a telescope. Its efforts are not scattered and diffused over 10 or more states, but are devoted to Washington alone. It is not handicapped by a small organization; for it is well "manned" and adequately equipped in every way to serve the great and growing live stock industry of this state.

If you are interested in live stock you will want your state farm paper for that feature alone, not to mention scores of other worth-while articles, departments and entertainments.

As a result of our cooperative plan you get this popular magazine at a price which would be hard to duplicate anywhere else in the country. One dollar pays for five years, and we guarantee that any time you think you are not getting value received you can cancel the order and get a refund. Please remember that cooperation means renewing your own subscription at least 60 days in advance of the expiration date on the wrapper of your paper, and including the orders of your friends and neighbors with your own.

Subscription Rates of The Washington Farmer:

$1.00 for Five Years — **25 Cents for 1 Year.** **50 Cents for 3 Years.**

In Canada add 1 cent a copy for extra postage.

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

THE KIND OF A GIRL I AM.

I have to live with myself and so
I want myself to be fit to know,
I want to be able as days go by,
Always to look myself straight in the eye.

I don't want to stand with the setting sun,
And hate myself for the things I've done
I don't want to keep on the closet shelf
A lot of secrets about myself,
And fool myself as I come and go,
Into thinking no one else will know.

The kind of a girl I really am,
I don't want to dress myself in sham.
I have to live with myself and so
I want to be fit for myself to know.
—Henry Van Dyke.

Experience Letters

Dear Editor: You ask women to write of farm life and I believe by that you mean to invite the real successful ones to write, or rather, the woman who has a successful husband farmer to write. Well, I wish I could write in that capacity, but I can't, but am going to unburden my mind by writing an article which I have little hope of having printed as I have no doubt it will be considered too apt to dampen the ardor of many who are struggling farmers' wives, striving for a mere existence.

I would not for anything do this, as they need all the sympathy and inspiration that can be extended to them.

I can look about me here where I live and see five farms which have been vacated. The husbands and wives who tried to make those farms into homes worked 16 hours a day during the farmers' working season and then had to move out and leave them because they couldn't pay for them. One neighbor, with his wife and two sons, spent $45,000 and three years of their time, trying to meet payments, but couldn't because of low prices. They were all hard-working people, sacrificing every comfort to meet obligations from the sale of crops, which brought almost nothing.

Another neighbor and his wife paid down $2000 cash and improved their place to the amount of $2000 and then walked out and left after one year of hard work, both worn out with the awful struggle.

Another neighbor traded for some land here, giving a suburban home worth $4000, and left the place without enough money to pay rent in either city or country for more than two months.

Two more families built homes and paid I know not how much money on the land, and left after a couple of years. I know that these were all very hard working people and put in long hours of hard work. But it seemed impossible for any one to ever pay a debt on a ranch here.

Husband and I milk eight cows; we get up at 4 in the morning, then after milking we work in a hop field nearby and if it were not for the work that we do away from home we would have to leave our place after making payments for three years on it.

We raise our own garden truck and some cow feed; we raise chickens, pigs, etc., but we do not know at what time we will fail to make our payments and have to leave, like the rest of our neighbors.

There is a large orchard near by where several men are employed and one who is employed there owns a ranch not far away, but he can not live on it as he can not earn enough to make a living.

We are feeding potatoes to our cows that we took from the pits of our unfortunate neighbors. There was no sale for them after they had raised them by the ton. (This letter came last spring.—Editor.) Onions, too, were raised by our neighbors and almost given away. And this, after women and children had crawled on their hands and knees, weeding and thinning, to raise a crop that wouldn't sell.

Editor, you who sit in your editorial office and hear the bright tale of the few who succeed, try to feel just a little sympathy for us who work so hard and gain nothing. Give us all the advice you can; pray for us if you ever pray. As for us, we hardly have time for prayer at home, and as for going to church, the women about here seldom have decent wearing apparel. If they have a hat they have no shoes, and if they have these things they lack other things needed to be decently dressed.

You may think this is all a trumped-up story. Come and see for yourself. I am giving my address, but not for publication, as we do not want the eyes of all the readers of THE FARMER turned this way.

Dear Editor, we all love God's great outdoors and the city has no attraction for us or our neighbors. We would like to remain in it. MRS. E. C. B., Wash.

(I fully intended to send this letter to press long ago, but it slipped out of sight among my many letters and also slipped my mind.—A. W. B.)

If the boy who signed himself R. R., Idaho, will send me his address he will hear something to his advantage. I accidentally destroyed it.

ALICE W. BARLAND.

Family Circle Girls

Dear Mrs. Barland: I am a constant reader of the Circle for some time and followed the discussions, and some of the letters have prompted me to write.

I am a tall blonde, 19 years old, and have been out of high school for two years. I have gone with boys since I was 14 and have always had boy friends, but never could fully understand them. I can't understand if boys feel as they say they do about the rouge and kissing kind of girls why they go with them in preference to the other kind.

I am not the rouge and kissing kind, but that doesn't mean I never kiss boys, for I do, but not just any one who happens to take me home. I have gone with lots of boys, but I don't believe I ever went with one more than two or three times before he asked me to kiss him goodnight or deliberately did it without asking.

I am sure I am not the only one with this kind of experience and I would ask if this is some fault of the girl? I wish some boy would be kind enough to answer this for me.

If these boys hate so much to be kissed except by their future wives I would say to them, don't ask the girls to do it. Very few will kiss without asking or you may get your face slapped if you run onto one like me. More than one boy has.

Idaho. TRIX.

Dear Mrs. Barland: You asked a while ago what girls do for recreation who do not find favor with the opposite sex. I can tell you what six of the happiest girls alive do.

In the summer we ride, hike, golf, tennis, swim and countless other things. A hot afternoon is sometimes made very interesting when one of us reads aloud and the others sew or do other hand work for our "hopeless chests." We even find an old-fashioned quilting bee an interesting change. Occasionally we all "throw in" and make ice cream and cake and have lots of fun while we are doing it.

In the winter we coast, ski, skate, play cards and have candy pulls. Every week is just bubbling over with fun. I will venture to say that we have better times than any "boy struck" girls do in any part of this old world. Boys are troublesome creatures and though we might have had a number of boy pals they always prove themselves to be bores.

Why all the row about smoking? Nice girls won't smoke anyway (neither will nice boys). If those who do smoke were not doing that they might be doing something worse; anything to shock the public, you know. Arguing till doom's day won't get us anywhere.

I am 18 years old, tall, slim and a blond. I can drive a car or a tractor and I love to work with horses. I also cook, sew and do all kinds of housework.

"BETTY JOE," Idaho.

Family Circle Boys

Dear Mrs. Barland: I received your letter asking about our farm, so here it is. The farm contains 320 acres; 120 acres are a mixture of oats, wheat and rye, 120 in hay and 60 in grass.

The house is entirely surrounded by trees and it and all the other buildings are painted a chocolate color with orange trimmings.

We have a large water tank which holds about 10,000 gallons and is 28 feet high. The water is piped to the sheep shed, which is about one-fourth of a mile away. The sheep shed is 140 feet long and 24 feet wide and it will accommodate 250 sheep. Outside there are two sheds made of straw and there are six corrals to keep the sheep in.

There is a two-room bunk house about 15 feet from the sheep shed and it has running water in it and two stoves. It is plastered and has window boxes and is furnished.

Our school house is in one corner of the ranch and has two rooms, though we use only one.

My brother Fred has a goat which we hitch up to our coaster; we sheared it this spring. It has a long, thin beard and a stubby tail, which is always in the air. I am 12 years old and in the sixth grade.

JAMES YOUNG RAWSON, Idaho.

(I seldom print letters from such young people, but this boy of 12 has written so clearly about his home that I thought you would like to read it.—A. W. Barland.)

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Yesterday I saw a young woman on the verge of insanity because of her terrible fright over what a doctor had told her. She had complained of her eyes and the occulist suggested that as soon as clouds appear before the sight blindness is near at hand.

Dr. Copeland.

I am happy that most doctors are extremely conservative and rarely make dire predictions. Sometimes you get angry with your doctor because he tells you so little. His education and experience have taught him how foolish it is to make positive statements about health and disease. On this account he says little.

It is not safe to be too confident. Particularly is it dangerous to predict evil. Why? Because nature has a way of accomplishing wonderful cures. There is one thing I wish everybody in the world would remember. It is this:

The natural tendency of disease is toward recovery.

There may be long delays. There will be days and days when things look black. The weeks may run into months. But the joy of it is that after a while this wonderful human body will find its stored-up forces asserting themselves, the evil agents of disease will be driven back, ever so slowly, perhaps, but little by little improvement will come.

There can be no doubt that the followers of Christian Science hold certain advantages over the rest of us. By constant exercise of the powers of faith and hope, they make themselves invincible against the depressing effects of hysteria, discouragement and despair.

My patient of yesterday did not need medicine. She needed faith, hope, encouragement, happiness and confidence in herself.

You must use common sense about your ailments. Don't wake up in the night to worry over some impending disaster. Live such a life of physical righteousness that your sleep will be undisturbed. Get up refreshed and strong, ready for whatever the day offers. There may be trials and burdens, but a vigorous and healthy body will help to carry them bravely.

Mind and body are so related that neither can be normal unless both are right. A disturbed mind upsets the functions of the body. Illness and pain interfere with normal mental operation.

Consult a doctor who is known to you as a capable practitioner and an honest, wise man. Give him the chance to examine thoroughly into your physical condition. Then accept his views, confident he is right. Let him carry all the responsibility. Then you won't worry.

You will develop a philosophy which will sustain and comfort you. The surest prescription for cure is 50 per cent profession skill and 50 per cent confidence in your doctor.

Home Recipes

Tomato catsup—(Small quantity)—Two uarts tomatoes, boiled and strained, two tablespoons salt, two cups vinegar, two-thirds cup sugar, one teaspoon cayenne pepper.

Add the salt to the tomatoes, then the vinegar, sugar and pepper. Boil until quite thick, being very careful not to burn. Pour in hot jars or bottles, seal. If bottled dip the tops in hot paraffin.

Green pepper and raisin pickles—Three quarts green peppers, three red peppers, one quart ripe tomatoes, six medium-sized onions, one-half cup salt, one and one-half pounds of sugar, one cup raisins, two teaspoons pepper, one-half teaspoon mustard, three pints vinegar.

Chop the peppers, ripe tomatoes and onions until fine, add the salt and let stand over night, then drain carefully and add all other ingredients. Cook slowly one and one-half hours. Put in glass jars and seal.

Potato puff: A good way to use left-over mashed potato: Two cups of mashed potato, two tablespoons of melted butter, six tablespoons of sweet cream, two eggs, a little salt. Beat the potato, butter and salt, add the eggs beaten separately, then the cream; mix all together well and bake in a quick oven until browned. A. W. B.

1 teaspoonful equals 2 of many other brands-

THE WORLD'S GREATEST BAKING POWDER

Just Folks

Polish attracts.

Excuse has no backbone.

Pretenders have their day.

Hope is the best stimulant.

Satisfaction is a sedative.

Swaggering confidence pleases the swaggerer.

We were talking of a building contractor who had been a part of the town's life for 30 years and who had built some of its business blocks and some of its finest residences. The architect said: "He would be a rich man today if he had not taken quite so much pains in all his work, had not been quite as anxious that all the work should be workmanlike, and that all the material in the construction, seen and unseen, should meet the specifications. But then," added the architect, "he can look every man square in the eyes, and that is some satisfaction."

It may be an old song, but mere dollars do not give all the satisfactions of life. To be able to look a man straight in the eyes is an accomplishment as well as a satisfaction. Merely doing the right thing does not assure one of the accomplishment, but doing the right thing is the biggest requisite. Something must be added and that is self-assurance born of that action.

Doing the right thing apologetically does not get you anywhere. Unless you have confidence in yourself you can not look a man straight in the eyes.

That self-confidence may be so nicely imitated by a crook that he may get by in looking a man straight in the eyes, but the crook can not keep it up always or make it work with everybody. E A S

An Echo From the War.

A colored soldier in the American army was doing sentry duty for the first time in his life. A dark form approached him. "Halt!" he cried in a threatening tone. "Who are you?"

"The officer of the day."

"Advance!"

The O. D. advanced, but before he had proceeded half a dozen steps the dusky sentinel again cried "Halt!"

"This is the second time you have halted me," observed the officer. "What are you going to do next?"

"Never you mind what ah's gonna do. Mah orders are to call 'Halt!' three times, den shoot!"—Selected.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4522. Ladies' Dress. Cut in 7 sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 3 1-4 yards of 54-inch material. The width at the foot is 1 7-8 yards. Price 10c.

4537. Girls' Coat. Cut in 4 sizes: 8, 10, 12 and 14 years. A 10-year size requires 2 3-8 yards of 54-inch material. Price 10c.

"Leila, when you have plenty of KELLOGG'S in the pantry you're ready for company"

You're always right when you eat Kellogg's Corn Flakes. Kellogg's are so delicious and so crispy, crunchy that they hit the taste spot, universally! Besides, Kellogg's are ready to serve, which saves cooking and scraping and scouring of pots!

Every day more than a million packages of Corn Flakes are made in the Kellogg factories. Just one day's supply of raw corn takes more than the annual crop of a 450-acre farm.

For the sake of family health, serve Kellogg's generously and eliminate the greasy, heavy, indigestible foods. Just see how much better every one will be.

Kellogg's Corn Flakes are sold only in the RED and GREEN package that bears the signature of W. K. Kellogg, originator of Corn Flakes. None are genuine without it.

Kellogg's CORN FLAKES

Also makers of Kellogg's KRUMBLES and Kellogg's BRAN

High Points in News of the Week

Steps were taken at Washington, D. C., last week for the coordination of state and federal enforcement of prohibition laws, when a conference of state governors met with President Coolidge and pledged to him state support in carrying out the Volstead act as designed to make effective the prohibition amendment to the constitution. The annual meeting of governors, held this year in Indiana, took similar action in pledging state aid to the national administration in prohibition enforcement as well as general law enforcement.

President Coolidge has placed himself on official record not only in favor of strict enforcement of prohibition laws but of the laws and the constitution generally. In his address to the governors at the national capitol last week the president said in part:

"The eighteenth amendment was proposed by the congress in 1917, and its ratification proclaimed in January, 1919. It prohibits the manufacture, sale or transportation and the importation and exportation of intoxicating liquors for beverage purposes and confers upon the congress and the several states concurrent power to enact enforcement legislation. This power was exercised by the congress in the national prohibition act, which was finally passed in October, 1919, two-thirds of the house of representatives and senate present, having voted in the affirmative.

"The national prohibition act places the duty of its enforcement on the commissioner of internal revenue, his assistants, agents and inspectors. In accordance therewith, there is an assistant commissioner in direct charge of prohibition enforcement, and there are prohibition agents and inspectors in each state. Corresponding provisions will be found in nearly all state laws.

"The Constitution and the laws of the nation and of the several states are binding alike upon all the inhabitants. It is the Constitution to which we have given our oaths to support; the Constitution which requires of the president that he shall take care that the laws be faithfully executed; and the state constitutions lay a similar obligation upon their governors.

"The Constitution and the laws are perfectly plain, and the directions which they contain to the president and the governors are equally plain. The country ought to know all this. It ought to understand just what duties the laws have imposed. It ought to comprehend that when laws have been made there is, and can be, no question about the duty of executives to enforce that with such instruments and by such means as the law provides for securing enforcement. They have no alternatives. They can not be criticized for doing their duty.

"This is not a political question; it can not be made a political question. If there be any principle which has been established by time, by common consent, by the unqualified assertion of fundamental and statute law, it is that executives are the law-enforcing officers of this nation.

"No provision of the 18th amendment, or the national prohibition act, contemplates any surrender of state responsibility. Under them prohibition becomes obligatory in all states, for the Constitution and the laws made in pursuance thereof are specifically declared, by the federal Constitution, to be the supreme law of the land. They are binding upon every inhabitant. But there still remains to the states the power, specifically reserved in the 18th amendment, to pass enforcing acts, and there is still on them a joint responsibility to enact and execute enforcement laws, which may not always be exercised, but which can never be avoided.

"The great body of the people are thoroughly law-abiding. This great law-abiding element of the nation is entitled to support and protection. I propose to give that support and protection to the limit, provided by the Constitution and the law of the land, against every lawless element. The executives are required to enforce the law. The machinery for the enforcement of the law is that supplied by the acts of congress and the acts of the state legislature. That machinery must be used to the full extent of its capacity to secure the enforcement of the law. It is certainly my own purpose so to use it. The people are going to continue to yield obedience to the law. This principle will continue to prevail, whenever the American people shall pass judgment on it, because it is the foundation of all their institutions."

* * *

The federal trade commission has issued an order that the Utah-Idaho Sugar company of Salt Lake City, the Amalgamated Sugar company of Ogden, Utah, and E. R. Wooley and A. P. Cooper of Salt Lake City, "cease and desist from conspiring to maintain the monopoly in the beet sugar industry enjoyed by them." The case against these sugar manufacturing concerns has been before the trade commission for several months, during which several hearings have been held. It has been charged that these concerns have maintained a mutual monopoly over the beet sugar industry of the northwest and that they have operated in such a way as to prevent other interests from successfully competing with them.

* * *

The two dark spots seen by Herbert Hoover, secretary of commerce, in a survey of world conditions are the American agricultural situation and the chaotic condition in Germany. In spite of these obstacles, however, the secretary expresses optimism over the general world industrial situation.

Farm Business and Markets Outlook

(Continued from page five.)

fresh eggs are gradually tapering off, however, and are not more than needed to supply the demand, so that prices have been stable, even with large total receipts.

Receipts of poultry are increasing and all signs point to a heavy supply throughout the fall and winter. Consumptive demand is excellent and prices have held up quite well thus far.

Butter prices have recovered the loss incurred after the issuance of the preliminary report on cold storage holdings which showed that most of the "shortage" in stocks compared with the last year had been caught up during September. Receipts of fresh butter at the leading markets have fallen off and reports of a decrease in the make point to a further decline in arrivals.

Cheese prices have not declined much during the last week, but the undertone is not strong. Receipts at the leading markets are heavy and storage stocks are large.

Fruits and Vegetables.

The white potato crop was placed at 401,000,000 bushels in the October estimate, an increase of 12,000,000 bushels over the preceding month, but 50,000,00 bushels less than was harvested in 1922. The improvement in crop prospects was chiefly in Maine and New York. The sweet potato estimate also was raised to 96,350,000 bushels, compared with 109,539,000 bushels last year.

The apple crop estimate was reduced slightly in October, the commercial yield being placed at 33,104,000 barrels. A substantial decrease was made in the estimate for New York, while Washington was credited with a larger crop than a month ago. Only minor changes were made in the other states. The apple market is practically steady with a week ago in spite of an exteremely heavy carlot movement from producing sections, which has probably reached peak for the season.

The onion market is unsettled at the present time, as the demand is slow. Carlot shipments from the surplus areas are falling off, but arrivals at consuming markets remain heavy. Midwest yellows are quoted at $2.75 to $3.25 per 100 pounds on the Chicago market.

LATEST QUOTATIONS.

UNION CARBIDE

WORLD'S BEST QUALITY—HIGHEST GAS YIELD

—a wonderful cooking convenience

Keeping the sun up after dark!

—hot water for washing, bathing, and all purposes

Artificial sunlight, the dream of the ages, is in our time a reality. Artificial sunlight owes its existence to the discovery of Union Carbide—a discovery made over 31 years ago. The wonder-working gas is today favorably affecting the welfare of millions of people, bringing comfort and happiness with economy and satisfaction.

Already more than 398,000 farms enjoy its blessings without interruption day after day, year in and year out. And every year the number of farms equipped with Union Carbide Gas lighting and cooking plants increases over the number added in any preceding year.

And it is all so simple and economical!

A little Union Carbide, fed into common water automatically by a simple apparatus, makes Union Carbide Gas. Small iron pipe, concealed without disfiguring floor, wall, or ceiling, carries the gas wherever needed—to every room for shedding its glorious light; to the kitchen, for cooking, ironing, and water heating; to the barn, for lighting the way wherever you work; to the henhouses, where the sunlike qualities of Union Carbide Gaslight unquestionably lead to much greater egg production during the winter months at trifling cost.

We supply Union Carbide in generator sizes direct to consumer at factory prices through 150 Union Carbide Warehouses. There is one near you.

UNION CARBIDE keeps indefinitely if protected from air and moisture. Its blue-and-gray drum is recognized the world over as a symbol denoting best grade carbide, highest gas value, most uniform dependable quality, and purest gas.

UNION CARBIDE SALES COMPANY
30 East 42d Street, Dept. M-60, New York, N. Y.

Please send me, without obligation, information on UNION CARBIDE Lighting and Cooking.

NAME .....

ADDRESS ..... STATE .....

I am / I am not NOW a Carbide user

Note: Every owner of a Carbide Gas Lighting and Cooking Plant should write us, so he will be kept advised of our lowest direct-to-consumer prices and nearest warehouse address, and his name placed on our mailing list for future helpful service.

Cynthia Harlow of Stevens county is also a new cousin. She is 10 years old and has one little sister and three brothers older than herself. She says, "I did not plant any garden this year, but I helped mamma with her garden. We have pumpkins, squash, corn, tomatoes, cabbage, peas, strawberries, raspberries and onions. We also have a pretty flower garden in front of the house with marigolds, phlox, candytuft, pinks, asters and roses growing in it. On the sides of the garden we have poppies, hollyhocks and verbenas growing." Cynthia will be 11 October 20.

This little message comes to us from Verna Wenneberg of Wenatchee valley, Wash.: "I am a little girl 8 years old. I shall be 9 February 2, 1924. I have red hair and brown eyes. I like to knit, tat and sew for my dolly and I like to go to school. I shall be in the fourth B grade when school starts. I am having a nice vacation now and we are spending it at my grandma's. I have lots of fun playing with the farm pets."

After a long time we hear again from Martha Wurgler of Whitman county, Wash. Martha isn't going to wait so long before she writes to us next time. She has promised us one of her pictures, too, which will be fine. Martha takes piano lessons.

Two girls are visiting at the home of Thordis Fjerlie and they have good times swimming in the river and at Rosario beach. Thordis will be 10 October 23. School will commerce soon and she will be in the fifth grade. She is a cousin in Snohomish county, Wash.

Anna Olson lives on an 80-acre farm in southern Washington with her parents, two brothers and baby sister. She is 13 years old. This is our first letter from Anna.

There is "always room for one more," n our Corner, Dorothy. This new cousin, whose name is Dorothy Cole, has been borrowing copies of The Junior Farmer rom her friends. She has also been reading, "Cattle Ranch to College," "Children's Corner" and the "Bedtime Stories" in THE FARMER. Dorothy is 11 and is in the sixth grade at school. She has two brothers. One of them is her twin brother. The Coles live in Whatcom county, Wash.

Zoe Ludwin says she has not forgotten he cousins and Aunt Nellie even if she did not write to us for a long time. She s attending school again and is quite busy. She has four teachers.

We are glad because our little friend, Amy Weber, a Washington cousin, had such a good time this summer. One of her best chums spent the summer with her and Amy thinks any little girl could have a good time with her best chum. School commenced in September, however, and Amy likes to study, too. She will be nine November 9.

Welcome to our Corner, Ernest Toivonen. This new cousin lives on a farm three miles from town in southwestern Washington. His father is a berry grower and Ernest also has a strawberry patch of his own. He says he is interested in all kinds of birds and their habits. He is a 12-year-old boy and is in the eighth grade at school. He likes to read magazines.

Emma Lautenschlagar is an Okanogan county cousin. She says they are harvesting and have been since July. She is 9 years old. They have eight pupils in their school, which was just built last fall. The school is close to the road. Write again, Emma.

Birthday Greetings

THURSDAY, October 25—Gladys Daley, years old; Horace Engle, 10; Hubert Sparber, 10; Dollie Rice, 9.

FRIDAY, October 26—Mary Aharn, 10 years old; Isabel Pettichord, 10; Marle Wyatt, 9.

SATURDAY, October 27—Irene Goetz, 9 years old.

SUNDAY, October 28—Luale Downing, 11 years old; Selma Paananen, 11.

MONDAY, October 29—Irene Borowski, years old; Bennie Nead, 11.

BEDTIME STORIES

By THORNTON W. BURGESS.

WARBLER MAKES A DISCOVERY.

A joyous mate, a downy nest—
Could anybody be more blest?

Tiny the warbler didn't think so. It seemed to him his cup of happiness was quite full to overflowing. And yet he discovered that there was still greater happiness for him. He discovered it early one morning when he went to have a peep at that downy nest while Mrs. Tiny was off hunting for her breakfast. What do you think it was? Why, it was an egg, the most beautiful little egg, with a little wreath of brown and lavender spots around the larger end. It seemed to Tiny that there never could have been before such a wonderful and beautiful little egg.

And the nest it was in was just fitted for such a beautiful thing. It was a dainty nest, for Tiny and Mrs. Tiny are very dainty little people, quite the daintiest of any in the old orchard excepting Mr. and Mrs. Hummer, the humming birds. It was made of silver plant fibers, soft grasses, caterpillar silk and the soft brown cotton that grows on ferns. Could there have been a nicer cradle for such a jewel of an egg?

Tiny looked and looked and then he shook out his handsome yellow coat and sang over and over again a simple little song of pure happiness. After this he hunted up Mrs. Tiny, for he felt that he just had to share his happiness, and of course it was she who had given it to him. Together they hunted worms on the leaves of the apple trees in the old orchard and talked about that wonderful egg and the

Together they hunted worms.

baby bird that would some day hatch out of it. When they had eaten all they could they flew back to that wonderful nest so securely hidden way out on a branch of an old apple tree. Tiny was first, for he just had to get back for another look at that beautiful egg.

When he reached the nest and looked in he had such a shock that he quite lost his breath for a minute. Then he gave a funny little cry that brought Mrs. Tiny as fast as her wings could bring her. When she peeped into the nest she was even more shocked than Tiny had been. There were two eggs instead of one. And one egg was twice as large as the other and not at all beautiful.

Tiny and Mrs. Tiny looked at each other in dismay. It was very clear to them that while they had been away a visitor, a very handsome visitor, had been to their nest and had laid that strange egg there.

"Did you ever hear of such a thing?" cried Tiny.

"Yes," replied Mrs. Tiny. "I've heard of such a thing before, but I didn't ever expect it would happen to me. What are we going to do about it?"

"Kick it out!" replied Tiny promptly. He hopped into the nest and tried his best to kick the strange egg out. But the nest was deep and work as he would he couldn't get the strange egg out. Then Mrs. Tiny tried and she was no more successful. And all the time they had to take the greatest care not to break their own beautiful egg. At last they gave up and sorrowfully sat and stared at the hateful egg.

"I'd break it only that would muss our beautiful nest all up," said Tiny spitefully.

"That wouldn't do at all," declared Mrs. Tiny with tears of vexation in her eyes. "We must think of some other way."

"Who do you suppose did it?" asked Tiny. "If we hatch out our egg we'll hatch out that hateful egg."

"We won't hatch it," declared Tiny firmly. "Let's go about among our neighbors and see if they have seen a stranger around."

So together they made the rounds of the old orchard, inquiring if any one had seen a stranger there, but no one had.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Oliver Dilling, Doris Jones, Trygoe Lee, Elizabeth Anderson, Tynnie Kokko, Martha Kooko, Earl F. Lind, Murna Wright, Freeda Klippert, Dolores E. Evans, Hugh Adams, Ella Hennig, Jessie Manis, Rosa Reierson, Helen Zeller, Evelyn Ellis, Helen Phillips, Amy Doris Beam, Mary Trapp.

Dora Grace Urquhart, Albert Barraford, Ruth Sharp, Joyce McDonald, Renata Looff, Margaret Lettell, Orval White, Clarence Carlson, Alma Cook, Naomi Miller.

Mother! for your baby's sake consider these facts!

BABIES need certain food elements called "vitamins" for proper growth and health.

Breast milk may be deficient in vitamins if the mother's diet is not properly chosen.

The vitamins in cows milk will vary according to the feed the cow receives.

The sugars commonly used in plain modified milk are practically free of vitamins; as are patent cereals and patent flour.

Free To Mothers

Our Booklet, "Baby's Health and Food, answers the question "How can I be sure my baby is getting these vitamins?" Send for a copy today. Baby bib and sample of Dennos will also be sent if you so request.

DENNOS *The milk modifier*

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.

POST CARDS BRING BIG RETURN

Many of our advertisers offer free booklets and information which is very much worth your while to send for. A postal will bring them. Why not place a dime or so in your rural mail box with a note requesting the carrier to leave you some cards? Then use the cards in writing advertisers. When you do so be sure to mention THE WASHINGTON FARMER.

Ayrshire Achievements

Washington and Oregon figure prominently in the summary of Ayrshire achievement appearing in the September issue of the breed journal. A new Oregon state champion is announced, a Washington cow leads all those on test in the United States during June, and both Oregon and Washington cows are numerous in the monthly 50-pound list, so-called.

Oregon Robinetta R., owned by Oregon Agricultural college, is the new state champion, her record of 17332 pounds of milk, containing 671.92 pounds of fat, started as a junior 4-year-old, entitling her also to sixth place for age in the United States and to a silver medal of the Ayrshire Breeders' association. Robinetta averaged 1444 pounds of milk per month, and qualified for the 50-pound list in every full month of her test.

Another O. A. C. heifer, Oregon Pancetta Q., in the ninth month of her test as a senior 2-year-old, was A. R. state leader for June and ranked 12th among 40 animals of that age in the 50-pound list; and the college had one also among 28 junior 2s so honored.

Washington ranked fifth among 28 states having one or more animals in the list, Wenatchee Ayrshire farm having seven and Washington State college five, and the latter's Chinook Peter Pan Dimple, a mature cow in the fourth month of her test, produced more milk and butterfat in June than any other Ayrshire in the United States, and led the 233 cows in the 50-pound list. Her monthly total was 1941.1 pounds of milk and 91.23 of fat. Four other W. S. C. heifers ranked, respectively, eighth among 16 junior 4s in the list, third among 22 senior 3s, fourth among 40 senior 2s and 16th among 28 junior 2s, while Wenatchee Ayrshire farm had one second among junior 4s, one fourth among senior 3s, two 9th and 14th, respectively, among junior 2s and three among the first 20 senior 2s. Every animal mentioned, moreover, is of the owner's own breeding.

NICHOLS & PLUNKET HERD.

It is hard to find a herd of registered Jerseys that have better Island breeding than the animals in the Nichols & Plunket herd at Ellensburg, Kittitas county, Wash. His present herd bull, Majesty's Cowslip's Noble, is an animal of splendid island type and is sired by Cowslip's Oxford, who was a son of Cowslip's Peer, out of a daughter of Oxford You'll Do. The sire of the present bull was owned in partnership by Bert Pease and Charles M. Talmadge, then of Newport, Wash.

There are now four daughters of the herd bull and one gold medal cow, Brown Lad's Cowslip, with a record of 15,017 pounds of milk and 712 pounds of fat. She is a half sister to the herd bull, since she was also sired by Cowslip's Oxford. In the herd of 26 animals there are 13 that trace back to Oxford You'll Do and Noble of Oaklands, one of You'll Do's most prominent sons.

While Mr. Plunket, who has charge of the herd, is making every effort to get the maximum production from the mature cows, he admits that a better record could have been made, no doubt, had the cows been fed silage. They were fed on alfalfa hay and grain with what pasture they could get before cold weather set in all the time they were on official test. The record cow is said to have one of the highest Jersey records in the state. It is also interesting to note that there are three other gold medal cows in the state by the same sire.

Is it any wonder that the Jersey breeders of the northwest point with pride at the splendid showing that is being made in Kittitas county? It is not unreasonable to look for still greater records to come from this herd in the future, since it has already gotten such a splendid start.

EXPERT HOLSTEIN MAN COMING.

A man who for six consecutive years won the National Dairy show championship for Holstein females, who had a prominent part in making the "true type" models of animals of the breed, and who is one of the hardest worked judges in the ring, will tie the ribbon on Holsteins at the Pacific International. He is "Bob" Haeger of Wisconsin, who was picked for the task when H. H. Kildee, previously selected, had to cancel the engagement. Haeger showed Minerva Beets to the national championship for five years, and Paul Calamo Korndyke for three years, records not equaled with any other bull or cow. He has judged already this season at the Ohio, Maryland, New York and Illinois state fairs, the Tri-State fair at Memphis, Tenn., and the dairy cattle congress at Waterloo, Iowa.

DUROC EDITOR IS COMING.

Duroc Jersey breeders are feeling good over the prospect of a visit to the Pacific International of B. R. Evans, editor of the Duroc Jersey Bulletin. While dairy cattle at this show have been recognized by eastern editors and prominent breeders, and to some extent this is true, also, of beef breed journals and fanciers in the east, so far the hog men and journalists have been conspicuous by their absence. It is true that the Poland China record association has sent men out to western shows one or two years to superintend the futurities, but this will be the first visit of a man of much importance in Duroc Jersey circles. Mr. Evans is considered a high authority on characteristics of the Duroc breed and one of its most consistent boosters. His coming is occasioned by the Duroc Jersey sale which will be held on Wednesday of the show, as well as a desire to see the northwest and visit this classic live stock event.

LEADS TESTING ASSOCIATION.

St. Mawes Glen Thelma, a registered Jersey cow owned by A. E. Lundeen of Rochester, Thurston county, was high cow in the Thurston and Grays Harbor Cow Testing association for 1922-23. She began as a 4-year-old and produced 574.3 pounds of butterfat from 11,333 pounds of milk. She is a beautiful cow, with a good udder, and her owner is sure her record would have been much larger but for a severe and continued spell of sickness which veterinarians attribute to a piece of wire or a nail. Dr. Lundeen purchased "Thelma" as a yearling from Ed Carey of Carlton, Ore. He bought St. Mawes Dolly Lee at the same time, also as a yearling. Her record last year was not remarkable, but this year she promises to make over 50 pounds of fat, with a possible 600 pounds. Mr. Lundeen bought 16 head at Mr. Cary's sale last May and now has 26 head, including baby calves. Some of them were bred in Idaho, but are of the Cary line of breeding. Mr. Lundeen's herd sire, Anna St. Mawes Lad, is a son of St. Mawes Susy Anna, one of the five world record full sisters by Rosaire's Olga Lad. He is an exceptionally large bull, with straight top line and long, straight hips. His grade daughters have been sold at $100 each and his purebred offspring are showy, typy Jerseys.

HAS GOOD JERSEY HERD.

John R. Martin of Satsop, Wash., who won grand championship on Jersey bull at the Grays Harbor county fair the last of August, has reason to be proud not only of the individuality of the young bull, which enabled him to win, but of the rich breeding of the animal. Oxford Fern's Theatre Cup, the bull in question, is by Theatre Cup Prince, son of the medal of merit and great show bull, Fauvic's Prince, owned in Connecticut and one of the most noted bulls of the breed. Theatre Cup Queen, the dam of Theatre Cup Prince, was a first-prize winner "Over Jersey," and stands third among imported register of merit Jersey cows in America. The young bull was easily champion in strong competition. Mr. Martin had three of his get at the fair, sired when the bull was eight months old, and they are also of fine show type. While most of the Jerseys Mr. Martin exhibited were of his own breeding, he had a heifer calf that was made reserve champion to a very fine cow and the judge paid the little heifer a high compliment. This calf is out of Fancy Beau's Oxford Fern, that was bought from A. Albright of New Jersey, and by a son of Fauvic Prince. The calf was dropped after Mr. Martin purchased the cow.

A CHAMPION STALLION.

Herewith is a picture of Majesty's Best, purebred Clydesdale stallion owned by H. T. Whitman of Spangle. This horse was grand champion of the breed at the Spokane Interstate fair both this year and last year. He has also won similar honors at a number of local fairs and horse shows.

GLEN TANA WINS IN MONTANA.

Glen Tana Farm of Spokane was leading winner in the Jersey show at the Montana state fair the last week in September. In only one class in which it competed did its entry fail to win first place. In addition it won the senior and grand championship and the junior championship in the bulls and the senior and grand championship in the females, losing only the junior championship. The herd that showed was largely the same as that at the Spokane Interstate and Washington state fairs, where it made similarly excellent showings.

HOG ASSOCIATION GROWS.

J. R. Pfander, secretary of the National Duroc Jersey association, says that 14 years ago there was only one employee in the central office of that association. The growth of the association's work, however, has been such that today 60 employees are kept busy.

WORK FOR UNIFORMITY.

"Corn belt farmers pay a premium on stockers and feeders," says an exhibit in the department of agriculture's display on the fair circuit. "To produce them, use good purebred beef bulls of the same type, select well-bred, uniform cows and heifers and practice breeding at as nearly the same time as practical so that the calves will be about the same age," continues the statement.

Organize Bull Club

A bull club was formed in the Schrag community, where three farmers owning dairy cattle joined together and purchased a Jersey bull from the Waikiki farms. The animal will be cared for by Frank York. This is one of the first dairy bull clubs organized in Adams county. The farmers were assisted in their organization by County Agent Donaldson.

HOLLYWOOD FARM HOLSTEINS

Hondo, California.

The first 30,000-pound record ever made in Southern California was completed on September 23, when Hollywood Lilith Palmyra Abbekerk, star performer of the Los Angeles County Farm herd, completed 11 months of her yearly semi-official test. On that date she had 30,015 pounds of milk. With 30 days still to go, she is expected to make close to 32,000 pounds of milk in 365 days. During the 11 months she made 1128.6 pounds of fat, equivalent to 1410 pounds of butter. This is also the first time that any Southern California producer has reached the 1400-pound mark for butter. By September 27, she had displaced Adirondack Wietske Dairy Maid as California state champion for butter production and on October 7 will pass Carnation Stock Farm's famous world's record holder, Segis Pietertje Prospect. This record bids fair to be not only the highest butter production ever completed on the Pacific coast, but at least third highest in the entire United States, with a prospective total very close to 1500 pounds of butter, as the year does not close until October 23. Of the 11 California cows that have previously completed 30,000-pound milk records, only one has made more than 1325 pounds of butter. In fact, no other 30,000-pound cow has ever made such a high butter record.

Hollywood Lilith Palmyra Abbekeik. 365 days, milk, 21,606.8. Butter, 883.7. At 3 years old, 11 months ending September 23, 1923, has produced 30,015 lbs. milk and 1410 lbs. butter. Is expected to finish her year with 32,000 lbs. milk and close to 1500 lbs. butter.

The above is part of letter to Hollywood Farm from the Los Angeles County Farm, of Hondo, California.

This cow was bred at Hollywood, as were her sire and dam. She has three half sisters in the Hollywood herd that have produced over 29,000 pounds of milk at four years old, one was a world record.

Our herd is closely related to this cow, as her sire was our senior herd sire for over four years.

Excellent heifer calves for sale, also some very fine bull calves out of yearly record dams.

See our exhibit at Pacific International Live Stock Exposition, North Portland, Oregon, November 3-10, 1923.

HOLLYWOOD FARM

(NEAR SEATTLE)

HOLLYWOOD — A CALF OR A CARLOAD — WASHINGTON

Mt. Vernon Accredited Holsteins

especially. Buy purebred baby bulls and heifers from the most productive dairy district in entire northwest.
R. E. WAUGH, Burlington, Wash.

Linn County Holsteins

Cows, heifers, bulls and calves.
LINN CO. HOLSTEIN ASSOCIATION.
GEO. A. McCART, Sec. Harrisburg, Ore.

Pioneer Herd Hampshire Swine

10 head choice boars; 10 head of sows and gilts, backed by show records.
J. M. FRUITTS, Cambridge, Idaho.

Weanling Hampshire Pigs

and service boars. Most popular blood lines, good individuals, reasonable prices.
J. W. PARKER, Yamhill, Ore.

When you write to advertisers be sure to state that you saw their advertisement in this paper.

Big Type Polands

The Royal Designer herd of the best blood lines. We offer 5 March boars, 1 two-year-old boar and a number of March gilts, tried sows and fall pigs at weaning time. Write for prices. Satisfaction guaranteed.
JOHN F. LYNN & SON, Peach, Wash.

Gano's Durocs

Have size, quality and individuality. Am offering a choice lot of breeding boars, also booking orders for fall pigs. Prices reasonable.
F. D. GANO, Sunnyside, Wash.

Duroc Jerseys

Spring boars and gilts by Idaho Sensation, Big Bone Sensation and by my 800-lb. herd boar. Priced to sell, papers furnished. Satisfaction guaranteed.
V. R. FISHER, Oxford, Idaho.

O. I. C. SWINE

Herd headed by Western Prince, No. 103084; he by Ohio's Best. Winners, size, quality and true type. Breeding stock for sale.
J. H. WEST, Ringgold Farm, Centralia, Wn.

When answering advertisements don't fail to mention this paper.

Chester White Boars

Prize Winning Stock

Some out of the first prize futurity litter, Oregon state fair; first prize senior yearling and other prize winners. Also some by the many times grand champion, Oregon Buster. Satisfaction guaranteed.

CASS A. NICHOLS, Salem, Ore.

Chester White Swine

For sale, spring service boars out of my Iowa sow. I am now booking orders for fall pigs. For further information write or see me at the Pacific International Live Stock exposition.
THEODORE J. RESCH, Aurora, Ore.

Berkshires

Improve your stock on my easy payment plan. Grand champion boar and Jr. champion sow at Spokane fair. Blood lines unsurpassed. Cedar Canyon Farms.
F. M. CURTIS, Prop., Fruitland, Wash.

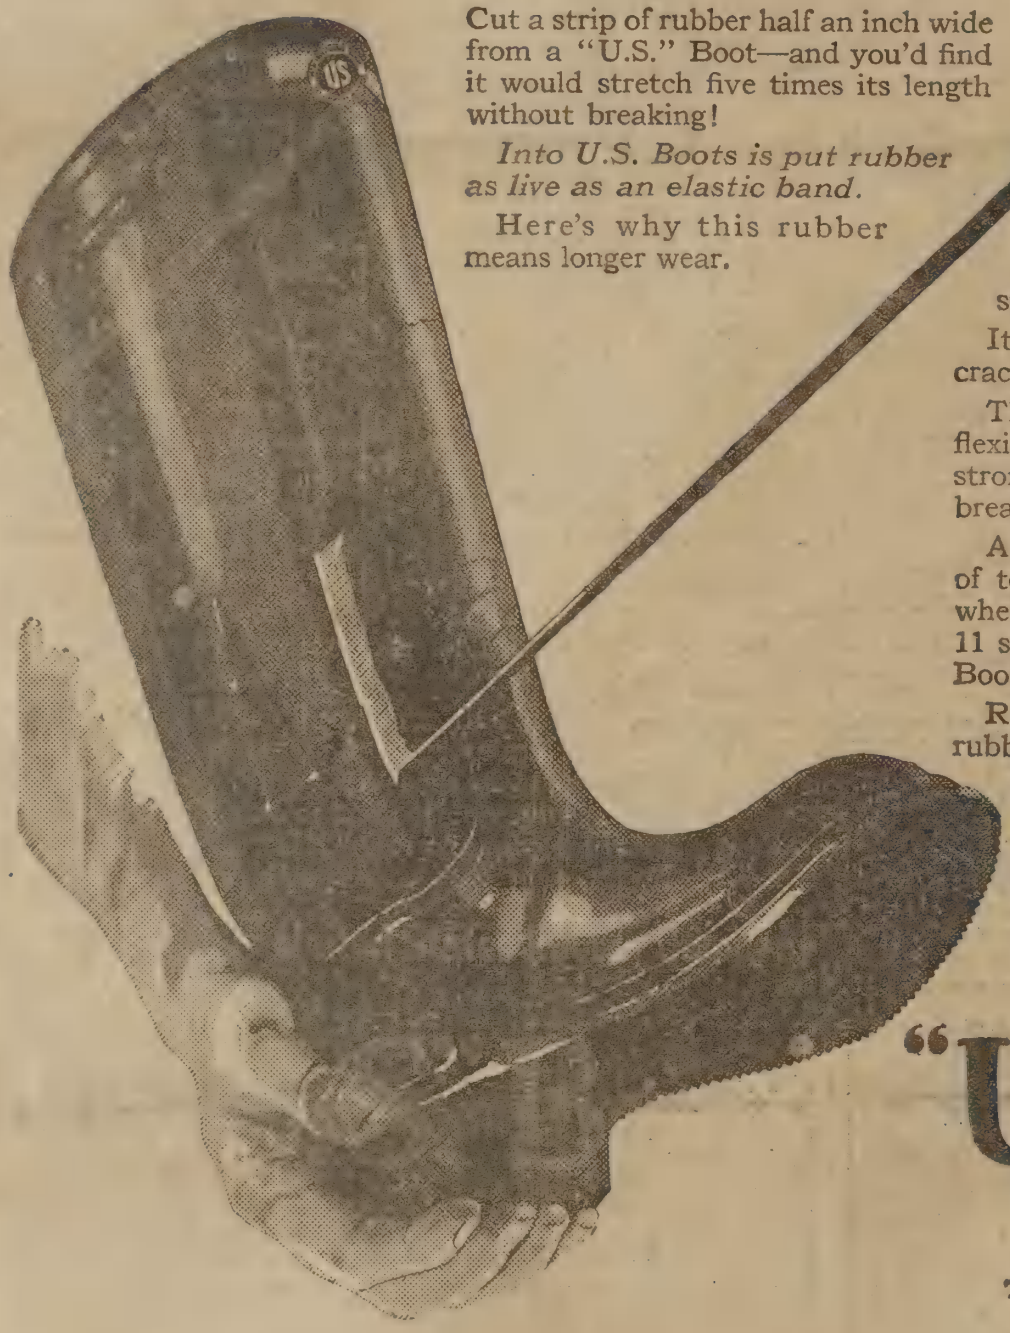
EXPERIMENT STAT
URBANA ILL

Stretches five times its length!

Why live, elastic rubber gives "U. S." Boots longer wear



Cut a strip of rubber half an inch wide from a "U.S." Boot—and you'd find it would stretch five times its length without breaking!

Into U.S. Boots is put rubber as live as an elastic band.

Here's why this rubber means longer wear.

Every step you take, your boots bend and wrinkle. Thousands of times each day—the same strains in the same spots.

It's these strains that make ordinary rubber crack and break.

The live, tough rubber of U.S. Boots has the flexibility to stand constant bending. It *stays* strong and pliable—resists strain and prevents breaking.

Anchored in this solid rubber is layer on layer of tough fabric reinforcements. In the places where the hard strains come there are from 7 to 11 separate plies of rubber and fabric in U.S. Boots.

Reinforcements that give rugged strength—rubber that stays tough and resisting—these are the reasons why U.S. Boots mean longer wear and better service. Be sure to ask for "U.S." *Get the longest wear a boot can give you.*

United States Rubber Company

"U.S." Boots

TRADE MARK

Made with the same live rubber

The "U.S." Walrus—the famous all-rubber overshoe—is made with the same live, elastic rubber that goes into the boot. It's reinforced, too, by layer on layer of fabric and rubber where the strains come.

Out to the barnyard a dozen times a day—kicked on and off—the U.S. Walrus is built to stand the hardest wear you give it.

You'll find every type of footwear in the big U.S. line—the U.S. Bootee, a lace rubber work-shoe for spring and fall. U.S. Rubbers and Arctics—all styles and sizes for the whole family. Look for the "U.S." trademark whenever you buy.

Buick Double Service Sedan—$1695

THE new Buick Double Service Sedan brings to traditional Buick sturdiness, power and dependability, an entirely new standard of closed car utility. It is designed to meet hard daily service—yet its appearance and well appointed interior make it the ideal family car. A 70 h. p. six-cylinder Buick valve-in-head engine provides this Sedan with more than ample power for all kinds of roads and grades. Proved Buick four-wheel brakes assure complete driving safety at all times and under all conditions

Cooperation Takes Another Start

President Coolidge's Interest Thrusts Subject Upon the Attention of American People

President Coolidge's recently announced purpose to use the department of agriculture and other federal agencies to help the cooperative movement among farmers has thrust that subject anew upon the attention of the American people. Opinions range all the way from enthusiasm down the scale to skepticism, and from skepticism still further down the line to downright knocking. "Cooperative marketing will solve the wheat growers' problems," say the enthusiasts. "It won't be worth a tinker's darn," declared its critics, including the grain dealers.

Three Notable Authorities.

Three notable articles by three notable authorities on farm cooperatives have recently appeared in American periodicals. Aaron Sapiro, attorney for several cooperative organizations, who has spoken before audiences in the Pacific northwest, says the average farmer has never really tried cooperation. Farmers have organized, it is true, but their organizations have been local. What is called cooperative marketing is in reality only cooperative packing, grading, buying or manufacturing. These organizations did some good locally. They secured local sales for local produce and stopped petty larceny, but they never even conceived the real problem of marketing. Real cooperative marketing, Mr. Sapiro says, is illustrated by the California fruit growers, the first group who conceived the idea of distribution on a commodity basis. Tobacco, potato, rice, bean and nut growers, dairymen and stockmen are now organized on a commodity basis. Other groups are following.

In the Pacific Northwest.

That is a clear statement of a thought frequently expressed by THE FARMER as to the efficiency of the cooperative movement in the Pacific northwest. To a large extent, as we have pointed out, cooperative organizations are competing with each other. Part of the fruit growers, for instance, in one orchard district will be organized, while other growers will deal with private sales agencies. The same divided condition exists over in another orchard valley, and in another, and another. And the net result is that they cut each other's throats competing for markets.

Cooperation in Denmark.

In another periodical E. C. Lindeman explains the cooperative method in Denmark, where it has been brought to a high degree of efficiency. But the cooperatives in Denmark are built on educated loyalty in the local community groups. "In this country," he says, "there exists among cooperative organizers a theory which leaves the community emphasis until last. This," says Mr. Lindemann, "leaves the weakest point, the most vulnerable point in the entire structure, undeveloped and unguarded." The legal contract binding the farmer to deliver his products to the cooperatives, which has become so popular, is in itself insufficient to produce the cohesion and loyalty necessary for a cooperative movement which will endure, according to this authority.

C. L. Christensen of the United States department of agriculture also deals with Denmark's experience of over 40 years. Eighty-six per cent of Danish farmers are members of some cooperative organization. The organizations operate on a strictly business basis, and sufficient patronage must be assured before beginning business. Control is democratic and there is capable technical and business management.

Less of Grains, More of Meats

Pays to Find Out What Foreign Buyers Want Most of Our Farm Products

The successful merchant studies his customers' wants, and stocks up with merchandise that will fill their demands.

The same method should govern the farm producers of an exporting country like the United States.

The wants of foreign buyers are recorded in our current exports. We are selling less wheat and other grains abroad, but are selling more meats, fats and dairy products.

Exports of American meats in September, as shown by a statement of the United States department of commerce, totaled 95,370,000 pounds, as compared with 66,045,000 pounds in September of last year.

But September exports of grain and preparations of grain fell to 831 926,000 in value, as compared with exports valued at $59,650,000 in September, 1922.

The record of exports of grain and preparations of grain in the first nine months of this year tells a disquieting story of declining foreign demand—$247,095,000 worth this year, as against $400,965,000 in the nine months from January to September last year.

We exported in the first nine months of this year 80,196,000 bushels of wheat, as against 126,155,000 bushels in the corresponding nine months of 1922.

On the other hand, exports of animal oils and fats (chiefly lard) in the first nine months of this year had a value of $117,278,000, as compared with exports valued at $86,938,000 in the corresponding months of last year.

What goods are you going to put on your shelves, Mr. Farmer of the Pacific northwest? Will it be yet more wheat and other grains, for which a decreasing demand is shown, or meats and dairy products, for which expanding markets are indicated?

To Market Eggs

The Farmers' Union Egg and Poultry association has established headquarters in Spokane at 8166 Post street. D. F. Mitchell is president and general manager and A. C. Whisler is office manager and secretary.

"This is a poultryman's organization," says Mr. Whisler, "run by poultrymen for the sale of poultry products and its success or failure depends upon the efforts put forward by its membership.

"The poultrymen, through this organization, are endeavoring to reach the consuming public through a more direct route than has heretofore been in effect by selling direct to the retailer and restaurant man without the intervention of the wholesaler.

"By establishing our own grades we hope to get the producer more for his product and give the consumer more for his money.

"The producer, by belonging to this association, does not need to worry about his markets. All he needs to do is to get the eggs and it is the duty of the management to find the best markets.

"The association eggs will be marketed under the farmers' union label, which will be on every egg case and every carton sent out by the association as soon as these can be secured from the printer. Thus we will make a direct appeal to the union labor to purchase eggs that are sold under the union label.

"We have the climate and the soil. The market has been there, but there has been no way to reach it. Now that we have the agency, all we need is the eggs."

What Time Should Poultry Be Marketed for Most Profit?

By GILBERT GUSLER

How, when and where to market the farm paultry surplus, and in what condition to market it, are questions that call for answer with the arrival of fall.

Most poultry is sold from the farm "on the hoof." The individual farmer does not wish to take the time for home dressing. He is unfamiliar with the best methods of finishing, dressing, packing and shipping. He lacks the equipment for chilling and holding and he does not have the market outlets to dispose of the dressed product to the best advantage. Similar reasons were responsible for the shift from farm slaughter of cattle and hogs to the big packing houses and caused creameries to replace farm butter making.

Much poultry is shipped alive to the large consuming centers, but whether dressed in the smaller towns near the point of production or in the large cities, a goodly fraction of it is put through an intensive fleshing or finishing process before slaughter. Spring chickens are fed about 10 or 15 days and hens five or 10 days in crates arranged in batteries in the poultry packing houses. They are given all they will eat two or three times a day of a ration such as 60 per cent of finely ground corn meal and 40 per cent red dog flour or white middlings mixed with enough buttermilk to make it like mortar.

Young chickens will add 20 to 60 per cent to their original weight by feeding in this way and 300 to 400 pounds of dry feed with the buttermilk used to moisten it will produce 100 pounds of gain. Compared with the cost of making gains on other kinds of live stock, together with the selling price, poultry finishing has distinct advantages.

Farmers at Disadvantage.

Besides the additional weight, the carcass is made more plump and attractive in appearance and is bleached by the milk feeding. All these benefits are preserved by slaughtering as soon as the finishing process is completed. Poultry which is milk-fed and fattened to capacity on the farm will shrink and be very easily bruised and blemished when shipped alive so that it will not grade as first class when dressed and most of the results of special feeding are lost.

This does not mean that no effort should be made to finish poultry to be sold from the farm. Handlers of poultry constantly complain that only a small percentage comes to market as well-finished as it might properly be made by the producer. For this very reason, the poultry fleshing industry has furnished a golden opportunity to the packers.

Prices for live poultry in the large cities discriminate between the unfinished and the well-fleshed. To some extent, this is shown by weight. Heavy hens, for example, are selling for four to seven cents more than hens weighing under four pounds. This discrimination is most pronounced during the fall and early winter since the percentage of heavy, well-finished birds in the receipts increases after the first of the year.

Country buyers may try to buy all poultry at a flat price instead of paying a premium for that which is fat. In such cases, producers can ship direct to reliable commission houses on the large markets, if the distance is not too great, where their poultry will sell more nearly on its merits. Regular shipping crates, which can be obtained through the commission house, should be used.

During the cold weather, the farmer can dress his birds and ship them without fear of spoiling. Dressed poultry costs less to ship than live and if properly dressed and chilled, the shrinkage will be small. The farmer who undertakes to dress his own poultry will be competing with the professional dressers, however, and must approach the standards of packing set by them.

An Expert's Job.

For proper dressing and packing no food is given for a day before slaughter, the birds are stuck so that they bleed thoroughly, and they are plucked dry instead of scalded. The heads are wrapped in paper to avoid smearing other parts of the carcasses with blood. The birds are cooled for a day or so in a room slightly above freezing and then sorted into uniform sizes and grades and packed a dozen birds to the box or barrel. The barrels may be packed with ice, or if the weather is cold, the birds may be shipped by express in boxes without ice.

Assorted by Weight.

Markets differ to some extent, but dressed broilers are usually sorted into those weighing under 20 pounds to a dozen, those weighing 20 to 24 pounds, and 25 to 30 pounds; fryers, 31 to 35 pounds; and roasters, 36 to 42 pounds, 43 to 47 pounds and 48 pounds up. Fowls, which are hens and pullets beyond the springer stage, are sorted into similar groups from 30 pounds down to 66 pounds up. Those in barrels or kegs are not sorted so closely. Milk-feds, at the present time, bring one to three cents a pound more than corn-feds on the New York market.

Poultry producers located reasonably close to the larger towns and cities found in every state have an opportunity to develop a special trade with hotels or well-to-do customers who are willing to pay attractive prices for high-class, milk-fed poultry dressed on the farm. For such trade, it may be advisable to draw and truss the birds before they are delivered.

All these methods or marketing call for extra time and labor which the farmer may find it inconvenient to furnish when field work is pressing. Cooperative marketing, when it reaches the stage of operating poultry fleshing and packing plants, which are not costly, offers a better way for the producer to get the full worth of his products.

Early Marketing Pays.

Poultry marketed early in a season commands the highest prices, just as does every other highly seasonal product which is ready for sale before the mass. Broilers are very scarce in late April, May and June, for example, so that they bring a big premium over fowls and a much higher price than later on when the supply becomes more abundant. The farmer who can have broilers weighing from one and a half to two pounds to market early in the season can be fairly certain of good returns.

Way Prices Vary.

Since a bird which is a "broiler" at one stage of its growth becomes a "fryer" later on and still later a "roaster" and then a "fowl" or "stag," it is not so easy to determine the comparative merits of selling at different seasons of the year. The accompanying chart, however, shows the trend of prices on the different kinds, using quotations on fresh-killed western chickens at New York. Live chicken prices maintain a fairly uniform differential below dressed. Broilers decline during July and August from their spring high point, but have averaged fairly stable as between the different months thereafter. The demand for them usually is excellent during the fall. Starting in September, roasters decline until December and January, which are the low months. Fowls reach their peak in March, April and May when they are laying heavily and are kept back on the farm. December is the low point as young chickens are plentiful then, but

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Poultry at Adams Fair

One of the especially noticeable features at the county fair recently held in Ritzville was the poultry department, in charge of W. Bischoff of Lind. H. H. Collier of Tacoma, who judged the show, said that a wonderful improvement was noticed in the poultry exhibits since he judged at Ritzville four years ago. A special prize for White Wyandottes was won by Henry Oesterisch of Ritzville.

County Agent Service

County agent work at Wenatchee is closely tied up with the allied horticultural office. Between these two offices Chelan county possesses one of the best organized services in the state.

It is now announced that the fruit growers in the vicinity of Cashmere and the upper valley may obtain more direct service from the county agent and horticultural office from a branch office that is being established at that point.

Requests for services of the county agent or horticultural inspector will be taken by officials at the bank in Cashmere and listed and then these calls will be taken care of in order of listing.

Another Experimental Crop

The Pasco district is experimenting with its sweet potatoes. Success is reported with the "Nancy Hall" and "Red Bermuda," the southern varieties of sweet potato, noted for quality, but not often seen in northern markets. Last spring a few bushels of these varieties were planted. The yield was reported highly satisfactory and the quality excellent. Merchants in town are paying the farmers 5 cents a pound for these sweet potatoes.

Already there is promise that the sweet potato will take its place with the strawberry and cantaloupe as highly specialized crops in the Pasco district.

Where Cooperation Pays

It has been officially announced that the farmers' union live stock commission at the stock yards in Kansas City, Mo., has returned to the farmers who have shipped their live stock to it during the first six months of this year 40 per cent of the charges which it has made for its selling services.

The significance of this is seen when it is remembered that the farmers' union commission is a cooperative organization operating in the stock yards in competition with the private commission companies and charging the same commission fees to the live stock shippers as do the private companies. The difference is that the shippers themselves own the farmers' union commission and receive back at the end of every six months all that they have paid in in the form of fees less the actual cost of operation. Last year this same organization refunded 20 per cent of its commissions after paying 8 per cent on its outstanding capital stock and placing 10 per cent in its reserve fund for the protection of the business.

Successful Fair Management

The successful fair manager finds no time for rest. No sooner is one fair over than plans and preparations go forward for the next yearly event.

This is evidently the habit of mind possessed by Secretary George R. Walker of the Southwest Washington fair. Mr. Walker already announces that the beautification of the fair grounds, which are located midway between Centralia and Chehalis, will begin this fall. An order of 200 Oregon maple trees has been made, which will be uniformly planted in various parts of the grounds. The principal buildings will also be reshingled this winter.

Persistent Campaign Pays

A hard and persistent fight has been made against forest fires, largely caused by careless campers. It has seemed at times as almost hopeless to drill into the minds of the average seeker for recreation and pleasure in the mountains the necessity of due attention in putting out the camp fires. At times one would seem to despair of the result.

There have been, however, those who have obeyed the scriptural injunction not to be weary in well doing, relying upon the promise—"For in due season we shall reap if we faint not."

Results in the Wenatchee forest the last season would seem to confirm the fulfillment of this promise to a large degree, for the rangers report that but two of the forest fires, covering more than a quarter of an acre, were caused through the carelessness of campers.

That the campaign is not over is seen from the addition to the report that in the same territory 33 persons were convicted of having left camp fires burning.

Nearly half a million persons visited the forest districts of Entiat, Lake Wenatchee, Chiwaukum, Leavenworth, Cashmere, Liberty and Easton.

Combat Dangerous Weeds

Brick Burford, secretary of the Whitman county farm bureau, has the following to say concerning one of the weed pests of his county.

"A bad weed is gradually, but steadily working its way northward into the various wheat fields of the county. This is the Russian thistle. At first appearance in the field or on the roadside, it seems harmless and ordinary, but once started it becomes a pest and one of the hardest of weeds to eradicate and control. Wherever found for the first time it should be carefully picked, put in a gunny sack and burned. Whenever Russian thistles are dragged by a harrow or a disc drill around the summer fallow during either fall or spring seeding, the entire length of soil thus covered by the machine will be infested with seed and a heavy growth of thistle will follow. Once the soil becomes infested with this seed, it is almost impossible to ever free the land from them again. They get their start in an isolated part of the field and from there they gradually creep along the roadways, fence corners and thus entrench themselves till finally the fields are continually surrounded with an ever ready supply of seed to be carried when ripe by the winds, animals and machinery."

What Mr. Burford says about the Russian thistle may be applied in a general way to a great many of the weed pests of this state, and yet it would appear impractical under conditions as they now exist to keep such weeds as Russian thistle, Jim Hill mustard and the like from becoming widespread and permanent pests. Sometimes a weed is almost a blessing in disguise, as it compels the farmer to be more vigilant in the tilling of his soil. This, however, is no argument against the wholesale warfare against weeds, but merely another argument in favor of such warfare. Any virtue which a weed has depends entirely upon the effort to get rid of it.

Washington State Gleanings

When hop picking started, hops were being bought for 22 cents a pound, says a Yakima report. Recently John Hanses, Tampico, received 31 cents for 300 bales of fancy hops, and other sales have been made at 30 and 30 1-2 cents.

Of 15,000 to 20,000 bales produced this year, fully half were under contract. Open prices have ranged from 13 to 30 cents a pound. Dealers are offering contracts for next season at 20 cents, saying the outlook is more optimistic than a year ago.

PAYS $60,000 FOR FARM.

W. W. Richardson of Pomeroy is back from a trip to San Francisco, where he closed a deal with Mrs. M. H. Houser by which he became the owner of 600 acres eight miles south of Pomeroy on the Pataha flat. The exact consideration is not known, but is reported to be about $60,000, which is the price at which Mrs. Houser had offered to sell. This is one of the first hill ranches improved in Garfield county, and always has been considered one of the most productive wheat farms. This purchase extends Mr. Richardson's ownership of cultivated lands to about 2000 acres.

PLANS DAIRYMEN'S SCHOOL.

Promotion of the dairying industry in the Prosser section of the Yakima valley was the main topic of discussion at a recent community club luncheon at Prosser. A special committee was appointed to arrange, through the Washington State college extension department, for a winter dairy school for the dairymen in the region.

An effort will be made to obtain speakers through the extension department and plans are being laid for a three-day dairymen's short course. Realization by farmers that each ranch should be equipped with a small herd of dairy cattle has brought the club to believe that it should extend every effort to assist this movement.

APPLE CROP ABOVE ESTIMATE.

While there is wide divergence of opinion among authorities, it is estimated by the district horticultural office that the Wenatchee region apple crop will be larger than the September estimate of 17,900 cars. As picking and packing the fruit progresses, it is possible to more closely check the crop, and it is stated that best figures available indicate that it will overrun the earlier estimate. Throughout the orchard country the fruit is coming off in good color, size and quality, with the later varieties especially free from worms. Loss to growers from this cause will be lower, it is believed, than in former years, probably not more than 1 per cent of the yield.

WILL HAVE COUNTY AGENT.

Whitman county will go back to the county agricultural agent after a year without one. An estimate for the work was included in the budget adopted recently by the county commissioners. Negotiations are under way between the commissioners and Washington State college for employment of Brick Burford, who has been secretary of the Whitman county farm bureau a year.

When the county dropped agricultural work a year ago in the interest of economy, farm bureau members as individuals contributed cash for the employment of a secretary. Mr. Burford was named and, in addition to looking after the interests of the farm bureau members, he has done much general county agent work.

KENNEWICK FRUIT SHIPMENTS.

A total of 208 cars of fruit have been shipped by the Kennewick branch of the Yakima Valley Fruit Growers' association and there are still many cars of apples to be shipped which are now being held in storage. Out of this number there were 18 cars of cherries, one straight car of strawberries, 17 cars of peaches, 30 cars of mixed fruits, which include pears and early apples, and 53 cars of Jonathans, Rome Beauties and a few Yellow Newtowns. The association estimates that it has practically 50 per cent of the fruit in the district, which puts the total near 1000 cars when all the late apples are counted. There is a capacity of 108 cars in the cold storage rooms and 45 cars of dry storage in the large $65,000 plant at Kennewick, which is said to be one of the largest and best equipped packing and storage plants in the valley.

WASHINGTON APPLE CROP MOVING.

Virtually 20 per cent of the estimated Washington apple crop of 36,489,000 boxes had been shipped up to October 17, according to figures compiled by the Spokane office of the bureau of crop estimates. From August 25 to October 17 Washington growers had shipped 9304 cars of apples, or 7,033,824 boxes.

Government figures of recent years show that the "peak" of apple shipments is normally reached about this time of the year, and the 1923 season is running true to form. The largest day's movement, 644 cars, for the season was reached October 15. Apple shipments are going out of the state, chiefly through the Spokane gateway at the rate of about 400 cars a day on an average.

This is equivalent to 20 trains of 20 cars each every 24 hours, almost one an hour. In 17 days in October 7000 cars, or about 5,000,060 boxes, were shipped out.

SHEEP INDUSTRY IMPROVES.

The sheep industry in Washington in 1923 produced an income of some $3,500,000. Sheep men figure that the profits in 1923 and in 1922, another good year, have made it possible to liquidate from one-half to two-thirds of the indebtedness incurred in the "off" years of 1920 and 1921.

Washington wool growers in 1923 ran 500,000 sheep. They clipped from 4,000,000 to 4,500,000 pounds of wool. Wool prices ran from 26 to 40 cents a pound. Most of the clip was sold under 35 cents and 32 cents is probably a fair average price. This would bring a total return of from $1,280,000 to $1,440,000 for wool alone. There were about 300,000 lambs, which were sold at an average around $7.50 a head. Washington lambs weighed from 60 to 90 pounds, averaging perhaps 75 pounds. For the season 10 cents a pound is regarded as a fair return in the Inland Empire. On this basis, the 1923 lamb crop brought in around $2,250,000.

Virtually all the lambs have been shipped, barring the late lambs, small animals, pee-wees and cutbacks, which will be fattened this winter. The number is not great, but every sheepman has some of this type.

Enforce the Constitution

Don't Let Any Governor "Pass the Buck" on Volstead Law

It is the sworn constitutional duty of President Coolidge and of each of the governors of the 48 states of the Union to enforce in vigor and sincerity the 18th amendment to the Constitution and the Volstead law.

That was the gist of the president's address at the recent notable conference of the president and a majority of the governors, at the White House in Washington.

Friends of law enforcement everywhere should be on guard against any attempt by a governor to "pass the buck" by asserting that it is the sole duty of the president to enforce the Constitution and the Volstead law.

It would be just as false for a governor to assert, if the United States were at war, that it was the exclusive duty of the president to fight the war without aid from the states.

President Coolidge stated the case in a nutshell when he told the assembled governors that "no provision of the 18th amendment or the national prohibition act contemplates any surrender of state responsibility. * * *"

After he had pointed out that it was the clear duty of the executives of the United States, both the president and the governors, to defend the Constitution and protect the public against law-breakers, President Coolidge declared:

"I propose to give that support and protection to the limit provided by the Constitution and the law of the land against every lawless element."

And at another point the president declared that the machinery of the law "must be used to the full extent of its capacity to secure the enforcement of the law; it is certainly my own purpose so to use it."

Any governor who may try to shirk his own duty by calling on the president to do all the law enforcing against rum-runners, bootleggers and moonshine makers will justly be regarded by the public as in sympathy with them and as playing into the hands of the criminal elements.

That applies with special force in states like Washington, Oregon and Idaho, which had state prohibition before national prohibition was adopted. The federal government stepped in to help them, when the 18th amendment was adopted and the Volstead law passed, not to make it easy for "wet" governors or dodging governors to slip out from under their duty of enforcing prohibition.

Shrewd Manipulations Somewhere

As shown by the records of the United States department of commerce, grain exports during the week ended September 1 totaled 9,214,000 bushels, an increase of 4,764,000 bushels, as compared with exports the previous week. Exports of wheat during the week ended September 1 totaled 8,215,000 bushels, as against 3,271,000 bushels the previous week.

But there must have been "a nigger in the woodpile" somewhere, for the price of cash wheat on the Chicago market at the end of the week of these heavy exports was actually lower than at the beginning of the week. On August 25 No. 2 hard cash wheat was quoted on the Chicago exchange at from $1.05 to $1.07; one week later the quotation was $1.05 to $1.05 1-2.

How do the foreign buyers and the American exporters do it? How do they contrive to slip into the market and make heavy purchases and not run up quotations against themselves? Suppose it had been the other way around; suppose the foreign demand, which had been more than 8,000,000 bushels in one week, had fallen to 3,000,000 bushels. Why, that, of course, would have knocked the price There must be shrewd manipulation somewhere; there must be peddling of a lot of false information. A vigorous investigation by the department of agriculture, the department of commerce and the big grain growers' associations should illuminate this dark subject.

Does It Point the Way?

Shall the Fig Tree Be Given Another Opportunity to Make Good?

A certain man had a fig tree planted in his vineyard: and he came and sought fruit thereon, and found none. Then said he unto the dresser of his vineyard, "Behold, these three years I come seeking fruit on this fig tree, and find none; cut it down; why cumbereth it the ground?" And he answering said unto him, "Lord, let it alone this year also, till I shall dig about it, and dung it: And if it bear fruit, well: and if not, then after that, thou shalt cut it down."—St. Luke XIII, 6-9.

First impressions may hold good, and then again they may not. Whatever you may say, snap judgments are dangerous. Many a person is entitled to the benefit of the doubt, who does not get it.

But the above parable gives evidence that the owner of the fig tree was not hasty in giving his order to have it cut down. He had given the tree a reasonable trial. For three years he had been seeking fruit and found none. Yet the plea was made for one more trial. Not only was the tree to have another trial, but that trial was to be made under better circumstances. It was to be especially cultivated and fertilized. Evidently the stress of work in the vineyard had prevented this individual attention.

After usual trials, perhaps a little additional personal attention is needed to save a worker from utter failure, to save the child from the fatal pathway, to save the trusted agent from the penitentiary.

The New Testament goes the limit on this line: "Then came Peter unto him, and said, Lord, how often shall my brother sin against me, and I forgive him? Till seven times? Jesus saith unto him, I say not unto thee, until seven times; but until seventy times seven."

You say that is not practicable. But does it point the way? Are you utterly dead to its meaning?

FARM BUSINESS AND MARKETS OUTLOOK

RECENT prices of important farm products as combined in various index numbers average the highest they have been in many months and show that they are making some progress toward rising to the level of prices of other commodities.

The index figure of the farm price of 10 leading crops on October 1, combined by the United States department of agriculture, was 172.5 compared with 135.5 a year ago, or a gain of 37.3 per cent. This year's figure was the highest since November 1, 1920. Corn and cotton bear chief responsibility for the favorable comparison.

Wheat lags behind. Last year at this time No. 2 hard wheat in Chicago was quoted at $1.14 1-2@16; this year, $1.07@1.12. No. 2 red last year was $1.17@17 1-2; this year it is $1.11.

The department's index of farm prices of meat animals on September 15 was $7.68, the highest since October 15, 1922. It was practically unchanged from the corresponding date one year ago, but 8 per cent higher than two years ago.

These index numbers do not cover live stock products, of which milk and butter are substantially higher than a year ago, eggs about the same price and cheese slightly lower. Some grades of wool are quoted lower, but the majority are higher.

The index numbers compiled by the bureau of labor statistics confirm findings of the department. The September index of wholesale prices of farm products was 144, compared with 133 a year ago and with one minor exception the highest since December, 1920. Likewise the "foods" group, which includes many unprocessed farm commodities, was 147, compared with 138 a year ago and the highest since March, 1921.

The bureau index for all commodities was 154, against 153 a year ago. Farm products are only about 5 per cent below the all-commodity group, whereas a year ago they were 11 per cent below. The exchange value of farm products is higher than last year, but is still considerably below normal, especially in purchasing clothing, fuel, building materials and home furnishings.

Weak Spell in Cattle Trade.

Cattle markets have been unusually sympathetic to supply conditions in the last month. The public is consuming beef with avidity, so that every light run brings an advance, which is taken off as soon as the country can respond by heavier loading. Smaller arrivals permitted an upturn early last week, but a larger supply later on, especially at Chicago, which had the heaviest run of the year, put the price-making function in the hands of the buying side once more and values are lower nearly all along the line.

Leading market centers report a big percentage of short-fed steers and country advices to commission houses show that many more will be unloaded on every hard spot owing to the advance in corn, and the wobbly habit of the fat cattle market. Heavy steers, which were scarce a few weeks ago, are now so abundant that fat yearlings are bringing a small permium at Chicago. Western rangers are coming fast and numerous. Indications are seen that some western breeding stock is going to the shambles. The peak of receipts will probably be passed in the next month, after which the pressure on prices should gradually diminish.

Packers are not accumulating frozen beef, as they formerly did at this season, which means that practically the entire supply must go into current consumption. In the past several hundred thousand carcasses went into "sharping" plants each fall. On October 1 only 27,060,000 pounds of frozen beef were in storage, compared with a five-year average on that date of 99,616,000 pounds.

With feeders anxious to empty feedlots filled in the last two or three months, fresh demand for thin cattle has not been brisk and the movement to the country in the last two weeks has been about 25 per cent less than in the same period of 1922. The available supply of stockers and feeders has been ample.

Hog Market Supply.

Receipts of hogs have reached recent midwinter volume already. As eastern shippers bought more sparingly, prices lost their recent showing of stability and values melted fast. The Chicago top was more than $2 below the September high point and the lowest since July. Receipts probably will increase another 25 per cent before reaching the peak, so that no advantage in holding back finished hogs is apparent.

Decline in Lambs Checked.

Lamb prices broke sharply early last week as a result of congestion in the eastern dressed trade, which reduced shipping competition at middlewestern pointss. Receipts are gradually falling off, however, so that the market is beginning to recover. Lambs placed in corn fields are returning to market in increasing volume and the supply available for slaughter will be ample during the next 60 days. The farm-feeding states have taken and are still taking an unusually large number of thin lambs each week and most of these must come back before February 1. Colorado and adjacent feeding districts appear to be putting more lambs on feed than they were expected to do at the time of the recent government survey.

Wool Market Steady.

A moderate demand for wool continued in seaboard markets last week. Lower qualities were in greater demand than the finer sorts, although a few buyers favor the latter, anticipating a shortage later on. Both primary and secondary foreign wool markets are firm, especially for good wools at prices above our market, so that very little is being brought to come here. The fall clip in the southwest is now being shorn and moderate quantities are for sale, although growers are holding for prices above a parity with eastern markets. The woolen goods market is in a more healthy state.

Wheat Regains Firmness.

Although only part of the recent loss in wheat prices has been recovered, the market shows a firmer undertone than a week ago. Hope of some form of governmental aid was a factor as well as the lack of pressure of cash grain on domestic markets.

Exports have been much better right along than the reports from grain trade circles indicated. Over 70,000,000 bushels have been cleared since July 1, or an average of 750,000 bushels for each business day. By the end of October nearly half of our calculated surplus will have been disposed of. Little difficulty should be experienced in selling the balance in the remaining eight months of the crop year in spite of competition form other countries. The likelihood that the markets east of the Rockies will go on a domestic basis remains an important consideration for the future.

The world's wheat situation is weak, however.

Rye has encountered keen competition abroad and exports have been extremely small recently. The visible supply keeps gaining. Prices have become firmer with wheat, however, as the crop was quite small and stocks are getting into stronger hands.

Sharp Break in Corn Market.

The corn market became decidedly top-heavy last week when receipts of new corn began to indicate that a fairly heavy movement could be expected soon and buyers backed away. Prices dropped 10 to 15 cents within a few days. The trend is likely to continue downward until a more normal level is reached.

Oats prices showed little independence of the corn market. Receipts are holding up after harvest longer than usual and the visible supply is making modest gains, although it is far smaller than in either of the last three years.

Cash Grain Markets.

The range of cash grain prices for the week ended October 24 was as follows:

CHICAGO—Wheat—No. 1 hard, $1.08@1.16; No. 2, $1.07@1.12; No. 3, $1.05 1-2@1.08 1-2; No. 4, $1.02 1-2@1.06; No. 2 red, $1.11; No. 3, $1.05@1.10; No. 4, $1.04 3-4. Corn—No. 2 mixed, $1@1.10; No. 3, $1.00 1-2@1.11; No. 2 yellow, $1.01 1-2@1.13; No. 3, $1.01 1-2@1.12; No. 1 white, $1.01 1-2; No. 2, $1.02@1.10. Oats—No. 2 white, 41 3-4@45c; No. 3, 40 1-4@44c; No. 4, 40@43c. Rye—70 1-2@73 1-2c. Barley—62@80c.

Seed and Feed.

Increasing receipts of new cloverseed have caused weakness during the last few days.

Feed markets are weak, with heavy offerings of wheat feeds at prices about $1 lower than a week ago.

Good Hay Moving Well.

Better grades of hay are in demand and are moving well, but lower grades are inclined to drag. Prices at the principal distributing markets were mostly firm under light receipts, partly due to rainy weather.

Fresh Eggs Trend Higher.

Fresh eggs are not very plentiful and are becoming scarcer, if anything. Prices advanced sharply last week and the normal trend on them for the next few weeks will be upward. The bulk of receipts show the usual seasonal irregularity in quality.

Receipts of eggs at the four leading markets thus far this month are about 20 per cent heavier than during the same period last year, indicating a heavier fall production than in 1922. The larger scale of receipts is still causing a smaller reduction of storage stocks, but the movement is not falling so far behind last year as in the same period in September, which gives promise of a more favorable outlook for the holders of storage eggs.

Receipts of live poultry continue far ahead of last year and withdrawals from the heavy storage stocks during the last month have not been so large, so that, although consumptive demand is excellent, the decline in prices last week was not surprising.

Latest quotations: Chicago—Eggs—Miscellaneous, 30@34c; dirties, 22@25c; checks, 20@23c; fresh firsts, 34@40c; ordinary firsts, 27@28c. Live poultry—Hens, 22c; springers, 19 1-2c; roosters, 14c; ducks, 20c; geese, 20c; turkeys, 25c.

Butter Market Unchanged.

Supplies of fresh butter were not large last week and reports show a continued fall in production. Prices maintained a steady level, with dealers appearing uncertain as to what might develop in the market during the next few months.

Lower British markets made Danish butter more attractive to American buyers and the sale of several thousand casks for shipment later in the month was reported. Arrivals of foreign butter at New York city last week amounted to 2300 boxes of Argentine and some Norwegian and Canadian butter. They were not large enough to materially affect the market, but future importations seemed more probable than for some time.

Storage Stocks Depress Cheese.

Influenced materially by the large and increasing surplus of storage stocks over last year, cheese prices declined sharply last week. Buyers became extremely cautious and were reluctant to purchase new stocks until their floors were entirely cleared.

Shows Importance of Seed Inoculation

Three Ways Are Pointed Out of Maintaining and Increasing the Nitrogen in Farm Lands

By PAUL W. ALLEN

Bacteriologist, Experiment Station, State College of Washington

The soil contains a chain of some 10 elements which are all necessary to plant growth. The weakest element in this chain is nitrogen. It is this element which is most often lacking in soils. Also it is this element which is most quickly exhausted, as plant life draws on it most heavily. There is no better illustration of the old saying that the strength of a chain is known by its weakest link than we have in soils. Many a farm which is considered worn out often has fair amounts of all of the elements required for large crop production except the one, nitrogen.

The crop-producing ability of much of the land of our eastern states would have been completely depleted by the farming of the last century if there had been no other source of nitrogen for these soils except the purchase of nitrates. However, the eastern farmers have been forced to become experts in the practice of crop rotations in which some legume crop acts as the benefactor of the others. In Canada a soil containing very little nitrogen in a few years was found to have 170 pounds of nitrogen per acre, due to the growing and turning under of a legume crop each year.

It is true of most sections that one man during his active life time can remove enough of the natural nitrogen of the soil by continuous cropping with wheat or other nonleguminous crop to reach a point of soil depletion where crop growing is no longer profitable.

Three Possibilities.

There are three main ways of maintaining or increasing the nitrogen of farm land: (1) The growing and turning under of legumes. (2) Live stock farming in which more or less feed is purchased and the manure used. (3) Purchase and use of nitrogenous fertilizers.

Of course the method of maintaining nitrogen is determined by the surrounding condition. However, there are few localities where other methods of returning nitrogen to the soil have been found to be cheaper than the method which utilizes legume crops. The air is calculated to be 50 miles thick and is four-fifths nitrogen, but farmers have no way of utilizing any of this nitrogen for crop growth except as they grow legumes.

A Partnership Affair.

The legume plants, such as alfalfa, clover, sweet clover, peas and vetch, differ from all other plants in that they have a way of obtaining nitrogen from the air. Legume plants are not able to do this alone, but nature has furnished them with an ability to enter into a sort of partnership with certain bacteria called legume nodule bacteria. These bacteria are sometimes found in the soil and sometimes they are lacking in the soil. When they are present they will enter the root system of the legume plant and cause the formation of nodules as a sort of home for themselves. These bacteria then begin to gather nitrogen from the air of the soil and to furnish it to the plant, which aids the plant's growth. The bacteria in return use as food part of the sugars and carbohydrates which the plant forms from carbonic acid gas and water. This is a most striking case of a very successful partnership between a plant and bacteria of the soil.

Should Inoculate Seed.

Farmers are beginning to realize the great significance of the partnership and are making seed inoculation one of the important steps to be taken in the planting of legumes. Some farmers take it for granted that their soil is inoculated sufficiently for the successful growth of legumes; in other words, they leave this important factor in legume growing to chance. This is poor practice in face of the facts that legume seed inoculation costs so little, while the failure of a crop of legumes due to the lack of inoculation costs so heavily. Proper legume inoculation has been made the subject of investigation at the Washington experiment station for the last seven years and considerable progress has been made in obtaining legume cultures which are especially adapted to Washington soils and climates. This work has been considered so important that it has been the custom for some years for the experiment station to furnish pure legume cultures for inoculating any of the legume crops to all farmers applying for them. A charge of 25 cents per acre is made to partly cover the cost of preparation. By furnishing these cultures it is felt that farmers are aided at one of the most difficult points in legume growing. These cultures may be obtained by any farmer in the state by applying to the department of farm crops, Washington experiment station, Pullman, Wash.

Most people who have had experience in the growing of leguminous crops think in one of two ways. Either they are very enthusiastic over the possibilities of certain leguminous crops or they feel that legumes have little use in the operations of their particular farms. It is true that there are many places where the growing of legumes is impossible; however, very many failures with legume crops are due to the fact that the farmer does not understand the conditions required by this crop well enough to secure the best crop possible on his particular farm. This is shown by the fact that the growing of alfalfa and clovers has steadily increased in the last 20 years in the country as a whole. It has only been during the last few years that the factor of inoculation has been considered as important as the preparation of the soil and the selection of proper seed.

A cross-section of the root system of an alfalfa plant in loamy soil, showing how the roots sink deep into the soil for moisture, also how nodule production is greatest in the upper layers of the soil, where there is most air.

An early June crop of a well-inoculated field of alfalfa. A yield of better than five tons per acre was obtained the third year, part of which was harvested and part turned under. Soil nitrogen was not sufficient to produce a crop in former years when inoculation was not practiced. Inoculation made the difference between success and failure on this field. It is calculated that about 1400 pounds of atmospheric nitrogen was fixed by nodule bacteria in one year.

Much Farm Land Needs Drainage

By L. J. SMITH,
Professor of Agricultural Engineering, State College of Washington.

The subject of drainage should be of interest to Washington farmers, for over 10,000 farms are now enjoying the benefits of drainage, and the last census report tells of 14,323 farms needing drainage to a greater or less extent. These farms are in nearly every county in the state. It is estimated that over 500,000 acres of land could be improved by drainage. It is a curious fact, however, that it is easier to interest land owners in expending money for putting water on land to increase production than it is to get them to pay out money to remove superfluous water, which will also greatly increase production and the value of their lands.

Farm drainage dates back over 200 years when tile drains were discovered in the "magic gardens" of a monastery in France. There was no record as to how long they had been used. Tile drainage was first practiced in New York state in 1835. Tile under-drainage, properly planned and installed, is a permanent improvement on the farms.

There are many benefits to be derived from land drainage. The main ones will be briefly enumerated.

Drainage removes excess water, thus lowering the water table so plants can live.

Drainage warms the soil. Wet soil is cold and a cold soil holds back germination.

Drainage enables plants to develop deep root systems and therefore resist drought to a much greater extent.

Drainage makes available the richest soil on the farm. Drained land almost invariably produces greater crops than the surrounding land.

Drainage increases the capillary supply of moisture and improves the structure of the soil, facilitating cultivation.

Drainage also permits better air circulation and assists in the liberation of plant food.

Drainage assists the decay of vegetable matter in the soil, and aids in nitrification.

Drainage assists in preventing erosion and soil washing by the removal of excess water.

Drainage puts the soil in condition to work earlier in the season, and lengthens the growing season from one week to over a month.

Drainage prevents the rise of alkali and stops heaving and the freezing out of plants.

Drained land will resist drought better than partially drained soil.

The draining of isolated small wet spots makes it possible to work the whole field at one time.

In general, drainage improves the sanitary conditions in the country and promotes greater healthfulness on the farm.

A circular letter of inquiry to farmers having drained land invariably brings the reply that land drainage certainly pays.

Wild Morning Glory

"What am I going to do with that wild morning glory?" is the question being asked by many Washington farmers. The morning glory is a dangerous weed and is spreading rapidly where no effort is made to control it. The weed spreads by seed and by root and from a small beginning will soon occupy the entire field.

The time to fight this weed is when they are few in number, is the recommendation of Leonard Hegnauer, extension specialist in crops and soils. It can be done in the early stages in the best possible way and at small expense. When they have once spread over the field the problem becomes very much more serious and the expense is far greater.

"During the last summer," said Mr. Hegnauer, "some successful demonstrations have been carried on in Walla Walla county on summer fallow land. The demonstration showed that carbon bisulphide will do the work and can be successfully used where conditions are favorable.

"Where a patch is to be treated with this material holes 18 inches deep and three feet apart are made in the ground. These holes can be driven with a sledge and an inch and a half iron bar, some three feet long. About four ounces of the liquid should be poured into each hole and the hole tamped with dry earth. In one week's time the tops begin to show the effect of the treatment and in a month the vines will be dead.

"Carbon bisulphide should be used while the soil is quite dry in order to let the gas spread as far as possible. When the soil is dry there is more air in it than when wet; and since the carbon bisulphide is heavier than air, it can readily displace the air and will spread fast in dry soil."

The use of carbon bisulphide can be recommended for small patches and has been used successfully in California, as the result of the experiment station of that state.

Plan Feeding Tests

More experimental feeding will be carried on at the irrigation branch experiment station at Prosser this season, according to R. P. Bean, superintendent of the station. From 100 to 125 steers will be fed on hay and silage during the winter. One car of these may be stockers, which will be fed only refuse hay from the lamb pens and silage. The experiment will involve varying amounts of hay and silage in order to ascertain the most profitable ration.

There will also be 1000 lambs, which will be fed under a more practical feeding experiment than was carried on last year. Mr. Bean expects to fatten off a few of the heavier lambs as soon as possible during the winter, and not hold them all until the lighter ones are ready to go to market. The lighter bunch, however, will be fed a lighter grain ration, but fed over a longer period of time.

Any Bargain Shipped On Approval!

Send No Money

Not only do we claim that these are the biggest bargains in the U. S. A.—we are ready to prove it at our own risk—not yours. We don't ask you to take our word. We invite you to select any articles on this page and order them entirely on approval. You be the judge when goods arrive. If you are not delighted with their quality and positively amazed at their dollar-for-dollar value, simply return the shipment and you will not lose a cent.

Don't send one cent. Just letter or postcard brings you any of these smashed price bargains. Merely give Name and Number of each article you want. Also state size and write your name and address plainly to avoid delay. Pay nothing till goods arrive—then only the amazing price and postage. If you are not delighted with your bargain for any reason at all simply return the goods and your money will be cheerfully refunded. ORDER NOW. If you buy NOW, you'll BUY RIGHT!

PAY ONLY WHEN GOODS ARRIVE!

Fur Trimmed Coat for Girls and Children

$4.48

Girls' stylish coat of polo that insures real service. Has warm Coney fur collar. Two novelty pockets. All-around belt. Novelty buttons, trim pockets and belt. A durable coat at an amazingly low price. Sizes 7 to 14 years. State size wanted. **Order navy by No. 52E7308. Brown by No. 52E-7310. Send no money. Pay $4.48 and postage on arrival for either color.**

Same quality for children furnished in sizes 2 to 6 years. **Order navy by No. 52E7458. Brown by No. 52E7460. Send no money. Pay $3.48 and postage on arrival for either color. State size.**

Manchurian Wolf Scarf

$3.69

Look at this beautiful, soft, inexpensive Manchurian wolf scarf lined with messaline silk. Length about 44 inches. Width about 12 inches. Tail about 18 inches long and bushy. **Scarf by No. 52H9000. Order brown scarf by No. 52H9001. Send no money. Pay only $3.69 and postage on arrival.**

Women's Wave Top Walking Boot

$2.69

Women's all solid leather wave top walking boot, comes in brown or black calf finish leather; built on sensible rounded dress toe last; one-piece solid leather inner sole with steel shank, solid leather counter, outing sole and heel with rubber tip. Sizes 2½ to 8. Wide widths. **Order black calf by No. 52S203. Order brown calf by No. 52S204. Send no money. Pay $2.69 and postage on arrival.**

Sporty Style Silk Seal Plush Coat For Women and Misses

$9.98

Where else can you buy a genuine silk seal plush coat of this jaunty style and splendid quality for such a low price? Beautifully modeled of soft, warm, lustrous, deep pile silk plush with full lining of beautiful flowered sateen. Newest loose back flared style with belt. Wide 10-in. shawl collar, two pockets and roomy bell sleeves. Length about 34 inches. Women's sizes 34 to 44; Misses' 32 to 38 bust measure. State size. **Order No. 52E-7000. Send no money. Pay $9.98 and postage on arrival. Money back if not satisfied.**

Pretty Black Velvet Egyptian Strap Pump

$2.48

State Size

An absolutely new and novel Egyptian style dress pump of rich black velvet. Medium pointed dress toe and patent leather trimming as pictured. Patent leather vamp, collar and instep straps fastened on each side by buttons. Neat perforations at sides. Fancy carved Egyptian slave ornament on vamp. Leather insole; genuine oak outsoles; medium height, rubber tipped leather heel. Sizes 2½ to 8; wide widths. **No. 52S257. No money now. Pay $2.48 and postage on arrival. State size.**

Hi-Cut Lace Brown Dress Shoes for Children and Misses

$1.79 Up

Extremely dressy boot of serviceable calf finished leather. Pretty wing tip with medallion on full rounded toe, perforated vamp, quarter and eyelet rows. One-piece extension oak sole and low heel with rubber top lift. Wide widths. **Child's sizes 8½ to 11, No. 52S439. Price $1.79. Misses' sizes 11½ to 2, No. 52S440. Price $1.98. Growing girls' sizes 2½ to 8, No. 52S441. Price $2.48. Send no money. Pay bargain price and postage on arrival. State size.**

Men's Four-Buckle All Rubber Arctics

$2.79

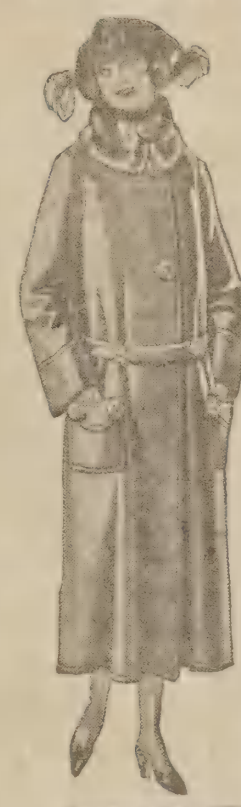
State Size

Order Quick.

Guaranteed best quality all rubber 4-buckle hi-cut arctic for men. Made with double thick soles and seams reinforced, snow-excluding tongue. Furnished in men's sizes 6 to 15. Wide widths. Sensational value. Send quick. **Order by No. 52A990. Send no money. Pay $2.79 and postage on arrival.**

Fur Trimmed Thibet Coat For Women

$5.98



Another sensational value in a warm winter coat. This becoming model is of splendid Thibet cloth in choice of rich brown or navy blue. The ample collar is of genuine brown Coney fur. Coat is finished with all-around self material belt and two patch pockets, trimmed with pretty buttons. Imitation cuff is also button trimmed. Coat measures about 48 inches long, and comes in sizes 34 to 44 bust.

Order brown by No. 52E7094. Navy by No. 52E7096. Order black by No. 52E7095. Send no money. Pay $5.98 and postage on arrival. State size.

Women's Patent Leather Gun Metal or Brown Calf Finished Oxfords

$1.98

Made with imitation shield tip and medallion perforated vamp, perforated lace stay and circular foxing. Has medium rubber heel and medium pointed toe. Sizes 2½ to 8. Wide widths. **Order patent by No. 52S121. Order gunmetal by No. 52S122. Order brown by No. 52S123. Send no money. Pay $1.98 and postage on arrival.**

State size wanted

Dressy Finish Walking Boot for Women

$1.98

State size.

Choice of two colors.

Women's black or brown kid finish leather hi-cut lace walking boot. Perforated stitched tip with medallion on toe; neat perforation at vamp and lace row. Medium extension oak sole with rubber tipped walking heel. Sizes 2½ to 8. Wide widths. **Brown kid finish, No. 52S195. Black kid finish, No. 52S194. Send no money. Pay $1.98 and postage on arrival for either color. State size.**

Men's Dress Shoes

$2.98

Give Size.

Men's French-toe dress shoes or oxfords in brown mahogany calf-finished leather. Have brogue toes, oak soles and rubber heels. Perforated on vamp, toe and eyelet stay. Sensational values. Prepare for the Future

By F. J. SIEVERS, State College.

The farmer, in his strenuous efforts to readjust himself and his practices to the change in economic conditions resulting from the war which has had such a depressing effect on the purchasing power of his dollar, is being offered a mass of free advice. This advice comes from many sources, and, if it were taken at all seriously, would have a tendency to demoralize agriculture to the extereme.

Foremost among such advisers are those who are apparently attempting to leave the impression that the farmer at this time is well qualified and thoroughly understands the business of producing crops and should give preferred consideration to his system of farm accounting and to greater efficiency in the marketing of his products, subjects which, according to their notion, he has utterly neglected. There is an effort to lead him to believe that greater efficiency in marketing and a more accurate check on cost of production offer a complete solution of his problems.

The improvement in marketing conditions is also a consumer's problem, and the public is not justified in putting the burden of responsibility in perfecting a more efficient marketing system on the shoulders of the farmer, whose primary business is and always should be crop production. The fact of the matter is that if the urban consumer had given as much consideration to better and more efficient marketing as these problems have received from the rural population, many of the present unsatisfactory conditions would not exist.

Notwithstanding the importance of marketing, the business of efficient crop production is big enough and worthy of the best efforts of the farmer, and this is not the time for him to slack up in acquainting himself with the best and most scientific methods of producing farm products. The axiom, "In time of peace prepare for war," applies fully to the present agricultural situation. Agriculture is so basic in our national economic development, and is and always will be so open to competition, that any factor, be it marketing or what not, that will improve the status of the farmer will also improve equally the conditions affecting society in general.

The agricultural colleges the country over have had decreased enrollments during the last few years as the direct result of the poor reputation that farming has at the present time. The wise student is the one who has sufficient imagination and foresight to realize that this condition must change and change very shortly, and that he who prepares for efficient service along agricultural lines at this time will be in line to enter into an active participation and help satisfy the demands for well-trained men in agriculture which will necessarily come in the course of a few years.

With a full realization of this condition, the agricultural college of the Washington State college is putting more emphasis on the development of a successful short course this year than it has done for some considerable period. Beginning with the 8th of January, 1924, there will be offered at the state college one eight weeks' short course in diversified farming, in which special emphasis will be placed on all factors pertaining to the more profitable management of live stock and the most effective methods in crop production as determined from recent investigational work. This course is short, but exceedingly practical, and a special effort is made to aid the student, not only in comprehending the fundamental principles upon which the successful production of agricultural products is based, but upon the application of these fundamentals to diversified systems of farming adaptable to the various sections of Washington.

Beginning with January 8, there will also be offered two very specialized courses of four weeks each. The one in horticulture, planned especially to meet the demands of the student interested or at present engaged in commercial fruit production, will cover systems of soil management, storage and marketing and also problems pertaining to insect and disease control. The other is a specialized course in dairying, planned particularly for general farmers who are giving major consideration to the business of converting farm crops into dairy products. This course will deal with problems pertaining to breeding, feeding, housing and the general management of dairy herds.

Besides these courses the institution at that time will also offer specialized two weeks' courses pertaining to the operation of gas engines and tractors, the official testing of dairy cows and the operation of creameries. These courses have been very successful and much appreciated in the past and should develop considerable interest at this time.

All of these courses are open to any one who can read and write and is above 16 years of age. Any information desired concerning further details pertaining to any special feature regarding these courses may be obtained by addressing a letter to the dean of the college of agriculture, State College of Washington, Pullman.

Storing Potatoes

"Proper storage of potatoes has much to do with their keeping qualities and the work should begin during harvest," says George L. Zundel, extension plant pathologist of the state college. "When handling potatoes care should be taken not to break the skin, since an injury always gives fungi a chance to enter the tuber and cause storage rot.

"To help overcome the damage to the potato crop I would suggest that the potato cellar be disinfected by using either bluestone at the rate of one pound to 10 gallons of water or formaldehyde at the rate of one pint to 10 gallons of water. Spray on bins and walls.

"Provide each potato cellar or storage house with inlets for fresh air and outlets for foul air. Also provide false floors and walls for the bins. Have an air space between bins.

"Never store potatoes in piles more than five feet deep without making some provision for air to get to the center of the pile. Lastly, do not dig more potatoes than can be put in storage the same day.

"Every one is familiar with the 'mushy' frozen potato. Where the potatoes are kept in a temperature of around 30 to 32 degrees F. for only three hours there will be black streaks formed on the inside, though the outside may look perfectly good.

"Insufficient air in the storage house will cause a superficial breakdown, which appears as dark, sunken spots on the outside of the potato. Black heart is also caused by too high temperatures and lack of fresh air."

Try Out Vetches

J. D. Sanford and Earl Dibble of Sequim, under the direction of County Agent A. W. Holland, tried out six varieties of vetch. The trail was made to determine the best kind of vetch to seed for growing in Clallam county. In the six varieties they found a difference in yield of from 1206 pounds per acre with Tangier peas to 6090 pounds per acre with Pearl vetch. Monanthos vetch yielded 4900 pounds per acre, Hungarian vetch 3228 pounds per acre, while winter hardy vetch and common vetch averaged 1750 pounds per acre. Cliff Wilson of Forks reports that vetch is growing well in his community.

NEXT YEAR'S LAMBS.

For a larger lamb crop turn your breeding ram with the flock at night. Feed him a pound daily of oats and bran.

Drainage Pays

Those Who Try It Increase Areas

By A. B. CRANE, Specialist in Drainage.

One encouraging feature in the development of drainage in the various counties of the state is the fact that many who put part of their lands under drainage come back for an extension of the work on the rest of their lands. They have found that drainage pays.

J. F. Dilling, living near Port Angeles, in Clallam county, is one of the men who sings the praises of drainage on his farm. On May 26, 1920, he had the specialist visit his farm and plan for about 10 acres which at that time was so wet teams could not drive over it and the specialist himself sank more than ankle-deep while planning out the drainage. Mr. Dilling put tile in here at once and, though it was late when planted, sowed it to oats. In the fall he harvested 70 bushels per acre. Previous to that he got about 35 bushels. He laid 1660 feet the first year. The results were so marked that he put in 900 feet more the next year, 1921, following it in 1923 with 700 feet more, now having about 13 acres tiled. He expects to continue with another 1000 feet in the near future.

Mr. Dilling freely commented on several interesting points relative to the advantage he derived from the drainage of this field. He says, "My tile being all covered, I lose no land, as I would with an open ditch and its attendant bank growing up to weeds, but, on the contrary, my crop is better and cleaner over the tiles than in any other place. Neither do I have to clean them out every year, as I had to do with open ditches."

Mr. Dilling has been demonstrating the advantage of manure on his drained field. He is putting on barnyard manure supplemented with 100 pounds of phosphate to the acre. "I think my fertilizer is worth about 100 per cent more on my drained land than on the undrained," is his answer to that question.

Results such as Mr. Dilling reports should be a great encouragement to others to make the necessary improvements on their lands. One hundred per cent increase in crops, with practically no increase in the cost of production per acre, will, in most cases, change the balance of the account from the debit to the credit side of the ledger.

The Farm Flock

Some excellent suggestions on the selection of breeding ewes is given by Eugene L. Harms of Pullman, who has had several years' experience in raising Hampshire, Shropshire and Oxford sheep.

"In selecting our foundation farm flock," said Mr. Harms, "we picked especially for a uniform lot of ewes of balanced mutton conformation, dense fleeces, good teeth and good udders. We prefer black-faced ewes, because they have, as a rule, a blocky conformation, and the market lambs, sired by black-faced rams, are of the same type. The buyers like them. Their black or dark faces appeal to the buyer as well.

"We also prefer the black-faced ewe of Hampshire, Shropshire or Oxford breeding for the wheat section because they carry a finer quality of wool, which brings a higher price per pound than do the long wool breeds of sheep. We always use high-class purebred rams of the same breed from year to year. Lambs by good purebred black-faced sires are worth from $1.75 to $3 more than those by scrub or ordinary grade rams."

In speaking of Mr. Harms' success, C. M. Hubbard, live stock specialist of the state college, also suggests that 20 to 25 bred ewes may be sufficient for the inexperienced farmer. If unbred ewes are secured, then have 50 head.

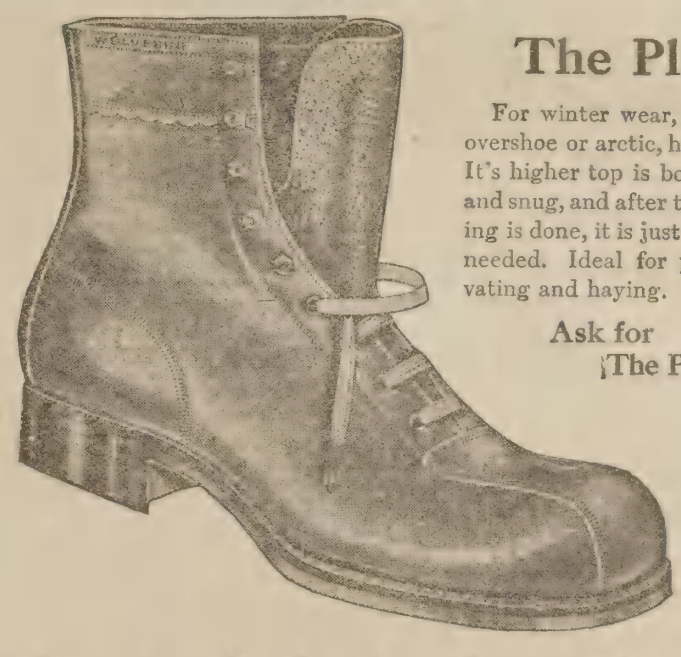
"Select uniformly short-legged, deep-bodied, dense-fleeced ewes, carrying broad chests and well-filled rear quarters," says Mr. Hubbard.

"Do not select coarse, overly-developed, long-legged ewes, but rather the compact type carrying quality. Examine the mouths carefully, eliminating any broken-mouthed ewes (those which have lost teeth). However, if older ewes are being selected at a lower price this does not apply.

"Examine closely for spoiled udders on ewes which have lambed previous seasons. Their udders should be soft and pliable, like a cow's, not hard or lumpy. Old ewes of high grade may be taken, but not those which are failing in health. If the ewes are bred be sure it was to a good purebred ram; if not bred be sure to purchase a good purebred sire of any of the black-faced breeds."

ADOPT IMPROVED METHODS.

Poultry management practices, advocated by extension workers to increase economically the quality and quantity of poultry products, were adopted in 1922 on over 259,000 farms, according to reports to the department of agriculture.



The Planter

For winter wear, underneath an overshoe or arctic, here is the shoe. It's higher top is both comfortable and snug, and after the spring plowing is done, it is just the shoe that's needed. Ideal for planting, cultivating and haying.

Ask for The Planter

Stays Soft in Any Weather

A 1,000-Mile Shoe— From Tanners to You

Every man knows what it is to dry out wet shoes. The leather dries out stiff as a board, hard and uncomfortable.

Now this discomfort is ended. For, thanks to our exclusive, secret, double-tanning process the Wolverine shoe dries out after every soaking as soft as new buckskin. *This amazing shoe stays soft.* No other shoe made like it!

We tan the leather in our own tannery. We take selected horsehide of the superfine quality, formerly used for expensive Cordovan shoes and Cossack saddles—the toughest, longest-wearing leather known. Yet by our secret tanning process we give this wear-resisting leather the softness and pliability of buckskin. It never loses its softness—and it wears and wears and wears. For we even increase its natural durability.

Wolverine Comfort Shoe

Tender feet welcome these shoes. They're soft and flexible as a moccasin, yet wear like iron. And so light and easy, you'll never know they're on duty. For tender feet or where you do not encounter wet weather, wear this comfort shoe.

Unusual Economy

Work Shoes for All Purposes

We operate our own tannery and our shoe factory as one organization. This effects very large economies. So every Wolverine shoe is very low priced when you consider the quality.

There is a Wolverine for every use. For field and shop, for lumbering and hunting, for the mines and the oil fields. The model shown in the picture is ideal to wear under arctics. The ever-soft leather in every model assures perfect comfort always. This new-day shoe is the one all men want.

If your dealer can not supply you we will see that you are supplied.

LIVESTOCK AND DAIRY

Feeding Suggestions

Here are a few suggestions for the live stock man that were found at some of the smaller fairs this year in a college extension service booth:

A good mineral mixture for hogs can be made by mixing 25 pounds of salt, 50 pounds of bone meal and 50 pounds of charcoal or wood ashes. For larger or smaller amounts these ingredients may be mixed in the same proportions.

A good ration for developing a litter of pigs for breeding purposes is made of 30 pounds of ground barley or ground corn, 30 pounds of ground oats, 30 pounds of mill run or bran and 10 pounds of tankage or fish meal.

A good ration for fattening hogs for the market, when they are placed on feed at 100 to 125 pounds weight is made as follows: Sixty pounds of ground barley or corn, 20 pounds of shorts or mill run and 10 pounds of tankage or fish meal.

A good program for fattening steers is to utilize during the first part of the fattening period alfalfa stubble, corn stalk or beet-top fields; the second period give them alfalfa hay and a good silage; the third period add five to 10 pounds of corn or barley to the daily ration of alfalfa and silage.

Warns Against Diseases

"Cholera is by far the most deadly and dangerous of all hog diseases," says Brick Burford, secretary of the Whitman County Farm bureau, who reports some loss in the western part of that county. "It must be remembered that it is a highly contagious disease and may be transmitted quickly and easily to sound herds either by contaminated water and foods, or farm animals, such as horses, dogs, cats and birds carrying the disease germs. If there are diseased hogs in your neighborhood, stay away from these diseased premises and be careful about visitors coming to see your swine. Disinfect before and after leaving these areas. If you note symptoms of sickness, isolate immediately and call a veterinarian. The same may be said with all other farm animals. There are instances of whole outfits of teams having become diseased with laryngitis and distemper by carelessly letting horses sick with these diseases run at large with sound horses. Pneumonia many times follows both of these diseases. Save yourself time, money and valuable stock by isolating these cases and getting a veterinarian after them."

Carrots as Feed

By R. T. SMITH,
Department of Animal Husbandry,
Washington State College.

Can carrots be fed successfully to a horse that is being fed on alfalfa hay, doing just enough work for exercise? If so, in what quantities? Also are carrots good for young growing pigs and, if so, should they be cooked and what grain ration would be fed with the roots? C. C. P.
Port Orchard, Wash.

Carrots can be fed in quite large quantities to horses without ill effects. In fact, horses relish them very much. Their chief value lies in that they keep horses in a thrifty, healthy condition. It is customary to feed horses just a few carrots along with their other feed.

Carrots have a very slight value for young growing pigs when fed with balanced rations. In experiments at the Wisconsin station, roots had a value of $4 per ton when fed to fattening pigs. At this price it would hardly pay to feed carrots to pigs.

There is no advantage gained in cooking carrots, and unless they are very cheap in price or culls, I do not advise feeding them to pigs.

VETERINARY

By DR. S. B. NELSON.

Distemper—I have had several of my dogs die from distemper. Is there any remedy for it? J. H. C.
Hoquiam, Wash.

I would suggest that you have the dogs vaccinated with dog distemper vaccine against this disease.

Poll Evil—I have a mare that has a swelling back of her left ear that is about a foot long and larger than a man's hand laid lengthwise of her mane. It terminates in a running sore over her eye or rather near her ear—they call it poll evil. O. T.
Odessa, Wash.

Your animal has a poll-evil, as you say. She should be operated and the operation would include the removal of part of the bone on top of the head so as to give drainage down over the face. You can not get thorough drainage in any other way. Any competent veterinarian can operate your horse for you.

Loss of Appetite—I have a cow that seems to have lost her appetite. Last January she was sick with pneumonia, but freshened in April in good shape and gave a good flow of milk. She does not eat like the other cows. She is thin, but seems to feel all right.
Yelm, Wash. J. H.

Suppose that you try putting the cow on a tonic, such as compound tincture of gentian—one tablespoonful in a pint of water, night and morning. Try this treatment for 10 days or two weeks. Also give her on her feed either at noon or at night a half teaspoonful of powdered iron sulphate mixed with one-half teaspoonful of powdered ginger.

Lumpy Jaw—I have a bull that has a bunch on his lower jaw. It has been coming about one year. It is as hard as the bone. If it should turn out to be lump jaw will it do to use him as a breeder? J. H. S.
Hunters, Wash.

Your bull probably has big jaw or lumpy jaw. This is an infectious disease, being caused by a fungus which is discharged from the lump either through the mouth or through the skin after the lump becomes an abscess and breaks. Other animals, including calves, should the fungus enter their body would become infected. It is dangerous to have him about the place.

Hop Poultice.—I have a cow that came fresh a month ago. She is a big milker but got one of her teats badly cut so that I had to use a milk tube. She seems to be slowly drying up in that quarter and the milk in that teat is getting a little ropy. There seems to be a lump high up in her udder and a little fever. T. K.
Woodland, Wash.

There is hardly any remedy that you can use for the cow at the present time, unless you can stop using the milking tube. You have probably gotten infection into the udder. If you can milk out the udder three or four times daily and put a poultice on the udder, this probably would give relief. The poultice should consist of hop leaves retained in place by a bandage around the body and then should be kept hot with hot water four or five times daily. By using a poultice three or four times daily you may get relief for the cow.

WHITE LIGHT FROM OIL LAMP NOW

Government Tests Prove New Light Beats Electric—Sensational Invention.

A new lamp has recently been invented which burns common kerosene oil and produces a soft, white light said to be even better than electric or gas. Tests by the government and leading universities prove this new light is superior to ten ordinary oil lamps. It burns without odor, smoke or noise, is simple and economical, requires no pumping up and has been approved by the underwriters for insurance.

The inventor, W. T. Johnson, 161 Union ave., Portland, Ore., is offering to send one of these new lamps on ten days' free trial, or even give one to the first user in each locality who will help him introduce it. Write him today for particulars. Also ask him to explain his agency proposition —Adv.

Everett Live Stock Show

Shows Good Growth and Expresses Ambition to Spread Out

The second annual live stock show at Everett was held at Elliot park, October 11 to 14, inclusive, and was operated under a new name, a new plan and a greater determination to put on a real show that will establish itself as one of the northwest's important events of the year. The show is now known as the North Pacific Live Stock show. Next year the directors expect to hold the show on the 80 acres of new ground near Silver lake, where they will erect permanent buildings for the purpose.

And it was truly a live stock show. The location of the temporary buildings were such that the visitor passes out through the barns and can watch the judging before going out to the arena where the afternoon and night horse show was held as an entertainment feature. The latter was made up mainly of local horses, ridden by prominent townspeople, and the draft horses were also from Everett stables.. A showing of trained shetland ponies was entered by F. H. Divan & Son of Monroe, Wis.

"The whole thing is partly an experiment on the part of the directors, in order to ascertain if the people of Everett and the towns of the adjoining country want to turn out to see good live stock," explained Dr. H. K. Stockwell, president of the show, as he told of the plans for the future of the institution. "We were criticised last year for having a number of concessions that were not the desirable kind and we have made an emphatic ruling that no questionable concessions are to be allowed on the grounds. We have turned away several thousand dollars from these people. If the people desire and will support a clean show we will give them one."

As to the attendance, T. C. Simmons, secretary of the show, stated that the turnout was reasonably satisfactory. "We are not playing up Everett only, but are including all of northwest Washington and we intend to draw both the crowd and the animals from other parts of the state as well as Snohomish county."

It was but natural that the greater part of the cattle division should be made up of dairy cattle, although there were good representations of the beef breeds. All of the cattle were judged by W. T. McDonald of Victoria, B. C., commissioner of live stock. The hogs were placed by Hugh Nisbet of Chimacum. The horse show was managed and the placings made by F. H. McCoy of Yakima, while the poultry was judged by C. H. Burnett of Hollywood.

The Dairy Cattle.

There was some keen competition in the Holstein classes. Although the showing was made up entirely of local animals there were some fine individuals and plenty of quality. The exhibitors were: Herman Steffen of Monroe, Martin Treosti of Snohomish, Ed Hoem of Snohomish, K. Hodges of Everett, P. D. Hillis and Alex Wheeler of Snohomish and Dr. H. K. Stockwell of Monroe.

The senior and grand champion bull was Segis Pontiac De Kol Mead, the senior herd sire and sire of the seven daughters shown as his get. The senior and grand champion female was Tyee Peggy Fayne.

The three local herds of Guernseys met some real competition in the Fircrest herd from Lynden. Their splendid little show cow, La France of Bralee, was made senior and grand champion in spite of the fact that she was showing dry. Kulshan Hays May King was made senior and grand champion bull. An interesting class in this breed was the aged cow class, in which there were eight entries. The other breeders were Valley Gem farms and C. E. Entzminger of Arlington and H. J. Weiser of Everett. The herd bull, Weiser's King Tom made a close run for first place in the aged bull class. As the catalog called for a prize for the best dairy animal in the show, Mr. McDonald placed the ribbon on the grand champion Guernsey cow. One of the milk goats competed against the 11 head of cows.

The Jerseys were shown by Donald McRae of Lakewood, who entered nine head. His senior herd bull, Lady Slipper's Oxford Lad, the grand champion bull, was recently sold to Berton Brothers of Arlington, but he was exhibited as the head of the herd to show what the combining of the Oxford Lad and Hood farm blood lines have done in his herd. The grand champion female ribbon was placed on Quilceda Glory, an 18-months-old heifer that had just freshened and showed a very typy udder and splendid dairy conformation. She is sired by a son of Rinda Lad and out of a Hood Farm Pogis cow.

The Ayrshires came from the Van Tassel herd at Wenatchee, but met no competition from the local dairymen. The herd bull, Queen's Scottish Cavalier, was made senior and grand champion and Empress Lady of Wenatchee, a 3-year-old, senior and grand champion female.

A herd of six Brown Swiss cattle was shown by H. M. Hillis of Snohomish. The 3-year-old herd bull, Velva's St. Patrick, from an imported dam and sire, was made grand champion. Mr. Hillis was formerly a Jersey breeder in British Columbia, but has purchased a start of 13 head of Swiss and will obtain all of his new blood from eastern breeders. He won all awards offered in this breed.

The Beef Cattle.

Aberdeen Angus and Herefords comprised the beef cattle breeds and were shown by Congdon & Battles of Yakima and O. A. Boggs & Sons of Daysland, Alberta. Alberta Panama, that has been Hereford champion wherever shown on the circuit, won again, and Panama Lady 2d was senior and grand champion female. The Aberdeen Angus champions were Prizemere 10th, the 5-year-old bull, and Barbara C. B. 2d the female.

The Hog Show.

There was an unusually good showing of hogs, most of which came from local herds, with the exception of one exhibitor from Yakima, I. J. Oder, who exhibited Tamworths and Poland Chinas. There were six breeds represented which included all of the better known breeds except the Yorkshires. Dr. Stockwell was heard to remark that if he knew of one animal of this breed in the county he would have gone after it to make the show complete.

Most of the Berkshire classes were filled by Donald McRae of Lakewood, who took both of the grand champion ribbons, but was beaten in the senior gilt class by three animals of his own breeding that were shown by club members from Arlington. Dick Palmer of Arlington won first; Robert Erving of Lakewood, second, and Ruth Miller of Arlington, third. The first placing among the four club entries won a special prize of $15, donated by Mr. McRae to encourage the club work.

There was a showing of white hogs from the A. E. Jewett herd of Arlington and Otto E. Schwartzmiller of Hartford. Jewett had the senior and grand champion sow and the junior and grand champion boar, while the junior champion sow and senior champion boar were in the Schwartzmiller herd.

Perhaps the most interesting breed shown was the Hampshires. There were three breeders: The Valley Gem farm of Arlington, who only recently purchased the Dr. H. K. Stockwell herd from Monroe; E. O. Green of Monroe, and William Joyce of Burlington.

The senior and grand champion boar was O. U. R. Chief Lookout and the grand champion sow was Tipton Lalla, both of the Valley Gem herd.

The Duroc Jerseys were shown by A. Turley of Monroe and W. O. Kuhn of Alderwood Manor. Turley had the champion boar, Great I Am 7th, and the champion sow, Pinkie of Orion 21st. The sow was of his own breeding, sired by Crescent's Orion 21st. Kuhn had the junior champion sow, Nora's Chieftain Lady 3d.

All of the Tamworth awards went to the Oder herd. His herd boar, Marker, a 2-year-old animal, was grand champion and Sunnyside Belle was the senior and grand champion sow.

The Poland China grand champions were also in the Oder herd. Cedar King, the boar, is a son of Cedar Lady, the grand champion sow. Ole Thompson had the junior champion sow, Nellie's Hope, an animal from the J. H. Hulbert herd of LaConner, sired by Big Joe's Wonder.

The Sheep Show.

There were 59 head of sheep displayed by two Canadian breeders, who made up a carload with five breeds. A. C. Stewart of Aldergrove, B. C., showed Shropshires, Southdowns, Lincolns and Rambouillets, while G. F. Brown of the same town won all the placings in the Romney classes, of which he had seven head. The whole showing made a fine addition to the hog and sheep department and had some of the local breeders brought out their animals

FRANK EVANS.

"I was a green kid right from the farm when I came to your school. Now I have a business of my own. I make better than $20 a day," says Frank Evans.

ADCOX TRAINING
Put Frank Evans in the
$20 a Day Class

You, Too, Can Do It

I have made hundreds of men—with little or no education—successful.

Not Enough Good Mechanics

You may think there are too many auto mechanics in the U. S.—and you are right. There are too many of the kind THAT DO THINGS BY GUESSWORK. But there is a crying demand for **experts; we make experts.** Adcox graduates don't have to compete with "ordinary mechanics" who learned their trade by the "I-picked-up-what-I-know" method. Adcox graduates get the jobs that the "ordinary mechanics" can't hold down.

Training Makes the Difference

The ordinary mechanic finds it difficult to get a job at low pay, while the Adcox graduate is in demand at big pay. The difference is **training.** Calls are pouring into our employment department faster than we can fill them. Automobiles are increasing so fast that before long the "common mechanic" will also be in demand. There are almost 15,000,000 autos in the U. S. now, and the 1924 production, which will be the biggest in the history of the auto industry, will bring it up to 18,000,000 and probably more. There are less than 50,000 garages in the U. S., which means over 300 cars to the garage (think of the opportunities to open up a garage) and the thousands of **big paying jobs open to expert mechanics.**

Send for Big Free Book

I can't tell you all about it in the short space of this ad, so I am offering to send you, free of charge, the large Adcox Book—this book being a complete index to auto training—showing the different departments of the Adcox School—telling you why our school is different from the average auto school—explaining our method of teaching—length of courses, prices, etc., and also scores of letters and pictures from successful Adcox graduates.

Will $150 to $500 a Month Interest You?

If you are looking for a short, cheap course and would be satisfied with "ordinary Auto Mechanic's" wages, then don't answer this ad, but if you are keen to realize the value of thorough training—want to forge ahead in this world—have natural mechanical inclinations like most healthy fellows have—want to make from $150 to $500 per month, send me your name and address and I will send you my big 112-page Catalog, absolutely FREE. OPPORTUNITY waits for no one; this is **your opportunity!** Grasp it! Cut out and mail the coupon at once—now—today.

COUPON

L. L. ADCOX, President.
Adcox Auto and Aviation School.
Portland, Oregon.

Please send me FREE the story of Frank Evans and other graduates and your large 112-page catalog No. 1—the largest, most complete and explanatory catalog published by any auto school in the U. S. I promise to read it through.

POULTRY AND RABBITS

Old Buildings

May Be Converted Into Good Poultry Houses

Many farms have old-style closed-up poultry houses, with poor light and ventilation, or old sheds and other buildings of little use for other purposes, that can be remodeled or built over with little difficulty into satisfactory poultry houses for the flock this winter. The size and the shape of the buildings is comparatively unimportant, say poultry experts. Essential factors are dryness, good ventilation, freedom from drafts, plenty of sunshine and room enough to allow the birds to move about with freedom and comfort.

If new houses are to be built or old buildings converted into poultry houses, locate them on high or sloping ground if possible, but always on dry and well-drained soil. The amount of floor space to be allowed each fowl varies somewhat with conditions, but on a farm or where the birds can be out of doors nearly every day the department has found that about 2½ square feet of floor space per bird in flocks of 20 is enough. In a village or city, where there is a good deal of snow, making it necessary to confine the birds closely, four or five square feet per bird is needed. The interior of the house should be simple, convenient and easy to clean.

The converted poultry house may or may not have a floor. If the house is on dry, sandy soil a dirt floor is usually quite satisfactory, although often more damp than board or cement floors. Fresh gravel and sand must be added from time to time to keep them sanitary. If board floors are used, make them tight and smooth so as to make them dry and easy to clean. If possible, build board floors eight or ten inches from the ground to allow a circulation of air and to prevent rats from harboring under them. Cement floors, especially for large houses, are quite satisfactory, as they keep rats out and last much longer than board floors. They must be kept well covered with litter, however, department workers say, to make them warm and comfortable for the flock.

Poultry Problems

By R. T. PARKHURST.

What is the matter with my turkeys? They all acted and died in the same way. At first they seemed stiff in their legs, then the next day they stood with their heads under one wing or stretched straight out with their bills close to the ground. I opened one, but could find nothing. He had a few spots on his liver and there was hardly any blood. His liver was about the size of a man's two hands and his intestines were badly bloated. His crop was empty and he was poor. I have been feeding about four gallons of wheat per day to 25 turkeys, 4 geese and 18 chickens. Could it be I am not feeding enough or too much, or what was the trouble? They have been herded on grasshoppers. They have a clean house to roost in. How does salt act on turkeys?

MRS. W. F. B.

I believe that from the symptoms you have given that the turkeys have been poisoned. The actions are very similar to those that result when birds have received too much salt. The same actions, however, may result from ptomaine poisoning, due to the birds eating decomposed meat of some kind or other.

I suggest that you give the birds epsom salts at the rate of one pound per 100 birds. I believe that this will help to prevent further loss.

The cause of the poisoning should, of course, be discovered and removed.

What is the matter with my chickens? They start picking at one another's tails and keep that up until they draw the blood, then they just keep at that until they kill a hen. I shut these pullets up on September 28, fed them scratch feed of wheat, whole corn and some sunflower seeds. I keep beef scraps, granulated bone, oyster shell, alfalfa meal and mash before them all the time. They also have another bad habit of eating feathers. What causes this? I give them all the milk I get from two cows. I keep them in a half-monitor henhouse 24x40. Have about 350 pullets in building. I get 50 eggs a day. E. O'L.

I believe the trouble is that your pullets are overcrowded. Instead of having 350 pullets in a house 24x40 you should have not over 275 Leghorns or birds of the lighter varieties and not over 250 birds of the medium or heavy birds.

It will be necessary for you to remove immediately any of the birds that are bleeding from the others. It may also be necessary for you to isolate some of the worst offenders as far as the picking is concerned.

It will help considerably to induce exercise by having at least six to eight inches of straw litter and to hang up green feed such as cabbage and mangles.

Chickens Have Worms

By B. T. SIMMS.

What treatment should chickens have that are infested with worms? MRS. J. W.
Weston, Ore.

The most satisfactory method of treating birds which are infested with worms seems to be the tobacco dust treatment. This is given by mixing it with the dry mash at the rate of one pound of the tobacco dust to each 50 pounds of mash. This is kept before the birds continuously for a period of about 10 days. Then the tobacco is taken away from them for about 30 days, when the treatment is repeated.

Birds get intestinal worms from the infested soils or yards and pens. The nature worms which are in the intestines of the birds lay eggs which pass out and hatch in the soil. These are picked up by other birds. If young chicks are incubator hatched and then placed on soils where birds have not been kept for four or five years they will usually be practically free from worms.

Feed Parrot Oyster Shell

By J. S. CARVER.

My parrot keeps pulling out her feathers and eating them, until she keeps her breast and legs all bare. I have examined her for lice, but can find nothing on her. I have used insect powder, greased her with olive oil, used pepper and everything. She is very hearty and eats lots of sunflower seeds and things from the table. Can you give me any information regarding her? MRS. E. H. V.
Grandview, Wash.

I would say that the difficulty was caused by lack of calcium, ash and phosphates in your ration. The parrot is eating feathers to acquire these elements. By feeding your parrot some oyster shell with its other daily feeding I think that you will find this trouble will be cured.

FREE-Big Poultry Book

Full of information about the feeding of chicks, culling of hens, etc. Tells how to keep hens healthy and make them pay. Worth dollars to any poultry raiser. Sent for 8 cents in stamps to pay postage.

1000 Eggs in Every Hen

If You Keep Chickens, Cut This Out—Four to Seven Eggs a Week per Hen Through Coming Winter Season. High Priced Eggs Means $5.00 Profit per Hen in Next Six Months. Amazing Poultry Secrets Said to Be Revealed by

AMERICA'S FOREMOST POULTRY EXPERT

This is an offer no reader of this paper who keeps chickens can afford to ignore.

Henry Trafford, famous poultry expert and breeder, for nearly eighteen years editor of "Poultry Success," is said to have developed a new and remarkable system of rearing, breeding and feeding chickens for heavy egg productin that seems certain to revolutionize the poultry industry and give five eggs or more for every egg produced today. This plan or system is explained in Mr. Trafford's "1000 Egg Hen," a free copy of which will be sent to any person who keeps six hens or more.

Poultry keepers following my directions, said Mr. Trafford, learn how to start young pullets laying early; make old hens moult quickly and resume heavy laying during entire winter season. Most any hen will lay in spring when eggs are cheap. I tell how hens lay four to seven eggs a week during coldest winter days when eggs sell at a dollar a dozen or more. His system shows how any breeder, with ordinary care, may get 1000 eggs or more from nearly every hen in four to six years' time at a net profit of $25.00.

There is big money to be made with chickens this winter by the man or woman who gets the eggs. The time to get the hens ready for heavy winter laying is now. My "1000 Egg Hen" system tells how and arrangements have been made whereby any reader of this paper may receive one copy absolutely free by using the coupon below. Send no money, but cut out the coupon and mail it with your name and address and a free copy of "The 1000 Egg Hen" will be sent by return mail.—Henry Trafford, Suite 1104 C, Herald Bldg., Binghamton, N. Y.—Adv.

W. F. Nov. 1.

FREE COUPON.

ORCHARD AND GARDEN

Fall Garden Work

A few good licks in the garden now will mean much when you come to harvesting your vegetables next spring, summer and fall. One can not get the best results in gardening when preparation is left until the warm days of spring. At that time everything should be ready for the planting.

Before it freezes up this fall the vines, leaves and so on in the garden should be carefully raked up and burned. There are two reasons for this—to destroy sources of disease and to get rid of insects that are wintering over in the egg or pupa stage. Many a garden is greatly reduced in value because of the presence of various pests or diseases, and much can be accomplished toward the elimination of these adverse features by careful fall cleaning.

It is not a bad plan to plow or spade the garden plot once or twice during the winter. This exposes certain of the pests that winter in the soil, and they are destroyed by the freezing. This is a good way to reduce the damage from cutworms.

If your garden is so located that the poultry can be run on it after the vegetables are harvested, they will render a two-fold service. They will pick up many a bug or worm that is one of next year's potential pests. They will add greatly to the soil fertility. It is well to provide fertility in the form of henhouse or barnyard manure, for in nearly all cases vegetables flourish best in a rich soil. If the henhouse manure is used there should be something put into the soil to provide humus. Nothing is better for this purpose than rotted bedding from the barn or from the strawstacks.

Now is the time to prepare the soil for spring planting; that is, up to the point of final seed bed preparation. Then in the spring those seeds that require early planting may be put in at the first thaw-up. How many weeks do we do without fresh vegetables every spring merely because we did not get our garden in shape to plant early vegetables early? How much have we lost because we did not fertilize in time to have the fertility in form for plant food when the plants need it? How much have we lost because we have allowed pests or disease to stunt or destroy some of the things that we liked best?

Another virtue in fall garden work is that it enables us to plan next year's garden at a time when the present one is still fresh in mind. If the arrangement this year was not the best we should plan now to rearrange it next spring and should till the soil and fertilize accordingly. Not all plants require the same kind of tillage or the same degrees of fertility. Where we made mistakes along this or other lines the season just past we should plan right now to do otherwise for the coming season.

Also it is soon going to be time to order that seed catalogue, for the winter evenings are the time to figure and plan and make out the order. Many a garden has been only half a success because the seed ordering was not done till the seeds should have been put into the ground.

The value of gardening is something that too many farm families underestimate. Vegetables are not only essential to the best health, but when home-grown they greatly reduce the cost of living. And what is more delightful and altogether satisfying than good fresh vegetables in plenteous variety and quantity as a part of the home meals?

Let's begin to plan and work for next year's garden now.

Evergreen Blackberry

By C. E. SCHUSTER.

Can you tell me of some way to get rid of the evergreen blackberry? W. A. C.

There is only one way to get rid of the evergreen blackberry so far as we know, and that is to cut them off and keep them continually cut off.

The idea of cutting them off and keeping them cut off is just simply a matter of starvation. If the shoots are cut off as soon as they appear above the ground it will mean that in time the root system will be completely starved out, as the root system is dependent upon the elaborated food formed by the tops above the ground. If this top is kept cut off and there is no leaf formation and consequently no elaboration of plant food, the roots will finally be starved out and the blackberries killed.

It is, of course, of some additional help if the patch after being cut down can be burned over and then plowed deeper. The roots that are brought to the surface can be gathered up and burned. This will in many cases start a large mass of small shoots coming up, but they can be quickly hoed or cut off and the consequent growth following this will be greatly reduced. In any case it will simply be a question of starvation of roots. So far as we know, there is no other satisfactory method of eradicating this pest from the ground once it gets established.

Apple Pomace for Cows

Thousands of tons of apple pomace are going to waste annually which might profitably be turned into food for wintering cattle. Studies to determine the food value and best methods of utilizing this by-product from commercial cider and vinegar mills have been made by the department of agriculture. When the moist apple pomace can be used fresh or ensiled it yields a succulent cattle food comparable with corn silage. The quantity that can be used in this way is limited, however, because of the relatively high cost of transportation for material having such a high water content. Its most profitable utilization depends upon its preservation by dehydration and producing it as a commercial food. In feeding trials with dairy cows dried-apple pomace proved to be a palatable feed and appeared to be equal, pound for pound of dry matter, to good corn silage. The material was fed wet and replaced the corn silage in a ration including grain and hay.

Sheep in the Orchard

Philip S. Moore, one of the largest and most successful orchardists in western North Carolina, gives an interesting experiment with sheep.

When Mr. Moore settled at the head of Clear creek on a farm of about 200 acres he found a considerable number of apple trees and he set out a great many more. The undergrowth was enormous and the saw-briars so large and stubborn that one would get entangled in them and find it difficult to get out. He decided to place sheep in this area, as it was too expensive to grab it out. He fenced in 25 acres, and buying 10 sheep placed them within the "jungle." Neighbors laughed and called him impracticable. Two years later the sheep had done a good job, and the harvest of wool and the offsprings brought $240, which more than covered the cost of fencing in the 25 acres. Since then Mr. Moore has kept sheep in his orchard.

THE EARS TO CHOOSE.

In selecting corn for seed pick ears from stalks which yield well in competition with others, are free from disease, and hang at a height convenient for husking, says the department of agriculture. Drooping ears which shed rain readily usually will give the best seed. Care in selecting and handling seed will be more than repaid in increased corn yields next year.

NO STUMP TOO BIG FOR THE K HAND POWER Stump Puller

One man with a K can rip out any stump that can be pulled with the best inch steel cable. No Digging—No Expense for Team or Power. Works by leverage—same principle as a jack. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts. Write today for free booklet on Land Clearing.

-are You an Outdoor Man?

The Bergmann Sportsman Boot

The Bergmann Spring Heel Logger

The Bergmann Heel Logger

The Bergmann Utility Shoe

—then there's a Bergmann Outdoor Shoe for you.

Bergmann's big new factory makes only men's and boys' outdoor shoes—and *such shoes!*

If you care about *comfort*—if you care about *economy*—if you care about a real good-looking, solid grain leather shoe—buy a pair of Bergmann's. They cost a little more than some, but they wear so much longer that they're the cheapest shoe to buy.

Do you know what Grain Leather is?

"Grain leather" is made from the outside of the hide—where the hair grows. It costs more than inside splits, and of course there are good and better grades of grain leather. Bergmann uses only the best quality of full stock real grain leather.

Your feet can tell the difference

"Keep your feet warm and your head cool" was the advice of old Gorgon Graham. To keep your feet warm you must keep them dry—and to keep your head cool you must keep your feet comfortable. "Bergmann Outdoor Shoes" is the *Right Answer!*

Best Time to Market Poultry

(Continued from page three..)

prices in other months show much stability.

In view of the normal downward trend during the fall months, it would seem advisable to sell well finished spring chickens in late September and October instead of glutting the market in the early winter when the peak of receipts normally arrives. At this time packers are storing the surplus of dressed poultry and will attempt to keep quotations for both live and dressed stock on the lowest possible level. Greater weight may be obtained by holding poultry until late in the season, but against this must be weighed the lower price, and the change from broiler to fryer or roaster prices, to say nothing of the labor and feed involved. Spring roasters are classified as stags, beginning around the first of the year, and sell at a lower price.

Leghorns, which are in a class by themselves as producers of fine white eggs, have long been discriminated against in the poultry market all along the line from shipper to consumer. The discount may be as much as six to eight cents a pound. Since the breed is small and does not yield readily to fattening, those of the usual broiler size are older than the more meaty breeds and their large combs make the consumer think they are older than they really are. They often dress out dark also. The best way of handling them appears to be to sell the surplus roosters as squab broilers weighing three-fourths to one and a fourth pounds. Up to that weight they grow well, but become too "scrappy" thereafter. The demand is for fat yellow-skinned birds, such as are produced by the general purpose breeds which predominate in farm poultry flocks. Strangely enough, European consumers are partial to white-skinned birds.

Turkeys for Holiday Trade.

Turkeys are marketed mostly during November and December. It has been estimated that 95 per cent of the turkeys are killed, dressed and marketed during these two months and that about 75 per cent of all the turkeys consumed in the United States are sold for the Thanksgiving and Christmas trade. A comparatively small quantity is stored. Many turkeys are not fully grown or fat at Thanksgiving time, and all such should be held back for a later market. The middle of September is not too early to begin feeding turkeys in order to have them in the best condition for the holiday trade. Ducks and geese also find an active demand at the holiday season.

In general chicken prices do not respond so strongly to the holiday trade as do other classes of poultry for which the demand is more partial. Also, extremely large receipts of chickens at those seasons largely offset any increase which does occur in the demand. One advantage of selling direct to consumers is that the producer can sell the year around and is in better position to average his returns.

Capon production offers excellent possibilities for enterprising farmers as the market for them is never overloaded. They should be made to weigh at least seven pounds. The best time to market them is in January or February just after the turkey season, and they sell on about the same price level as turkeys.

Holidays Affect Prices.

The best market days in the large cities as a rule are from Tuesday to Friday inclusive. In the case of an approaching feast day, however, there is a demand every day in the week. Jewish holidays, of which there is a series along in September and October and again during the spring, create a special demand for fat live poultry, which is then slaughtered according to certain Jewish regulations. The exact time of these holidays varies from year to year. If the producer wishes to strike this market his poultry should arrive two or three days before the holiday.

Another question involved in marketing this year's surplus is whether poultry production generally should be expanded further. The increase in the last few years has been more rapid than the increase in the demand. The saturation point of the egg and poultry market has not been reached and moderately lower prices could prevail before production would be at a loss. But, for the good of all, it is probably desirable to slow down the process of expansion to a rate more nearly equal to the annual increase in the consuming population.

Land-Clearing is Cheaper and Easier this Fall

THE fall months between harvest-time and winter is the time to add more productive acres to your farm.

It's easier and cheaper this fall! The reason is Pacific Stumping, the new du Pont explosive. It doesn't freeze—no bothersome and dangerous thawing necessary. You get ½ more sticks for your dollar than with any standard stumping powder—and Pacific Stumping does even better work, stick for stick. Ask your local dealer.

Write for free booklet, "Clearing Logged-off Lands," many pages of practical information regarding explosives for land-clearing, ditching and tree-planting.

Davis Quits

Presidency Reclamation Association

D. W. Davis, former governor of Idaho, for four years president of the Western States Reclamation association, has announced his resignation as president of that organization, according to the Salt Lake Tribune. Davis, who was elected president while governor of Idaho and who is now commissioner of reclamation in the United States department of the interior, says he finds it impossible to devote enough time to conduct the affairs of the association in the proper manner. A call for a meeting of the association to be held in this city, November 19 and 20 has been issued.

A Record Silage Crop

A world record for ensilage corn production is claimed by S. D. Cornell of Yakima county, who harvested and weighed under the eye of County Agent A. E. Lovett 28 tons and 985 pounds from one acre on his ranch near Grandview. The plot selected for measurement consisted of 20 rows 709 feet long and two feet apart. Alternate double rows were from eastern and Yakima seed, the eastern variety averaging 18 feet high all over the field and yielding considerably higher than the other. One average row of this variety cut and weighed immediately tipped the scales at 4500 pounds—45 tons to the acre had it all been like this. However, in addition to the western corn producing a shorter stalk, most of the corn lay on the ground from one to 24 hours before weighing, thereby losing much of its moisture content. Lovett estimated that had it all been weighed promptly, even the mixed varieties would have yielded 35 tons or more to the acre. The land used had been in alfalfa for three years, and was manured last spring at the rate of 18 tons per acre. Twenty-four tons to the acre, a record made in Idaho, is the highest previous authentic production known in Yakima. Cornell is a breeder of pure Holstein-Friesian cattle and Duroc-Jersey swine.

Go to Pacific International

The Washington State college live stock judging team will be at the Pacific International Live Stock exposition at Portland, Ore., November 3 to 10.

On the trip the W. S. C. students will compete against students from most of the western states and British Columbia for honors in judging beef cattle, sheep, horses and hogs.

In the past the Washington boys have won their share of the honors. This year the school will be represented by William Killmore and Edward Birkmaier of Kittitas county; Fred Olson of Whitman county, Leo Quirk of Lincoln county, R. C. Ward of Yakima county and C. Anderson of Iowa, who is one of the wounded soldiers taking training in this state.

The state college will ship a car of cattle to be exhibited at the exposition.

Live stock from the college has been exhibited at most of the northwest stock shows and fairs. These shows are the one place where the efficiency of one animal can be measured against that of the other.

Everett Live Stock Show

(Continued from page eleven.)

there would have been some interesting competition.

Toggenburg milk goats were shown by two breeders in King and Snohomish counties. M. P. Eggers of Woodinville entered some of his best stock and showed against six head from the Westwold farm at Edmonds.

The Poultry Department.

Comparing this part of the show with what was exhibited last year, there was a great improvement. There were more than 1000 birds in the show and if the coops could have been provided in time there would have been 500 more. As it was, there was plenty of room for those that were shown even though the wire coops could not be secured.

There was an unusually large class of Rhode Island Reds and the White Leghorns were second in numbers. The Barred Rocks and Buff Leghorns were also shown in strong classes and there were good representations of Columbian and Partridge Wyandottes, and White Plymouth Rocks. The turnout of turkeys, geese and pigeons was first class.

Tries Argentine Alfalfa

A new alfalfa, the Argentine common, has just been introduced for trial at the irrigation branch experiment station at Prosser. "So far it has proved to be only an ordinary grade of alfalfa, though its seeding properties may help the farmers in the irrigated sections to grow more alfalfa seed," according to H. P. Singleton, agronomist at the station. "If we can find some crop of this kind which will go to seed after the first two crops of hay have been removed, it may be something worth while, and we intend to give it a thorough trial."

GET AN IRRIGATED FARM IN SUNNY Southern Alberta and assure yourself of a steady income. Favorable climate, rich soil and ample moisture mean good crops every year; low priced land; easy terms. Alfalfa, corn, wheat, oats, barley, vegetables, small fruits, etc., all yield heavily. Wonderful country for livestock. An opportunity to make a real attractive farm home near railways, town, good schools. Write for descriptive booklet to the Irrigation Council of Alberta, 12 Provincial building, Lethbridge, Alberta.

PUGET SOUND WATERFRONT FARM, THIRty acres, all cleared; 1-3 well drained marsh, balance good upland; 1000 ft. beach frontage; good house and barn, with water piped into both; hog house, poultry house; well settled neighborhood; school, cream, phone route; 3 miles from live trading center. This farm splendidly adapted to dairy and poultry; owner has business in town; will include some personal property and sacrifice on price if taken soon. D. W. Packard, Oak Harbor, Wash.

IRRIGATED LAND FOR SALE—THE STATE of Washington, through its division of reclamation, is completing the construction of the Whitestone project, in the Okanogan country. Mild winter climate, long growing season, smooth, level lands; no stumps or rocks; gravity water supplied by well-built canal; fifty-five dollars per acre and less. Extremely easy terms. Excellent chance for real farmers to make good. Jay Morrison, Postoffice Box 711, Wenatchee, Wash.

5000 ACRES, NEWAUKUM RIVER VALLEY; highest type level farming land; all rich, productive soil. No gravel. No floods. No crop failures. Well developed district. Near Chehalis, Washington, 20 acres up, $15 to $50, easiest terms. Settlers can get steady employment years to come; good wages; and live at home. See local representative, St. Helens hotel block, Chehalis, or write Graham Land company, American Bank bldg., Seattle.

IDEAL DAIRY OR STOCK FARM—80 ACRES; 1½ miles from best town Colville valley; 40 in cultivation; 30 alfalfa; family orchard; large creek; good house, chicken house, spring water in house; good schools, market; $7500; $3000 cash; would lease. F. A. Yeomans, Chewelah, Wash.

BIG OPENING SALE OF YAKIMA VALLEY farm land, under an assessed state and government approved irrigation project; best, deep soil; close to town and good roads. Price $25 per acre and up. Very easy terms. Western Lands, Inc., owners, 918 Green bldg., Seattle.

SPLENDID OPPORTUNITY—POULTRY FARM with hatchery; five-room plastered house, five chicken houses, waterworks, garage, outbuildings, orchard; on Columbia highway, McNulty station, near St. Helens and Portland; part cash, balance easy. A. B. Larson, Warren, Ore.

BIG LUMBER COMPANY LAND SALE—IN Skagit county; 40-acre tracts, $1400; $200 cash, balance easy. Lots work for the settler. Splendid district, roads, schools, towns. Information free. H. C. Peters, 726 3d ave., Seattle.

SELL YOUR PROPERTY QUICKLY FOR cash; no matter where located. Particulars free. Real Estate Salesman company, 501 Brown ll, Lincoln, Neb.

157 8-10 ACRES, 35 MILES FROM SPOKANE; partly improved; buildings, spring water; near lake. Ida Frantz, Elk, Wash.

40 ACRES, RUNNING WATER, BUILDINGS; $8000; TERMS. Helen Zumsteg, Route 1, Hubbard, Ore.

FARM LANDS—Wanted 654

NO COMMISSION—SELL YOUR FARM through Washington Farm Bureau Exchange, represented in 45 states. Lists of farms for sale by owners mailed free. 312 Lindelle bldg., Spokane, Wash.

I HAVE INQUIRIES FOR FARMS IN NORTHwest. Describe fully and state price. R. A. McNown, 310 Wilkinson bldg., Omaha, Neb.

WANT TO HEAR FROM OWNERS HAVING farm for sale; give particulars and lowest price. John J. Black, Chippewa Falls, Wis.

WE HAVE BUYERS FOR SEVERAL FAIR priced farms and ranches. Central Land Bureau, New Franklin, Mo.

FARM LANDS FOR RENT 657

80 ACRES IRRIGATED LAND, IN YAKIMA valley, suitable for alfalfa, grain or truck farming. Also Colville valley diversified ranch, equipped. The Big Bend Land Company, 212 Symons bldg., Spokane, Wash.

IRRIGATED LANDS—For Sale 663

FARMERS AND STOCK MEN—THE COLUMbia irrigation district has several tracts of irrigated lands of various sizes, in the famous Kennewick valley, with plentiful water supply. The district wishes to get these tracts into the hands of good farmers who will put them to work, and will make very low prices and long terms to such men. No speculators need apply. One tract 580 acres, especially suitable for stock or dairy ranch. Write the secretary, Columbia Irrigation District, Kennewick, Wash.

40 ACRES IRRIGATED LAND; THREE MILES to county seat; all in cultivation; fruit, berries, grapes, asparagus, alfalfa; good buildings, stock and farming implements; ill health compels sale. If you want a good farm cheap, investigate. Address Box 786, Pasco, Wash.

A MONEY MAKER THAT WILL ALWAYS show handsome profits; 130 acres, near Yakima; good water rights; excellent buildings and well equipped; large dairy herd. Price $22,000; good terms. Western Lands, Inc., owners, 918 Green bldg., Seattle.

WHY RENT WHEN LANDLORD'S SHARE will pay for well imp. home? Write Western Bureau of Exchange, Twin Falls, Idaho.

FOR SALE OR EXCHANGE 702

2-STORY BRICK HOTEL, FURNISHED; FOR stock, dairy or timber land; $30,000. Name your terms. W1504 Fairview ave., Spokane.

160 ACRES; 80 IN CULTIVATION; GOOD buildings; running water; good roads; near school. Otto Peterson, Colville, Wash.

TO EXCHANGE—Real Estate 705

160 A. DAIRY, STOCK, HAY AND FRUIT farm; Yakima river bottom land, irrigated; 2 sets extra good buildings and fences; on highway, school bus, mail; 3 mi. to town. $32,000; mortgage, $8300; exchange for property in Nez Perce, Palouse or Willamette valley. R. F. D. 1, Box 20, Richland, Wash.

Cattle Ranch To College

By Russell Doubleday Copyright by Doubleday & McClure Co

CHAPTER XVIII.

A Midnight Stampede.

On a wide flat the round-up outfit commenced working the big bunch. As the cutters-out dart here and there, whirling, dodging and following, the small individual bunches slowly increase in size, while the main bunch correspondingly dwindles.

John and his Lightning work away with other riders until only the nucleus of the herd remains, and in five minutes this too has vanished. Each outfit pauses to rest a few minutes before the counting and branding begin; in the meantime Jerry is coaxing the fire in which the branding irons are heating.

"What'll you give for the buckskin now?" said John with pardonable pride, as he drove in the last animal bearing the XXX brand.

"He'll do; but I want to see you rope with him before I take back all I've said," answered Jerry. "He cuts out pretty well, but you get a calf on your string and the string under his tail and he'll dizzy you," and Jerry began to poke the fire, chuckling the while.

"Oh! you're jokin'; I can ride him now without stirrups. I tell you he's a broke horse."

"The iron is hot now," broke in Jerry, as he rolled up his sleeves. "Let's see what your horse can do. Bring in your calves."

It was John's duty, with two other men, to rope the calves belonging to his ranch by the hind legs and yank them along the smooth grass to the branding fire, where Jerry applied the hot iron. He started Lightning on a run to rope the first calf, eager to prove his horse's ability.

One sleek little fellow stood on the edge of the XXX bunch, gazing in wonder at the horse and his rider. Doubtless the calf thought this a strange creature, able to separate into two parts and reunite without the slightest inconvenience. John went straight for it and broke off its cogitations suddenly by whirling his rope and throwing it under the little fellow. The calf started and jumped into the loop, and John quickly drew the rope tight, pulling its hind legs from under it and throwing the little animal heavily. Lightning was checked and the calf rolled over and began to struggle and bleat piteously. A green horse is nearly always frightened the first time he pulls on a rope; he does not understand it, and Lightning was no exception to the rule. The rope touched his shifty hind legs and he kicked out with all his might; it rubbed harder as the calf struggled, and the horse began to whirl and plunge viciously in his efforts to get rid of the line that scraped his sensitive sides.

Fortunately the little creature got loose at this juncture and escaped. True to prediction, the rope got under "Lite's" tail and now the fun commenced in earnest. He bucked as he had never bucked before, and all but stood on his head. The other outfits stopped work for the moment to see the sport.

Lightning fairly foamed in his rage and fear; he bucked continuously, and every time he struck the ground he gave a hoarse squeal—shrill and wicked. John's strength was sorely tried; but after his boasting it would never do to be "piled up," so he set his teeth and vowed he would stick, no matter what happened. The fury of the effort made it a short one, but it seemed to John plenty long enough, for during the five minutes the saddle was like unto a hurricane deck in a raging sea. But through it all John came out triumphant. In the words of a bystander: "The little horse bellered and bucked and the kid never pulled leather" (did not hold on to the horn of his saddle). Which was high praise from a cow-puncher to a cow-puncher.

"What'll you take for him?" called Jerry, as John dismounted to untangle the rope from "Lite's" heels.

"Money can't buy him," was the reply. John was bruised and stiff, but his pride was not broken and his faith in his horse was undiminished, though it must be confessed it had received a severe shock. "He'll bring that calf in or I'll kill him tryin'," he said sturdily, and he mounted "Lite" again and went back. He found the same calf, roped it, and "Lite," after a few futile plunges, dragged it up to the fire, where he stood with heaving, sweat-covered sides while the iron was applied. The hard lesson had been taught and learned for all time.

"He's got the making of a good cow-horse," admitted Jerry. "But, oh Lord! such a making!"

The way John worked the little horse that day would have seemed cruel to a novice, but he intended that he should never forget the experience of the morning, and he never did. The last calf was branded at dusk, and by the time this necessary torture was completed poor "Lite" was about done up.

The bunch was allowed its freedom for another year and the cattle began at once to wander off, the old cows licking the disfigured sides of their offspring, the calves shaking and writhing with pain, failing utterly to understand why they should be tortured thus. The wound soon heals, however, and though the soreness disappears the scar remains always.

The day's work was over; the coolness of evening succeeded the heat of the day; the men stopped work and rode slowly into camp by starlight.

John and Jerry unsaddled their tired horses and turned them over to the care of the night herder.

"I'm dead tired, stiff and sore tonight," said John, as he and his companion hustled for cups and plates in the dish box.

"It's a dog's life," returned Jerry, taking the cue. "If I'm ever caught on a round-up again I hope they'll tie me on a broncho and turn him loose." He grumbled on as he sipped his steaming coffee.

The two ate heartily and then strolled over to the main camp fire, where perhaps 50 men lay sprawling upon the ground smoking, talking and resting.

"Hullo, there's the three X kid!" some one shouted. "How's the legs, kid?" "How d've like astronomy?" said another.

And so the bantering went round, but John took it good-naturedly and even responded in kind. Soon a song was started, but the men were too tired to listen, and the singer stopped for lack of encouragement. About two hours after the day's work had ended all hands were rolled up in their beds and asleep, Jerry ending this first day on the round-up as he began it—grumbling.

"Cow-punching is a job for a Chinaman," said he, dropping off to sleep. It was the most scathing condemnation his imagination could frame.

This was but the first of a succession of days much alike, some easier, some harder, some full of incident and narrow escapes, others less exciting. The long dry spell had given way to a series of rainy days that were harder to bear than heat and dust. The wind-driven rain had a penetrating quality that nothing could withstand. The rider, after being in the rain all day, came into camp to find his bed saturated. The trying weather affected tempers, not only of the men, but of their charges, the cattle, as well; they were nervous and restless, and this was especially true when electricity was in the air. As Jerry had said, it was "regular stampede weather."

John had seen small bunches of stock break and run, and had followed them over ticklish country, but a big stampede had not yet been numbered among his experiences. He had often sat listening to some old veteran of the range tell of the horrors of a midnight stampede, when the great herds became an irresistible torrent of animal life driven on by unreasoning terror.

He knew that some time he would become an actor in such a scene and dreaded it in anticipation.

The sky was threatening when the riders were sent out one day to make the "big circle," as the gathering of cattle was called, a week or so after the organization of the round-up. By the time the bunch was collected it was raining heavily, and at intervals hailstones pelted man and beast viciously. The bunch was large that day, and as the storm continued the ground became too slippery and the cattle too crazy to attempt to work them. Nothing could be done but hold them together until things dried up a bit. The nervousness of the cattle was such that this required the activity of all hands.

John and Jerry were out in all this stress of weather, and, strange as it may seem, the older cowboy was almost happy; he had a really new and good chance for grumbling. "Even a coyote can hunt his hole and keep dry, but a cow-puncher has to sit up straight and take his medicine," said Jerry, almost triumphant in his feeling of just resentment. "The worse the weather the more he has to brave it," he continued. "If I'm ever caught on a roundup——"

"That's the tenth time you've said that today," said John, laughing in spite of his own discomfort. Jerry made a queer picture. His long, yellow oilskin slicker reached to his heels and was just running with water; the felt hat that almost entirely obscured his woebegone features dripped water down his neck. He looked as forlorn as an equestrian statue decorated with cheap bunting and paper flowers and thoroughly water-soaked.

Everybody was out of humor and no opportunity was lost to register a "kick."

"Say, you three X men," said the foreman, "scatter out there; d'yer take this for a conversation party?"

"The horses is stupid and the cattle is worst. If I don't miss my guess there'll be trouble tonight. If ever I get caught in a——" Jerry's voice died away in a mere growl as he rode off to his post.

Left alone, John turned his eyes to the sea of backs swirling up and down and around like an eddy in a troubled sea. Even now the half-crazed animals threatened to break through the frail line of men and scatter to the four winds.

And still the driving rain continued. A night in the saddle was inevitable—a dreary enough prospect. As evening drew near, flashes of lightning and peals of thunder added to the terror of the almost unmanageable cattle.

"Look at 'em steam," said John to himself, as he noted the vapor that rose from the acres of broad backs. "That's bad," said Jerry, as he came within earshot on his beat. "Steam brings down the lightning, men are high on horseback; steel saddles, metal spurs, six-shooters, and buckles make a man liable to catch it," and he disappeared in the mist, droning out as he went a verse of "The Grass of Uncle Sam" to quiet the cattle. It seemed futile to attempt to soothe the creatures by the sound of the human voice—they were in a tumult, and the slightest thing would set them off. For an instant there was a lull, and not only Jerry's but the voices of other riders could be distinctly heard singing and calling quietly to the cattle.

Suddenly there came a fearful flash directly overhead and streams of liquid fire seemed to flow in every direction. This was followed immediately by a tremendous clap of thunder. The effect was instantaneous. Each animal seemed to be possessed of a demon and rushed headlong in whichever direction its head happened to be pointed. In an instant the orderly herd was changed to a panic-stricken rout, and the riders were swept irresistibly with it. The lightning flash was blinding, and the darkness which ensued was intense; through this man and beast rushed pell-mell without a pause, recklessly.

John was with the other riders, was in the very midst of the mad, surging creatures, their eyes rolling in a perfect frenzy of fear, their very breaths in his face, their horns rattling together close beside and in front of him. It was every man for himself, but even in the midst of this frightful chaos the cow-puncher's sole thought was for his stock. John looked for a bunch to follow—to follow to death if need be, but if possible stop it. That was the plan in John's mind, but it seemed utterly impossible of fulfilment. There was no bunch; each animal for once went off on its own hook and the confusion was fearful.

"I'll follow one then," said John to himself. Then to his horse: "Stand up now, old 'Lite.' If you fall you're a goner."

One big steer alongside ran strongly, and John let "Lite" know that it in particular was to be followed. He couldn't be seen in the darkness, but "Lite" could smell him and kept at his flank. Away they went through mud and sage brush, over badger holes and boggy places. What lay in their path was a mystery, but "Lite" stuck to his leader like a leech. There was no time to reckon chances, if such a thing were possible.

As vapor forms into raindrops, the running cattle began to draw together into groups which enlarged momentarily. John was now following one of these groups, but in the pitchy darkness he could not tell how many it numbered. As pursued and pursuers rushed on, the smooth, rolling prairie was left behind, and rough, broken country was encountered. Up steep-sided gullies they struggled and down slippery hillsides they scrambled after the terror-stricken cattle. "Now's our chance," said John, speaking, as was his wont under strong excitement, to his horse and patting his neck in encouragement for the supreme effort that was to come. He spurred to the front and began to turn the leaders around. He struck them on the nose with his quirt, slapped them with his hat, and yelled at them.

Slowly one leader, then another, turned; others immediately behind followed, until the leader caught up with the tail of the bunch and round they went in a circle. "They're milling beautifully now, 'Lite,'" said John to his horse again. "We'll keep 'em at it till they're too tired for funny business."

The circle gradually slowed to a trot, then a walk, then stopped altogether. The cattle were utterly exhausted, heads down, sides heaving and steaming.

John leaned over in his saddle and patted his little horse affectionately. His feeling was one of fondness mixed with gratitude for the pony whose wiry limbs, sure feet, good bottom and intelligence had carried him safely through a difficult and dangerous duty. He thought of what had passed, and marvelled that he was alive. To make such a journey amid the tossing horns and thundering feet of the cattle, over treacherous ground, in total darkness, seemed an impossible feat, and yet here were horse and rider covered with mud, saturated with water, almost unbearably weary, it is true, but without a scratch. John began to realize the danger, now it had passed, and appreciated the fact that to his game little horse was his safety due. "Lite" received the caressing pat on his nose and the words of praise his master gave him with commendable modesty.

The cattle were willing now to stand and rest; they all were trembling with fear and exhaustion and seemed in no condition to continue their flight. "Lite," too, was pretty well done up, so John dismounted and unsaddled him; then, after putting one blanket over him, he wrapped himself in the other and lay down in the mud to sleep. It was cold and sopping wet, but John's inward satisfaction made outward discomfort trivial.

The hours were long before daylight—longer, the boy thought, than he ever knew them to be before. He was glad enough when the sun came and he was able to size up his capture. They numbered 50 head, and proud enough he was.

"Lite" was feeding near; at John's call he came up and, without his usual capers, allowed himself to be saddled. The two started the bunch toward camp—weary, hungry, sleepy, wet and cold, but triumphant.

"My first stampede and back with 50 head," said John to his horse. "Not bad work, and I couldn't have done it but for you."

The storm had spent itself during the night and morning broke gloriously fine. John and Lightning kept the cattle going as fast as their strength would allow, which was all too slow for the boy, who was anxious to show his work to Jerry—his chum, his friend and counsellor—Jerry the grumbler, the good-hearted. He knew

Bits of Fun For Everyone

On Sister and Sister's Chum.

Mazie—What do you think of Patricia?
Peggy—Well-er-she's a very nice girl——
Mazie—No, but cat to cat, what do you think of her?—American Legion Weekly.

We Know Her.

There was a young lady named Maud;
A very deceptive young fraud.
She never was able
To eat at the table,
But out in the pantry—O Lawd!
—Ohio Sun Dial.

The Only Way.

"Johnny," said the teacher sternly, "I want you to tell me where you learned to swear!"

"Aw, I just picked it up, teacher," said Johnny. "But if you wanta learn I can't teach you none. You gotta go out where it's bein' done an' listen until you get it!"—Richmond Times-Dispatch.

Now You Tell One.

An Irishman, an Englishman and a Scotsman were all out of work. They traveled together in search of employment, and came to a farmer's house and applied. The farmer said whoever could tell the biggest lie could have a job. The Englishman said he went to the North Pole in a tub. The Scotsman said he swam to the South Pole. The farmer then asked Pat, "Well, Pat, what is your lie?"

"Begorra, sir," said Pat, "I believe these lads." Pat got the job.—Winnipeg Tribune.

Mistaken Identity.

"As I was crossing the bridge the other day," said an Irishman, "I met Pat O'Brien. 'O'Brien,' says I, 'how are you?' 'Pretty well, thank you, Brady,' says he. 'Brady!' says I, 'that's not my name,' 'Faith,' says he, and mine's not O'Brien.'

"With that we again looked at each other, an' sure enough, it was nayther of us."—Shevlin Equalizer.

After Thought.

A lady who kept a little curly poodle dog lost her pet and called on the police to find it. The next day one of the force came with the dog very wet and dirty.

The lady was overjoyed and asked a lot of questions, one being:

"Where did you find my darling?"

"Why, ma'am," said the officer, "a fellow had him on a pole and was washing windows with him."—Selected.

that he would appreciate it, though he might joke.

As the bunch appeared on a little rise a short distance from camp, a horseman galloped out to meet them and to help drive them into camp. "Hullo, kid!" said the man, when he got within earshot. "You've done pretty well; biggest bunch that's come in yet."

"Oh! I've had a great old time," John began jubilantly, feeling as if he had not seen a human being for a month and must talk. "See that big spotted steer there, leadin'? Well, I follered that feller eight miles in the dark last night an' he set me a red-hot pace, you bet—but the buckskin here," patting "Lite's" mud-spattered shoulder, "followed him close all the way."

"Well, you look it; got enough mud on yer to weigh down a team of iron horses."

"How many cattle back?" asked John.

"Only 'bout half the bunch."

"That's too bad," sympathized the boy.

"That's not the worst."

The man stopped, and John noticed for the first time a peculiar expression on his face.

"What's the matter?" said he.

"One of your men——" he hesitated.

"Well?"

"One of your men," he repeated, "went down last night."

"It wasn't Jerry?" cried John anxiously, having a premonition suddenly of something dreadful. "Say it wasn't Jerry!"

"Yes, it was Jerry." The man spoke the words slowly and solemnly. "Horse's leg went into a badger hole and the cattle trampled him."

(To be continued.)

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

When your stomach begins to "go back" on you and you find your food resting heavily, you should find out what is wrong. It is probable the cause is trifling and will be removed without difficulty. But if you neglect the condition you may wake up some day to find out you are in serious trouble.

Dr. Copeland.

To be hungry is natural and desirable. To have gnawing or aching pains in the stomach an hour or two after eating or an hour or two before meal time is a bad sign.

Nausea in the morning after eating, or, for that matter, at any time of day, is a symptom which should not be disregarded. Belching of gas, eructation of food and vomiting give evidence of a disability worthy of your attention. Indigestion and all the symptoms I have suggested are grouped under the common title—"dyspepsia." Dyspepsia is a term which means little more now than a general inclusion of a lot of symptoms relating to the stomach. It was formerly used as the name of a disease. Today doctors recognize that these common symptoms may be sifted and with the aid of the X-ray and various laboratory tests the exact disturbance may be located and defined.

Ulcer of the stomach causes pain, nausea, vomiting and the familiar chain of dyspeptic symptoms.

Disease of the kidneys may have various dyspeptic symptoms.

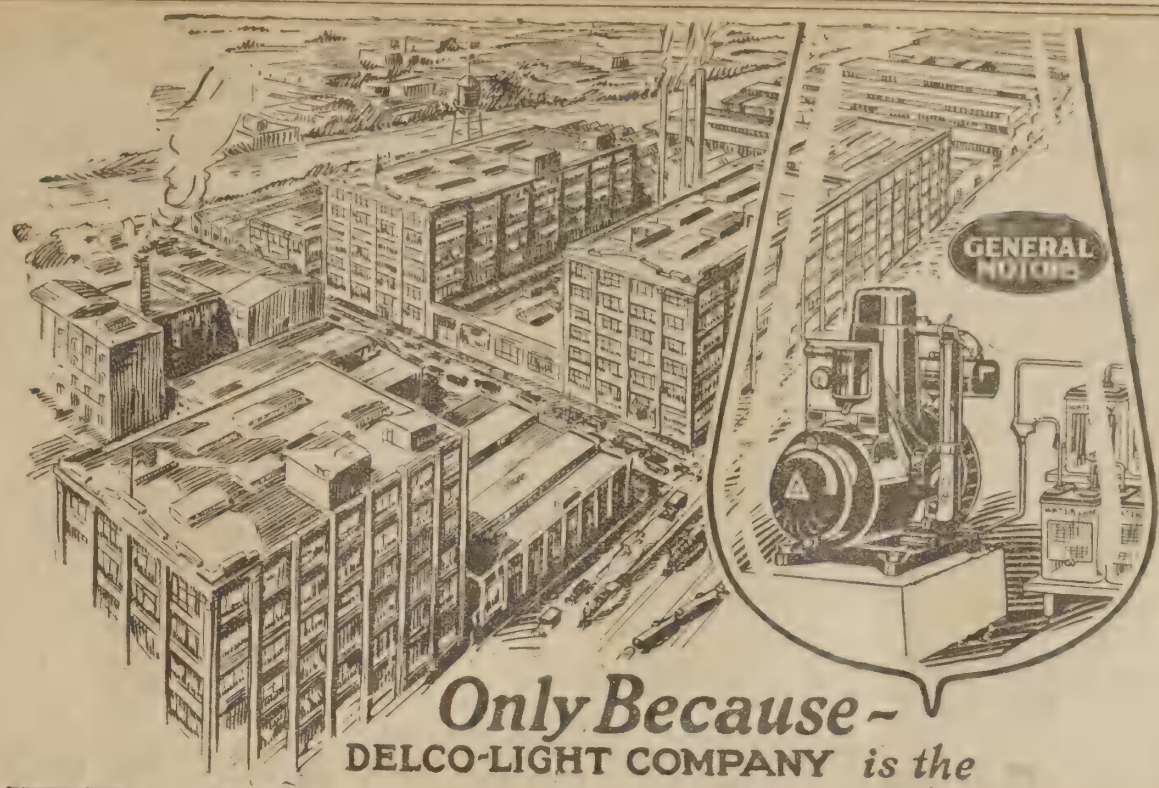
Cancer of the stomach is another of the serious diseases which may upset digestion and produce pronounced symptoms of dyspepsia.

These three conditions—ulcer, Bright's disease and cancer—are capable of discovery by the careful tests I have suggested. It is by early recognition and early treatment that satisfactory methods of remedying the trouble can be applied.

There is another form of dyspepsia, due to anemia, overwork, habitual loss of sleep or nervous exhaustion. This type is usually called nervous dyspepsia, because it seems to be the effect of a failure of the blood and nerve supply of the stomach, its muscular walls and lining membrane.

It is useless to attempt a cure of nervous dyspepsia by taking soda tablets or other drugs intended to neutralize the excessive acidity of the stomach contents. Such treatment will give temporary relief, but, of course, the trouble can not be removed until the ultimate causes have been reached.

Before going to your doctor to worry him with your troubles, give yourself and your habits a careful survey. Everybody should know enough about foods, beverages and the simple rules of personal hygiene, to discover where the fault is in his manner of living. Put your life on a higher physical plane and see if the dyspepsia does not disappear.



Only Because—
DELCO-LIGHT COMPANY *is the*
World's Largest Producer
of Electric Light Plants *can they make such an offer—*

$599.50

COMPLETELY INSTALLED
—for the most popular farm size plant ready to turn on the lights.

Here is the installation you get for $599.50

1. One Delco-Light Plant, the most popular size, Model 866—850 watts capacity, 32 volts (freight paid to nearest railroad station).
2. One standard Delco-Light Exide Battery with sixteen large capacity cells with extra thick plates and heavy glass jars (freight paid to nearest railroad station).
3. The installation of the Plant and Battery—except purchaser to furnish concrete base and battery rack and haul plant from nearest railroad station.
4. Wiring your house for ten (10) lights to be located where you wish.
5. One power outlet wherever you may want it installed in your house.
6. Standard set of ten (10) drop lights with sockets and the installation of these lights in your house.
7. Ten (10) standard electric light bulbs.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

Oh, mothers whose children are sleeping,
Thank God by their pillows tonight,
And pray for the mothers now weeping
O'er pillows too smooth and too white!
Where bright little heads have oft lain,
And soft little cheeks have been pressed,
Oh, mothers who know not this pain,
Take courage and bear all the rest.
—Selected.

Dear Family Circle: The time has come when I think it appropriate to give you a resume of the questions we have dealt with for many weeks, and we will from this time have no further discussions on these questions.

I have received many hundreds of letters and have tried to give you those which have presented the subject from different angles. I have received very many letters which were well worth publishing, but because they didn't differ in ideas I haven't used them.

You have noticed, I am sure, and several have written to ask why the girls who are classed as "flappers" have not written. Some have, but never could I be sure that they gave their right name and address, even if they gave any at all, which was very seldom. Only about one in a hundred have written who classed themselves with the drinking, smoking kind. Some boys have written who seem to belong to the "male flapper" class, but very few, and not one ever gave any sort of clew as to who he is. This makes me think that these old young people who would make us believe that they have already learned all there is worth while in the art of living, are not, down in their hearts, quite so cock-sure as they would like to have us believe.

Some have written that their parents do not approve of their going out nights on the wild rides, but that they are determined to have a "good time," so they sneak out without permission.

As you read these lines, my dear parents, let me urge you to keep the confidence of your children at any cost of personal comfort to yourself. Allow them to have their company at home. Do not forget that it is as natural for girls to want to dress up in becoming clothes and have young people about them as it is to breathe. When boys come to the age where they take pains to scrub up and pay some attention to brushing their clothes and arranging their neckties they are old enough to enjoy picnics and parties where girls are in attendance. Remember this and also remember that if you don't provide the entertainment they will find it. This wild dash for a "good time" seems to be the main business in life of the flapper type of both girls and boys.

Here are a few extracts from some of their letters. This is from a girl of 16, who says she lives near Portland, Ore., but seldom attends dances there, as she prefers to go to the "country places which some call rough and wild." She continues: "I do not hesitate to walk six and seven miles to attend a dance. I believe young people should enjoy their young days the best way they know how, and if smoking, drinking and 40 miles an hour car rides are enjoyments for them, why, let them indulge, like myself. I am engaged to be married, as my four brothers are my only guardians and they approve of early marriages. They all smoke and are fond of drinking liquor." These wonderful words of wisdom (?) fall from the pen of a girl only 16. Here is a picture of a whole family who have no regard for the law of our country, the greatest and most wonderful on the globe. They have no regard for the 18th amendment to the Constitution and seek what they call pleasure in open defiance of it.

To disregard the Constitution of our country is not good citizenship and those who so disregard it are not loyal Americans.

This wild dash after a "good time" turns the heads of too many of the young people. They breathe restlessness, for it is in the air. Many of the girls begin their careers in the public dance halls at the age of 12 years. They should be in bed at the time the parties begin. I have had letter after letter from girls who tell me they have been going to dances and smoking since they were 14 years old and the swagger and bravado noticeable in their statements is enough to make one weep. They have lost the fine sense of womanly refinement, which is the heritage of every woman and which is like the velvet on a peach, which once removed by harsh rubbing can not be restored. And the pity of it is the girls are not conscious of the loss to their characters. I have said the excitement and restlessness is in the air and it is felt and given way to by all ages. The old-time quiet home life is almost unknown. Well do I remember the old living room at home where of winter evenings, the long table held two and sometimes three big kerosene lamps, for heat and light were things that my father always insisted upon having.

I can see the picture of that room as plainly as if I were there this moment. There was father with his weekly paper or very often his "account book," for he was about the only man in that neighborhood who ever had more grain than was necessary to have for immediate use, and it was a very common thing to see a neighbor's wagon in front of his granary borrowing grain. Father faithfully made note of the item, but seldom was the grain all returned and many times none of it.

Mother would have her knitting or mending and the older children would be leaning over the table with their favorite papers spread out before them. Every one was happy and contented and when it was 9 or 10 o'clock we were all in our beds and the house quiet.

There were no movies to lure us away and no autos to make "going" an easy matter. We had time to read and an opportunity to get acquainted with our parents and with each other. And we had our pleasures outside the home, too. There were the neighborhood picnics and parties; there were the preaching services in the schoolhouse and the Sunday school and the singing classes and the fun-provoking spelling bees.

And we had good times in our own home, too. Many were the big sleighride parties we had, where it took four horses to haul the load of joyous young people who came tumbling out of the long sleigh at our door to enjoy a good oyster supper and nice doughnuts and chocolate.

Then there would be games where the head was exercised instead of the feet and father and mother enjoyed it all as much as the young folk. Our home was typical of many, though I knew too many people at that time also who were not so considerate and who never opened the home for innocent fun. But it paid our parents for any cost of personal comfort, if there was any, to make the home attractive.

There were four boys and two girls. Three of the family took degrees in various colleges, all grew to be men and women, all were members of churches and respected in their communities, and the boys were all successful business men. The younger girl is a happy wife and mother of four fine children; the next younger you should begin to know very well by this time. She has tried to be a friend to all of you for years and has a deep desire to aid in making all the homes of the Circle readers happier and more dear to the young people.

Two girls of 14 wrote me a joint letter and said they were good girls, but that their brothers and parents, especially their father, were so strict with them that they went away for good times when they would have been glad to have fun at home. The girl writing says: "Parents don't seem to realize that young people will have entertainment in their leisure hours. It appears to us that a girl can be perfectly decent and respectable and yet mingle with young people, both boys and girls. And when a father is so strict that he will not allow his girls to go riding to make a call, on horseback, the girls are pretty apt to yield to temptation and accept an auto ride from a young man when they would otherwise have gone on horseback and enjoyed it more." She goes on to say: "This lack of trust sours and discourages girls and they often leave home to seek work elsewhere while so young that it would be better for them to remain with their parents." She closes the letter with these words: "Therefore, we say to the parents, allow your children to have company at home and mingle with them and help to entertain the young folks. Treat them the same as if they were your company and as if you enjoyed having them there. We are glad of an opportunity of expressing our ideas.
PAT AND MIKE.

I don't want my message so long that you will tire of it, so I shall make it continued in the next number. Your friend,
ALICE W. BARLAND.

A Few Good Ideas

A teaspoon of vinegar beaten into boiled icing will keep it from breaking.

Will some one tell how they save their geraniums over winter? If put in the cellar, do you hang them up or give them a little water in the pots? A sister wants to know.

One ripe banana sliced and beaten with the white of an egg with a little sugar added makes a good substitute for whipped cream, as the banana dissolves. This will make a good filling for a cake, too.

Good Fences Pay Profits

One of the most profitable investments you can make on the farm is building strong, effective, hog-tight fences. This enables you to pasture fields, rotate crops and farm on a modern scientific basis. Make sure of honestly constructed fences of full gauge, heavily galvanized wire by using Pittsburgh Steel Company's

"Pittsburgh Perfect" STIFF STAY Fence and "Columbia" HINGE JOINT Fence

These two dependable brands represent the two approved types of fence, and together afford the correct style and type of fence for every purpose, whether for field, barnyard, orchard, garden, poultry run or lawn. These fences are made under our own careful supervision at every stage of manufacture.

For twenty years "Pittsburgh Perfect" has held a prominent place among stiff-stay fences. It is fabricated by the perfected electric welding process, producing a neat, strong and durable fence. Representing the other approved type, "Columbia" Fencing is made with the "Columbia" hinge-joint that *grips with grit*, producing a flexible fence fabric of unsurpassed strength and durability.

You can get both of these brands of dependable fence from a dealer near you or write us and we'll see that you are supplied. Our *Good Fence Catalogues* sent free.

Just Folks

Manhood and womanhood are the basic requirements of farming.

That which adds to manhood and womanhood on the farm is the largest and best contribution which can be given by agricultural extension workers. Having made this contribution, the ways and means of better farming and better home making on the farm will be much more eagerly sought.

Only consider two virtues and see how they can be of inestimable value to the farmer and his wife.

Courage is about all there is to life, anyway. With courage comes the smile that makes for soul satisfaction, under most trying circumstances. Courage gives hope. Courage is eager for the good fight. At its best, courage becomes triumphant as difficulties multiply.

Then there is acceptance of the situation. This is not weak-kneed fatalism. It is the acceptance of the fact that night follows the day and the morning follows the night; that age creeps on to youth, and in short that the pendulum is the method of all life.

There is no such thing as following the even tenor of your way. You are either swinging to the end of so-called prosperous days or returning to the so-called days of adversity.

Loss of friends, loss of health, loss of money are a part of life just as much as happy days with friends, health and money.

The interplay of these forces are marvelous to those who have learned to accept them. Now and then a friend may stay by you when your money is gone. Now and then money may stay by you when your friends are gone. A single indiscretion in health may ruin your life, and a series of bodily indiscretions may follow you to the end of coveted years.

Many of these things in life we make poor headway in trying to understand. Having tried according to our ability to understand, there is nothing to be done but accept the situation and move away from Growler's Hill.

Having accepted the situation, courage is given an opportunity to point the way to new worlds to conquer, and there is scriptural authority for the belief that the biggest of all worlds to conquer is to rule your own spirit.

High Points in News of the Week

A bad state of affairs has existed in Germany during the past week. The separatists, led by Leo Deckers and Dr. Guthardt, proclaimed a Rhineland republic at Aix-la-Chapelle on Sunday, October 20. Not a drop of blood, however, was shed, but the separatists took possession of the city hall and public buildings and control of the police services. The regular police finally ranged themselves on the side of the republic. Deckers informed the Associated Press correspondent that he planned to put all the cities in the French and Belgian areas, plus Elberfeld and Barmen, in the unoccupied territory, in the hands of the republicans within five days. Deckers said he had no thought of stealing a march on Joseph Matthes to get glory for himself. They all had the same aims, he explained.

Violent incidents occurred in Aix-la-Chapelle Monday night. The police decided to oppose the separatists and tried to tear down the Rhineland colors from public buildings. Several persons were killed in fights that followed.

Tuesday the loyalists recaptured the buildings in Aix-la-Chapelle held by the separatists, except the provincial government building. The separatists also were defeated at a number of places where they established themselves during the previous days. Twenty-one persons were killed and 22 wounded at Hamburg on Tuesday. The outbreak of rioting began when communists attempted to storm the police stations in the city.

Tuesday night found the separatists having a precarious hold on Coblenz and Duisberg, being fairly well settled in Duren and Treves, and having divided authority with the French in Weisbaden and Bonn.

The flight of Joseph Matthes, a member of the separatists' directorate for the Rhineland republic, on Wednesday put a further crimp in the Rhineland republic. On Thursday Berlin reported the situation in the Rhineland still far from clear. German accounts of the latest events there allege that the allied occupation authorities, including the French, now are actively opposing the separatists.

Saturday open and active French support is said to have enabled the Rhineland republic to extend its hold over a number of smaller towns and villages and that Joseph Matthes and his supporters in the separatist movement still held Coblenz. In the meantime, France, Belgium and Italy have accepted the British invitation for a reparations conference with the understanding that it shall take the form of a committee of experts under the authority of the present allied reformation commission. America's decision to lend her advice and cooperation in the conference seems to have lifted Europe out of the slough of depression. Secretary Hughes' prompt and decisive response to Marquis Curzon's plea for America's assistance has given impetus to the situation, which has heretofore been almost hopeless.

Lord Curzon's request was for American participation in any form, either official or unofficial, to participate in an inquiry by a special commission appointed by the reparations commission. In his reply to Lord Curzon Secretary Hughes desires again to express the deep interest of the United States in the economic situation of Europe and of her readiness to aid in any practical way to promote recuperation and reestablishment of economic stability, further declaring that "the government of the United States is therefore entirely willing to take part in an economic conference in which all the European allies chiefly concerned in German reparations participate for the purpose of considering questions of the capacity of Germany to make reparations and an appropriate financial plan for securing such payments.

It is also important to note that the French government has accepted the British proposal for an examination into the German capacity to pay reparations. It is also to be noted that since the United States is not a party to the treaty it can not participate officially in the activities in the reformation commission, in Secretary Hughes' opinion.

* * *

Intrigue, debauchery and corruption in connection with contracts for the veterans' bureau hospital were charged before the senate committee investigating the bureau. Elias H. Mortimer of Philadelphia, formerly a representative of the Thompson-Black company of Chicago, was the witness. He testified that when securing a hospital contract in 1922 he loaned $5000 to Charles R. Forbes, then director of the bureau; that on another occasion he advanced him an additional $1000 or $1500, and that none of the money has been repaid. Mortimer testified also that he had paid Forbes' expenses on trips about the country, official and unofficial. Disgraceful parties at Hayden Lake, near Spokane, in which Forbes participated, were also the subject of Mortimer's testimony.

More or less denials have been made by Forbes and others implicated in the testimony of Mortimer, Forbes himself issuing a statement denying as utterly and absolutely false the statement of Elias H. Mortimer of Philadelphia of alleged bribery and corruption in contracts for the veterans' bureau of hospitals.

* * *

President Coolidge and Secretary of Agriculture Henry C. Wallace are reported as taking a deep interest in a proposal of northwestern and central western bankers, grain dealers and farm land owners for relieving the crisis in the grain belt through the sale of 50,000,000 bushels of wheat to Germany. There is even some talk in this connection of donating the wheat to starving people in Germany, a precedent having been established when millions of dollars were voted by congress to furnish food for the Russian people two or three years ago.

* * *

Dr. C. P. Steinmetz, electric wizard, age 57, died at his home in Schnectady.

"The world has lost one of its greatest mathematicians and the electric industry will miss one of its shining lights," said Thomas A. Edison when informed of the death of Dr. Steinmetz. A recent feat which attracted attention to the work of the electric wizard was the production of the artificial indoor thunder storm, including a bolt of lightning.

Market Outlook

(Continued from page five.)

Pelts—Flint dry sheep pelts, long, 20c; flint dry sheep pelts, short, 10c; flint dry sheep pelts, pieces, 10c; dry salted pelts, 15c; salted pelts, short, each, 50@$1; salted pelts, shearings, each, 10@30c; salted goats, long, each, $1@2; salted goats, short, each, 50@$1; dry goats, long, per lb, 12c; dry goats, short, each, 20@30c; goat shearings, each, 5@10c.

Tallow—No. 1, 5c; No. 2, 4c per lb; grease, 3c per lb.

Fruits and Vegetables.

The principal consuming centers were heavily supplied with potatoes last week and carlot shipments from producing sections continued heavy. Prices were weak, with northern round whites quoted at 90 cents to $1.15 per 100 pounds sacked and bulk in the Chicago market. The peak of shipments probably has been reached, but receipts at the leadig markets will continue heavy for another month or six weeks.

Public Utility Ownership

The electric light and power companies in Washington are not owned by a few wealthy capitalists living in the eastern states, as is so often claimed by the uninformed politician.

As a matter of fact, the stock and securities are owned by tens of thousands of small investors.

Over 5000 citizens of the State of Washington own stock in the light and power companies operating in their district and this number is rapidly increasing.

On the other hand municipally owned plants are financed by the sale of bonds and since they are exempt from the surtax under the Income Tax Law they are purchased in large blocks by wealthy investors.

The light and power companies of Washington are in fact more publicly owned than are the municipal plants.

NORTHWEST ELECTRIC LIGHT AND POWER ASSOCIATION

A very interesting letter comes from Dora Grace Urquhart, a Grant county, Wash., cousin. Dora says she likes to read and has read a number of books. She is in the seventh grade at school and takes seven subjects. Dora is 9 years old. For a pet she has a black pup called Walfe.

Through her friends, Eva and Stella Slade, Ruth Sharp learned of The Junior Farmer, and after reading her friends' paper thought she would like one, too. (Welcome to the Corner, Ruth; we are pleased to hear from you.—Aunt Nellie.) This new cousin is 11 years old and in the sixth grade. She has one sister. Ruth has a birthday on the 1st of February.

Walla Walla county, Wash., is the home of Jessie Manis, a 10-year-old Corner cousin. Jessie has been quite busy lately and, although she did not forget the Corner, she could not find much time to write. We were glad to hear from Jessie again. Her teacher is very nice, she says, and she is in the seventh and eighth grades, taking different subjects. Jessie says all her flowers have gone to seed now. We are sorry to hear her grandfather is ill and hope by now he is quite well.

Allen Davis, a Washington boy, became a Corner cousin and we shall expect to hear from Allen real often now. Allen was 13 September 26. He is in the sixth grade at school, has a horse named Prince, a dog named Towser and two cats.

From the Canal Zone we have a letter from Stella Newbold, who is 16 years old. Stella says she finds The Junior Farmer very interesting and hopes to find her letter in a copy of it in the near future. Her birthday is August 24.

"Dear Aunt Nellie: We have moved to a different state. There are about 400 pupils attending my school now. There are 38 in my room. I am in the eighth grade. I like school fine," writes Rosa Pierson, a little cousin from Cowlitz county, Wash. Aunt Nellie was pleased to receive your letter, Rosa.

"I am 10 years old," writes John Branton, a new Corner cousin, who lives in Washington. John is in the fifth grade at school and likes Mrs. Alldredge, his teacher, very much. He has one horse, a cow and 14 sheep to take care of. Aunt Nellie is pleased to receive John's letter and will look for another some time again.

Birthday Greetings

THURSDAY, November 1—Willard Decker, 10 years old; Bertha Enroth, 10.
SUNDAY, November 4—George Jones, 9 years old.
MONDAY, November 5—Virginia Frances Littell, 11 years old; Vivian Mirosh.
TUESDAY, November 6—Wayne Britton, 10 years old; Warner Brittain, 10; Ina Charlotte Cole, 11; Estella Felmley; Doris Elaine Wright, 10.
WEDNESDAY, November 7—Violet Dickson; Mamie McCoy, 11 years old.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie were those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Viola Taylor, Olive Pershall, John Lincoln Larren, Bessie Cyran, Anna Gesler, Ernest Sigren, Marguerite Edline, Alma Bessie Tarr, Cleia Taylor, Pearl Amburn, Ione Anderson, Gertie Rehn, Mayme Kynse, Lucile Keck, Lee Owens, Eva Paavola, Raymond Lerback, Emile Manson, Viola Rinell, Ethel Gordan, Fona Johnson, Irene Bernice Beardslee, Lola Allenshead, Letha Sims, Floyd William Beardslee, Vina McGrew, Lillian Kunz, Leslie Ann Beardslee, Clara Mary Beardslee, Jennie Victor, Sigrid Moe, Averil Boyes, Jennie Mae Beardslee, Lillian Abrahamson.

BEDTIME STORIES

By THORNTON W. BURGESS.

MRS. TINY THINKS OF A WAY.

Think and keep thinking, and keep your heart stout,
There's a way in, there must be a way out.

That is the only way to keep out of trouble. If you keep thinking hard enough and hopefully enough sooner or later you will find the way. It was so with Mrs. Tiny the warbler. She just couldn't make up her mind to hatch out that strange egg in her nest, and then have to feed and care for the young stranger. She knew that the size of the egg that the baby who would batch out of it would be twice as large as her own babies and need twice as much food.

She couldn't think of any way to get rid of that hateful egg out of the nest, and she couldn't bear to think of building a new nest somewhere else. You see when she had picked out that particular place for her nest she had felt that it was the very best place in the old orchard. In fact, she knew it was, because she had hunted through every tree before she had finally decided to build in that particular spot. So she kept thinking. She thought so hard that she almost forgot to eat. At last she called to Tiny.

"Tiny, my dear," said she, "hurry as fast as you can and bring grasses and cotton from the ferns and any other nice things for a nest which you may find."

Tiny stared at Mrs. Tiny very hard. "Are you going to build a new house?" he demanded.

Mrs. Tiny smiled. "Not exactly," she replied. "You fly away and get the things and you'll see."

Tiny looked puzzled, but he did as he had been told to do, for he always lets Mrs. Tiny have her own way. It was she who chose the place for their home and who did most of the building, so he felt that it was quite right and proper that she should say what was to be done now. When he returned with some nice silvery threads he found Mrs. Tiny already at work with some grasses which she had found. Tiny almost dropped his threads he was so surprised by what she was doing. She was building the walls of the nest higher.

"What are you doing that for?" he demanded.

"Don't ask questions, but work. I want some material right away," she replied.

So Tiny left his threads and hurried away for more. Mrs. Tiny worked with might and main. She made a roof over

"Are you going to build a new house?" he demanded.

the nest and then built up the walls. The roof over the old nest was really the bottom of a new nest. Perhaps we shouldn't call it a new nest, but a new part of the old nest. In fact, Mrs. Tiny was building a two-story house. It took several days to finish it, but when it was done the second story was quite as dainty as the first had been, and once more Mrs. Tiny was quite happy. The strange egg and her own two beautiful eggs were in the lower part, quite out of sight, and now they would never hatch into little birds. Tiny had felt very badly about giving up those two beautiful eggs, but Mrs. Tiny had promised that she would lay some more.

"Then we'll never, never leave the nest unguarded, and so there will be no more strange eggs laid in it," said she. "We've had to give up those two eggs, but we haven't had to give up our nice home, and we haven't got to take care of somebody else's child," she added triumphantly.

"That's so," replied Tiny. "My, how smart you are, my dear! I never should have thought of such a clever plan. Do you think we will have some eggs soon?"

"I think there will be one tomorrow morning," replied little Mrs. Tiny. And sure enough, the next morning there was a beautiful little egg in the new part of the nest.—(Copyright.)

HOMEMADE LEATHER GOODS.

A club woman in northwest Oklahoma recently made herself a very beautiful horsehide coat which she believed would have cost at least $50 if she had bought it ready made. She spent only $9 for tanning and a small additional amount for the sateen lining. Every one in the club assisted in planning the garment and in applying the principles of cutting and designing learned from the extension agent.

Extension agents of the department of agriculture and of the state agricultural colleges are endeavoring to aid in the profitable utilization of the hides of animals butchered on the farm.

Most useful and attractive coats and sleeveless jumpers, with hats to match, can be made from veal skins, which can be tanned without the hair at a reasonably low cost. Many useful and marketable articles are also made from lamb, sheep and goat skins.

Crop Records Smashed!

Bigger Yields Make More Money

This year Canada's crops are bigger than any previous year. Big yields on low cost fertile farm lands together with good average prices for products offer you your chance to enjoy prosperity and real independence. Thousands who shared in Canada's biggest crop this year were struggling just a few years ago to overcome the handicaps you face now. By the plan they followed, you too can get ahead. Along the Canadian National Railways' lines unusual natural advantages really repay you for your work!

$20.00 Per Acre Average Price

Easy Payments—Low Prices and Taxes—Increasing Values

You can buy land unsurpassed for fertility along the lines of the Canadian National Railways for an average of $20.00 an acre. Such land yields abundantly and is suitable for grain growing and mixed farming. Our booklet shows the yields per acre. Easy terms place it within reach of all. You make only a small first payment, usually 10% or less—the balance being spread over a term of years, with low interest rates and small land tax. No tax at all on buildings, improvements, animals, machinery or personal property.

Special Excursion Rates

Reduced railway rates are in effect for landseekers and their effects to encourage inspection along the lines of the Canadian National Railways. Personally conducted excursions also be arranged.

What $2.00 Buys for a Ford!

EXPERIENCED Ford owners have quit cheap-price and doubtful-quality timers to buy the Milwaukee Timer at $2. Their reward is great — more power, quicker pick-up, steadier pulling, easier starting, longer life. Their cars climb hills better, travel faster through mud, sand and snow, and are free from ignition troubles for thousands of miles.

Milwaukee Timers are sold in every village, town and city—at garages, auto supply and hardware stores. Get one today—and you'll have a better Ford! The Milwaukee also fits the Fordson tractor.

Over 18 years of building fine ignition units are back of this timer. It is known wherever Fords are driven.

The 1924

THREE big improvements make the 1924 Harley-Davidson even better than ever for the farmer. You have never felt such a surge of smooth power as the new *alloy pistoned* Harley Davidson delivers. And the new side car with its *ful-floteing, semi-elliptic springs* — you won't have to worry about the case of eggs you're taking to town. Another great improvement is the *Alemite Lubrication* (first on any motorcycle). Use a Harley-Davidson for business errands—50 miles for a dollar (gas, oil, tires and all) and leave you car in the garage. Thousands of farmers save money this way.

Ask your dealer about his Pay-as-You-Ride Plan. Write us for free literature.

Why Not Be Sure of a 100% Calf Crop?

SAV-A-CALF

(TRADE MARK REGISTERED)

Is Guaranteed to Get Results

Staggering losses of valuable calves are turned into satisfying profits by those who feed their cows SAV-A-CALF. Hundreds of well known farmers, breeders and dairymen throughout the northwest have eliminated calf loss from their herds by using this tried and proven abortion remedy.

Cows that have refused to breed, or fail to come in heat or catch with calf, bring strong, healthy calves every time if treated with SAV-A-CALF. It insures better service from your bulls, improves the health of the entire herd, keeps them free from disease, and increases production.

SAV-A-CALF is simple and easy to use. Just mix it in the salt or use it in the feed. YOUR MONEY BACK if not satisfied.

READ WHAT USERS SAY.

Nampa, Idaho, 10-8-'23.

Gentlemen:

"My trouble was shy breeders and I had considerable calf loss. I treated my cows with SAV-A-CALF and every one has caught with calf regularly. I have one 2-year-old Jersey heifer which I was told would not breed, but she, as well as the rest, are with calf. I heartily recommend SAV-A-CALF to all breeders."

CLARK SHALLENBARGER.

EVERY COW CAUGHT WITH CALF.

Nampa, Idaho, 5-25-'23.

Dear Sirs:

"After feeding SAV-A-CALF to nine of my cows that would not breed, every one of them caught with calf after the first treatment. I had used different bulls at times without success."

F. A. BURLINGAME.

TESTIMONIALS BASED ON FACTS.

Nampa, Idaho, 10-11-'23.

Babbitt Bros:

"In reply to your suggestions regarding testimonials as to your remedy will say that I am personally acquainted with the Nampa men named and can assure you of their reliability. Their testimonials are based on facts. Whatever they state can be relied upon."

News for Breeders

HEADS MAYVIEW FARM HERD.

Earl F. Harper, Johnson, Whitman county, is building up a strong herd of Duroc Jerseys on his Mayview farm. He has as his senior herd sire a good boar, Mayview Great I Am 1st, and junior sow champion-sire, Great I Am 1st. His junior sire is a senior pig, Lookout Sensation, from the J. D. Waltmeyer herd of Iowa. Mr. Harper showed 17 head in the hog show at the Lewiston-Clarkston fair at Lewiston in September, among his winnings being the sow senior and grand championship on Mayview Orioness I Am, also a get of Great I Am 1st, and junior sow championship on Mayview Double Orioness 2d. Mayview farm also breeds purebred Shorthorn cattle.

NEW STATE BUTTER CHAMPION.

Washington's new full-age champion Holstein butter cow for 10 months' production is Konnybrook Cornucopia Clothilde, owned by the state hospital at Fort Steilacoom. Her record as announced by the advanced registry department of the Holstein-Friesian Association of America is 22,042.4 pounds milk containing 766.26 pounds butterfat, equivalent to 957.8 pounds butter.

As a consequence of this record this cow displaces the former champion in her class, Cascade Blossom of the William Todd & Sons herd, Yakima, whose record is 24,043.7 pounds milk and 762.59 pounds butterfat—equal to 953.2 pounds butter.

YIELDS WELL UNDER HANDICAP.

Though born with only two teats, Steilacoom Fayne Cascade, a junior 4-year-old Holstein in the Western State hospital herd at Steilacoom, Wash., made 17.58 pounds of butterfat from 497.7 pounds of milk in seven days and will close her year with around 20,000 pounds of milk and 640 of butterfat—five times the production of the average cow with full lacteal equipment. She came to producing age with only half of her udder developed, but she was so well bred that Superintendent V. M. Richards decided to give her a trial. She is out of one of the high producing daughters of Sir Johanna Ruth Fayne, foundation sire in the herd of William Todd & Sons at Yakima.

BUYS WASHINGTON JERSEY.

John T. Cain of Salt Lake, Utah, who judged Holsteins and Jerseys at the Southwest Washington fair, purchased a Jersey bull calf from A. T. Flagg of Chehalis, to take to his own Jersey breeding farm in Utah. Mr. Cain is on the staff of the extension service of the Utah Agricultural college and his brother is head of the department. He has judged Jerseys and traveled over a considerable portion of the west and has observed the type and studied the blood lines of the Jerseys he has seen. The calf won first in his class and was placed as junior champion by Mr. Cain before he had any idea of buying him, and this was done in strong competition. In fact, he tried to buy the sire of the bull, and also tried to buy the senior herd sire of N. C. Sears of Winlock, that is by the same sire, but both the older bulls were held at prices he felt he could not afford to pay. Professor Cain noted the get of this sire exhibited by Mr. Flagg and the grandsons and granddaughters in the Sears herd and decided that was the blood he wanted to improve his herd. The sire, St. Mawes of Oak Springs, was bred by Ed Cary of Carlton, Ore. Before making the purchase Mr. Cain visited the Flagg farm and studied the conformation and breeding of the dam, which only confirmed his first opinion that he had found a bull to suit him.

Wheat Conference Called

Congressman John W. Summers has sent out a call to heads of organizations, farmers, bankers, war finance corporation officials and county agents of the wheat growing counties for a meeting at Colfax November 7, to work out details of cooperative marketing of wheat.

Ten Cents Premium on Hogs

Farmers of Hillsdale county, Mich., have had proof in the form of actual cash that it pays to clean out tuberculosis from all their herds. This county was one of the 17 included in the first list accredited by the bureau of animal industry, United States department of agriculture, as practically free of the disease, and a Hillsdale county farmer was the first to receive the premium of 10 cents a hundred on hogs offered by the principal meat packers at the various markets for all hogs bred and fed in counties accredited as being practically free of bovine tuberculosis. Since hogs contract the disease from milk or the droppings of cattle, healthy cattle means healthy hogs.

Breeders' Department

LAST CALL
Pacific International Combination Duroc Jersey Sale
North Portland, 1 P. M., Nov. 7

Note the consignments of service boars, bred and open gilts, of the grandest blood lines of the breed—Pathfinder, Sensation, Orion Cherry King, Pathmaster and others. Note the number of prize winners and close kin of prize winners consigned.

If you have no catalogue, come early and secure one at the ringside. If you have one and can not attend, send your bid to B. R. Evans, editor Duroc Bulletin, Des Moines, Iowa, or Horace Addis, field editor Oregon Farmer, both of whom will be present. It will be the opportunity of years to secure the best of Duroc blood and individuality.

Maple Ridge Jersey Farm

offers strongly bred St. Mawes bull calf; bred for production and type. Reasonable.
J. C. BROWN & SONS, Shedd, Ore.

Have you glanced over the farm bargains on the "Want Ad" page?

Jersey Announcement

I have purchased entire Ladd herd of Jerseys at rock bottom prices. This gives me more cattle than I can comfortably care for at Oreglow, hence have placed a price on each animal which is but little above grade cattle price and will sell until I have left the number I wish to keep. I will be at the Pacific International, Nov. 3 to 10, every day but Sunday. Oreglow is not far from the show grounds and I will gladly take any one looking for purchases out to the farm where they may inspect all the cattle in their "every day clothes."

Oreglow Farm
D. BROOKS HOGAN, Boring, Oregon.

Royal Ranch Durocs

We have the best boars we ever raised for sale at less money than you ever bought them for. The type and breeding you want, including the 1923 junior champion of Idaho. The strongest Duroc show of the northwest. 26 herds competing. Write us your needs.
ROY SHUTWELL, R. F. D. NO. 3, Boise, Ida.

Turner's Durocs

For sale—Registered spring boars and gilts, sired by grand champion boar. Also booking orders for fall pigs. Prices reasonable.
H. W. TURNER, Sunnyside, Wash

Duroc Jersey Boars Spring boars sired by my Jr. yearling boar Gun Sensation Leader, the boar that weighed 700 lbs. at 18 months, and was Sr and grand champion in 1923 at Idaho's greatest hog show. These boars are priced to sell. Let me write you about them.
J. P. Hunt, Route 1, Buhl, Idaho

Duroc Jersey Boars

By Gem Sensation Leader, champion a Idaho state futurity.
BEVINGTON BROS., Gooding, Idaho

Entermille's Polands

Sired by Giant Liberator and out of a Bl Buster sow, win first and third junior sow pigs at state fair in class of 42. Have a few choice spring pigs and some wonderful fal stock for sale.
FRED D. ENTERMILLE, Baker, Ore

Big Type Poland Chinas

Young boars ready for service. Also weaned pigs at bargain prices. Best breeding o the times.
H. J. STILLINGS, Hermiston, Ore

Pioneer Herd Hampshire Swine

10 head choice boars; 10 head of sows an gilts, backed by show records.
J. M. FRUITTS, Cambridge, Idaho

Weanling Hampshire Pig

and service boars. Most popular blood lines good individuals, reasonable prices.
J. W. PARKER, Yamhill, Or

O. I. C. SWINE

Herd headed by Western Prince, N 103084; he by Ohio's Best. Winners, size, qual ity and true type. Breeding stock for sale.
J. H. WEST, Ringgold Farm, Centralia, Wa

HOLLYWOOD FARM HOLSTEINS

SIR BEETS CORNUCOPIA NETHERLAND

First Prize Senior and Grand Champion Minnesota State Fair 1910, 1911, 1912, 1913. Grand champion National Dairy Show 1910. The only really undefeated champion of the breed.

Grandsire of North Star Daisy Johanna.

In 1922 the Hollywood Herd was the highest record herd in the highest record cow testing association in the United States

NORTH STAR DAISY JOHANNA

A monderful outstanding individual. At 3 years 4 months, 365 days' milk 22,360 lbs., butter 1039 lbs. At 4 years 6 months 365 days' milk, 24,823 lbs., butter 1072 lbs.. strictly official test.

JOHANNA BONHEUR CHAMPION

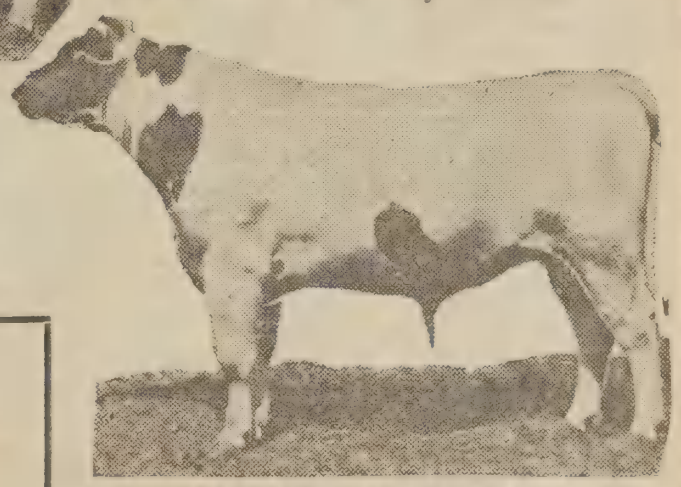
Grandson of Johanna Bonheur. Sire of second prize cow at the Minnesota State Fair 1923, also second prize get of sire. Sire of Junior Champion Bull at the New York State Fair 1921.

Sire of North Star Daisy Johanna.

NORTH STAR DAISY OAK

305 days' milk 15,244 lbs., butter 661 lbs. at 2 years old. A better record than her dam made at the same age. A full sister to Goliath of Hollywood.

Daughter of North Star Daisy Johanna.



GOLIATH OF HOLLYWOOD

Junior herd sire of the Hollywood herd. He traces back directly to a long line of National Grand Champions. His daughter won Junior Champion at the S. W. Washington Fair, the Washington State Fair and the Oregon State Fair. His son won Junior Champion at the S. W. Washington Fair and Grand Champion at the Washington State Fair. His "get" won first at the Washington State Fair and at the Oregon State Fair.

Son of North Star Daisy Johanna.

Christmas Is Just Around the Corner. So start today choosing your Christmas Gifts

20 Complete Christmas Stores in Your Montgomery Ward Catalogue

Twenty complete Christmas stores, hundreds and hundreds of gifts, everything suitable for Christmas is pictured in your Montgomery Ward Catalogue.

Toys, games, books, jewelry, all the season's novelties, all kinds of practical presents—everything to please Man, Woman, Child or Infant is offered in this complete catalogue.

If you do not know what to give, your catalogue will make you a hundred suggestions. It will be your best aid to choosing the right gift for every friend and relative.

And in this great Christmas Catalogue everything is ready now. You do not need to wait until Christmas is at hand to make your selections. You have before you now in your Ward Catalogue everything you will want to buy for Christmas.

Start Today Selecting Your Gifts for Christmas

The weeks before Christmas pass by quickly. So start today looking through your Catalogue and select your gifts carefully. There is an increased pleasure both in giving and receiving a carefully selected and appropriate gift.

There are no "Christmas Profits" in Montgomery Ward prices

There are no Holiday prices, no "Christmas profits." You pay the lowest price of the year for every Christmas gift. You buy from Ward's Catalogue at the normal, everyday price.

Your saving in buying from Ward's is, therefore, greatly increased at Christmas time. So study your Catalogue. See for yourself the saving. See for yourself how much farther your money goes, how many more presents you can buy. No one need to be omitted from your Christmas list if you let Ward's Catalogue be your Christmas guide, your Christmas store.

Order Your Christmas Gifts Early. Christmas is just around the corner

We are ready now to handle all Christmas orders. Our stocks of Christmas goods are now complete. Everything is ready. So order now.

Get out your Ward Catalogue today. Don't put it off till Christmas time. Don't wait till some things are gone.

Start today making up your Christmas list. Order early.

Figuring Profits From the Dairy Herd

Snohomish County Cow Testing Association Succeeds in Adapting Rations to the Herd and to the Individual Cow

By RALPH ERSKINE

DAIRY HERD PROFITS vary according to the cost of production, yet every dairyman knows that if he can increase the production of milk from his cows he will also increase the profits. Feeding can greatly affect this increase even in some low producing herds. There are many cases where better feeding also will prevent the loss of much work in constructive breeding, thereby returning a better profit to the owner.

The Snohomish County Cow Testing association, under the supervision of Donald L. Saunders, the tester, has demonstrated what can be accomplished by better feeding methods. This was one of the first cow testing associations to be organized in the state of Washington and has been operated successfully even during the time when it was difficult to get testers. It was at one time known as the Stillaguamish Cow Testing association, since a large part of its members were then in the Stillaguamish valley, which is a fertile dairy section. There are still many of the original members in the organization and the striking feature is that the older members feel that they are getting more than their money's worth and their herds average higher than the average of the newer members.

The membership is about what is desired for the ideal testing association. In August, 1923, there were 34 herds tested which made a total of 604 cows, and in September, 678 cows. The average production per cow per month was at that time 789 pounds of milk and 33.4 pounds of butter, a good average, but it is not the present production that is the outstanding feature of the work of this association.

As many association members know, the records kept in the herd books are not always taken advantage of by the herd owners, although they can be made the basis of much improvement in the herd. It remained for Saunders to dig into this record as he took up his work early in the summer of 1922. A graduate of Washington State college, he secured a good foundation in the feeding of farm animals and saw his opportunity to put it into practice. He began slowly, but it was not long until he had established a name as being able to suggest rations that would increase the milk production.

The Flower Garden

By RUTH GIPSON PLOWHEAD.

Shrubs are among the most useful of all plants for home ornamentation, requiring perhaps the least care of all forms of floral growth. While they respond to careful treatment, they will stand much neglect and still produce favorable results. Shrubs are desirable, both as a background for perennials and annuals, and as a screeen for hiding unsightly buildings.

While fall blooming shrubs are not as common as spring blooming, they may be had; yet if we choose our shrubs for succession of spring blooms, tall growing perennials, such as hollyhocks or golden glow, planted in the foreground, will furnish the color for late summer and fall and look all the better for a thick green background.

Forsythia is one of the earliest of the spring blooming shrubs; it might be followed by early and late tartarian in shades of rose, pink and white, by lilacs, spirea, syringa, in fact, there are any number from which to choose, according to your own desires.

Most shrubs are easily started from cuttings, and if your neighbor has varieties you would like to grow, you may easily propagate as many plants as you choose. The nursery way would probably be to take cuttings of the ripened wood in the fall, cut into six-inch lengths, tie into bundles and bury them in damp sand to form callouses, and then root them in the spring. But one can plant them in the garden in the fall. Dig a trench which is deep enough to hold all the cutting except one eye, which should extend above the ground. Pack the earth well down about the cuttings, protect them with a box or leaves and branches, and a number of your cuttings are sure to grow. I have found syringa and spirea easily started in this manner. If you are planning to buy or move shrubs, November is a good time in which to plant them, especially the spring blooming varieties.

Many kinds of roses are also easily started from cuttings, and as few of us ever have too many roses we can increase our stock in this manner. Climbing roses, especially the rambler type, are very easily rooted. They also may be cut in November and buried in sand until spring, but a good method for the amateur to try is the following:

Take cuttings of the current year's wood late in October or November. One very successful grower said that he always tried to take the cuttings where the branch joined the main stem, and tear, not cut, it off, leaving a little bark from the stem adhering. These cuttings are then planted in trenches of sandy soil, with one bud or eye exposed. Fruit jars or other glass containers are then placed over the cuttings, firmed down well around the edges with earth, and left undisturbed until the weather is warm and settled in the spring. Among others in my garden raised by this method are Paul Neyron, a lovely salmon pink hybrid tea, unnamed, Dorothy Perkins and Virginia R. Coxe.

It is very easy to protect a few of the blooming plants in your yard from the first severe frosts. One may often prolong the blooming season several weeks, for in our northwestern climate we often have several sunny weeks after a spell of frost. A number of things may be used, but several newspapers wrapped about each plant is as good a protection as any, and easy to work with. Don't forget that the same thing applies to the vegetable garden, and a few tomatoes and cucumbers may be also protected.

Our Friend--The Toad

By DON B. WHELAN.

When you see a toad in the garden, in a field of growing crops or among the flowers you can just make up your mind that it is a real friend. Many people have appreciated this fact, but they did not know how, or to what extent, this squatty, warted amphibian rendered its aid. He is an insect eater of the first magnitude and has an insatiable appetite. On his bill-of-fare are many of our most injurious insects. Investigations have proven the fact, in 24 hours, the insects consumed by the toad equals in quantity four times the capacity of the toad's stomach. In other words, the stomach if filled and emptied four times during a day and night.

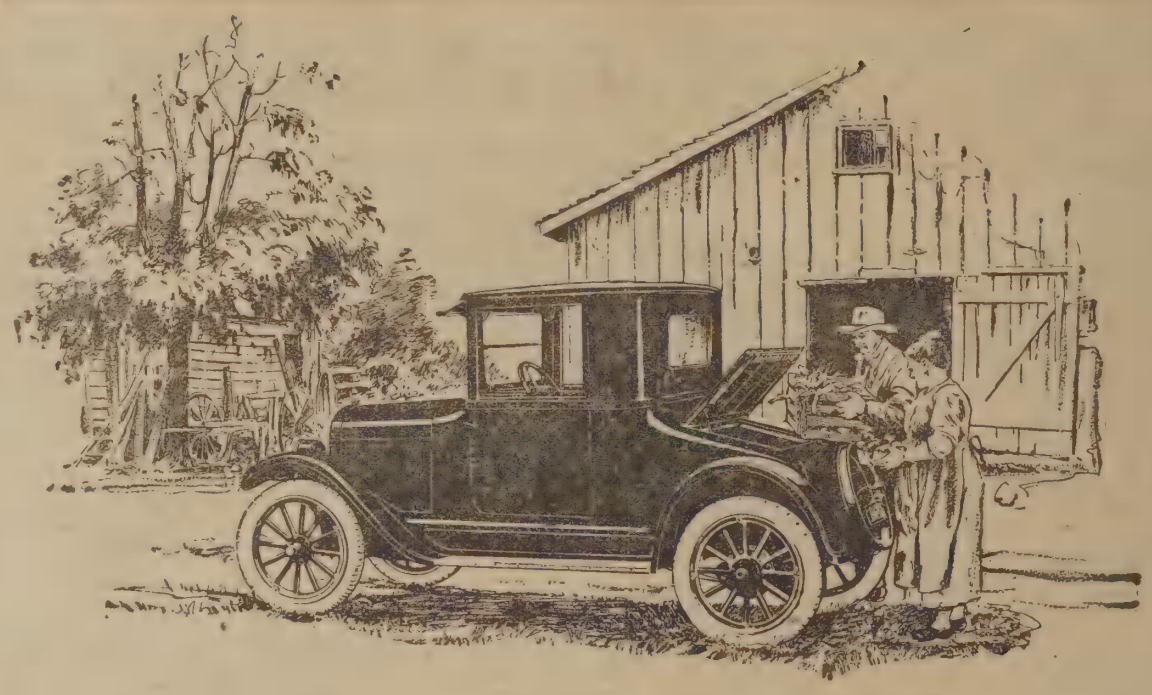
One investigation, in order to find what the toad's diet was composed of, examined the stomachs of 149 toads during the months of April, May, June, July, August and September. As a result of this investigation he found that the toad's meal was composed mostly of insects, many of which were injurious. The following list

(Cintinued on page eighteen.)

for Economical Transportation

CHEVROLET

Every Farm Needs Two



EVERY farm needs two automobiles, one of which should be a closed model Chevrolet.

The open touring car is best for general farm use, carrying passengers or perhaps miscellaneous bulky produce or merchandise, but for cold or rainy weather, and for church or social use the family needs a closed car, either a 2-passenger Utility Coupé, as illustrated, or the 5-passenger Sedan. The extra large rear compartment is a feature of the Coupé.

These closed cars are very finely made, furnished, upholstered and trimmed. The windows are of plate glass and can be lowered, providing as much air as an open car, yet affording full protection against wind, rain, snow or cold when raised.

With a second car on a farm, one is always available for those at home when the other car is out.

The low prices of Chevrolet make the ownership of two cars feasible for most farm families.

Kitsap County Club Members Celebrate

Notable Achievement Banquet and the Awarding of the Prizes Won at the County Fair

It takes the boys and girls of the Four A clubs in Kitsap county to set an example for other districts with their county achievement banquet, held at Bremerton October 25, as the final windup for their year's work. There were over 300 members and their club leaders at the banquet which was held in the Methodist church and 200 of them passed through the gates and visited the Puget Sound navy yard at Bremerton, where they had a group picture taken on the U. S. S. Nevada.

This was their third annual achievement banquet, held largely for the purpose of getting the winners together and awarding the prizes won in the contests at the county fair. The banquet was carried on in true banquet style, with an address of welcome by E. J. McCall, the mayor of Bremerton; a response by Mrs. Clara J. Carter of Central Valley and addresses by such men as Rear Admiral J. A. Hoogewerff, commandant of the navy yard, and Dr. S. B. Nelson, director of the extension service at the state college.

The guests of honor, however, did not do all the talking. The meal was interspersed by frequent yells and songs from the different clubs and occasionally the entire group would join in with the county yell, which went as follows:

K-I, K-I, K-I-T;
S-A, S-A, S-A-P;
KITSAP.

The manner in which each club carried on their part of the enthusiasm showed that they all had had plenty of practice at their local meetings and were well able to make themselves known.

Dr. Nelson was called on to award the achievement pins to the senior and junior county champions and he spoke very highly of the splendid work that is being done in this county. "Optimists is hardly the right word," he explained. "I would prefer to use the new word, peptimist, as it means more than an optimist. An optimist is a person who knows what ought to be done but lets the other fellow do it, while a peptimist is a fellow that knows what should be done and goes ahead and does it himself."

The garden, canning and sewing exhibits this year were displayed in a different manner than has ever been used before. The business men of Bremerton donated space in several store windows and the different clubs that brought their prize-winning exhibits along were given a section of the window all to themselves and the store decorator arranged the articles in such a way as to best suit the rest of the window. The plan was pronounced a decided improvement over the custom of having all of the clubs display their goods in one large store room or in the chamber of commerce room, as was the case the first year.

The splendid cooperation from the business men went much farther than to afford space for the displays. They also gave their financial support and did much to strengthen the backbone of the entire club movement. All of the seven banks in the county contributed to the general fund by awarding savings account books with $3, $2 and $1 deposits to the members in their own community that did not win any of the county championship awards.

The account book idea has been carried on for the last three years and the bankers all testify that there have been very few that have drawn their accounts out and many have deposited more to the original account. The plan is an excellent one and is creating a foundation of thrift as well as awarding something of value to the members to show the appreciation of the year's work. It also keeps the local bank fresh in the mind of the boy or girl who holds the account and gives him a personal interest in its operations.

A novel plan of awarding scholarships, each of $25 valuation, was taken up by three civic organizations in the county. The scholarships are to be held in trust by the State College of Washington until such time as they may be used toward defraying the expenses incident to the attendance at any regular or special course in instruction. The four scholarships were given by the following bodies: Garden project, Port Orchard Chamber of Commerce; canning project, Bainbridge island central committee; pig project, Bremerton Kiwanis club; sewing project, friends.

The county fair prizes amounted to a total of $100, while the savings accounts from the seven banks were somewhere between $100 and $200. Special prizes were also awarded and Thelma Anderson, age 9, who recited a poem on Kitsap county, was presented with a bouquet of flowers by one of the local flower shops.

Too much credit can not be given to the valuable assistance given by the local club leaders and to G. N. Worden, the county agent, for their untiring efforts in putting the work across. Mr. Worden has spent much of his spare time in getting the contests arranged and the club displays shown at the county fair. His praise was sung many times during the banquet and he was presented with a gift sweater in appreciation of his efforts among the club members.

The champions of the entire county, who have successfully met all their competitors at their district and county fair, were presented with a scholarship of $25 and a shield which told of their accomplishment and may be kept by the individual or team in their home or meeting place. Those who won the county championships were:

Sewing club—Bertha Johnson of Pearson club; Mrs. O. P. Lynum, leader.

Canning club—Verneta Ruef of Silverdale club; Mrs. F. B. Kunz, leader.

Garden club—Oak Lodholm of Burley; Mrs. Edna B. Lodholm, leader.

Pig club—Ellis Johnson of Bainbridge island; V. C. Lee, leader.

In addition to the county champions the teams in each project were also awarded shields. These tokens gave the winning team or member something to keep in the meeting place or home to show what winning was made. In case the scholarships have not been used before the winners become 21 years of age they shall revert to the county club work and be re-awarded in the same or other projects:

Following are the individual winnings:

Junior division champions—Sewing club, Orlene Carlson of Pearson; Mrs. O. P. Lynum, leader.

Canning club, Minnie Hall of Fragaria; Mrs. Gladys E. Karcher, leader.

Garden club, Louis Molzahn of Fernwood; George E. Worton, leader.

Pig club, Louis Molzahn of Fernwood; George E. Worton, leader.

County Bank Prizes.

The Kitsap County bank, First National Bank of Bremerton, Bremerton Trust and Savings bank, Citizens' Bank of Bremerton, the Silverdale State bank and the Poulsbo National bank, being all the banks in Kitsap county, join in awarding savings accounts to all boys who have satisfactorily completed their work. The county champions in both senior and junior divisions receive a $3 account, those winning second place get a $2 account and those winning a third place get a $1 account.

Following is a list of the winners in all projects:

Sewing Project.

Senior division—Bertha Johnson, Pearson, county champion. Seconds: Ada Dahl, Central Valley; Gina Ringness, Central Valley; Mildred Tegstrom, Pearson. Thirds: Ethel Koskey, Pearson; Irene Morse, Pearson.

Junior division—Orlene Carlson, county champion. Seconds: Katherine Cady, Burley; Muriel Stein, Burley; Agnes Ringness, Central Valley. Thirds: Ida Warnberg, Pearson.

Canning Project.

Senior division—Verneta Ruef, Silverdale, county champion. Seconds: Sylvia Vales, Long Lake; Adna Dahl, Central Valley; Hilma Kippo, Central Valley; Martha Olson, Central Valley. Thirds: Georgia Smith, Port Orchard; Anna Rimple, Port Orchard; Mary Ernst, Silverdale.

Junior division—Minnie Hall, county champion. Seconds: Muriel Stein, Burley; Josephine Dahl, Central Valley; Myrtle Peterson, Central Valley; Betty Hall, Fragaria; Louise Willock, Fragaria; Rowena Crist, Silverdale; Elma Major, Olalla; Helen Peterson, Olalla; Esther Peterson, Olalla; Mary Vales, Long Lake; Bessie Vales, Long Lake; Marie Hauff, Long Lake.

Thirds: Edith Colburn, Long Lake; Edith Anderson, Ellen Carslin, Elsie Carlin, Ruby Pfundt, Martha Smith, Ethel Toner, Cora Clapson, Nellie Clapson, all of the Olalla club; Florence Bates, Lena Bates, Metta Davis, Phyllis Davis, Kathryn Hedden, Ariel McIntyre, Dorothy McIntyre, Mildred Milne, Myrtle Milne, Edith Nelson, Geraldine Shattuck and Laurice Siegner, all of Port Orchard; Florence Bartlett, Julia Kitts, Josephine Kunz and Sigrid Lindberg, all of Silverdale; Mary Stein, Burley; Thelma Bjorlie, Tora Fosberg, Anna Hanson, Thora Kvarnstrom, Emma Olson, Olga Olson, Vivian Peterson, Marguerite Peterson, Alice Ringness, Ruth Ringness and Katherine Rausa, all of Central Valley; Marie Bandrup, Elma Johnsen, Ella Johnson and Louise Hall of Fragaria.

Garden Project.

Senior division—Oak Lodholm, county champion. Seconds: Edgar Ostrand of Bainbridge island and Ralph Hallam of Pearson.

Junior division—Louis Molzahn of Fernwood, county champion. Seconds: Ernest Ostrand, Bainbridge island; Valdemar Lodholm, Burley; Beech Lodholm, Burley; Edwin Molzahn, Fernwood; Pearl Noren, Fernwood; Valdis Olson, Bainbridge island; John Finholm, Olalla; Walter Finholm, Olalla; Willis Carter, Pearson.

Thirds: Oliver Nelson, Fernwood; Rossi, Fernwood, Lee Carlson, Alvin Carlson, Orville Culver, Lars Grevstad, Arthur Iverson, Merton Mallory, Orvis Rongen, all of Olalla; Anselm Sunila, Pearson; Josephine Kunz and Melvin Ruef of Silverdale.

Pig Project.

Senior division—Ellis Johnson, Bainbridge island, county champion. Seconds: Ben Burke, Bainbridge island; Ernest Ruef, Silverdale; Norman Nelson, Bainbridge island.

Junior division—Louis Molzahn, Fernwood, county champion.

Pig Club Awards.

Special pig club awards given by the Bremerton Kiwanis club are as follows:

Ellis Johnson, scholarship, $25. Ben Burke, greatest average daily gain, $5. Ernest Ruef, cheapest, $5. Norman Nelson, best record, $5. Louis Molzahn, best story, $5.

All members who have satisfactorily completed their work will receive an achievement pin as soon as they can be secured and forwarded.

The following clubs will receive formal standard club charters as soon as they can be prepared and delivered:

Central Valley Canning club—Mrs. Clara J. Carter; Central Valley Sewing club—Mrs. Hans Dahl. Fernwood Garden club—George E. Worton. Fragaria Canning club—Mrs. Gladys E. Karcher. Long Lake Canning club—Mrs. Alf Hauff. Olalla Canning club—Miss Edith Peterson. Olalla Garden club—Ole Rongen. Pearson Sewing club—Mrs. O. P. Lynum. Port Orchard Canning club—Mrs. W. L. Wheeler. Silverdale Canning club—Mrs. F. B. Kunz.

CULLING IN KITSAP COUNTY.

A total of 2335 hens have been examined in Kitsap county by members of the poultry culling school during the last three months. Of this number 552 have been weeded out as poor producers, according to a report from G. N. Worden, the county agent.

County Fair Comes Back

Neglect does not seem able to kill the county fair as an institution.

The first county fair to be held in Skamania county for 10 years, which was also the last one of the season in Washington, was held at Stevenson the week of October 7 and was a success from every standpoint.

The holding of another in 1924 is practically assured.

Cooperation in Marketing

Cooperation in marketing will receive special attention at the coming meeting of the State Horticultural association, which will be held at Yakima December 10-12. President Paul Weyrauch of Walla Walla will preside and N. B. Coffman of Chehalis, president of the State Chamber of Commerce, will make one of the leading addresses.

Papers and discussions of interest to horticulturists will be given by State Director of Agriculture E. L. French; Roy Larson, Wenatchee; Leo K. Couch and Isaac D. Hunt, Portland; Dr. E. A. Bryan, Washington State college, and George Coburn, Wenatchee.

Why Club Members Make Good

One reason why club members make good is because they are usually the type of boys and girls that are sure to make good in any undertaking. The nature of the work and the manner in which it is carried out help to keep alive the ambition to carry some kind of agricultural pursuit. A recent survey of club work in Clallam county has emphasized this point in a very striking manner.

Out of the 604 prize-winning club members in all parts of the county, a summary of their records gives the average value of property owned by these members at $318.40. They had an average bank account of $111.10. It was the definite ambition of 65.2 per cent to attend college.

The final figures of the summary tell the most vital part of the story. Of these intelligent and thrifty young citizens of the farms 90.7 per cent said they wished to remain on the farm. Only 2.5 per cent of the remainder expressed an intention of leaving agricultural pursuits.

Did It on Home-Grown Feed

A Holstein cow owned by Chris Hendrichsen of Onalaska, Lewis county, Wash., received some national publicity in Hoard's Dairyman recently on the strength of a good year's record she recently completed in the county cow-testing association. In 305 days, at 6 years, she produced 613.1 pounds of fat valued at $313.05 (market price less cost of transportation from farm to market). Her total feed costs for the year were $115.45, leaving a profit of $197.60. An interesting feature of the story, and one that ought to be emphasized more on western dairy farms, is that, with the exception of oil meal, all of the feed was grown on the Hendrichsen farm. During the year this animal, Nisqually Olga Johanna, consumed 4320 pounds of corn silage, 2100 pounds of roots, 3150 pounds of hay and 2650 pounds of grain, besides being on pasture for six months.

The Potato Grower's Opportunity

The third annual Northwest Potato show will be held at Spokane, November 20-23. This show has been patronized in the past by a considerable number of growers from all four states of the northwest—Washington, Oregon, Idaho and Montana. This year an even greater interest should be manifested. The prize money offered is worth an effort to win, totaling $980, of which $525 will be awarded to winners in the certified seed competition, the remaining $455 being for producers of commercial table stock. Of greater importance, however, than the premium money that may be won is the information that may be obtained by the growers of this important crop. In addition to the lessons which the competition itself will give, a program of recognized authorities on various phases of the potato industry will be given.

A notable agricultural meeting is that of the Pacific Northwest Potato Growers' association, which will begin its sessions in Spokane November 20 in connection with the potato show.

Among the speakers this year is W. C. Edmundson of the federal field experiment station, Greeley, Col. He will tell the high points in five years' experiments.

Another government expert, well known to our growers, will also be present, D. G. K. K. Link, pathologist of the United States department of agriculture.

Details of the three days' program will be found elsewhere in this issue.

Reducing Cost of Cow Testing

In the early history of the cow testing association the dairymen of the dairy sections have tried different means of getting a large number of cows tested at a small cost. Some of these plans have worked for a time, but the plan that has stood the test is the one where from 450 to 600 cows are tested each month by one man who attends to all the book work and records.

Necessity has pressed the original idea and it has at last been worked out in Whatcom county, where they have been successful in handling almost three times the number of cows at a lower cost than is being charged in the smaller associations. Although the plan is now being operated as an experiment by the state college extension service through the help of the county agent, it has been prophesied that it will be taken up by other counties in this and other states.

The plan may be briefly stated as follows:

The sample bottles are left at the farms by the tester once each month, and the farmer asked to take his own samples and record the weight of each cow's milk for the two milkings. The next day the samples are collected and taken to Lynden, where they are all tested by the use of a steam centrifuge. Here the tester's job ceases, and instead of taking the time to figure up all of the data, and work out the books for each herd, one barn sheet for each herd is sent directly to the state college at Pullman, where it is figured up and recorded in the herd books which are kept there. The herd owner keeps only the original barn sheet as a record of each month's test. Thus the tester has time for real personal contact with the farmer, since he spends the greater part of his time calling at the different farms to get the samples and can at the same time talk over problems that come up regarding the herds.

READJUSTMENT OF AGRICULTURE.

Wallace's Farmer: There is such a thing as intelligent readjustment of agriculture to the present situation. It means producing less of some crops and more of others. It means putting some wheat ground back to grass, and also some rolling corn land down to grass. It means raising somewhat more cattle and sheep in the United States, and possibly fewer hogs. The problem is a technical one of the greatest complexity. If it can be tackled successfully it will mark the beginning of harmonious cooperation of agriculture, labor and capital.

Washington State Gleanings

The reorganization of the farm bureau at Oakesdale was accomplishment under the direction of Fred Talley, state director of farm bureau work, and Brick Burford of Whitman county.

The following officers were elected: Thurston Hodges, president; Jim Willard, vice president; Mrs. Gifford Martin, secretary and treasurer of organization and program work; Charles Willard, entertainment committee.

GRAPE JUICE MANUFACTURED.

Although the Kennewick district is becoming well-known for its Concord grapes, which are shipped to all parts of the northwest, there are many grapes that do not reach the fresh market. This year there were 300 tons that were used for the manufacture of juice by the Church & Co. plant, where 54,765 gallons have been stored. All of this will be bottled and shipped to jobbers for fountain and store trade.

IMPROVE IRRIGATION DITCH.

Improvement and permanent renewals on the West Oroville irrigation ditch are proceeding rapidly. Two tunnels are being run and a large part of the ditch from the intake to the first laterals will be improved, removing a large part of the high fluming, which has given trouble in past years.

About 50 men are employed and more are being added daily. The work will continue the greater part of the winter.

NEW APPLE PACKING RECORD.

M. A. Peacock of Yakima picked 28,100 boxes of apples from 38 acres of 11-year-old trees, averaging 739 boxes an acre.

Pearl Goetz, packing apples for the Yakima Valley Fruit Growers' association, in 10 hours packed 261 boxes of Rome Beauties, setting a new record. The best record last year was made by Minnie Markel, who packed 225 boxes in eight hours, working for the Moxee Orchards company.

Total fruit shipments from the Yakima valley for the week of October 22-27, were 990 cars, and vegetables were 239, making a total of 1229 cars. Apples led with 880 cars; pears, 95; mixed fruit, 8; melons, 4; prunes, 3; potatoes, 190; onions, 33, and mixed vegetables, 16. Both railways had enough refrierator cars.

BARRELED BERRIES SOLD OUT.

Dr. E. S. Barnes of Seattle, president of the North Pacific Cooperative Berry Growers, while in Chehalis recently stated that the principal regret he had was that the association has not 2000 or 3000 more barrels of strawberries to sell. Already he has turned down offers for over 1000 barrels because the North Pacific is sold out of barreled berries.

The price on barreled goods is stronger than when the season opened. While in Chehalis Dr. Barnes transacted business for the North Pacific and went fully into the matter of the plans for the southwest district to handle its own affairs.

Dr. J. T. Coleman of Chehalis has been offered the chairmanship of the committee of seven which is to work out an acceptable pooling plan of some kind.

STUDY APPLE CONDITIONS.

Coming from New Zealand to the Wenatchee valley to study apple conditions and get ideas to take back with him, Hura Beusenmaun is now working on a ranch near Wenatchee. He plans on going back November 18, arriving home in time to prepare for the New Zealand apple harvest. He is the son of one of the largest apple growers in New Zealand. Three hundred thousand cases of apples were shipped out of New Zealand last year, every one bearing the government inspection stamp.

The horticulture department will not allow apples to be exported without the official stamp. All of the ranchers, Beusenmaun says, are organized into associations. The principal varieties raised are Cox's Orange, Delicious, Jonathans, Sturmer and Dunn's Favorite. The majority of the trees were planted between 1910 and 1914, but the planting of orchards is again increasing. The land is very fertile and enough rain falls so that irrigation is not needed.

BERRY GROWERS PLAN TO UNITE.

Action taken at Chehalis October 20 by representatives of the various locals of southwest Washington counties that are members of the North Pacific Cooperative Berry Growers will result in the early formation of a district organization embracing Lewis, Pacific, Cowlitz, Grays Harbor, Thurston and Mason county berry growers, with Chehalis as the principal place of business. Recently at the annual meeting in Seattle of the members of the North Pacific organization of districts was authorized. Representatives from most of the locals in this part of the state voted unanimously to proceed to work out a plan under which to handle their present business and it is expected to still further increase the business already developed. Under the plan as suggested the business will be done locally instead of through Seattle.

L. G. Colyn of Onalaska, who is a member of the executive committee of the North Pacific, and who called the meeting, presided. George E. Worton of Port Orchard, who also is a member of the executive committee, made a very interesting talk, urging that the district organization plan be adopted and suggesting a plan whereby the operations of the district may be successfully financed. Dr. J. T. Coleman of Chehalis discussed the advantages of the district plan and how it might be financed to handle an immense business.

Chairman Colyn was directed to name a committee of three men, whose business it shall be to formulate a plan of district organization. Dr. J. T. Coleman of Chehalis, Henry Olson and J. T. Smith of Adna were named members of the committee of three.

The consensus of opinion of the berry growers at the meeting was that if the industry is to succeed in southwest Washington it must be through the cooperative method.

Present at the meeting were L. G. and John Colyn of Onalaska, A. S. Caton, S. H. Ingel and L. C. Frederick of Olympia, F. S. Ingersoll and Charles Moore of Grand Mound neighborhood, J. Wingart, R. D. Haskell, J. H. Haskell, August Wingert and Martin Goesch of Harstine island, Mrs. Allmer of Centralia, L. W. Hunting of Silver Creek, H. W. Dow of Elmer. H. S. Bates was secretary.

Something Besides Wheat

Road to Financial Safety, Likewise Road to Good Living

The National Association of Farm Equipment Manufacturers held an annual convention at Cleveland, Ohio, last week, and some things were said that were not complimentary to the farmers of this country. Sometimes it is helpful to listen to what the other fellow has to say. There has been a good deal of criticism of the manufacturers of farm machinery and utensils, and some of our readers have shied a few bricks at them.

The absorbing topic of this convention was the shrinkage in the demand of farm implements. Farmers have been saying, with force of reason, that high prices were the cause of that condition. Here is what Alexander Legge, president of the International Harvester company, said in a paper read to the 200 delegates:

"While the initial cost of implements today is much higher than the prewar levels, the whole cost, when calculated on the period of its usefulness or on the number of acres tilled by it, will probably figure less than in the old low-price days we hear so much about. I am told farmers right here in Ohio are paying out three times as much for gasoline alone as for farm machinery. The whole family is boosting the cause of the auto salesman, while only the farmer and the hired man are interested in replacing worn-out farm equipment."

J. B. Bartholomew, president of the association, touched upon the wheat problem. He approved a moderate reduction of wheat acreage, but with reason said the reduction should be made by farmers who can not compete with the producers of the northwest and the southwest, who can not raise much else; that the high-priced land of the east ought to be turned to other things.

Here in the wheat-growing areas of the Pacific northwest it would be foolish to urge growers generally to quit growing wheat and produce something else. There can be only a partial giving up of wheat-growing here. It is an industry well suited to the soil and climate of parts of Washington, Idaho, Oregon and Montana. The machinery, the equipment and the facilities have been built up here at great cost to carry it on. There is an enormous investment in machinery to that end, and in warehouses. Many wheat growers lack an understanding of other agricultural pursuits. Labor is trained to it. An industry like that can not be "chucked" all at once as you might "chuck" a potato out of the window.

Nevertheless, there should be a gradual easing away from so much wheat growing. There should be an accelerated movement toward diversification. Every wheat farm should have enough hogs and poultry to clean up the stubble and the waste of the farm.

And every farm, whether it be of 20 acres or 2000, should produce its own poultry, eggs, milk, butter, vegetables, berries and hardy fruits. There lies the road to financial safety, and it is likewise the road to good living, and to a dignified pride and satisfaction in the place that is one's home and the home of his wife and children.

World Farming--Switzerland

Of the 16,000 square miles comprising the area of Switzerland about 72 per cent is classed as productive. Of the productive area 36 per cent is under grass and meadows, 29 per cent under forest, 19 per cent under fruit and 16 per cent under crops and gardens. In 1921 there were 111,000 acres in wheat and about 50,000 acres each in rye and oats.

The chief agricultural industries of Switzerland are the manufacture of cheese and condensed milk.

The bulk of the food crops consumed in the country is imported.

At the time of the last census there were in Switzerland 129,269 horses, 3581 mules, 891 donkeys, 1,382,116 cattle, 729,999 cows, 240553 sheep, 546,112 pigs, 333,852 goats.

The population of Switzerland is 3,880,000.

Here Is the Catechism

Gird Up Now Thy Loins Like a Man and Make Answer

Then the Lord answered Job out of the whirlwind, and said,

Who is this that darkeneth counsel by words without knowledge?

Gird up now thy loins like a man; for I will demand of thee, and answer thou me.

Where wast thou when I laid the foundations of the earth? declare, if thou hast understanding.

Who hath laid the measures thereof, if thou knowest? or who hath stretched the line upon it?

Whereupon are the foundations thereof fastened? or who laid the cornerstone thereof;

When the morning stars sang together, and all the sons of God shouted for joy?

Or who shut up the sea with doors, when it brake forth, as if it had issued out of the womb?

When I made the cloud the garment thereof, and thick darkness a swaddling band for it,

And brake up for it my decreed place, and set bars and doors,

And said, Hitherto shalt thou come, but no further: and here shall thy proud waves be stayed?

Hast thou commanded the morning since thy days; and caused the dayspring to know his place;

That it might take hold of the ends of the earth, that the wicked might be shaken out of it?

It is turned as clay to the seal; and they stand as a garment.

And from the wicked their light is withholden, and the high arm shall be broken.

Hast thou entered into the springs of the sea? or hast thou walked in the search of the depth?

Have the gates of death been opened unto thee? or hast thou seen the doors of the shadow of death?—Job xxxviii:1-17.

FARM BUSINESS AND MARKETS OUTLOOK

OPINION is gradually crystallizing in well-informed quarters that land values are back on a rock bottom basis, and that some improvement in prices can be looked for in the next few years.

Most of the land changing hands represents the voluntary or involuntary closing out of overextended farmers or the liquidation of estates. These forced sales, of course, are below the level at which farmers still possessing some financial strength are holding their land, but they indicate the price at which a considerable volume of land is obtainable.

The average value of all plow lands on March 1, 1923, as compiled by the department of agriculture was $66.54 per acre. This compares with $90.01 at the peak on March 1, 1920, and with $58.39 in 1916, when the first report of this kind was made. The 1923 value probably indicates the decline in asking prices compared with 1920 rather than the extent of the decline in actual prices were made at forced sale.

A survey recently conducted by the National Association of Real Estate Boards through a questionnaire to 2000 farm land dealers indicates that the process of deflation of farm land values over the United States as well as Canada has already begun to be succeeded by a new movement, that land is beginning to sell and that land values in a number of sections are already on the up grade.

The main conclusions drawn from the survey are as follows:

1. The price of farm land is probably lower today than it has been since 1916 and as low as it will be for some time to come. In many sections of the country land can be had today at a price that will not only enable the land to yield a good return on the investment, but also probably will enable the investor to turn his property at a profit within a reasonable length of time.

2. There has been a considerable increase in the sale of farm lands in the last year, particularly with the last few months. In some sections this increase has been very marked; in other sections it is less noticeable. While the prospects that are there will be definite improvement in the market, this improvement will be slow.

Slump in Cattle Halted.

Lighter receipts last week brought a welcome halt to the break in cattle prices. The market hopper had been overflowing for two weeks as a result of rains and cold weather, which forced in cattle from the ranges simultaneous with a rush of corn belt feeders to unload when the corn market soared skyward and fat cattle values continued to slip. High prices for heavy steers in the late summer period resulted in an excessive movement of fleshy steers to the corn belt, a fact which available records failed to disclose with certainty, and these are coming back after being barely warmed up on corn. Westerners are furnishing an abundance of beef of much similar grade at lower cost, so that many of these short-feds are scarcely bringing first cost. While prime steers are still quoted up to $12.50, plainer kinds selling above $12 two months are are $2 lower at present. Bulk of the westerns at Chicago sold at $5.50 to $7 last week, with a few up to $7.50 and a top of $9 for some Montana steers of unusual finish.

The department of agriculture reports that more range cows and heifers are being marketed than last year.

Cattle feeders appear afraid of the corn market, while the supply of thin steers has been the heaviest of the season, so that prices sagged again last week and are the lowest in months. Plain steers weighing up to 900 pounds have been available at $4 to $6 at Chicago, prices which seem to carry but little element of risk for the buyer, and which are not likely to continue much longer.

Break in Hogs Interrupted.

Receipts of hogs were enough lighter last week to keep values fairly stable. But the supply was much heavier than ever before at this season and the advance did not carry far. Bottom for the season probably has not been uncovered, as arrivals are expected to reach considerably heavier volume in the next 30 to 40 days.

Smart Upturn in Lamb Market.

Receipts of sheep and lambs dropped off 20 per cent last week, while thin lambs were in the majority in the western contingent, so that prices of fat stuff advanced 50 to 75 cents and the Chicago top crossed the $13-line again. Since June 15, when new crop lambs began to dominate, arrivals at 10 leading markets have been 10 per cent larger than last year and prices are about $1.50 lower than at this time in 1922.

Corn belt feedlots are still being gorged with thin lambs, although the volume of purchases fell off enough last week to allow values to sag.

Seaboard markets report a fair demand for wool at steady prices. Stocks of some mills apparently are running low and other buyers desire to accumulate while a suitable selection is to be had.

Exports of wool from Australia, Argentina, Urguay and the United kingdom in the first eight months of 1923 totaled 1,036,000,000 pounds, compared with 1,324,000,000 pounds in the corresponding period a year previous. The United States imported 350,000,000 pounds in the same interval, compared with 245,000,000 pounds last year. During July and August, however, only 22,000,000 pounds were imported, against 65,000,000 pounds last year.

Firm Undertone in Wheat.

Wheat prices have covered an unusually narrow range in the last two weeks, but appear to be about ready for a substantial advance. Both the large supply in commercial channels in this country and abroad the prospect of greater surpluses in exporting countries than importing nations will need are unfavorable influences, but the market repeatedly has demonstrated its ability to ignore them. Even the report of substantial quantities of Canadian wheat coming into this country caused only temporary weakness.

In some particulars the market situation is improving. For one thing, Canadian wheat pressure has been less than expected. Importing countries other than European, especially Japan and China, are taking more wheat than they were counted upon to do and the total amount of wheat disappearing into importing countries since July 1 is 197,000,000 bushels, against 204,000,000 bushels last year. A small potato crop in central Europe, as shown by recent reports, will probably offset part of the market increase in their wheat crop, which was supposed to mean smaller imports. Argentina and Australia at present are disposed to hold back their old crop surpluses until the new crops were nearer maturity.

Exporting countries seem to be better sellers than in former years, as no marked anxiety to dispose of surpluses is shown, and producers also have been selling at a more uniform rate than they usually do. Finally the prospect of enough scarcity of good milling wheat in the United States east of the Rockies to put prices later in the season on an import basis has supported markets in the middlewest and their steadiness has exerted a restraining influence on markets abroad

Corn and Oats.

Old corn has declined nearly 20 cents in the last two weeks and the break in new corn also has been severe.

Oat prices have been affected by the weakness in corn, but are probably down on solid bottom again.

Cash Grain Markets.

The range of cash grain prices for the week ended October 31 was:

CHICAGO—Wheat—No. 1 hard, $1.08 1-4@1.12; No. 2, $1.07 1-4@1.12. Corn—No. 2 mixed, 99 1-2c@$1.01; No. 2 yellow, 92 1-2c@$1.03 1-2; No. 3, $90 1-2c@1.03; No. 2 white, 95c@$1.03. Oats—No. 2 white, 42 3-4@44 1-2c; No. 3, 41 1-2@43 3-4c. Rye—70 1-4@71c. Barley—57@75c.

Seed and Feed.

Clover seed prices held within a narrow range last week. Receipts of new crop seed have increased, but are so much lighter than last year that a rather firm undertone is apparent, even though dealers are not anxious to stock up for next spring's trade. Thus far this season only 2728 bags have been received at Toledo, compared with 14,243 bags last year and 13,585 bags two years ago.

Increased production of byproduct feeds and heavier receipts of corn, with lower prices for that grain, are causing an easier tone in the feedstuffs market.

Good Hay in Demand.

Hay prices generally were firm last week. Demand for the better grades is satisfactory in most markets, but the lower grades are moving slowly. Rainy weather during the fall in some of the principal hay surplus districts has caused a high percentage of undergrades.

Prices per ton in carlots: Chicago—No. 1 timothy, $26@27; No. 2, $23@25; No. 1 light clover mixed, $24@26; No. 1 clover, $22@24; No. 2 clover mixed, $17@19; No. 1 alfalfa, $19@30; midland prairie, $17@20; rye straw, $13.50@14.50; oat and wheat straw, $11.50@12.50.

Fresh Eggs Soar Higher.

Light receipts and excellent demand for good, fresh eggs last week pushed prices to a new high level. Supplies will continue to diminish as the season advances and prices should at least be maintained. The situation on storage eggs is less satisfactory. Eggs are not moving out of storage and into consumptive channels rapidly enough. In the four large markets last week the out of storage movement averaged only 26,043 cases per day, with more than 3,000,000 cases to be moved. A heavy surplus is expected to be shown in the November report on cold storage stocks, after which holders may decide to liquidate at lower prices than they are holding for now.

Butter and Cheese.

Butter prices remained practically unchanged last week, with a growing tendency to widen the range in price between the different scores. Receipts of fine butter were ample, but were generally better cleaned up than medium and undergrades. Production is gradually declining, as compared with previous weeks this year, but continues to stride ahead of last year.

An oppresive surplus of storage stocks of cheese and a very light demand are the chief factors in the quiet cheese market.

Fruits and Vegetables.

Potato prices in western markets declined last week, but in the middlewest, where they already were quite low, prices were steady. Carlot shipments from producing sections have fallen off in the last few days and arrivals in consuming markets should soon begin to decline. Many potatoes are going into storage, with holders fairly confident of better prices in the future. Northern

Finds That Diversification Pays

Would Not Consider Running a Straight Fruit Farm Even in a Favored Fruit Section

By RALPH ERSKINE

There are many farmers who believe in specializing with their farm crops in order that more attention may be given to one crop. Particularly is this true in the irrigated fruit districts of eastern Washington.

An exception, however, is found in the case of Charles Lumm, a fruit and vegetable grower of Kennewick. Mr. Lumm is convinced that it pays to raise a number of crops instead of having all of his land in orchard. Although he has 15 acres devoted to orchard, he keeps a large percentage of his fields for cultivated crops in order to spread out his work throughout the year and bring in a greater income per acre.

"I would not consider running a straight fruit farm, even in this fruit section," said Mr. Lumm, "because one has very little to fall back on in case anything goes wrong with the fruit, or if the markets are not the best. I have found that it pays better to raise such crops as strawberries, asparagus, berries, grapes and vegetables. I also raise a little corn every year just for feeding to the hogs. I keep a couple of cows and a few chickens, and always have plenty of butter, milk and eggs and my own meat supply for the winter.

Place for Strawberries.

"Heretofore I have always had strawberries planted in between the rows of my new orchards in order to make use of the land until the trees come into bearing. Last year I had seven-eighths of an acre of Clark Seedlings, which produced nearly 200 crates to the acre. This was a good yield, and proved a paying crop, since we received a gross return of $3.20 per crate through the season. Of course, these are early berries, and always bring a good price and I believe it pays to keep a small strawberry patch, even though there is no young orchard to make use of.

"I have always planted strawberries on land which has grown alfalfa for a number of years. Alfalfa is a good soil builder, and one can always be sure of a good production of berries if the soil has been properly prepared. I intend to seed alfalfa between the tree rows as soon as the strawberries have served their usefulness, but I intend to plant a new patch of berries in the meantime.

"Asparagus is a crop that brings in a good return and it comes at a different time than strawberries. I find that I can get as high as 300 crates to the acre by properly manuring the soil. Asparagus is a heavy feeder, and will yield almost in direct proportion to the amount of fertilizer applied. This crop can not be used as an intercrop, but must be planted alone and given special treatment if the best results are expected. Our patch was only five-eighths of an acre, and was all Palmetto variety. We had a little bad luck last year in not getting the rows cultivated in time and we lost the first cutting by breaking the stocks. Had we been more careful in our first cultivation we would not have broken off any of the first stocks as they were starting to come through the ground, and would therefore have had a larger crop this year.

Good Corn Crop.

"Our corn always produces a good crop," continued Mr. Lumm, "and it is my opinion that one can be sure of at least 60 bushels of ear corn to the acre, and I have had crops that I believe would have measured 100 bushels. This includes both yellow and white Dent, and I have found very little difference in the way they produce. Both make a good corn for hog feed, and the cattle like the fodder if they can have some alfalfa hay with it. I usually husk the corn in the field as it is picked, and cut the stocks for fodder rather than leave them to be fed in the field, since it is a little handier when irrigating not to have corn stocks to clog up the irrigating ditches.

"We have a long growing season here, and we can therefore grow a long-seasoned corn. I like the Dent varieties for this reason, and have had better luck with them than some of the quicker growing varieties. There is one drawback with the late producing corn and that is the ear worm. Some years there are more worms than others and they cause much damage. This, however, does not injure corn for hog feed, unless it is very bad. The worms can be prevented by dusting the silks at the proper stage with lead arsenate powder, and it does not take long to go through a field in this manner with a large pepper shaker. The difficulty, however, is that the application must be repeated every 10 days.

Feed One or Two Pigs.

"We generally keep one brood sow and feed one or two pigs for the winter's meat supply. It is not difficult to get two good litters of pigs each year, and I have no trouble in selling all of the young pigs I can raise. There is always more or less refuse around the farm that can be fed, such as cull apples, waste vegetables and refuse from the table.

"I find that chickens also pay if proper care is taken of them," continued Mr. Lumm. "The greatest danger, however, is in getting too large a flock, so that they can not be properly cared for during the busy season. We generally keep from 100 to 150 White Leghorns, since we have to buy most of our feed, but allow them to run at large and get all of their green feed during the summer. We have always had some money coming in from our eggs throughout the year, and it does not take much time away from the other farm work to attend to a flock of this size."

Profitable Pears.

As for the orchard, Mr. Lumm feels that his best crop is a field of 180 trees of Winter Nellis pears. These produced approximately 10 boxes to the tree this season, and since there was a good demand for them he sold his entire crop before his Jonathan apples were ready to pick. He has only two varieties of apples, Jonathans and Winesaps, which help spread out the picking season of his late fall crops.

In addition to apples, pears and cherries, Mr. Lumm also has 123 Italian prune trees, which produced a little more than 12 1-2 tons this last season. Prunes are an easy crop to raise, Mr. Lumm finds, and there is usually a good market for a few prunes if they are properly packed, and sold on the fresh fruit market. While this is only a small planting, it comes at a time when no other crop needs immediate attention, and it helps to spread out his harvesting season, and thus necessitates a smaller expenditure for labor, since much of the work can be done by himself and the two boys.

Raises Feed.

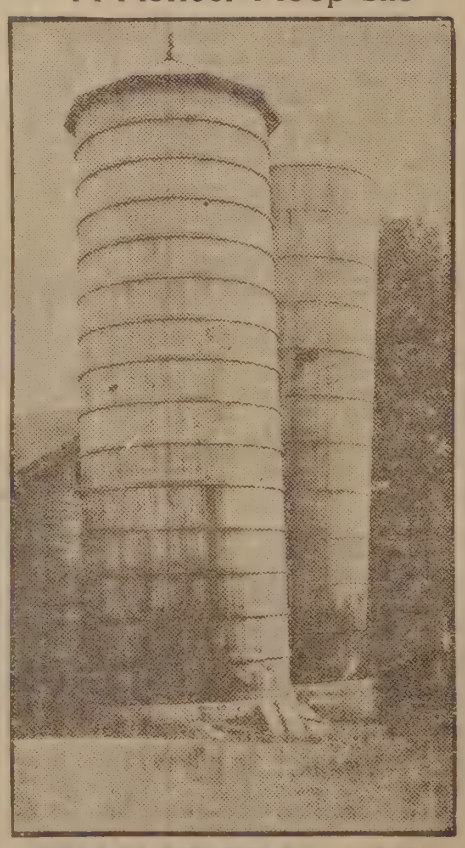
A small part of his land is devoted to hay since Mr. Lumm always endeavors to raise enough feed for his horses and two milk cows during the winter. The rest of the land is devoted to garden crops, berries and grapes, all of which are sold on the general market, and have been found to pay well for the time and trouble expended, even though there are only a few rows of each.

Taking the whole farm into consideration, Mr. Lumm's plan is one of the most ideal that can be found in any irrigated section. He not only has a large number of crops to be sold on the market at as many different times during the season, but he also has the advantage of having a number of kinds of fruit and vegetables to use on his own table without going to market after them. In fact, a large part of his table supply is raised right on his own farm with but very little extra effort taken from his routine work about the farm.

Remembers Home Table.

Mr. Lumm's first ambition is to supply necessities for the house, and then sell as much of the surplus crops as possible on a cash market. He says that if cost accounts were kept his results would compare very favorably with farms that produce straight orchard or hay crops in his and other parts of the valley. He is a firm believer that diversified farming is the only method upon which the farmer can depend in a long run.

A Pioneer Hoop Silo



Quite a bit of the farm history of Thurston county centers around the campaign carried on by E. B. Stookey, county agent, with the assistance of A. B. Nystrom. The above is one of the many wooden silos in the county and one of the first to be erected.

Begins to Receive Eggs

With the receipt of 12 cases of eggs, the Farmers' Union Cooperative Egg and Poultry association started business at its wholesale headquarters, S160 Post street, Spokane, last Friday. D. F. Mitchell is general manager and A. C. Whisler, sales manager. Under the contracts, growers have ten days' grace before they begin shipments. Arrangements have been completed for representation at Sandpoint, Idaho, through the Farmers' Union Supply company there. The officials expect to handle several hundred cases a week when the business gets running in good shape.

A FEATHER IN CHINA'S CAP.

By the year 1234, when Europeans were floundering under heavy mail, the Chinese were using gunpowder in cannon.

Many a Farm Flock Was Started From Less

Many orphanages are conducted in the spring season throughout the Inland Empire. Herewith is a picture of some of the inmates of one of these orphanages, together with two of the attendants. Mrs. Joseph Hamon suggests that we call this picture "Feeding Time on the Hamon Ranch at Benge, Wash." The lambs shown in the picture were rescued by the Hamon children, who are shown here administering to their needs with the bottle and otherwise.

"It Keeps Me Awake Nights"—

is the familiar confession of the tea and coffee drinker. The reason is that both tea and coffee contain caffeine—a drug which is the foe of night-time sleep and day-time energy.

Postum, the pure cereal beverage, is delicious and satisfying—and free from all the elements which so many users of coffee and tea find disturbing to nerves and digestion.

Postum contains no stimulant to keep you awake nights.

Sold by grocers everywhere!

Postum

for Health

"There's a Reason"

Your grocer sells Postum in two forms: Instant Postum [in tins] prepared instantly in the cup by the addition of boiling water. Postum Cereal [in packages] for those who prefer the flavor brought out by boiling fully 20 minutes. The cost of either form is about one-half cent a cup.

Made by Postum Cereal Co., Inc.
Battle Creek, Mich.

Fordson

"To make farming what it ought to be—the most pleasant and profitable profession in the world."

This is Henry Ford's vision of the Fordson.

Not a mere machine of so much horsepower, so many cylinders or so much drawbar pull. All are important. But much more than that—an opportunity to make farm life, your life, more productive and more worth living.

This vision of a better day on the farm has become more than a dream. The Fordson has made farming more pleasant and profitable.

How well the spirit of the builder is moulded into the Fordson through years of patient testing is proven by experience of a host of owners.

With operations organized on a more profitable basis, work done when it should be, labors lighter in proportion to results, the drudgery gone, life is really more pleasant on Fordson Farms.

Alfalfa

New Set of Standards Embracing Five Grades

A new set of alfalfa hay standards, embracing five instead of three grades, was made public Monday by the state department of agriculture as the result of hearings held at Yakima and Seattle last month. The new standards are made to provide for alfalfa hay with a heavy percentage of timothy, particularly that grown near Ellensburg, and are as follows:

Choice—99 per cent pure, leafy, of ripe green color and may include 2 per cent of weather-bleached hay. The balance of 1 per cent shall be hay of good quality and not objectionable as merchandise hay of its class.

No. 1—95 per cent pure, of good natural color, including not to exceed 5 per cent weather-bleached alfalfa. It shall not contain more than 2 per cent weeds or other worthless content, including not more than a trace of harsh bearded grasses.

No. 2—85 per cent pure, of good natural color, including not to exceed 5 per cent weather-bleached alfalfa. It shall not contain more than 10 per cent green cheat; or it may be alfalfa 95 per cent pure, of good natural color, including not to exceed 15 per cent weather-bleached alfalfa; must not contain more than 3 per cent weeds or other worthless content, including not more than a trace of harsh bearded grasses.

No. 3—70 per cent pure, of good natural color, including not to exceed 5 per cent weather-bleached alfalfa and not over 20 per cent green cheat; or it may be alfalfa 90 per cent pure, of fair color, including not to exceed 20 per cent weather-bleached alfalfa and not to exceed 10 per cent green cheat. It must not contain more than 5 per cent worthless content, including not more than a trace of harsh bearded grasses.

No. 1 mixed—From 60 to 85 per cent of reasonably leafy alfalfa. The balance of the hay of other kinds shall be at least 75 per cent timothy, all of good natural color, including not to exceed 5 per cent of weather-bleached hay and not more than 5 per cent of green cheat and 2 per cent of weeds or other worthless content, including not more than a trace of harsh bearded grasses.

No. 2 mixed—Containing the same percentage of mixtures as No. 1 mixed, but may be of not so good color and may contain from 3 to 10 per cent worthless content, of which not more than 3 per cent may be thistle. It shall carry a discount of 1 per cent for each 1 per cent of worthless content in excess of 3 per cent.

Sample grade—All merchantable hay reasonably well baled, not covered by other grades.

No grade—Any variety that is more than 3 per cent badly bleached or discolored, or that has badly damaged spots, heating, musty or caked, or more than a trace of foxtail, or more than 5 per cent thistles.

LIFE PRESERVERS FOR LIVESTOCK

By DR. E. E. WEGNER, W. S. C.

THE CHRONIC DISEASES.

I feel that it is a good time of the year to remind our readers that this is the time of year when it is usually convenient to have the horses treated for the chronic ailments that so often appear during the heavy working season. It is not often convenient to have this work done while the animals are badly needed in the field or on the road, but now, when the work has slacked up and the animals are going into winter quarters very shortly, it is a good time to have them treated, so that they may have the much-needed and very essential rest that is an important part of the treatment of many of these chronic conditions.

I have reference particularly to the lamenesses, chronic enlargements on the shoulders, dental work that has been put off from time to time and other ailments that must be attended to sooner or later. The tooth troubles are manifest by slobbering, careful chewing and occasionally dropping the feed from the mouth partially chewed, turning the head to one side while eating and raising the nose high to one side or shaking the head. Jerking the head up out of the water while drinking indicates that the cold water causes pain, or the animals may sip the water slowly through the lips. We sometimes become impatient with the animal that takes a lot of time while drinking, but in many of these cases the animals are afraid to drink fast and expose the teeth to the chilling effect of the cold water.

Save the Teeth.

Another indication of diseased teeth is enlargements about the face opposite the roots of diseased molars. Very frequently one sees quite an enlargement on the side of the face where an abscess has formed on the root of the molar or it may be in the nature of a growth of spongy bone from the inflammation about the root of the tooth. In either case recovery takes quite a while and one might well have the work done now, while the season is not a rushing one. The lower border of the lower jaw frequently shows great thickenings as a result of diseased lower molars and if no treatment is given the infection inflammation extends forward and backward, involving the teeth in front of and behind the one originally diseased. When such neglect has been practiced it is sometimes necessary to take out two or three teeth, when one would have been enough had the treatment been given earlier.

Lamnesses of whatever kind are better treated at a time when the part can be given absolute rest for an extended period. It is quite impossible to treat many of the lamenesses while the animal is required to do work or go to work soon after the lameness ceases. The parts must have time to get thoroughly strong and well before they are strained again or they may suffer from a recurrence of the trouble.

Treating the Shoulders.

If the enlargements that occur on the collar bed are to be removed and the shoulder smoothed up it is best to do this now, while the parts can be given extended rest. Putting the collar on too soon again is not a good practice and may defeat the object of the treatment.

The same reason applies to this appeal that applies to the one for doing the repair work before the necessity arises. Get the machinery in shape before the time to use it. It is all right to repair the machinery the day before it is to be used, but this does not apply to the animal, because the time for complete repair is considerable.

It would be well for every one with animals to look them over and see what is needed to be done, then to have it done now. Next spring, when the work starts again, the animals will be better able to get into the collar and stay there through the season. It is a matter of economy and good business to do it the right way and save loss of horse labor, as the loss of horse labor is the loss of money and profit.

Signs of the Times

Mrs. R. F. Little of King county sends the accompanying picture of a Buff Orpington rooster protecting a flock of his children from the cold. "I am enclosing a picture showing the trend of modern times—the mother deserting her little flock and father assuming the maternal burden," says Mrs. Little. "When the mother weaned the chickens he tried to talk to them and finally took over the job of being their mother and kept on the job. Long after they had gone to roost he would sit on the floor and try to coax them down."

This bird at 2 years old weighed 11 3-4 pounds, Mrs. Little writes, and says that at 8 months old some of his young sons weigh eight and nine pounds.

GENERAL ADVERTISING.

NEW LAMP BURNS 94 PER CENT AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 95% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 161 Union Ave., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Easy to slip off and on—one of the big convenient features of the "U. S." Walrus

In and out of 'em a dozen times a day

Slide 'em right over your leather shoes—snap the buckles shut—and you're ready for the stickiest muck and mire the barnyard offers.

You can walk in mud or icy slush—these big overshoes are as watertight as a boot. And their heavy fleece lining keeps your feet always warm and dry.

Then when you're through, a pail of water washes off the caked dirt in a flash! Mud has a hard job sticking to that smooth rubber surface.

Wives have a real interest in the "U. S." Walrus, too! No miry tracks on the kitchen floor—no dried mud around the house! Just flip open the buckles—kick your Walrus off—and you walk inside with clean, dry feet, no matter what the job outside has been!

The "U. S." Walrus can be washed clean instantly. Its surface is as smooth and waterproof as a boot.

Other "U. S." Footwear—all built for long, hard wear

U. S. Boots, built so tough and rugged they're famous wherever boots are worn—rubbers and arctics, all styles and sizes for the whole family—U. S. Bootees, the all-rubber lace shoe, for spring and fall use—every kind of rubber footwear you could possibly need is included in the big U. S. line.

Every single one is backed by 75 years of skilled experience. It will pay you to look for the "U. S." trademark—the honor mark of the largest and oldest rubber organization in the world.

County Pools

Used to Market California Grain

Grain sales approximating $4,000,000 were made by the grain department of the California farm bureau exchange, San Francisco, Cal., following the commencement of operations under a reorganized plan effective July 1, 1922. The grain came largely from 18 counties.

As now organized the exchange is a nonstock, nonprofit organization made up of representatives selected by county farm bureau exchanges. A "Prospectus of Co-operative Plan for 1923 Grain Crop" states that efforts are to be made to obtain the signatures of the 5000 grain growers in the state to a contract running for five years and providing for seasonal grain pools by variety and grade.

According to the prospectus, grain growers are to be organized into county farm bureau exchanges, managed by boards of nine directors each, Growers are to deliver their grain to the local warehouses or railway freight houses and indorse the warehouse receipts or bills of lading to the county exchange, which is to forward them to the state exchange with a sample of the grain. The state exchange thereupon is to issue a certificate of deposit showing grade. It is proposed to advance 60 per cent of the approximate market value of the grain delivered and to make a final settlement when the last of the grain in any pool is sold by the state exchange. The grain of each county is to be in separate pools.

The Center of Things

The following paragraphs indicate the centers of production of various crops and those of manufacture and of population. A center of production is not the median point in production of the staple, but is found by weighing the figures for each county in proportion to its distance from an (at first assumed) approximate center, until, with successive trial centers, the exact one is located. It will be readily comprehended that such a countrywide center for a product need not be in a region locally producing it, but may be.

Wheat production in 1919 had centered at a point in the extreme northwestern corner of Missouri, or at the meeting place of Nebraska's, Iowa's and Missouri's boundaries.

Corn production had its center, in that year, in Macoupin county, Ill., and about half-way between Springfield and St. Louis, having receded eastward since 1900.

The center of cotton production was in Mississippi and somewhat north of midway between Jackson, Miss., and Memphis, Tenn.

Oats had centered in Keokuk county, Iowa, nearly mid-way between Burlington and Des Moines.

The central point for all cereals was in Knox county, Mo., west of Quincy, Ill., and about one-third the distance thence across Missouri.

While in the next year, 1920, the total number of farms centered in Perry county, southern Illinois, near the 89th meridian, the total area in farms had followed its westward march, since 1850, across Kentucky and Missouri and, in fact, somewhere beyond the western boundary of our reference map, which ended but a little west of Omaha. This faster movement westward of farm acreage than of number of farms might indicate either that farm lands in the west are being taken in larger blocks since 1900, and therefore increasing faster than number of farms, or that eastern farms, since then, are breaking up into home-sized tracts. Perhaps the latter fact is the truth, since in the west, also, large ranches are giving way to smaller and often irrigated farms. Still another center is traced, that of improved acreage, and is found to have been in 1920 in Macon county, Mo., about one-third the distance west from Hannibal toward St. Joseph.

Farm values, in 1920, were centered in Missouri still, but had crossed the 93d meridian since 1910 to a center in Linn county, at about the latitude of Quincy, Ill.

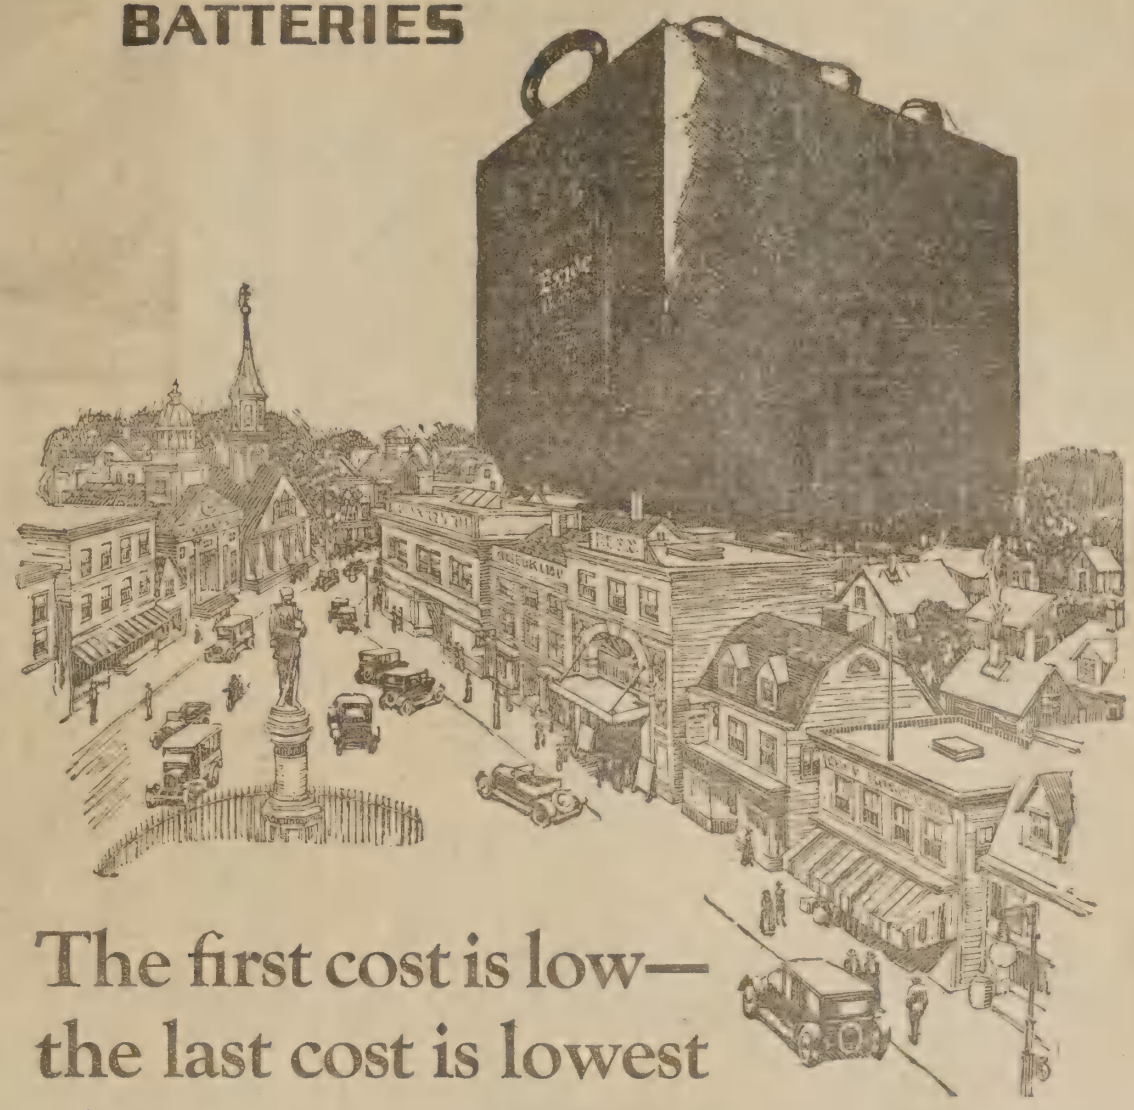
Population still centered, as for three decades, in Greene county, Ind., and had all the way since 1790 clung close to the 39th parallel of latitude in its westward movement.

Manufactures, lurking far in the east of these developments, in 1919 centered in Logan county, Ohio, on the Miami.

MORE COWS ACCREDITED.

Nearly 5,000,000 cattle are under supervision for the eradication of cattle tuberculosis, according to a statement of the status of the work just issued by the department of agriculture. A total of 661,260 cattle, including both beef and dairy breeds, are in fully accredited herds, while nearly 3,000,000 more have successfully passed the first test in the process of becoming accredited. There is a waiting list of more than 145,000 herds that will be tested as soon as federal and state veterinary inspectors can get to them.

Exide
BATTERIES



The first cost is low— the last cost is lowest

This advertisement is addressed particularly to those who have long recognized the Exide as the most desirable battery, but have felt they could not afford the original outlay.

Now, no man need deny himself an Exide. The present prices are surprisingly low—and the quality of the famous Exide, of course, remains unchanged.

Because the Exide gives such long service, it has always been the most economical in the end. At present prices, this economy is so marked that you cannot afford to ignore it.

The Exide not only gives long service, but steady service. It is powerful and rugged and stays right on the job in your car, instead of taking rests in a repair shop.

You will find an Exide, the right size for your car, at the nearest Service Station.

Before putting a new battery in your car, get the price of the Exide at the nearest Exide Service Station

For farm power and light

A great majority of all farm power and light plants have Exide Batteries. Make sure that yours is a long-life Exide.

LIVESTOCK AND DAIRY

Millions of Mules

The ability of the mule to endure hardship and perform sterling service under adverse conditions has established him as a real asset in American agriculture, and his importance and popularity as a work animal is attested by his rapidly increasing use, as shown by department of agriculture figures. In 1910 the number of mules on farms and ranches was 4,209,769. The number on January 1, 1920, was 5,432,391, an increase during the decade of nearly 30 per cent. Nearly three-fifths of all the mules in use in the United States are found in the nine cotton belt states. These states, Texas, Georgia, Oklahoma, Arkansas, Mississippi, Alabama, North Carolina, South Carolina and Louisiana, had a total of 3,172,797 mules in 1920, as compared with 2,855,257 horses. Texas and Oklahoma were the only cotton belt states having more horses than mules.

While the mule is essentially a draft animal, it is used widely for utility purposes, especially in the south. Mules vary in height from 12 hands to 17 1-2 hands and in weight from 600 pounds to 1600 pounds. They are divided into five general market classes: Draft, farm, sugar, cotton and mining. Each of these classes again is graded according to conformation, soundness, quality, condition and action, and classified as choice, good, medium, common or inferior.

The general form and appearance of the mule should resemble closely that of a horse, and in judging mules the same general points of perfection are to be looked for. The nearer the mule approaches the ideal desired in a draft horse, the more valuable he is from a market standpoint, department specialists state. The form of the mule should be compact, with a deep body, broad chest, full flanks, short back, and well-sprung ribs. The loins should be broad, short and thickly muscled; the croup long and level; the hips long, level and muscular; the thighs thick, long and well muscled, and the hind legs well set, with broad, clean-cut hocks and flat, dense bone. The mule should stand on good feet that are well shaped. While style and action may not be so important in a mule as they are in the lighter breeds of horses, these qualities add materially to its value. A smart, alert mule with a long, free stride at the walk and a snappy, balanced trot is highly desired.

Urges Uniform Laws

At the recent world's dairy congress, held at Washington, D. C., Dr. John R. Mohler, chief of the bureau of animal industry, United States department of agriculture, suggested to the delegates that efforts should be made to obtain some uniformity in the laws of the various countries regulating international trade in live stock. Some move of this sort is needed now, said Dr. Mohler, because of the great extent of international trade in live stock, and because of the prevalence of destructive animal diseases in many parts of the world.

Certain fundamental features which probably would be desirable for all countries were brought out in the statement made to the delegates. It was suggested that each country engaged in domestic and foreign commerce in live stock and its products should establish a competent veterinary service, and failing to do this it should have no right to expect its animals to be received in other countries; provisions should be made to prevent the spread of contagious diseases in the country, the introduction of infection from abroad, or the transmission of diseases to other countries; and there should be an international cooperative system of exchange of information in regard to animal health in the various countries.

Potatoes as Dairy Feed

By E. V. ELLINGTON,

Kindly tell me how many pounds of potatoes are safe and best to feed to milk cows to get best results. W. T. C.

Potatoes can be successfully fed to dairy cows in quantities varying from 20 to 25 pounds a day. Ordinarily potatoes are not used much for dairy cattle. However, when the price is low they may be economically used. During the last year the farmers have been feeding potatoes quite extensively, paying as high as from $10 to $12 in some instances. They are valuable mainly on account of the carbohydrates present. When uncooled potatoes are fed they serve the same purpose in the ration as any other root crop, inasmuch as they furnish succulence to the ration. The dry matter in them is practically of a slightly lower nutritive value than that found in corn silage. When fed in too large quantities they will injure somewhat the flavor of the milk.

In the European countries cooked potatoes are fed quite extensively to dairy cattle. The cows relish the potatoes when cooked, and they may be used with success when not over 30 pounds are fed a day per cow.

Potatoes should not be the sole ration fed. If they were fed alone there would be a drop in the flow of milk, but when they are used to supplement hay and grain they have a definite place in maintaining the milk production.

Dairymen Report Good Year

The Skagit County Dairymen's association recently voted for the retirement of $300,000 of their bonded indebtedness, $100,000 indebtedness on the Mt. Vernon Federal Condensed Milk plant, and $500,000 needed for equipment and improvement of the Burlington Milk Products plant.

The association reports a very good business year, especially for the past nine months. During this period the cooperative membership has increased from 1048 to 1307. The average price paid for whole milk per hundredweight has ranged from $2.26 to $2.27. The total amount of whole milk processed by the two plants during the nine months' period aggregates 52,182,000 pounds, there were 836,830 pounds of butter, 120,144 pounds of cream, 214,032 pounds of cream cheese, 266,894 cases of condensed milk and 1,529,131 pounds of powdered milk, the gross sales of the milk products aggregating $1,855,844.

SHOWS VALUE OF TESTING.

The value of association cow testing was again demonstrated when Miles Coleman of Lewis county, Washington, sold at public auction recently a herd which has been leading the county association in average production per cow. The animals brought good average prices for grades, while some of his neighbors' untested cows which were included in the sale either brought almost nothing or were led back because there was no bid. During the month of September the average production of 569 cows in this association was 645 pounds of milk and 26.1 pounds of fat. There were 38 cows, however, which produced over 40 pounds, and six that went over 60, while the leading cow, a purebred Holstein owned by H. Bouchard, yielded 2019 pounds of milk and 71.7 of butter fat. A Jersey owned by J. K. Conger produced within eighttenths of a pound as much fat, from 1182 of milk.

"ARABIC" FIGURES.

So-called Arabic figures were brought into Arabia from Hindustan in about the year 900 A. D. They were introduced into Spain in about 980 and into France in 991. In England their use dates from only about the year 1300.

SAVE ALL the CREAM

The Anker-Holth Cream Separator

meets with the approval of the most critical users. Why? Because of its self-balancing bowl and interchangeable disks. Place the disks in the machine any old way and they will be automatically thrown into place by centrifugal force.

VETERINARY

By DR. S. B. NELSON.

Milk All Right—I have a 2-year-old heifer that was fresh last May that gives watery milk—that is, if the milk is let stand until it sours into a thickened condition, the water rises between the cream and the thickened milk. What will cure this and is this milk healthful to use? The cow's mother gives good milk. Both run in the same pasture and are fed the same feed. They have access to spring water. C. W.
Battle Ground, Wash.

The milk is all right to use.

Mountain Fever—I have a 9-year-old horse that has what the neighbors call mountain fever. I am not acquainted with this disease and my remedies do not give relief. He seems to do better on a light diet than a heavy one. Can you suggest anything? A. T.
Brewster, Wash.

You might try giving the horse seven grains of arsenic on his feed night and morning for some time. This treatment has been of value in some cases of mountain fever. You might give him this remedy for five or six days, and then rest him for two or three days and repeat.

Heaves—I have a horse that has the heaves; coughs quite a bit when eating dusty hay. T. R. R.
Plaza, Wash.

Cut the hay down to about one-third of what you are now feeding; increase the grain about one-third; feed a little grass—not very much. Give the horse one ounce of Fowler's solution of arsenic on his feed morning, noon and night for quite a while.

Yohimbine for Cow—What can be done for a cow that came fresh in December last and has not been in heat since? She is still milking well. I should like to have her bred. I have another cow that came fresh last April and from one teat she has given water ever since she had the calf. I should like to know what I can do to remedy this. The cow that was fresh in December discharges some white matter quite often. H. P.
Everett, Wash.

Give your first cow one-half grain of yohimbine once daily for eight or 10 days. I do not believe that I can offer any remedy for the second cow.

Interesting Case—What can I do for a four-month-old pig that makes water (a dribble) all the time. She is a fine pig and I hate very much to lose her. I am feeding separated milk, mill run, ground barley, green stuff from the garden and wood ashes. The pigs have a large pen. T. W.
Rochester, Wash.

This is a very interesting case and I am going to express the opinion that she is affected with a cystic calculus. You should have a veterinarian examine her and he may possibly find the obstruction that you mention and this can be removed and she will be absolutely all right.

Udder Trouble—I have a 4-year-old cow that has small hard lumps form on the hindquarters of her udder between the teats and on the teats. The milk is a little stringy and does not taste right. The lumps yielded to treatment, but hard lumps of good size came in the hind teats and seemed to be sore and feverish at first. The lumps would move around when you milked her, but did not seem to affect the milk. Now the inside lumps seem to be almost gone and her udder is a mass of small, hard lumps on the outside. They are quite sore, but have not broken open. This trouble started shortly after she freshened in June. E. W. M.
Mead, Wash.

I would suggest as a treatment giving your cow one and one-half pounds of epsom salts in four quarts of water. Two days later I would begin giving her one drachm of potassium iodide in a pint of water morning and evening for a week or 10 days. I would also suggest that the lump be painted with tincture of iodine once daily or once every two days.

Lung Worms—Some of my calves were brought home from pasture quite thin and with a cough. They have had good appetites, but have gone down in flesh. The cough still holds on and the trouble has spread to others of the herd. What is the trouble and the remedy? A DAIRYMAN.
Ferndale, Wash.

It is very likely that your calves are affected with lung worms. Put the animals in a tight room. Place a tub with three or four inches of water in the room. Put a few bricks in the water and on the bricks a pan of sulphur. Set fire to the sulphur and allow the animals to breathe the fumes until they are nearly overcome, and then turn them out into the fresh air. This treatment may be repeated three or four times, four or five days apart, if necessary.

Bloat—I have a cow that gets bloated very often. What is the best thing to do for this? P. J. O.
Dockton, Wash.

Cut down the feed one-half and give her digestive system a rest. In the meantime you can give her a tablespoon of compound tincture of gentian in a pint of water once daily for 10 days or two weeks. Then gradually begin to increase her feed a little bit.

In giving the drench to the cow, slip your hand over the horn, if she has horns, otherwise over the head. Then grasp her firmly with the thumb and fore and middle finger in the nostril, pull the head straight up, but not too high, and put the neck of the bottle into her mouth just at the side of the lips between the front and back teeth and pour the liquid into the mouth along side the tongue and she will swallow it.

Begin With Ancestry if You Would Save the Pig Crop

By M. H. KNUDSON

The time to commence saving the new pig crop is with the grandparents, sometimes even better still, with the great-grandparents.

Too much emphasis can not be placed upon ancestry, as it is one of the most important things to be considered when preparing for the pig crop. Aside from the question of breed, in which every breeder has the privilege of choosing for himself, the ancestors of the animals to be mated must have been stock that have raised large, strong litters (not less than eight), which could be brought to a finished condition and to a weight of 225 pounds in six or eight months. The short, thick-set variety that cease to grow when they have attained a weight of 150 pounds should be avoided. They almost invariably produce small litters, many of which are often weak, and here is where you may expect difficulty in farrowing.

The type of pigs to be sought are those whose outstanding characteristics are depth of side, good length and a well-sprung rib. These are the points which indicate strength of constitution; and constitution and the preservation of constitution should be given first consideration when selecting and caring for breeding animals, because a lack of constitution in the parents is followed by irregularities of type, small feeding capacity and susceptibility to disease in the offspring. Quality and smoothness, strength of bone and pasterns and arch of back are also important, but should not be secured at the expense of constitution.

The pig has the right to be well-born and it is going to mean "money in the bank" for the farmer who will see to it that his pigs are well born. But even when the ancestry is the best we must not think that we have solved the problem. The unborn pig has to be fed properly, so that it might rightly possess its heritage. It must come to the world well-rounded out and able to fight for its "teat" from the very first. This is best accomplished by giving a ration to the mother consisting of some grain, plenty of tankage, or, better still, good, leafy, third-crop alfalfa hay and skim milk, with a suitable mineral mixture either fed with the supplement or placed conveniently where the pigs may gain access to it at their own pleasure.

Be sure that the sow gets plenty of exercise, especially just before farrowing, for otherwise constipation with its attending evils will set in.

The essentials of an environment suitable for breeding animals are such as will afford them an abundance of sunlight, fresh air and exercise during the day and warmth and freedom from dampness at night.

A farmers' profit in the hog business will depend very largely upon the care he gives his brood sows for the month before and the month after farrowing. Improper shelter, insufficient exercise, improper feed (too much grain and too little protein and mineral feeds), rough handling, are just a few of the causes of losses in the pig crop.

Saving pigs in this north country is no job for a lazy man. If you want to save the pig crop you have to be on the job 24 hours a day and forget when bed time comes, but not forget to get up if you are lucky enough to get there at all.

The fact is, that to save many pigs, you have to be on the job continually during farrowing time. Gain the freindship of every sow on the place. Have her so that when you get in the pen with her she will talk to you, be glad that you are there and have confidence in you. Kindness goes a long way, but mistreatment goes further in the opposite direction.

Records Are Invaluable.

Keep acurate breeding records. Keep the exact time for each individual sow and be on hand to give her attention accordingly when she is ready to farrow. A sow that farrows in the field may lose many pigs because of a chilly rain, or a snow, or an extreme cold spell.

Be on hand to render service if necessary at the time of labor. If assistance is not needed the mother should be left strictly alone. The sows needing assistance are those that are bred too young and those that are too fat. If you are not on hand it may mean the loss of both the pigs and the sow. The pig usually dies within 30 minutes after reaching the pelvic bones, if not delivered; if it lodges for any length of time the next pig following will be dead. Then the life of the sow itself is at stake, providing she is not assisted in the removal of the dead pigs.

Provide the pens with guard rails. Nearly one-third of all pigs dying after birth are crushed to death by being laid upon. A fender six inches above the floor and eight inches from the wall will save many pigs from an untimely death.

Very little long strawy bedding should be used until the pigs are 5 days or a week old. They get tangled up in the straw, which often results in injury or even death. Use sawdust or wood shavings mixed with air-slaked lime and some dry dip. This will keep the floors sweet and clean as well as preventing the newborn pigs from getting tangled up and thus saving them from injury and perhaps death.

Care After Farrowing.

Do not overfeed the sow just after farrowing. Give plenty of pure, fresh water during the first 24 hours (taking the chill off in cold weather), but withhold all other feeds. During the next 24 hours give just a light feed of grain and slop and then increase the feed gradually until the litter is a week old when you can generally give her a full feed.

Provide plenty of sunshine. It is one of the best promoters of good health and is practically the best disinfectant against all diseases. Have the sun's rays fall directly into the sow's nest. It aids materially in keeping the bedding dry and is the most economical source of heat.

Renew the bedding often. A damp, cold bed, or a cold wind blowing directly over the litter may cause losses from "meningitis." Dusty beds are often the causes of losses by inviting coughs and pneumonia.

It is advisable to clip off the sharp tushes of the new-born pigs, as with these they often cause injury to each other as well as being the source of sore nipples to the mother. Very often a sow will not permit her litter to nurse due to the soreness of her nipples caused by these tushes.

Keep all parasites under control. Use crude oil around the pens in sufficient quantities so as to keep the youngsters free from lice and scab parasites.

Prevent Disease.

Vaccinate against hog cholera. You can not possibly afford to take any chances. Carelessness here is unexcusable and may be attended by losses.

It is variously estimated that only 50 per cent of the pigs farrowed live to the end of the suckling period. We are safe in saying that 75 per cent of this loss is attributable to faulty environment, improper feeding and poor management. Such a great mortality is unexcusable and should give deep concern to every raiser of swine. Due to this great loss the unit cost of each pig raised to the end of the suckling period is approximately twice too high. Every time we lose a pig we are decreasing our income and profit and hence our bank account is directly influenced.

Ton Litter Contest Winners

Florence Robinson of Ellensburg, a member of the Kittitas County Chester White Swine club, was pronounced winner of the ton-litter contest by the extension service of the state college. The requirements of the contest were that an entire litter of pigs must attain a total weight of one ton at the age of six monhs, and Florence had her pigs ready for the county fair, where she won first prize.

Her litter of 10 purebred Chester Whites weighed 2490 pounds at six months of age. Second place went to a litter of Chester Whites raised by Steve L. Woodhouse, a Broadview farmer, which weighed 2373 pounds. Gilbert Mills, another club boy, took third place, his litter of 11 purebred Berkshires weighing 2142 pounds, and fourth place was won by Aubrey Lynch, a club boy, with 10 purebred Chester Whites which weighed 2095 pounds.

Sign Up Wheat 50 Per Cent Basis

Returning from a meeting of the American Wheat Growers, associated, at Denver, Walter J. Robinson, general manager of the Washington Wheat Growers' association, reports that no intensive campaign to sign up tonnage on the 50 per cent basis will be made in Washington, Oregon and Idaho before April by the Lowden-Sapiro interests.

Directors of the national marketing agency conferred with the committee headed by former Governor Frank O. Lowden of Illinois and Aaron Sapiro, cooperative organization expert. The northwestern representatives lost out in their main contention that 65 per cent of the national wheat tonnage be signed up for cooperative marketing before any contracts became effective.

The Lowden-Sapiro plan is for 50 per cent control, not on a national basis, but with the individual state as the unit. In other words, they will seek to sign up 50 per cent of the tonnage in each big wheat producing state for 1924. Nothing in the plan contemplates relief on the 1923 crop, according to Mr. Robinson.

"Three intensive organization campaigns are contemplated by the Lowden committee, members of which are underwriting the expenses," said Mr. Robinson. "Six middle western states are included in the first campaign—Kansas, North Dakota, Oklahoma, Nebraska, Minnesota and Iowa because Governor Lowden and Mr. Sapiro are confident they can sign up 50 per cent of the wheat tonnage in each of those states.

"The first auxiliary campaign will be conducted in Montana, South Dakota and Colorado and by April the work will be launched in Washington, Oregon and Idaho. The biggest men in the country will be sent out by the committee to handle the organization. The actual signup of tonnage, however, will be left to local committees in each community. The national leaders will devote their efforts to interesting bankers and business men actively behind the cooperative marketing plan which the government is indorsing."

The American Wheat Growers were not entirely satisfied with the result of the Denver conference because of its failure to consider any plan to handle the exportable surplus. As a result, directors of the national organization at their own meeting drafted a resolution calling for an export commission in the conviction that the cooperative plan will never get the results sought with the exportable surplus always hanging over its head. The American Wheat Growers' plan is to have all wheat assessed to meet possible losses in the sale of export wheat.

"This export commission," according to Mr. Robinson, "would handle not only wheat, but all commodities with an exportable surplus and each commodity would bear its own losses. The plan doesn't ask congress for a penny, merely for the machinery to handle the export, the producers themselves ultimately paying all expenses."

George C. Jewett, general manager of the American Wheat Growers, was authorized to take the plan direct to President Coolidge and he plans to go to Washington, D. C., as soon as a conference with the president can be arranged.

Mr. Jewett will also take to the president a request to increase the tariff on wheat 50 per cent. This, it is expected, would raise the present price on wheat from 30 cents to 45 cents a bushel.

Handling Seed Potatoes

The average seed potato grower does not fully appreciate the importance of using every means to prevent injury to the tubers from rough handling during the process of harvesting and storing, says the department of agriculture. Mechanical injuries to a tuber are sources for the entrance of infection which rapidly spreads to other tubers which come in contact with the injured one. If the crop is grown on land which contains many small stones the tubers are almost certain to be more severely injured than when grown in a sandy loam soil. Hand digging is not always feasible, but it is believed that where small stones abound in the soil it will be desirable to harvest the home seed plat by hand. Much injury will be avoided if the seed stock designed for planting the field plat for the ensuing year in picked directly into crates in which it is allowed to remain throughout the storage period.

BEE KEEPERS CHOOSE OFFFICERS.

The new officers of the Washington State Beekeepers' association were recently elected by a novel plan of voting by mail. At several meetings in different communities about the state which have been held during the fall months a ballot was cast and the result sent to B. A. Slocum, extension bee specialist, and Dr. A. L. Melander of the state college, where the votes were counted and the election announced. George W. York of Spokane, president: W. L. Cox of Elma, vice president, and Miss Helen Steiner of Elma, secretary-treasurer.

This Free Test

Will amaze and delight you

This offers you a ten-day test, to show the way to prettier teeth. To cleaner, safer teeth.

Millions now employ it. You see the results in whiter teeth wherever you look today. Now find out, for your own sake, what that way means to you.

Film—the great enemy

Dingy teeth and most tooth troubles come from film. From that viscous film you feel. Much of it resists the tooth brush, clings and stays.

Soon that film discolors. Then it forms dingy coats, and white teeth lose their luster.

Film also holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay. It breeds millions of germs, and they, with tartar, are the chief cause of pyorrhea.

Very few people who brush teeth in old ways escape those film-caused troubles.

How to combat it

Dental science, after long research, has found ways to fight that film. One acts to disintegrate the film at all stages of formation. The other removes it without harmful scouring.

A new-type tooth paste has been created to apply those methods daily. The name is Pepsodent. Now leading dentists the world over advise it, and careful people of some 50 nations enjoy its benefits.

Natural, gentle ways

In other ways Pepsodent is bringing a new dental era. It multiplies the alkalinity of the saliva and multiplies its starch digestant.

Those are Nature's agents for fighting acids and starch deposits on the teeth. Every use of Pepsodent gives them manifold effect.

Thus Pepsodent acts to protect the enamel in natural, gentle ways, and without the grit that injures.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

You will be amazed and delighted at what you see and feel. Cut out coupon now. This is too important to forget.

Protect the Enamel

Pepsodent disintegrates the film, then removes it with an agent far softer than enamel. Never use a film combatant which contains harsh grit.

Pepsodent REG. U.S. PAT. OFF.

The New-Day Dentifrice

Broadcasted Programs

Radio fans in Prescott, Ariz.; Ferndale, Cal., and Warsaw, Ind., have just reported hearing the programs from KFAE, State College of Washington, in fine shape. Merle Tucker was the Warsaw fan. Harold Ericesen of California says: "I have enjoyed your programs lately and thank you very much for the pleasure derived from them." Jack W. Newman, the Arizona air listener, says: "The selections played by the band were very good. Your entire program came through very clear and loud."

The extension service features for the broadcaster for November include the following talks: November 12, "Washington Poultrymen Advance in 1923," W. D. Buchanan; November 14, "Boys' Live Stock Clubs at the Pacific International Show," R. M. Turner; November 16, "Increased Use of Copper Carbonate," George L. Zundel; November 19, "Palouse Soil Troubles," Leonard Hegnauer; November 21, "What Farm Club Girls Did Last Year," Miss Elmina White; November 25, "How Some Washington Boys Spent Their Summer," Lincoln Lounsbury; November 26, "Winter Management of the Brood Sow," C. M. Hubbard; November 28, "Fire Prevention in the Home," Fire Prevention Specialist Sykes; November 30, "Selection of Clothing Materials," Miss E. Belle Alger.

The program numbers for the last week of November, not hitherto announced, are as follows: Monday—"Milk and Health," Professor E. V. Ellington; musical features; "Mining Opportunities in Washington," Professor Hugh M. Henton. Wednesday—"How to Study Occupations," Dr. D. W. Hamilton; "Housecleaning Made Easier," Dean Florence Harrison; music; "Aspects of the Future of Agriculture," Dean E. C. Johnson. Friday—"Control of Water Borne Diseases," Professor M. K. Snyder; talk on new books, Miss Alice L. Webb; music; "Gas Engine Cooking," Professor C. C. Johnson.

Moving Picture Reels

Eight new moving picture reels, totaling some 8000 feet—about a mile and a half—have just been received from the U. S. department of agriculture by the State College of Washington department of general extension service for use by farmers' clubs, granges, farm bureau meetings, civic organizations in rural districts and schools.

"Birds of a Feather" shows the benefits of raising standard bred, high-grade poultry. "Four Hundred Million Chickens" gives a review of the poultry industry in the United States.

"Bill Jones, Champion," tells the tale of a boy who attended a convention of boys' and girls' clubs, where he learned a lot and had a fine time. "A Letter to Dad" gives some other interesting scenes from the convention.

"Cranberries" shows the cranberry industry, and "Anchored Acres" shows methods of reducing soil erosion and wash. "A Tale of Two Bulls" gives an animated cartoon in which the value of the purebred sire to the herd is depicted. For those interested in the handling of sheep by scientific methods there has also been prepared a film called "A Year With the Flock."

Eighteen other reels of much interest for club members and school use include a history of the telephone, how to save coal, Mexico and its soil, the story of sulphur, story of petroleum, story of asbestos, the better way of milking, and milk, nature's perfect food.

Short Courses in Gas Engines

Whatever the car, if it is run by a gas engine, the owner and driver is bound to be interested in the announcement of a series of two weeks short courses in gas engines and tractors to be given by Professor L. J. Smith of the agricultural engineering department at the State College of Washington.

The first of the series opens January 7. Many students bring their own magnetos to be overhauled while they are taking the course, since special attention is given to gas engine ignition.

The gas engine courses will be of special value to fruitgrowers operating spraying outfits and pumping engines. These courses are also the foundation for the gas tractor courses which follow them.

The college Y. M. C. A. will have charge of the housing situation for the short courses, and Secretary Paul Phillips says every one can be comfortably cared for, as there are more rooms available since the opening of the new dormitory for men on the campus.

FORM BULL ASSOCIATION.

As the result of a slow but steady increase in the developing of dairying among the wheat fields of the Big Bend country, a purebred Guernsey bull club was organized near Waterville. Eight farmers will own the animal cooperatively with one of their number being selected to care for him during the year.

A Week's Shopping
—in one day

So much must be accomplished in a very short time when you come to Seattle on a shopping tour. You have a closely written shopping list as long as your index finger, which runs the dizzy gamut between a coat for yourself, sturdy school shoes for Jimmie, with a Bon Marche cake, a new sink strainer and a "best" hat for Sissy, scattered in between.

Perhaps you have Jimmie and Sissy along with you—and while they are delightful persons at home, they are a bit difficult when it comes to the matter of hurried and wide-spread shopping.

Let "Personal Service" Help!

A trained woman will gladly accompany you, as long as you need her—without charge. Explain to her the things you need and the prices you wish to pay, and she will help you assemble them with the least possible delay, keep a watchful eye on Jimmie and Sissy, collect the packages, and wrap them compactly for carrying or mailing, thus enabling you to pay for them all at once without waiting for change in each department.

Your Christmas Presents will be chosen easily, "Personal Service" either buying them as the result of a letter from you, or helping you to choose them personally.

The Bon Marche buys and sells for cash, because it believes firmly that cash merchandising means savings for all of us.

Your Shopping Headquarters should include almost every commodity you might desire, a comfortable place where your family may rest, and a nicely appointed restaurant where wholesome food is moderately priced.

The Bon Marche offers you all this—and then humanizes it with "Personal Service" which is yours to command at any time.

The Bon Marché

PIKE ST. SECOND AVE. UNION ST. SEATTLE

POULTRY AND RABBITS

High Standard

Whatcom Accredited Hatcheries

Not satisfied with the standard set by the state organization, the Whatcom county accredited hatcheries have decided to hatch only eggs from hens 18 months old and to begin the 1924 season with males at least 9 months old. In addition the dam and sire's dam of all males must have made a trapnest record of 225 eggs in 365 days.

This is a higher standard than is required by the rules adopted by the representatives of the different counties, but is similar to rulings that other county associations are taking up. There are over 44,000 fowls owned by the 65 breeders and hatcheries.

Officers of the association are: M. S. Allen, Lynden, president; C. E. Baller, Bellingham, vice president; B. C. Young, Bellingham, secretary-treasurer, and B. S. Hillier, Lynden, and A. D. Foster, Bellingham, directors.

Likes Wyandottes

To the Editor: I have been a subscriber and an interested reader of The Washington Farmer for a good number of years and have always found it a very helpful publication. More solid fact and less theory than many farm papers, and it is better adapted to western conditions. Being a poultryman, I am especially interested in the "poultry department" and get many helpful hints from it. I am glad to note that a move has been started to form a cooperative egg and poultry association in eastern Washington. This is a move in the right direction, and I surely hope no one will hesitate about joining such association, as it's the only way we can have a stable market for our product. And right now, when the wheat market is so uncertain, is a good time for eastern Washington farmers to carefully investigate the possibilities of poultry and eggs.

Then the question comes up, "What breed is best?" The usual answer is, "There is no best. The breed that you prefer is the best one for you." This is a fairly good answer, but after all is said, there are a few breeds that have developed points of excellence over most others. The Leghorns seem to be the leading breed west of the mountains, but my experience convinces me that they are not the best for this colder climate. The shows will soon be here and the different breeds will then be in evidence, and one can compare them and make his choice. In this connection one thing has always been a wonder to me and that is that, while you see large exhibits of most of the standard breeds, there are usually very few White Wyandottes, which, to my mind, is the very best all-purpose fowl bred. "Ah," says some one, "that's because you are a W. Wyandotte breeder." But not so. I am a W. Wyandotte breeder because after years of experience with most of the standard breeds I became convinced that this one is the very best all-purpose breed. As a table fowl they are parexcellent. With their yellow skin, plump bodies and good weight they are unexcelled, and the chicks develop into good broilers two weeks younger than any breed I am familiar with. As to looks. What breed can equal them in beauty? With their white, fluffy plumage, red comb and wattles and their erect carriage, they are "a thing of beauty." I repeat, I can't understand why they are not more generally raised. One thing I have noticed, is that people once adopting them seldom make a change. As I have nothing to sell, my enthusiasm can not be ascribed to mercenary motives.

Winesap, Wash. W. J. TAYLOR.

Poultry Problems

By W. D. BUCHANAN,
Poultry Extension Specialist, W. S. C.

I have 12 Barred Rock pullets that have started to lay at the age of 4 1-2 months. They are large and well developed. They lay a good many soft-shelled eggs and double-yolked eggs. Have you any idea of the reason for this? They have plenty of oyster shells.

My scratch feed is two parts wheat and one part corn. How much of this should I feed by measure to 12 pullets per day? I feed them mash in a self-feeder and have plenty of green feed. G. A. B.
Spokane, Wash.

Pullets sometimes lay soft-shelled eggs because they are too fat. There is some indication that double yolks may sometimes have the same cause.

A little bone meal, about 5 per cent, in the mash would help. So will better feeding methods. Twelve pullets will eat about one quart a day, which should be fed one-third in the morning and two-thirds at night.

I have a hen that has one side of her head all swelled. Her eye is swelled shut and she can not shut her mouth or eat. Can you tell me what to do? MRS. J. L. S.
Benge, Wash.

I would advise you to cut her head off. She will never be profitable. It is cold, or roup followed by canker.

Prevent the trouble in the rest of the flock by seeing that they are free from drafts and crowding and that they have plenty of fresh air and clean water. It might be well to give the flock an ounce of epsom salts in each bucket of drinking water for a day.

I have some 1-year-old hens which have bumble foot. What causes it and what should I do for it? Is there a cure or not? M. C.
Timentwa, Wash.

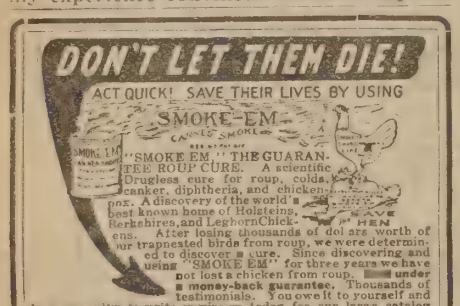
Bumble foot is caused by a bruise caused by flying from a high roost onto a bare floor or rocks, or by a sliver from scratching on a rough board floor or sometimes from thistles or thorns. When the center of the lump turns white, lance, squeeze out the pus and apply some good disinfectant. Remove the cause, so as to prevent future trouble.

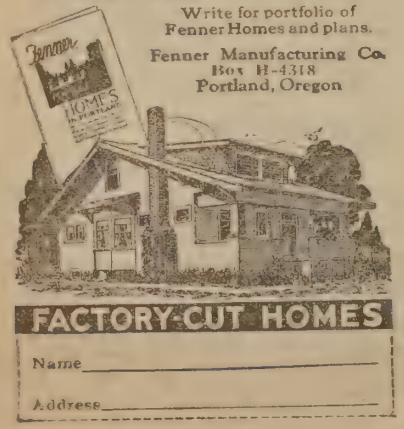
Please advise me the best method of fattening turkeys, closely confined or open range. What harm is there in having turkeys intended for breeding purposes go into the winter fat? F. W.
Oroville, Wash.

It is best to keep the turkeys on open range till about three weeks before you want to sell them. Then confine them in reasonably small yards. Start feeding lightly on wheat, keep mixing in a little corn, till the feed is half corn and half wheat. Bring them to full feed in about 10 days. Then for the next 10 days keep grain in a trough before them. If they have milk to drink it will be that much better. It is all right to have the turkeys go into winter fat, provided they are not overfed in doing it.

Please tell me how to distinguish a goose from a gander. A. L.
Bellingham, Wash.

It is difficult when they are young to distinguish a goose from a gander. The gander is usually about two pounds heavier than the goose. His neck is longer and his head a little coarser. When old he is crosser than the goose. When you find a goose that looks like a gander, that has longer neck and abdomen not so deep, weigh him and if he has the extra weight you may be reasonably sure that he is a gander.





Have you glanced over the farm bargains on the "Want Ad" page?

ORCHARD AND GARDEN

Berry Plant Diseases

The so-called degeneration diseases of berry plants have created unusual interest on the Pacific coast, and in fact the future of the industry depends to a large extent on how the fight against these troubles is carried on, according to Arthur Frank, plant pathologist of the western Washington experiment station. It is a well-recognized fact that yields have been going down in certain fields for some seasons and many fields have given out altogether. These troubles have been present in some parts of the country for a good many years, but it is only recently that the nature of the trouble has been recognized and the study of them commenced.

Three diseases are recognized as present in our raspberry fields. These are the mosaic, leaf curl and the blue stem. Although not much is yet known about them, still we know that they are present and that they are doing much damage. We also know what their symptoms are, how they are spread and a beginning has been made on control methods. These troubles affect raspberries both red and black, loganberries and to some extent bush blackberries.

The symptoms are many and varied and they are often difficult to detect, particularly in the earlier stages, except to the trained eye. Mottling and curling of the leaves, stunting of the canes, reduction of the yield and finally death of the plant—these are the chief outstanding symptoms.

No organism has been found present in the plants that is directly responsible for the trouble, but it is hoped that future work will reveal the direct cause. The chief way that the disease is spread is of great interest to the grower, for this has been found to be by the use of diseased plants for setting. If sets are taken from a diseased plant the sets are diseased also.

The chief and important point for the grower to remember and act on is that the diseased plants are not used for setting new fields.

Control measures that have been worked out in eastern states where they have been actively fighting these troubles are: First, use of clean stock; second, careful inspection of all fields and the removal of all plants showing any of the disease at all; control of insects such as aphids and leaf hoppers, for these are capable of spreading the disease from one plant to another.

The chief measure that is important for western Washington growers is to make sure that the plants they use for planting new fields are entirely free from any of these troubles. That is, they must have come from healthy plants. Second, the rogueing of new fields is important and should be attended to zealously.

The above diseases constitute a real menace to the whole berry growing industry. Growers will do well to familiarize themselves with the troubles and then to take the proper steps to make their plantation clean. Later state inspection will perhaps come to aid. Federal inspection is now in force in some places at the present time of all of these diseases.

Water Core in Apples

By O. M. MORRIS,
Department of Horticulture, W. S. C.

Will you please tell me the cause of water core in apples. Will they keep when picked? When is the time to pick the apples? The tree seems to be perfectly healthy. J. R. J. Tacoma, Wash.

The cause of water core in apples is not known. It occurs more frequently in apples that hang heavy on the trees late in the season for the variety, also most frequent in apples that are on land that has a high water content. Some of these conditions seem to be influential in producing water core, but as yet we do not know the real cause of it nor is our knowledge satisfactory relative to methods of prevention.

Water cored apples will keep well. Those that have an excess amount will not keep as well as those apples that are normal or have but a slight amount of water. Sometimes a part of the water core condition in apples seems to disappear during the storage process. Water core does not seem to be indicative of any disease or other form of abnormal condition in water.

An apple should be harvested when they have attained full size. This can not always be determined. Some varieties should be picked as soon as the green skin of the apple changes from the intense leaf green to lighter greens. In some apples it means a change to a yellowish cast. Some varieties can be gathered as soon as the seeds turn dark. Others may be permitted to remain on the tree until a good red color is attained. The date for picking some varieties can best be gauged by the taste of the fruit. When the apple is mature it seems to have a starchy taste. Strange as it may seem, there is no exact nor satisfactory rule to go by.

Decrease in Honey Production

Washington bee keepers report a dropping off in honey production of the state and the production over the entire United States is said to be lower than the five-year average recorded in the Washington forecast, according to A. B. Slocum, extension bee specialist of the state college. "Last year the average production per colony amounted to 50 pounds each, while this year with 87 per cent of the crop reported by September 1, we find only 34.9 pounds per colony," said Mr. Slocum.

"The Washington bee keeper is much better off than the average in the United States, for this year the bees of the state produced an average of 54 pounds of honey per colony. This makes 19 pounds of honey per colony more than the average. However, the reason there is some complaint about production is that last year the average for the state was 75 pounds, or 21 pounds more than now.

"Considering our neighbor states, the Washington bee keeper should feel optimistic for he produced 15 pounds of honey more than Idaho bee keepers; 17 pounds more than the California men, and 23 pounds more than the Oregon honey men.

"Washington ranks tenth in the entire country in the amount of honey per colony produced by the bees. So while we are still much lower than last year, our bees have proved themselves capable of securing a good big share of the honey available. Weather conditions have been one of the big reasons for the low honey crop."

Beautify with Shrubs & Shade Trees

Make your home the center of a picture. Paint the picture with shade trees, shrubs, roses and vines. Add to the comfort of your family and find for yourself a new satisfaction.

Washington Nursery shrubs are hardy field grown stock. They carry plenty of good roots which enable them to "take hold" and grow, producing quick results.

You will be surprised at what can be accomplished with a very small expenditure. Trees and shrubs properly planted will increase your property value many times their cost. Our big line offers a wide range for selection in fruit and shade trees, shrubs, vines, and over 100 different varieties of roses.

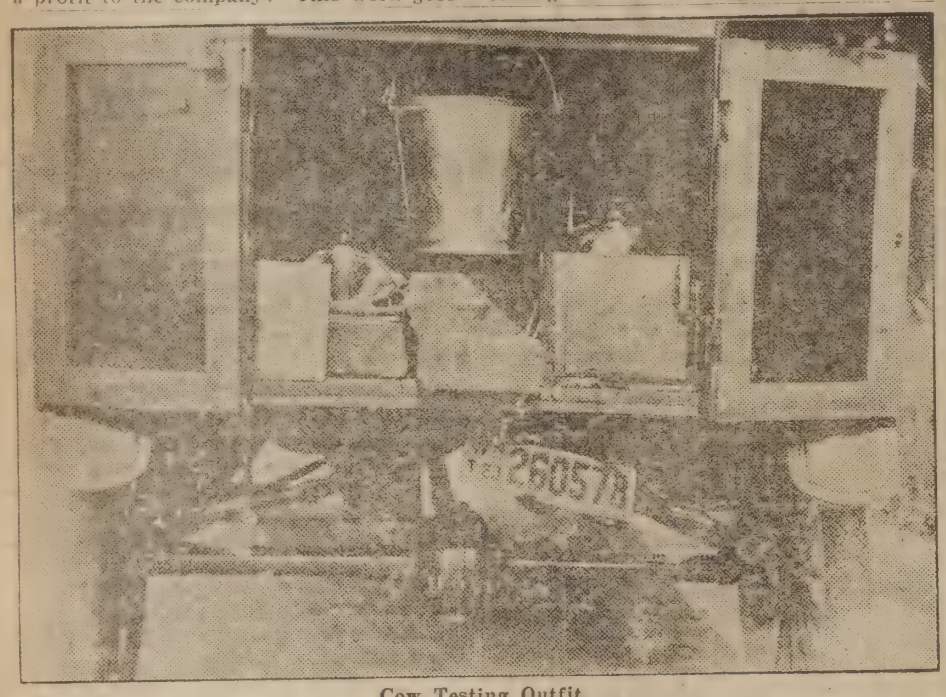
Figuring Profits From Dairy Herd

(Continued from page one.)

The result was that many of the members found that they could make an increase in their profits either by feeding more grain, different rations, or by mixing their own rations instead of buying prepared feeds. This is a detail that the dairyman can not always work out for himself and it is needless to say that the assistance given by Mr. Saunders has been greatly appreciated.

Much county testing association work in the northwest has emphasized the weeding out of poor-producing cows rather than giving help on better feeding. In almost any tester's yearly record one may notice a few cows sent to the butcher. Would the work of an efficiency expert for a large cooperation be accepted if he were to limit his findings to discharging employees who might not be returning a profit to the company? This work goes



Cow Testing Outfit.

a step farther and suggests economical methods and practices.

When the better feeding gospel was first advocated there were a few that came back with the idea that higher feed costs would cut down the profits. Saunders soon found an interesting comparison in the association records for the previous year. The average feed cost per cow in the high herd for that year was $140.20, buf the average return above the cost of feed per cow was $120.36. The lowest record in the association for the same year was made by a herd whose feed cost averaged $61 and the average profit over the cost of feed was $44.38.

This shows what some high-producing herds require for feeds, although it is possible that the low herd did not have the ability to return a good profit, even if the animals had received a generous ration. They must, however, be able to utilize the raw material in order to produce the finished product. The above figures prove the point that has been advocated by the United States dairy division, that "as the production of a cow is doubled, the profits increase three times." The high herd produced twice the amount of butterfat as the low herd and nearly three times the profit of the low herd.

"Many dairymen have made the mistake of depending entirely on pasture," said Mr. Saunders in one of his reports, "especially during the rush of haying, silo-filling and other work of midsummer. Farmers are apt to neglect the herd in this way and thus lose a large part of their year's production. It is not altogether the fact that the cows make a drop that hurts, it is the fact that when they are on poor pasture and go down in milk they generally lose flesh and as a general rule a thin cow will test lower. One can, therefore, readily see that going through the summer months on short pasture the cows are in poor shape to go onto winter feed.

"A thousand-pound cow requires about 40 pounds of clover and mixed grass pasture per day to maintain her own, and if she is producing 30 pounds of 4 per cent milk she requires approximately 60 pounds of pasture more. That makes a total of 100 pounds of pasture.. When the grass is plentiful and palatable, the probabilities are that a cow can pick 100 pounds of grass and find time to lie down several times during the day to chew her cud, but in the latter part of the season when the pasture is getting short, the flies are becoming bothersome and some of the days are quite warm, it is doubtful if the average cow can eat 100 pounds of grass, or hold up her production unless she is given assistance either in the line of green feed or grain.

"In fact, many of the dairymen in Snohomish county have found that it pays to supplement their pasture either with green feed or grain. Some find that it pays to feed soiling crops, even with the extra labor required.

"A good example of what soiling as a supplement to pasture can accomplish has been demonstrated on the B. A. Barker farm at Snohomish. In June the pasture was getting quite short and in spite of the fact that he was feeding liberally of a good grain ration, it looked as if the cows were due for a drop in production. However, this drop never came as Mr. Barker had anticipated. He seeded a large field of oats and vetch, the greater part of which was made into hay and the portion close to the barn was being fed as green feed. While the butterfat average of the testing association dropped four pounds during the last month, the average of Mr. Barker's herd of 26 cows dropped but one pound, thus proving beyond a doubt in his mind that it pays to feed during the summer months as well as in the winter."

Another suggestion made was that of P. D. Hillis of Snohomish county, whose cows were milking down into a very thin condition. Even though they were being fed exactly according to production and of a good grain ration, it seemed that the lost flesh could not be replaced. Mr. Hillis asked for suggestions on his ration and the following mixture was suggested:

Two hundred pounds mill run.
One hundred pounds ground barley.
One hundred pounds ground corn.
Fifty pounds soy bean meal.

As a result of feeding the new ration for a month, Mr. Hillis says his cows are producing equally as well, the ration is costing less, while the cows gained flesh rapidly.

"When changes are made in the ration to increase the production, the dairyman should not be alarmed if he does not get results at once, since it will often require months before any noticeable increase can be had," Mr. Saunders insisted. "I might cite the case of James Norberg, one of the Snohomish county members. He had fed hay for several years with no grain at all and consequently received a very small milk check.

"When he changed his feeding methods and began giving a grain ration, he could see no increase in the production until the end of a year's time. Now the herd is doing much better and he is well satisfied with the milk check. Many of the cows had been grain starved and needed the grain in the ration to put their bodies back to normal condition. When they had all accomplished this result, they began to put their surplus energy back into the milk pail and thus return a better profit to the owner."

Good Milkers, Poor Cows.

But feeding will not always account for some of the low producers and there are occasionally some cows that appear to be good milkers that have to be weeded out of the herd. In very few cases have these animals been picked out by any other means than by the tests which are made each month during the lactation period. The following instance may interest some dairymen who think they can pick out their poor cows by seeing how their milk holds out, but without the periodical tests.

Before joining the cow testing association George Barr of Monroe considered three of his cows, Nos. 3, 4 and 14, to be of equal value in production, according to Mr. Saunders. There was little difference in their appearance and they all gave about the same quantity of milk. They all freshened about the same time and got similar care and have otherwise had an equal chance. Their yearly net income as shown by their record in the association was as follows:

No. 14 .....$52.73
No. 3 ..... 98.45
No. 4 .....114.26

The figures show that cow No. 3 in the same length of time has produced $45.72 more net income than cow No. 14 and cow No. 4 has produced $61.53 more net income than No. 14. With the weeding out of cows like No. 14 it can easily be seen that almost any untested herd can have its money making capacity greatly increased by taking advantage of some kind of testing.

Although Mr. Barr has a good herd of grade Holsteins, he said that the testing and disposing of a few of his poorer cows soon paid for the costs of a year's testing. He also expressed his opinion that the cow testing association is the best method to stop the leaks in the dairymen's cost of production pocketbook.

Changes in Rations.

In regard to some of the other changes in the ration of different herds, the following examples are taken from one of Mr. Saunders' monthly reports.

"In February I found Mr. Walen of Silvana, feeding a ration composed of:

100 pounds mill run.
100 pounds barley.
100 pounds corn.
100 pounds linseed oil meal.
Oat, pea and vetch silage.
Good mixed hay.

"Mr. Walen had at that time three cows which were milking very heavily and I suggested that they be continued on the same ration. In view of the fairly high protein content of the silage and the good hay, I suggested the following ration for the remaining eight cows:

300 pounds mill run.
300 pounds barley.
300 pounds corn.
100 pounds linseed oil meal.

"At that time the cost of their ration was 2.2 cents per pound, and the cost of the suggested ration was 2 cents per pound. They were feeding 85 pounds of grain mix to these eight cows and two dry ones a day. The new ration made a saving of 17 cents per day, or $5.10 in a

Training for Disabled Veterans

There are 85 men who are getting special training from the state college through the United States Veterans' bureau in the rehabilitation division. The present plan, which is quite a departure from the institutional training that was used less than a year ago, calls for the placement of the men on farms of their own or rented farms and they are given instruction by special instructors who go from farm to farm.

The above picture shows a group of instructors and vocational men who are taking training under the plan which allows the state college to aid in the selection of instructors and in giving special instruction to the men on the farms. The picture was taken at the experiment station at Puyallup during Farmers' week.

The work is being carried on through contact with the state college and the western Washington experiment station. The five instructors are employed to act much the same as the circuit riders of our early history and go from one farm to another to give the men the training that they have requested. This is done under a very complete system of lessons which are given to the men as they have time to study them. All men are under supervision of the veterans' bureau and are paid subsistence money by the government in addition to what is necessary for text books and for equipment needed for their work.

"There are about 75 per cent of the men who are taking this work in western Washington that are going into the poultry business," explained James I. Stewart of Seattle, who has charge of this work in Washington, Oregon and Idaho. "Many of the men are buying their farms and are putting their subsistence money into the payments of their places. There are a few that are renting, but they plan on getting some kind of a farm of their own as soon as they can do so.

"All of these men have been disabled in some way while in the service of the United States during the World War and when discharged have found that they were unable to carry on their pre-war occupation. There are 45 men in eastern Washington, but they are so scattered that they have had to take up such special training as they could get, either from the county agents or by correspondence. In all cases the men are enthusiastic over their work and have a long list of questions to ask the field instructors when they arrive and they are all practical questions that have come up from their work."

There are 30 men that have already completed their work and there are others who are nearly finished with the courses, which take from 12 to 18 months. This is thought to be one of the best means of getting a man back to where he can be self-supporting and can take care of himself and family without the aid of a pension, as was formerly provided to ex-soldiers of the Civil war and is still being paid to those who are yet living.

Good Crop of Grapes

A good crop of grapes was produced on the two-thirds of an acre patch at the western Washington experiment station at Puyallup this year. While the vines are only young plants, they produced a total of 1500 pounds on the patch, or at the rate of one ton to the acre. H. D. Locklin, horticulturist of the station, said he was very well satisfied with this production and expected the patch to produce at the rate of four or five tons to the acre when mature.

The grapes were largely the Island Belle or Campbell's Early variety, while there are a few vines each of Vergennes, Eclipse, Delaware, Niagara and Moore's Early. These grapes are largely for variety tests to see if there are any that will produce an outstanding crop in this climate. Mr. Locklin says that the production this year from the Moore's Early vines are a little better and slightly earlier than the Island Belle. This of ourse is only the result of the first year's crop, and it is necessary to give it several years' trial before any definite conclusions are made. Practically all of the varieties named have given a good production for the first year, and are advised for home planting where two or three odd varieties are desired for fresh fruit consumption.

NEW SILOS IN KING COUNTY.

Considerable activity is being shown among the dairymen of King county in the building of new equipment for their farms. During the last month County Agent W. W. Henry reports three new silos constructed on dairy farms. C. J. Larson and George Bagwell of Carnation each completed a 12x32-foot silo. O. E. Jones, Issaquah finished a 10x36-foot structure.

Short Courses at W. S. C.

Courses beginning January 7: Diversified farming, practical poultry farming; eight weeks each.

Fruit growing, dairy farming; four weeks each.

Mining, geology, assaying, ore testing, metallurgy, mineralogy, mine surveying; 12 weeks.

Gas engines, tractors, automobiles, ignition; two weeks each, beginning January 7, 21 and February 4.

Creamery management, official testing; two weeks each, beginning March 4.

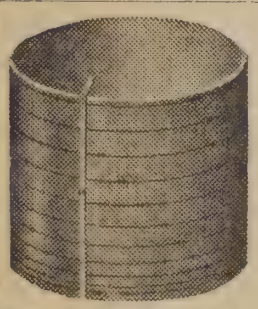
Wood Tanks For Every Farm Purpose



Get our prices before you buy. For serviceability and right down economy, you can't beat a **FEDERAL Tank.** All sizes—and at prices that farmers who believe in getting a dollar's value for a dollar, will declare an exceptionally good buy. Tell us the kind and size tank you want—we'll give you the price and full details. Inquiry does not obligate you in any way.

Federal Pipe and Tank Company
5330 24th Ave. N. W., Seattle, Wash.
Manufacturers of Water Tanks, Semi-Circular Creosoted Flumes, Wire-Wound and Continuous Stave Wood Pipe.

Non= Detonating

Neither the most powerful *powder* nor the most powerful *gasoline* detonates

There are two kinds of gasoline just as there are two kinds of powder. One **detonates**—explodes with a single crash.

It pounds the piston down with a sledge hammer blow.

Having a tendency to explode prematurely, it limits compression, decreasing power and efficiency. It often causes "knocking" on hills.

And the crashing blows, repeated, increase vibration—which means more wear and tear.

Detonating gasoline and dynamite are similar in that both **detonate.**

Even, Sustained Impulses

Union Gasoline is different. Like the smokeless powder, used in all big guns, it does **not detonate.**

Its explosions are progressive and prolonged. They **thrust** the piston down with a steady, sustained impulse, just as the big gun thrusts out the projectile.

These explosions permit higher compression, for compression is limited by the tendency of a **gasoline** to detonate, as all authorities know.

You enjoy more power and efficiency from a gasoline like this in your motor car or tractor.

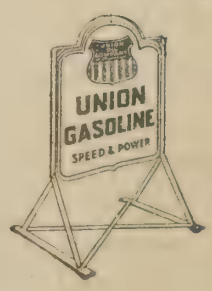
New Speed

This additional, **smoother** power in your motor means a new "lift" on hills, new speed on the level and more snap in the pickup.

These steady, sustained impulses decrease vibration, so save wear and tear. Detonating powder would be the ruination of big guns.

And this increased, all-'round efficiency means greater fuel economy.

Thus Union **Non-Detonating** Gasoline is the fuel that gives you better service from your motor or tractor in several important ways.



Union is always uniform. It doesn't disintegrate, thus doesn't deteriorate in storage. You get all the power when you want it that is put into it at the Union plants.

Union Oil Company of California

Union Gasoline

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

In America we take infinite pains to maintain the means of education. We take pride in our schools. We think education is the greatest thing in the world. We insist on the children going to school. To make it certain that every child shall have the privilege, we pass "compulsory attendance" laws and provide "truant officers" to enforce them. The only accepted excuse for absence is sickness.

Copeland.

This is all as it should be. But in spite of truant laws, every schoolroom shows vacant seats each day. Illness keeps away a large number of pupils.

Unless you have investigated the causes of school absences you will be astonished at what I am about to tell you. Forty per cent are due to ulcerated and aching teeth! The same power that compels attendance at school should compel children to have good teeth. Decayed and ulcerated teeth are inexcusable. They are inexcusable because they are preventable.

Nobody should have any disease he can prevent. Bad teeth can and should be prevented.

Ulceration or abscess is due to decay of a tooth, or "caries," as the dentist calls the condition.

Caries is a disease of civilization. It did not occur when men were barbarians, and it increased as they progressed in civilized arts and customs. The effect of civilization on certain African tribes is significant. For instance, one tribe less than two generations ago had caries prevalent to the extent of 1 per cent. In two groups of these same natives, living under the conditions of civilization 95 per cent were recently found to have caries.

The tooth is well made to resist disease. It is covered with a very hard and compact substance, the enamel. But, like every other material in nature, this dense substance can be destroyed. It gives way to the attacks made against it by the acids formed through the fermentation of food.

The mouth swarms with germs. This is no wonder, because we put almost everything in the world into it, including our own dirty fingers. Some of these germs have the power to convert certain foods into lactic acid. Sugar and starches are the particular foods which may be acted upon in this way. Let us consider for a moment the "sticky" foods of this sort—chocolates, biscuits, fresh bread, cake, pie crust, caramels.

Suppose we eat such food at night and go to bed without cleansing the teeth. Immediately the acid-forming germs of the mouth go to work on this material lodged on our teeth. Enough acid will be produced to cut off a layer or two of enamel. Tomorrow the process is repeated and after a while a cavity is eaten into a good tooth. Thus caries begins.

Proper eating and the use of the toothbrush form the first line of defence against tooth decay.

Just Folks

Fear is death to progress.

Sectionalism begets sectionalism, class begets class, sect begets sect, and there you go.

On the other hand, you can universalize your sympathies until that sympathy nearly fades out into nothingness.

Where to draw the line between the two, I confess I do not know.

Perhaps granting the other fellow the same rights and privileges which you claim for yourself will help out.

A state church is prohibited by the constitution of the United States, yet in the classifications of history we are a Christian nation, just as Turkey is a Mohammedan nation or India a pagan nation.

As a Christian nation we build on the Ten Commandments and the Lord's Prayer. Here is fundamental union and universal breadth. But when we get into the niceties of sectarian logic we are lost so far as the brotherhood of man is concerned, unless we grant freedom of opinion to allow one to believe in baptism by immersion, and to another baptism by sprinkling, without abating one jot or tittle in our own belief on the subject. Here are serious dangers to your own soul in sending another to hell because he does not believe just as you do.

E. A. S.

Our Friend---The Toad

(Continued from page two.)

shows the per cent of each article of diet as selected by this animal:

Ants	19
Cutworms	15
Thousand-legged worms	10
Caterpillars	9
Ground beetles	8
May beetles (white grub adult)	6
Wireworm beetles	5
Destructive weevils	5
Miscellaneous caterpillars	3
Grasshoppers and crickets	3
Spiders	2
Sow bugs	2
Potato beetles	1
Carrion beetles	1
Miscellaneous beetles	1
Snails	1
Angleworms	1
Unidentified animal matter	7

Toads work mostly at night and hide under dense foliage, or in deep grass, during the day time. They procure their food by suddenly thrusting out their long, sticky tongue, which holds the tiny insect it strikes until it can be drawn into the mouth. Some one has estimated that every toad in the garden is worth $5, but that was several years ago, before the dollar had lost so much of its purchasing power. Judging by the way that other commodities have gone up in price since then we must come to the conclusion that the toad is surely worth protecting. This should be encouraged wherever it is possible to do so. The thoughtless boy should be taught in school, or at home, just what the importance is of the toad in the scheme of life.

Form Home Club

A new home demonstration club has just been formed at the Gull Harbor district, in Thurston county, which makes a total of 12 clubs in the entire county. This is the seventh club to have been organized since last March. The farm women expect to meet once each month and study such problems as hat making, nutrition, dressmaking and the sewing of furs.

Following is a list of the officers: President, Mrs. W. A. McClarty; vice president, Mrs. Frank Cushman; secretary-treasurer, Mrs. E. E. Lane. The project leaders are: Clothing, Mrs. W. A. McClarty; nutrition, Mrs. Jilson White; home management, Mrs. A. W. Giles.

Are your shingle roofs weather tight?

It doesn't cost much either in time or in money to weatherproof roofs with Oronite Shingle Oil. Applications on roofs and sidewalls *now* will effectively prevent warm sun or soaking rain from doing costly damage.

Oronite Shingle Oil retards the evaporation of natural oils in the wood and prevents the absorption of moisture; retards warping, splitting, leaks and prevents moss growths. Adds years of new life to shingles on roofs and sidewalls.

Ask our agent about mixing Oronite Shingle Oil with color pastes for cheerful red and green stains.

55 ACRES, YAKIMA VALLEY, IRRIGATED; government water rights; 25 above ditch; grow corn, spuds or anything put in ground; good house, barn, chicken house; fine climate, school, church; two railroads; no better land in valley; will sell $2000 under value to some one who wants good home and willing to work; reasonable payments; easy terms. H. L. Williams, W924 14th, Spokane.

A MONEY MAKER THAT WILL ALWAYS show handsome profits; 130 acres, near Yakima; good water rights; excellent buildings and well equipped; large dairy herd. Price $22,000; good terms. Western Lands, Inc., owners, 918 Green bldg., Seattle.

FOR SALE OR EXCHANGE 702

STOCK AND GRAIN FARM, EASTERN WASH. Good buildings, well; 600 acres summer fallow, unlimited grass; 3000 under fence; 33 mares bred; adapted to sheep, cattle, mules and horses. $2000 cash will handle. For full particulars write Box 879, Connell, Wash.

480 A. WHEAT LAND, NEAR WILBUR, Wash.; $40 per acre. 320 a. Wainwright, Alta., $40 per acre. 160 a., Champion, Alta., $40 per acre. Trade part or all for coast property or Yakima valley. Full details, first letter. 405 Jamieson bldg., Spokane.

160 ACRES; 80 IN CULTIVATION; GOOD buildings; running water; good roads; near school. Otto Peterson, Colville, Wash.

TO EXCHANGE—Real Estate 703

160 A. DAIRY, STOCK, HAY AND FRUIT farm; Yakima river bottom land, irrigated; 2 sets extra good buildings and fences; on highway, school bus, mail; 3 mi. to town. $32,000; mortgage, $8300; exchange for property in Nez Perce, Palouse or Willamette valley. R. F. D. 1, Box 20, Richland, Wash.

Cattle Ranch To College

By Russell Doubleday Copyright by Doubleday & McClure Co

CHAPTER XIX.

An Awakening.

It was a terrible shock to the boy, and for a few moments he seemed dazed as if by a physical blow. He had come into camp weary of body but light and gay of heart, full of triumph, sure of a half-chaffing word of commendation from his friend and comrade. But this friend had met a horrible death. John's heart sank like lead, and for the time the light went out of the sky for him. There was no joy, no sunshine, no future—Jerry was dead!

"Where is he?" John asked of the man who brought him the sad news.

"In camp," was the answer.

John was in haste to go to his friend, yet he dreaded it with all his soul. He forgot his triumph, his pride in his horse, his weariness, in the one thought that filled his mind—"Jerry is dead!"

"So Jerry, great, strong, experienced Jerry, on his big bay went down, and I neither strong nor wise, am safe and well," John soliloquized.

In a minute or two they entered camp and John's first question was "Where?"

The cook nodded toward a bed outspread in the shade of a wagon.

Mr. Baker, the ranchman, was there, and as John reached the place he pulled back the canvas covering. The boy never forgot the sight that met his view. Jerry it was, certainly, but almost unrecognizable.

John sat down by him, overcome by his first great grief. Death he had seen many times, horrible deaths some of them, but none had come so close as this. Cook, perceiving his plight, brought him a cup of steaming hot coffee, well knowing that it would put heart into him.

"Mr. Baker," said John at length, "he's got to be buried some place where the coyotes can't get at him."

"But it's 60 miles to the ranch," objected the ranchman.

"That's nothing. Let me have a team and a wagon and I'll get him there."

After some demur, which John finally overcame. Mr. Baker allowed him to take a big wagon and a four-horse team.

The body was laid in reverently, the horses harnessed and hitched up. Just as John was about to take up the reins Mr. Baker came forward. "I guess I'll go with you, Worth," he said. "Roundup's most finished and I can do more good at home."

He climbed into the seat of the big covered wagon as he spoke; and after tying Lightning alongside the wheel horse John took up the lines. The punchers stood round, hats off, their weather-beaten faces grave and full of concern. All of them realized that this might have been their fate. Their rough hearts, accustomed as they were to all the chances of the dangerous life, were full of grief for the loss of their companion, "who was and is not."

"So long!" they said—a farewell to living and dead.

The whip cracked, the leaders jumped, and in a few minutes the white top of the wagon sank out of sight behind a rise. The 60-mile funeral journey had begun.

For some time employer and employee sat silent side by side. John's hands were busy with the four fresh horses he was guiding, and his mind with the real sorrow that filled it. He had never known Mr. Baker well; that familiar relation, unknown in the east, between employer and employed was prevented by John's absence on the range, but the boy was grateful for the kindness Mr. Baker had shown him.

"How long have you known Jerry, Worth?" the ranchman asked at length, touched by the boy's grief, and his interest aroused.

"Since I've worked for you only," was the answer. "Some people you never take to and some you know and like right off; Jerry was that kind. He always stood by me in quarels, and many's the time he's stood a double watch 'cause he knew I was tired and didn't want to wake me up. Yes, he stood by me through thick and thin."

"He was a good hand, too," interpolated Mr. Baker.

"He'd have divided his last dollar with me," continued John, more to himself than to his hearer. "I'd have done the same with him."

All this time they were travelling at full speed. The four horses yanked the heavy wagon along steadily over gullies and ridges, through valleys and over hilltops.

A couple of hours passed in this way, during which John slowed the horses down over the rocky places and urged them forward where it was smooth.

"What are you going to do with your money, Worth?" said Mr. Baker, hoping to dispel some of the sadness that hung over the boy. "You've not spent much this year, have you?"

"'Bout $300, I guess. Jerry and I thought of starting in with a little bunch of cows on our own hook, but——" The glance that John gave over his shoulder into the wagon finished the sentence.

"Did you ever think of going to school?" asked the ranchman, intent on his effort to divert the boy's thought.

"No, I saw a dude feller one time that had been to school all his life"—John spoke contemptuously—"and I'd rather punch cows all my days than be like him."

"Why? He might have been a poor specimen. My son would have been a lawyer if he had lived, and I would a great deal rather have him one than a cow-puncher."

John shook his head, unconvinced. A vision came to him of streets walled in on each side by buildings so that every thoroughfare was a canyon and every room a prison. The joy of wild freedom, fraught through it was with danger and hard work, tingled in his veins.

"You know if you stay on the range," continued Mr. Baker, "it's only a question of time when you'll be stiffened and

A new idea had been presented to him.

broken down, or else, what may be better, you'll be caught as Jerry was. If you keep on punching cows all your life nothing will be left behind showing that you've been in the world but a pine plank set in the ground."

For a time John's thoughts were as busy as his hands. A new idea had been presented to him—his future. What would he do with it? He loved the wild, free life he was now leading, and up to this time he had never thought of working for something higher and more lasting. Mr. Baker had stirred a part of him that had long lain dormant—ambition. His plans heretofore had seldom carried him further than a few days or weeks, his sole care was to do his duty and keep his job; but now he had a new care—his future.

The horses jogged along steadily over the rough country, their driver getting every bit of speed out of them that would allow them to last the journey through. Most of the time Lightning went alongside the wheel horse contentedly. With particular perversity, however, as the team was passing through a narrow place, where there was barely enough room to pass, Lightning began a spirited altercation with his side partner. He shied off from him, pushed him and bit at him till he in turn retaliated. For a time John had his hands full, but Lite, in his efforts to kick holes in the unoffending side of the wheel horse, got tangled in the harness, and so stopped the whole business. His master extricated him with difficulty, and Lite, instead of getting the punishment he so richly deserved, was petted instead, whereupon he became very good indeed and rubbed his nose affectionately against John's sleeve, as much as to say: "I'm sorry. I'll never do it again."

"It seems to me," said Mr. Baker, after they had got started again, "that a fellow that could tame such a wicked brute as that horse was a few months ago could master anything, books or anything else."

"Oh, I've read some books," said John eagerly, "and I thought I knew something till that dude feller told all about the things he knew. But that chap couldn't ride a sway-backed cow," and John smiled, sad as he was, as the thought.

"You struck a poor sample," the ranchman responded. "He saw you could beat him physically, so he tried to get even with you mentally."

For a time they rode along in silence, the boy busy with his own thought, which Mr. Baker was wise enough not to interrupt.

At length Smith Creek, the halfway mark of their journey, was reached, and they stopped for water, rest and food. The horses were unharnessed and allowed to feed a while. Thirty miles had been covered in less than five hours—thirty miles of diversified country, hill and plain, rock and mud. The road was not worthy of the name, it was merely a wheel track more or less distinct.

John was restless, the short hour of relief allowed the faithful beasts seemed long to him, and he was more at ease when they were spinning along the trail again. He had been living on his nerve all the morning and the strain was beginning to tell.

Soon Mr. Baker began to talk again. He was interested in the young companion by his side, this boy so filled with determination, so energetic and forceful and yet so abounding in loyalty and affection, as his grief over Jerry's death and his fondness for his horse testified, this boy who read books and yet had such a wholesome contempt of affected learning as evidenced by his ill-concealed disdain of the eastern "dude." "You've never been east," began the ranchman, "or to school?"

"No. I was born in Bismarck, N. D.," was the answer. "It must be queer," he added after a pause, and a smile lit up his tired face. "There's lots of women there, they say, and the men get their hair cut every month; the people have to always dress for dinner, the paper novels say, and everybody goes to school."

Mr. Baker smiled at this description of the life and manners of the east, and kept plying the boy with questions, put kindly, until he had learned pretty much all there was to know about him. It was long since John had had so much interest shown him, and it warmed his heart it was specially grateful at this time when he felt that he had lost a tried and true friend. The ranchman advised him to work out the year and save his money and at the end of that time doff his cowboy clothes and manners, array himself in a "boiled shirt," enter some good-sized town and go to school and church.

John was rather dubious about this "muscle work," as he called it, work requiring a quick eye, a strong will and the ability to endure, he knew he could do but about brain work and book learning he was not so confident. The idea of wearing a "boiled shirt" made him smile.

"Those stiff-bellied things the dudes wear," said he derisively. "Me wear one of those things!" and he laughed aloud at the thought.

Nevertheless the serious idea took deep root, and while he did not make any promises he had a half-formed resolve to follow the old ranchman's advice.

All this time the horses jogged along more and more wearily, and required more and more urging from the youngster on the driver's seat. The last 10 miles seemed endless; it was all John could do to keep the team going, and even tireless Lightning running alongside moved unsteadily with fatigue.

They were glad enough when the ranch buildings appeared dimly in the fast deepening gloom. The 60-mile drive was ended at last. When the wagon entered the ranch yard John almost fell into the arms of one of the men who had come to find out the cause of this unusually late arrival. It was Mr. Baker who told what the wagon contained and the story of Jerry's death.

John dragged himself to a hastily improvised bed, and, dropping down on it was asleep in a twinkling; the first rest for 36 long fatiguing hours.

Late the next day he was awakened to attend Jerry's funeral. It was a very simple ceremony, but the evident sincerity of the mourners' grief made it impressive. He was laid away on a grassy knoll where several other good men and true had been buried by their comrades. A rude rail fence enclosed the spot—the long resting place of men who had died in performance of their duty.

For a time things went sadly at the ranch, for John (he did not rejoin the round-up) missed his cow-puncher friend, his good-natured grumbling, his ever-ready helping hand. But gradually the boy's faculty of making firm, loyal friends helped to fill the gap that Jerry's death had made, though no one could ever take his place.

Mr. Baker's talk about school and a future took deep root, and as the boy turned the idea over in his mind it developed into a resolve to try it anyway.

Life had a new meaning now for John and he found it absorbingly interesting. The work he had to do was means to an end, and the commonplace, every-day drudgery became simply a cog in the machinery and therefore not only bearable but interesting.

The boy's success as a breaker of horses kept him much of the time at that work. Since he had broken Lightning all other horses seemed tame to him in comparison. It was part of his work not only to break the horses to the saddle, but to care for them generally, brand the colts, and train them for cow-pony work, as well as to guard them by day and night. On the long day rides over the rolling prairie and bleak, fantastically shaped and colored "bad lands" he would take a piece of a book in his pocket, and when an opportunity occurred, read it. He read many books this way, tearing out and taking a few pages in his packet each day. Mr. Baker was fond of reading, and understood the value of education; he had some books, and the less valuable ones he gave to his protege; these and the few John had been able to pick up from outfits he met and during the infrequent visits to a town formed his text books.

As he thought and read and studied he became more and more convinced that cowboy life was not for him; to know more about the things he had read a few scraps about, to gain a place in the world to learn something and achieve something was now his firm resolve.

The summer, fall and early winter went by quickly for the boy. Each season had its own peculiar duties and dangers—the roundup and branding, the driving of the steers to the railroad for the eastern market (a serious undertaking, involving as it might the loss of valuable cattle through injury and drowning when fording streams), the cutting of hay for the weaker cattle and horses, and occasional hunting trips for fresh meat. And so the year wore round.

On New Year's day John's time was up—the time which he had set to start out to seek his fortune. He had saved more than a year's earnings, so the small capitalist saddled Lightning, bade his friends goodby, and set forth, not without some misgivings, on a new quest; to get knowledge, see the world, and, if he might be, grasp his share of its honors.

(To be continued.)

Bits of Fun FOR Everyone

Legal Humor.

"Hello, Mose, how long you-all in jail fo'?"

"Three weeks."

"What did you do?"

"Jes' killed mah wife."

"An' you all only got three weeks?"

"Dat's all. Den dey's goin' to hang me."
—The Lawyer and Banker.

Today and Tomorrow.

Little Willie was of an inquiring turn of mind. He was always asking questions.

"Daddy," he asked one day, "is today tomorrow?"

"No, my son, of course it isn't tomorrow," was the reply.

"But you said it was," murmured Willie.

"When did I say today was tomorrow?" asked father.

"Yesterday," answered Willie.

"Well, it was. Today was tomorrow yesterday, but today is today, just as yesterday was today yesterday, but is yesterday today, and tomorrow will be today tomorrow, which makes today yesterday and tomorrow all at once. Now, run along and play."—Exchange.

Overruled.

A professor at law school is hindered by poor hearing. If a pupil mumbles along while reciting, he is apt to get by with very little preparation.

One of the class was called on, "Mr. O'Mahoney, state the next case, please."

The luckless student was void of any knowledge on the subject, but he had a copy of the Rocky Mountain News before him, so he read:

First inning—Ward tossed out Bancroft, going far to his left to get a mean bounder. Groh singled over second base. Frisch ahead of him, Young flied out. Kelly fouled out to Schang. Three runs, three hits, no errors.

"What you say is substantially correct, if you mean that the plaintiff's injunction should have been overruled," said the professor, presuming a good recitation. —Perrakeet.

Little Willie Had Him.

The great Thurston was producing eggs from a hat. With his characteristic humor, he addressed a boy in the front row.

"Your mother can't get eggs without hens, can she?"

"Oh, yes," quickly replied the boy. "How's that?" nervously asked the conjuror.

"She keeps ducks," chuckled the youngster.—Penn. Punch Board.

A Matter of Spelling.

"Bill," said a sailor looking up from his writing, "do you spell 'sense' with a 'c' or an 's'?"

"That depends, replied his friend. Do you refer to cents, meaning money, or sense, meaning brains?"

"Aw, I don't mean either of them two," was the reply. "What I want to say is 'I ain't seen him sense'."—Santa Fe Magazine.

Wheat Findings

Revise Production and Marketing

Production and marketing methods must be revised if there is to be an adequate solution of the wheat problem, in the opinion of the war finance corporation investigators who recently toured the wheat-growing areas at the request of President Coolidge.

The directors, Eugene Meyer and Frank Mondell, have talked over their findings with Mr. Coolidge.

The report warned against too much sympathy in working out the problem and urged maintenance of "a thoroughly rational attitude" in efforts to alleviate distress. It added that countless means of attaining the end long sought were laid before the two officials in their conferences, but most of them were rejected as cures likely to prove more damaging than the disease.

The report discussed the proposals at length, but into more detail with respect to cooperative marketing, declaring in conclusion that, even where sentiment existed for the purchase of the surplus, or for price fixing, there was general admission that a plan contemplating orderly marketing "is an essential and fundamental factor" in arriving at a solution. In the view of the two officials it provides the only method by which the producer can avoid to any extent reliance upon the speculator, whom the report described as the "key man" in the industry at present.

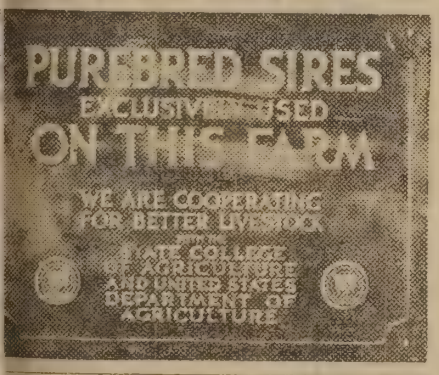
Discussing the depression among the wheat farmers, the report said, the local tax burden was one of the chief causes to complaint because it added materially to production costs. The scarcity and high cost of labor were cited as fundamental factors, while freight charges develop another vital problem accentuating the producers' troubles.

In connection with the tax question, the report said the privilege accorded states, counties and municipalities of selling tax-exempt securities has encouraged them to make extravagant expenditures.

Price-fixing appeared to have more opponents than advocates, the report says. With regard to the proposal that the government purchase "surplus" production a different situation was said to exist.

Purebred Sire Sign

In response to numerous requests, the United States department of agriculture has prepared a sign to be distributed free to persons who enroll in the "Better Sires Better Stock" campaign. The sign is lithographed on cardboard in several colors and resembles a metal tablet. It measures 11 1-2 by 15 inches. Each sign



issued will bear the official enrollment number of the person to whom it is presented, as authority for its display. Persons who have already enrolled in the "Better Sires—Better Stock" campaign may receive the sign if they write to the Bureau of Animal Industry for it, giving their official enrollment number.

Figuring Profits

(Continued from page Sixteen.)

month's time. This amount of money is not so very large, but it is fairly large considering that only eight cows made the difference.

Reducing Feeding Costs.

"This is a very good example of how feeding costs may be reduced by merely changing the nutritive ratio—or, in other words, balancing the ration. Mr. Walen said that the cows went on producing as well as before, and he thought that they would do even better. The cows did not go down in milk, for they had nothing taken from them which was needed—they were deprived of only the excess protein which was not needed for the amount of milk which they were producing.

"Results from feeding a herd of cows a balanced ration made up of a variety of feeds, fed according to production through the winter months.

"Last fall I made a suggestion to Hilmer Sather of Silvana that he discontinue the use of the prepared feeds which he was feeding, and start feeding a ration which he could mix himself at home, such as:

200 pounds mill run.
100 pounds ground barley.
100 pounds ground corn.
Linseed oil meal fed according to production.

"Mr. Sather began feeding the new ration immediately. Each succeeding month I have figured out for Mr. Sather exactly how much grain each cow should receive according to her butterfat production. The herd of cows have milked wonderfully well during the winter and went onto the pasture in splendid condition. The following is a comparison of the average fat production of last year with the production this spring under the new ration.

Average butterfat production April, 1922, 36 pounds.
Average butterfat production April, 1923, 50 pounds.

"The above figures are based on exactly the same cows for the two years. Of course, the pasture came a little early this spring, but that does not offset the greater production for this year, as the cows have done better all through the winter.

Mixing His Own Ration.

"My reasons for a dairyman mixing his own grain ration and feeding his oil meal separate and according to production, are that by mixing his own grain he knows what the mixture contains, and by mixing his own grain the correct nutritive ratio can be worked out for the herd.

"Still further I find that by mixing his own grain one is able to feed cows closer to their individual needs. For instance; a heavy milking fresh cow requires a more narrow ration than does the cow which is not milking so much and is farther along in lactation. By narrow ration is meant a larger proportion of a protein-containing feed. By feeding the oil meal separate the higher producing cows can thus be fed slightly heavier than the other cows in the milking herd. On the other hand if there is a cow or two which are below normal in flesh they can be fed handfuls extra of corn or barley each day and thus be brought back into good physical condition."

COUNTY OWNS FAIRGROUNDS.

Walla Walla county now has title to its fairgrounds, a deed of 35 acres from the county fair association having been recorded October 26. The consideration was $12,000, but stockholders of the association receive no money, county warrants going instead to creditors.

"Eat more wheat"

TIME was when only the "prize cook" could produce a perfect loaf. Today, thanks to Sperry Drifted Snow Flour, *every woman* can exercise the same oven-magic. The reason? All the guess-work is taken out of the flour before it gets to you. Smooth, uniform, even-strength *every time!* You can bank on that! What's more, you can bank on this Sperry treasure-recipe for a crisp, golden brown loaf that won't linger long on the table:

1 cup water or milk, scalded
1 tablespoon melted shortening
1 tablespoon sugar
1 teaspoon salt
½ compressed yeast cake dissolved in ¼ cup lukewarm water
Between 3 and 4 cups of Sperry Drifted Snow Flour

Mix first four ingredients. When lukewarm add dissolved yeast cake; then add Drifted Snow Flour gradually, beating until too stiff to stir. Knead in remaining flour until dough is smooth and does not stick to board. Place in greased bowl, brush top of dough with melted shortening, Cover, set in warm place until doubled in size. Knead again, shape into loaves half the depth of baking pan. Place loaves in greased pans, brush top with melted fat, let rise again until twice the size. Bake in hot oven about forty-five minutes. This amount of yeast can be used to three cups of liquid if dough is to stand over night. This quantity makes one loaf of bread.

Every woman should have the Sperry Cook Book: Not only does it give the famous Sperry tested recipes for bread, cake and other flour mixtures but it shows how to get more out of every food-dollar. Your copy is waiting for you—and it's free! Use the coupon.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

TWO DAYS.

God gave me a lovely day,
All garnished with smiling flowers,
And golden with sunshine all the way
Through its cycle of wondrous hours.
But I spoiled the day that he gave
With a single deed of wrong,
And sad Mem'ry covered it in its grave
Without a hope or a song.

God gave me another day,
And I struggled to live my best,
To toil, and gladden, and serve, and pray.
Till the evening brought me rest.
Into it I put my all,
For I played my honest part;
And I came to the quiet of evenfall
With a strangely happy heart.
—Unknown.

Dear Family Circle: You have had this page for many months and I am sure you will not object if I use it for a few weeks. Wouldn't it be fine if we could all be gathered together in some great place, like the Coliseum, and could meet as one great family, as we really are, and talk about these questions which affect us all?

We can't do that, but this is next best. I have been with you week by week so long that I feel sure you all know I have your interests very much at heart and I deeply desire that you, who have followed these discussions from week to week, shall have been strengthened in your determination to do right and make the most of your lives. Very many have written saying that this is the case.

Then there are the others who have written me letters that made me very sad to read. This sort of letters comes from girls 14 years old and younger, who should be so sweet and fresh, as they are just beginning to look out upon life; but their letters register experience in the ways of the world which show how greatly misguided they have been.

It shows a false view of what goes to make up a decent and useful life when girls give expression to ideas like the following, which is an extract from a letter from two girls. They write a joint letter:

"We are two girls, 14 and 16, who believe in dancing, smoking, petting parties and midnight rides, and we consider ourselves decent.

"We started to read this page and we consider it perfectly ridiculous and the girls who write absolutely Sunday school superintendents.

"We are out for a good time and don't carry a Bible over our hearts.

"If we don't have a good time now, when should we have it? Should it be later when we are raising babies?"

After some statements about the great beauty of the two of them, the other girl takes up her pen and with no preliminary remarks, says:

"Although we have stated our views (she says "conversed our views") to the boys, they think more of us than the 'church-going bunch'. You may think we have no intelligence, but we have more than the so-called church-goers." They ask me to state my views in THE FARMER.

These letters are very poorly written, the spelling is worse and the writers are high school age.

The letters are so absurd that any thinking person of any age must see it, and one would want to smile if he could forget where this sort of unsupervised girls are headed for. They are so knowing; they can not be told anything.

A few months ago I heard a judge of a juvenile court talk for nearly an hour on questions concerning his office. He made this statement:

"What the youth of this and every other community need is to be brought back into the Sunday schools and to have a place in the churches. In all my experience with young people who are brought into my court, it is almost an unheard of case when one appears who has been in the habit of attending Sunday school."

At about the same time that I heard this judge talk, there was a conference of sheriffs of several counties which met in a city in Washington to consider ways and means of preventing so much misdemeanor among young people. It was the expressed opinion of those men, who were not so very religious either, that the hope of better behavior lies in parents sending young people to Sunday school and a more careful supervision of their hours or recreation.

Now, dear girls and boys, who have written me without giving me your names, the rest of my message is for you particularly.

I can not believe that you are naturally bad, or that you in any measure understand where your avowed course is leading you. I believe you have in most cases lacked wise parental council, that you have been led to a false idea of what constitutes a "good time," which you all seem to be seeking without regard for consequences. And the consequences are sometimes so terrible!

Many have asked me what I think about girls smoking. Up to the present time, so far as I can recall, I have never expressed my views on this page concerning the subject, but great numbers have written into their letters this sentence: "I think just as you do Mrs. Barland about girls smoking"; and then have gone on to say that they didn't believe it was right, but that they did smoke and liked it; or that they agreed with me that it wasn't right and didn't do it.

I have wondered what your real impression would be, dear girls, if you were to call upon me at the office or my home some day, and I should be puffing away on a cigarette, which I would have to remove before I could give you some words of welcome.

If this smoking among girls is so good a thing, and since most of the hundreds upon hundreds who have written maintain that girls have as much right as boys to smoke (even though they do not use the so-called right), I say, since so many girls are forming this habit to prove that they are "good sports," to be "game," to "take a dare," or because they are "urged and teased by boys" or just because they like it and are going to do it for that reason—these are the reasons given by girls for smoking—if these are good reasons and we have as much right as men, why should any of you be surprised if I, too, have asserted my "rights"?

Girls, you all know, even the most thoughtless among you, that I would not lend my influence to anything that would tend to degrade you, and after all is said, smoking is a dirty, vile habit and does degrade and injure influence for good when practiced by girls and women.

You are all taught in school of the injurious effect tobacco has upon the body and if you want to be convinced that it can fasten itself about one with cords of habit which it is impossible for very many to break, just watch a man trying to quit the smoking habit.

The habit is very expensive and some day I will give you some figures that will, I believe, surprise you as to what could be done with the money spent for tobacco by even a moderate user.

Now let us take a new start on other subjects. Many, I am sure, have been on tours by auto or otherwise this summer, and I want you to write and tell us where you went, what you saw and all about it.

There are others who took no long trips, but quite likely had some good hikes and picnics and we want to hear all about them. Then some of you have been too busy to tour or hike; you have perhaps been earning money to take you through a year of school. If there are such we want to hear all about it.

If some of you have been to some nice parties and saw something there that we will all enjoy hearing about, write us.

In addition to these things, let every one be thinking of something to discuss and exchange opinions on. There are a great many of you and I am sure you can think of many things we would like to exchange ideas on and discuss with pleasure and profit. Very truly your friend,

ALICE W. BARLAND.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.
Wells & Richardson Co., Burlington, Vt.

STOP THAT BAKE DAY WASTE!

That's what millions of women have done with

CALUMET

The Economy BAKING POWDER

Being uniform and dependable it never spoils any of the ingredients used on bake-day. Has more than ordinary leavening strength—goes farther—lasts longer.

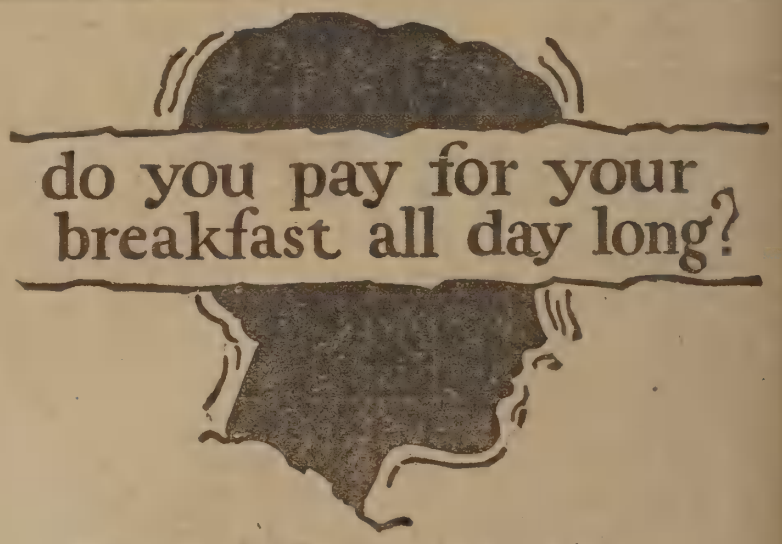
Don't trust to luck, use Calumet and know what the results will be—economical bakings that are always pure, and nutritious.

EVERY INGREDIENT USED OFFICIALLY APPROVED BY U. S. FOOD AUTHORITIES

Sales 2½ times as much as that of any other brand

BEST BY TEST

THE WORLD'S GREATEST BAKING POWDER



do you pay for your breakfast all day long?

The woman on the farm, no less than the woman in town, can ill afford a breakfast drink that gives her "nerves" instead of nutriment. Ghirardelli's Ground Chocolate has *everything* a woman needs in her morning cup. Fragrance! Flavor! Strength! "Drink to your own health with Ghirardelli's"—every morning!

Gift Suggestions

That Are Inexpensive to Make

A "farmer's wife," living on a rural route out of Vancouver, Wash., and who does not wish her name used, offers an excellent suggestion for this season of the year. In a letter to Mrs. Barland, she says:

"As the holidays are drawing near, it has occurred to me that it would be a good idea to ask the readers of your page to help with suggestions for inexpensive gifts that could be made at home. I always have to get busy and make things of what I can find in the house.

"One nice gift is composed of several small pin cushions, not more than two by four inches, made of bright colors, to hang in places where there is never a pin to be found. Another useful gift is a set of kitchen holders, made of washable material and of a generous size, and put in an envelope bag to hang up. I made the bag of unbleached muslin, with a holder appliqued on one side in bright colors and with a loop so as to hang it over a nail.

"I am trying to make rag rugs, braided of wool, and wish to make some drawn-in burlap ones. I would be very glad to get help about those."

THE SPRUCE BUDWORM.

The spruce budworm is causing serious defoliations of spruce and fir in northern and central Idaho, in the Yosemite National park and in the Tower Falls and Camp Roosevelt sections of Wyoming, according to a report made to the United States department of agriculture. This destructive insect, which has devastated the spruce and balsam fir forests of Quebec, New Brunswick and Maine, is apparently distributed throughout the western states.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4039-4572. A stylish gown. Blouse 4039, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 4572, cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. To make the dress for a medium size will require six yards of 40-inch material. The width at the foot is one and seven-eighths yards. Two separate patterns, 10 cents for each pattern.

4562. Child's dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires two and one-fourth yards of 36-inch material. Price 10 cents.

4412. Girls' dress. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size requires four yards of 32-inch material. Price 10 cents.

4558. Girls' coat. Cut in five sizes: 6, 8, 10, 12 and 14 years. A 10-year size requires two and one-fourth yards of 54-inch material. Price 10 cents.

4565. Child's dress. Cut in four sizes: 2, 4, 6 and 8 years. A 4-year size requires two and three-eighths yards of 27-inch material. Price 10 cents.

4549. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires three and five-eighths yards of 40-inch material. The width at the foot is one and three-fourths yards. To trim as illustrated requires five-eighths yard of contrasting material 40 inches wide. Price 10 cents.

4407. Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires four and three-eighths yards of 36-inch material for the dress and two and five-eighths yards for the panels. The width at the foot is about two yards. To make dress with short sleeves one-half yard less is required. Price 10 cents.

4414. Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires three and one-eighth yards of 32-inch material. Price 10 cents.

2463. Ladies' apron. Cut in one size: Medium. It requires one and three-fourths yards of 32-inch material. Price 10 cents.

4573. An attractive "character" suit. Cut in four sizes: 6, 8, 10 and 12 years. A 6-year size requires two and three-fourths yards of 36-inch material. For jacket of contrasting material one and one-fourth yards 36 inches wide is required. The collar alone requires one-fourth yard. Price 10 cents.

4196. A new doll set. Pattern comprising the doll and garments is cut in three sizes: Small, 12 inches; medium, 16 inches; large, 20 inches in length. The doll requires for a medium size one-half yard. The rompers seven-eighths yard. The suit and hat one and one-fourth yards of 27-iinch material. Price 10 cents.

4261. Ladies' home or porch dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires four and seven-eighths yards of 32-inch material. The width at the foot is two and one-fourth yards. Price 10 cents.

Keep Them Healthy and Happy

WHAT is so vital to the health and happiness of growing children as good cooking?

And what is so necessary to good cooking as a good range?

Even the best of cooks get better results when they use a Monarch. For the Monarch's leak-proof malleable iron construction gives perfect control over the fire and oven—not only when the range is new, but after many years of hard service.

With this greater satisfaction comes a saving in time—a saving in fuel—and a pride in the appearance of her range that is dear to the heart of a good housekeeper.

A Monarch would add more than you guess to the health of your family and the happiness of your home.

Send Coupon NOW!

Find out how a Monarch will save you time and expense—work and worry.

Conference Jeopardized by France

Statements attributed to Premier Poincare, in press advices from Paris, indicate the desire of the French government to restrict the scope of the proposed expert inquiry into the reparations situation. Official Washington is reported to be considerably shocked over this news. The four points indicated by Premier Poincare's speech at Nevers are:

First—Germany's present capacity for payment.

Second—New methods of payment.

Third—The renovation of Germany's finances.

Fourth—A new monetary system.

It is said authoritatively at Washington that the above restrictions are not in accord with the suggestions by an expert commission put forward by Secretary Hughes. There is every indication that if France insists upon a formula that will prevent a full and complete inquiry into Germany's capacity to make reparations, the success of the present negotiations will be seriously jeopardized.

COOPERATIVE MARKETING.

The government's inquiry into the advantages of cooperative marketing as a means of farm relief was carried a step further today by President Coolidge, who called into conference C. S. Barrett of Georgia, president of the farmers' union, and also conferred again with Managing Director Meyer of the war finance corporation, who made an investigating trip through the northwest.

Mr. Barrett explained the progress made in the cooperative movement under the auspices of his organization and told the president that through cooperation in the selling of products and in the buying of farm machinery and fertilizers the farmers of the country could throw off the present depression.

He was requested to return to the White House for another conference.

EUROPEAN MARKET.

A committee of farm bureau leaders has just started for Europe, seeking first hand information as to economic conditions, crops and markets there.

The committee, which was appointed after varying opinions were expressed by the different senators who have been abroad this summer, is headed by Gray Silver, organizer of the American Farm Bureau Federation. The other members are E. B. Cornwell, president of the Vermont farm bureau; George Starring, secretary of the South Dakota farm bureau, and Murray D. Lincoln, secretary of the Ohio farm bureau.

Without advance notice of their purpose, the members of the commission have slipped away to learn how and where the American farmer fits into the European scheme. They expect to visit England, France, Germany, Poland, Russia, Norway, Denmark, Sweden and Finland, probably Belgium and Holland. They will be gone from six to eight weeks, and hope to have the facts about Europe at their fingers' ends.

WORLD DAIRYING.

J. A. Scollard of Chehallis, president of the United Dairymen's Association of Washington, has returned home from an extended eastern trip, during which he and Mrs. Scollard attended the various meetings of the world's dairy congress. Forty-one countries were represented and the proceedings were conducted in the English, French, Spanish and German languages. Mr. Scollard was on the program at the Syracuse meeting October 9, his subject being "Cooperative Manufacture and Marketing of Dairy Products." He pointed out that the United Dairymen's association is now third in the United States as a producer of powdered milk, with chances that second rank soon will be assured, with annual output of 6,000,000 pounds for 1923.

PACIFIC INTERNATIONAL.

With over 4000 official entries the 13th annual Pacific International Live Stock Exposition was opened at North Portland Saturday by E. A. Stuart of Seattle, president. Last year similar entries numbered 3816. In addition to the display of beef cattle, dairy cattle, hogs, sheep and other live stock, the 10-acre pavilion also houses grain and dry-land farming exhibits, a poultry show and show of fancy and draft horses.

MAKES 274 MILES AN HOUR.

The highest speed ever attained by man was reached Sunday by Lieutenant Harold J. Brow, navy airman, when he did one leg of a three-kilometer air race at the rate of 274.2 miles an hour.

Lieutenant Alford J. Williams, however, won the speed duel, averaging 266.6 miles an hour, over a three-kilometer course. This is unofficial time and remains to be homologated.

Williams is former pitcher for the New York Giants. He captured the record of 259.12 miles an hour set by Brow last Friday over a three-kilometer course, lost it again to Brow and recaptured it just as dusk was setting in.

APPLE EXPORTS.

Last week, apple week, witnessed the departure of two steamships from Portland for the United Kingdom, one with 60,000 boxes of apples and the other with 100,000 boxes of apples.

TAKE YOUR NOTE BOOK.

Farm Business and Markets Outlook

(Continued from page five.)

round whites, United States No. 1, are quoted at 90 cents to $1.10 per 160 pounds sacked and bulk in the Chicago carlot market. Idaho No. 1 Russets are quoted at $2 sacked.

Approximately 30,000 cars of apples have been shipped from producing sections in the last three weeks. Washington alone has contributed around 3000 cars weekly and is believed to have shipped about 25 per cent of its crop. This is a much heavier movement than ever known before. Prices have been weak, as the domestic demand is only moderate. British prices were high early in the fall, resulting in extremely heavy exports from this country during September, but have declined rather sharply of late. Northwestern medium to large fancy Jonathans are quoted at $1.75 to $2 a box in Chicago, with extra fancy at $2 to $2.25; Delicious, fancy, at $2.50 to $2.75, and fancy at $2.75 to $3. Middlewestern Jonathans are bringing $5.50 to $6 a barrel and Northern Spies $5 to $5.50.

The carlot movement of onions has declined rather sharply and the market is gaining strength. Midwestern yellow stock is quoted at $3 to $3.25 per 100 pounds in consuming markets.

LATEST QUOTATIONS.

Are You a Silent Partner?

Do you know that the life, fire and accident insurance companies in the United States are almost without exception very heavy investors in the securities of electric light and power companies?

The light and power companies are engaged in furnishing a necessary service. They offer a stable investment, since their securities are not influenced by the ups and downs affecting industrial securities.

If you are the owner of a fire or accident insurance policy you, or if you hold a life insurance policy, your family and you are vitally interested in the success of the light and power company in your district.

It is the attitude of the silent partners which influence public opinion. Proper interest on the part of our silent partners will enable us to maintain the security of their investment.

NORTHWEST ELECTRIC LIGHT AND POWER ASSOCIATION

Nellie Hall, a Lewis county cousin, wrote Aunt Nellie a nice letter. Nellie has two little kittens and a dog for pets. They had two visitors at their school. This cousin is 12 years old and has a brother who is in the sixth grade.

"What four letters would frighten a thief?" is the riddle asked by Vesta Rogers, another Washington Corner cousin. "O I C U" is the answer, Vesta says. Aunt Nellie thanks Vesta for the riddles; they were fine. This cousin is in the fifth grade.

"May I join the Corner, too?" writes Helen Broderick of Whatcom county, Wash. "My pets are three little kittens. I have a mile and a half to go to school. I am in the sixth and seventh grades at school. My birthday is April 5. I am 10 years old."

From Whatcom county, Wash., comes an interesting letter from Otto Slotemaker. Otto is 12 years old and in the sixth grade at school. He goes to school on a bicycle every day and there are 210 pupils in the school. He has five pet rabbits. Otto has three brothers and two sisters. Sometimes he goes hunting.

Bella Havey, Ferry county, Wash., attended the fair in Republic, Wash., where she says she saw many things of interest. She met one of her best friends at the fair. Her friend's name is Anna Berg. Bella's pets are five little white kittens and a dog. She takes fourth grade work at school. (We shall be on the lookout for that picture, Bella)

Almost every day this summer Lillie Anderson went swimming, but she says she did not learn to swim. Next summer she will try very, very hard to learn. She has both kittens and rabbits for pets, also four calves. She is a Skagit county (Wash.) cousin. She sends this riddle: As I looked out of my chamber window I saw something fall. I send my maid to pick it up, but couldn't pick it all. What was it? Snuff.

Anna Mae Tarter writes that she has good times at school and likes both of her teachers. Her studies are spelling, geography, arithmetic, language, history, music, healthful living, reading and writing. Anna says she likes them all. She is in the fifth grade and there are 12 in her class. Grant county is where this little cousin lives. Although Anna had not written for quite a time, she did not forget the cousin. We are glad to hear from you, Anna; write again.

Esther Strunk, Clarke county, Wash., had a fine time July 4 with her relatives. She says two carloads of relatives had dinner at her home that day. This summer her mother, brother and she had a nice visit with her cousins in Vancouver and attended a big picnic, then went to Hillsboro, Ore., and visited with her aunt. They then returned to Vancouver and also visited relatives at Harmony. Now Esther is going to school again and isn't doing so much visiting.

BEDTIME STORIES

By THORNTON W. BURGESS.

OWNER OF EGGS DISCOVERED.

Little Mrs. Tiny is a very smart person. Tiny the warbler says so, and certainly he ought to know. He says she is the smartest person in the old orchard. Of course, his neighbors do not agree to that, but they do admit that she is very smart. They couldn't help admitting it after she built that two-story house with the strange egg locked in the lower part where it couldn't hatch. After he had heard about that even Sammy Jay, who has little respect for anybody, bowed to her most politely when they chanced to meet.

"I don't see how you thought of it; I really don't, my dear," Tiny would burst out every ounce in a while. "It is quite the cleverest thing I ever heard of. May I just peep at those eggs?"

"You may take care of them while I go get something to eat," Mrs. Tiny would reply, "but be sure that you don't leave them for an instant. It would break my heart to find another strange egg in with them, and I am not at all sure that that heartless creature who left the one we have locked up is not hiding around here somewhere waiting for another chance. I can tell you one thing, Tiny Warbler, and that is that I am not going to bring up any strange children."

Tiny new by the snap of her bill and the queer little jerk of her head that she meant just what she said. There were four beautiful little eggs in the nest now, and Tiny was very proud to take care of them while his smart little wife got her meals. He was doing this one morning when he caught a glimpse of a brownish-gray bird of twice his own size sneaking through the trees as if trying to keep out of sight. The instant she saw him she turned and disappeared. He was still wondering who she was and why she was so anxious to keep out of sight when there was a great outcry in another part of the old orchard. He could hear the voice of nearly all his neighbors creaming angrily, and he did so want to go and see what all the fuss was about. But he remembered his charge and sat tight. It was a hard thing to do when there was so much excitement, but he did it.

Presently Mrs. Tiny came hurrying home, and she was so excited that she could hardly keep still long enough to tell him the news. "What do you think?" she cried. "We've found out who has been laying those egs in the nests of other birds. It is Sally Sly the cowbird. Mrs. Pewee had left her nest for just a few minutes, and when she came back there was that dreadful Sally Sly just leaving

Sally Sly, the cowbird.

it, and in it was an egg just like the one we found in our nest and that Mrs. Chippy and Mrs. Redeye the vireo found in their nests. Mrs. Pewee called the rest of us and we drove Sally Sly out of the old orchard, and I don't think she'll come back very soon. I pulled two feathers out of her coat myself, and it did me a lot of good." Mrs. Tiny ruffled out her feathers.

"Did you ever hear of anything so wicked? They say she never builds a nest and never takes care of her babies. In fact, she doesn't even know her own children. She sneaks around and lays her eggs in the nests of others, always the nests of those a great deal smaller than herself, and then goes off to have a good time without any cares at all. She never even goes back to see if the eggs have hatched and the babies are being taken care of. She hasn't a spark, not a spark, of mother love in her. Nobody but Bully the English sparrow and his wife will have anything to do with her, and you know they are a very poor kind of people themselves and none of the rest of us will even speak to them. They are better than Sally Sly, though, for they do take care of their children. Did you ever hear of anything so awful? Just think of a mother leaving her children for strangers to feed and bring up and not even caring enough to find out whether they live or die!"

"What does Saly Sly look like?" asked Tiny.

"She wears a cloak of brownish-gray, a perfectly homely thing, and she sneaks around in the most shameful way," replied Mrs. Tiny.

"Then I saw her this very morning," declared Tiny, "and just as sure as you live she meant to leave an egg in our nest."

Birthday Greetings

THURSDAY, November 8—Sylvia Wirkkala, 9 years old.

FRIDAY, November 9—Bella Harvey, 9 years old; Delma Hedington; Hannah Wells, 11.

SATURDAY, November 10—Sarah Edwards, 11 years old; Freeda McCaul, 10, Helen Staadt, 10.

SUNDAY, November 11—Gaylus Adams, 11 years old.

TUESDAY, November 13—Leona Case, 8 years old; Ruby Irene Downing, 7.

That Old Inner Tube

By Mrs. C. W. Shumaker.

When journeying by car it is often necessary to have a pail or something in which to carry water to the radiator—when going back into the mountains, along the Coast or any place off the service station roads. Cut whatever length is needed from an old inner tube, take the piece to the vulcanizer and have one end vulcanized shut, and you have a water carrier that is collapsible, is not bulky, and will not scratch or mar any surface.

Rubber bands cut from old inner tubes come in very handy when wrapping up awkward bundles, or are useful about the car or farm buildings. They can be cut broad or narrow to suit one's needs, and a supply is a convenience when on a camping trip.

We needed a trough from the pitcher spout pump just outside the barn, to the tub from which our cow and horse drink, just inside. We took a section of an old inner tube long enough to make the connection, laid it on a board, and into the upper end tucked the rolled end of a piece of tin that catches the water and starts it through the tube. This kind of a "trough" has the advantage of not leaking, like a wooden one might.

Bits of tubing on the bottom will hold objects more stationary, and keep smooth surfaces from slipping.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Thordis Fjerlie, Victoria Penhallick, Cordelia Wagoner, Helen and Marie Youngsman, Alice Goldie Hilliard, Mabel Medsker, Beulah Warren, Martha Slikker, Effie Johnson.

Laura Anderson, Edna Heimbigner, Amalia Schaal, Clara Bernice Smith, Dorothy McClennan, Helen Staadt, Thelma Forsberg, Sadie Engebretson, Elizabeth Charlesworth, Ruby Robbins, Floyd Harris, Garland Harris, Pauline Forsman, Coral Wolverton, Charles Pendergrast, Ruth Eddie, Mildred Gerber, Esther Gronroas, Sylvia Simukka, Alice Holm, Edith T. McIlroy, Nellie Roe.

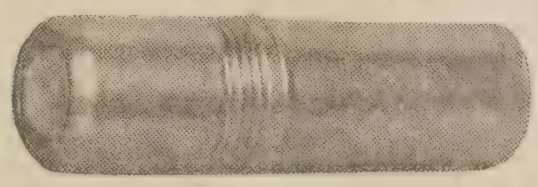
New Prizes for Junior Hustlers

Tray Coin Purse

has a tray for sliding coin into view and an extra pocket with flap and button lock for bills, etc. Highly polished nickel frame. Size of purse, 3x3 inches. Seal grain leather; colors, either brown or black. The purse pictured here will be awarded to you in return for your services in securing and sending in three three-year subscriptions to The Washington Farmer at the regular rate of 50 cent each, or $1.50 for the three orders.

Handy Nickel-Plated Vest-Pocket Flashlight



Seven-eighths of an inch in diameter and over three inches long. Flashlight and two batteries in a neat cardboard case. The Flashlight pictured here will be awarded to you in return for your services in securing and sending in two three-year subscriptions to The Washington Farmer at the regular rate of 50 cents each, or $1.00 for the two orders.

Two-Compartment Coin Purse

Made of good quality brown leather; 3 1-4 inches wide. This is a dandy purse. The purse pictured here will be awarded to you in return for your services in securing and sending in two three-year subscriptions to The Washington Farmer at the regular rate of 50 cents each or $1.00 for the two orders.

Granger Project

Completed at Cost of $250,000

Completion of the construction of the distributing system for the Granger irrigation district in the Yakima valley is announced by J. L. Lytel, project manager of the reclamation service. This work has been in progress since early in the year and has been completed at a cost of approximately $250,000. An inverted siphon of concrete 33 inches in diameter is constructed to convey the water from the Sunnyside canal to a point on Snipes mountain, where it is distributed by a series of canals and laterals to irrigate 1600 acres.

The cost of construction is $160 an acre, but most of the land was purchased from the Northern Pacific at $10 and $12 per acre. The total cost, leveled and ready for cropping, with construction added is put at less than $200 an acre and payment is spread over a 20-year period.

Win Prize Calves

High school boys' judging teams from four different high schools in Whatcom county competed with each other in milk testing, potato judging and stock judging at the Northwest Washington fair at Lynden. This part of the fair was an interesting procedure to both old and young and the interest was stimulated by two breeders donating pure bred bull calves, a Jersey and a Guernsey, to the winners.

The winners of the high school teams were decided by the grading system, the number of points made by each team deciding their standing.

The standing of the teams, together with their score and members of each team are as follows: Lynden high school team, first, with a total of 996 points; team composed of Francis Zweegman, Floyd Young and Percy Clark.

Sumas high school team won second place with 929 points, the members being Clarence White, Fred Smith and Donald Nims.

The Meridian high school team was third, with a total of 785 points, members being Allen Ross, Ling Bloom and Reider Rassmussen.

The Mount Baker high school team was fourth with 777 points, the team being composed of Ed Hoffman, Mitchell Brill and Marvin Gould.

Each team was required to judge three rings of dairy cattle and one ring of Duroc-Jersey swine. They were limited in their time of making their decision, but were allowed to give reason in each case, which was used as a basis in scoring the total number of points.

The individual winners were: Percy Clark of the Lynden team, who won a Berkshire sow pig donated by J. W. Morris of Ferndale as a prize for the boy or girl carrying the highest score in swine judging. Clarence Harlander of Lynden won the purebred Jersey bull calf donated by R. I. Tanner of Sumas as a prize for the highest score in judging Jersey cattle.

The winner of the purebred Guernsey bull calf is yet undecided, since there were three boys who tied for first place by scoring 95 points each. The Whatcom County Guernsey Cattle club will decide how the boys are to decide the tie.

York Heads Beekeepers

George W. York of Spokane has been elected president of the Washington State Beekeepers' association by the mail ballot that has just been completed. W. L. Cox of Elma, Grays Harbor county, was elected vice president and Miss Helen Steiner of Auburn, King county, secretary-treasurer. The results of the election have just been announced by B. A. Slocum, state college extension bee specialist, and Dr. A. L. Melander of the college, to whom the votes were mailed.

The new officers are among the most prominent beekeepers and authorities on bee subjects in the state. President York, formerly of Sandpoint, Idaho, where he was engaged in dairying and beekeeping, was for several years editor of the American Bee Journal in Chicago. Of recent years he has been connected with the Spokane Seed company. He is now engaged in the bee and honey business commercially in Spokane, and is publishing a bee paper, York's Bees and Honey.

Mr. Cox is one of the most prominent beemen of western Washington, while Miss Steiner is secretary of the Peninsula Beekeepers' association, the principal bee organization of the West Side.

FOUR CUTTINGS OF HAY.

Four cuttings of alfalfa hay have been reported from the J. E. Hostetter farm in the Riverside district near Yakima. This is the first season that four crops have ever been taken from the hay land, but in order to make them mature the three main cuttings were mowed down earlier than he had been accustomed to do in other years. If it had not been for fear of bloat he might not have cut the fifth time, but let the cows pasture it instead, he declared. However, when the alfalfa is high there is too much danger of bloating, while if the cows are turned in as soon as the hay is off they are obliged to feed more slowly and therefore not so liable to bloat.

Poultry Short Course

The poultry department of the State College of Washington at Pullman offers a new winter short course in practical poultry farming, starting January 7 and terminating March 2, 1924. This course is divided into two terms of four weeks, each offering complete work in the subject offered. A student may elect either or both terms as desired. Both terms are planned to give practical assistance to poultry keepers, both men and women, who are interested in learning more profitable methods of poultry farming.

Poultrymen interested in improving their breeding methods and acquainting themselves with pedigree and breeding records are offered a strong course in poultry breeding and breeding records. Poultrymen interested in the movable colony house plan of brooding as a means of disease control will find the course offered in the colony brooder house construction of great value to them.

First term: Poultry management practice, poultry breeding and breeding records, poultry diseases, poultry feeding, markets and marketing, culling and selection, poultry house construction, round table.

Second term: Incubators and brooding practice, poultry breeding and breeding records, fruit growing, incubators, brooding, trapnest practice, candling, grading eggs, round table.

If interested write to Professor John S. Carver, poultry department, State College of Washington, for special short course booklet. Enrollment in poultry short course is limited to 15 students.

"A Perfect Day"

The extension service of the State College of Washington takes into account the old saying that all work and no play makes Jack a dull boy. It provides two hours and a half of every day during the school year for play or other form of recreation. Here is the schedule of what the extension specialist considers a perfect day for the country boy or girl who has to travel some little distance to and from school: Seven o'clock, rise; 7-7:30, breakfast; 7:30-8, work; 8-8:30, going to school; 8:30-12, at school; 12-1, lunch; 1-1:30, returning to school; 1:30-3:30, at school; 3:30-5, recreation; 5-6, work; 6-7, dinner; 7-8, recreation; 8 p. m.-7 a. m., sleep.

Fastest, Cheapest Way to Clear Land

At a contest held recently in England, Hercules all-steel triple power stump puller pulled stumps faster than any other method. Quick work—low cost and one man does the job. **Hand power** in four speeds, single, double, triple and quadruple power. Easy to pull—quick winding cable, and other features. **Horse Power Hercules** is most complete, up-to-the-minute stump pulling outfit made. -Every Member of Family Likes This Home Magazine

Some papers are designed for father only. Some have a special appeal for mother and the girls. Then you have the exclusive boys' magazine. And also the papers for children only. But in THE WASHINGTON FARMER you have a publication which is welcomed and enjoyed by every member of the family. The stories are selected, the articles written, and the departments conducted with the idea of giving each reader in the home circle something to laugh over, something to do, and something to think about.

A dollar for a 5-year subscription seems a mighty small sum to pay out when you consider how many receive pleasure from its expenditure. This low price is made possible by our cooperative subscription plan, which looks to the elimination of the subscription agent and gives the reader the benefit of every penny which would ordinarily go to pay the agent's salary and expenses.

Our plan has been a success for seven years. It will continue to be a success throughout the coming season if our readers comply with our request to see that their own subscriptions are paid well in advance; to include their neighbors' orders with their own; and even when their own subscriptions are attended to for the year ahead, to find at least one new subscriber for our lists.

If you indorse the general principle of cooperation, won't you do your share by helping to make it a success in your neighborhood?

Nov. 8, 1923.

THE WASHINGTON FARMER,
Review Building, Spokane, Wash. .....**1923.**

I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.

I enclose herewith $.....for a.....year subscription to **THE WASHINGTON FARMER.**

(Rate: $1 for five years; 50c for three years; 25c for one year. In Canada 1c a copy extra.)

R. F. D.....Box.....State.....

If your subscription is already paid in advance, it will be extended from the date to which it is paid.

News for Breeders

HOLSTEIN BUSINESS IN SKAGIT.

To the Editor of The Washington Farmer: I have kept closely in touch with the progress of the Holstein business in this territory for the last 12 years, and can confidently state that at no time has the buyer of choice Holsteins had a better opportunity in making his selection than now. In 12 years the number of purebred Holstein females in Skagit county has grown from about 25 head to approximately 2000 head ,and is rapidly increasing. Some of the very first A. R. O. records in this state were made by cows in this district in 1909. Since then good official records have become quite the common thing for our cows, many having held state and world records.

The owners of one or more purebred females now number over 100 true dairymen and are, practically without exception, sincere in their operations.

As to the health of our cattle, I can say that the percentage of reactors to the tuberculin test is insignificantly small. Many of our herds, including my own, have been fully accredited by the state and federal departments. As to abortion and the reproductive vitality of our stock, the very large number of strong, thrifty calves seen on practically every farm is striking and conclusive evidence.

Shipments of dairy cattle, mostly milk cows, are being made frequently and to many different localities, but they do not seem to thin out our herds too much. It serves, rather, only to strengthen our breeding operations with a noticeable improvement in herd bulls and young stock.

Burlington, Wash. R. E. WAUGH.

ALL STOCK IS PUREBRED.

All live stock on the David Rankin farm, near Selah, is purebred and is kept in addition to 13 acres of orchard. The 10 head of cattle are Jersey and trace back to the Rosaires Olga Lad and Golden Glow breeding. Mr. Rankin has been working with these two families and is developing a number of promising calves, some of which are being shown at the state fair.

The five head of horses are Shires, and the 2-year-old stallion, Glad Surprise, is sired by Gay Lad Surprise and out of Henrietta Pride, a well-known champion of the northwestern fairs in her time. Holly Reliance, a 2-year-old mare, is to be one of the brood mares. She traces back to Reliance on the dam's side.

The horses and cows are kept on blue grass pasture and fed alfalfa hay produced on 20 acres of land adjoining the orchard. Mr. Rankin believes in a diversified system of agriculture and is working out his plan as best he can under his conditions.

HOLLYWOOD STOCK TO JAPAN.

Auguring other similar transactions when Japan shall have recovered somewhat from the effects of the catastrophe which recently visited her shores, the Japanese delegate to the World Dairy congress at Washington, D. C., purchased from Hollywood farm shortly after landing in this country a young bull and two heifers of typical Hollywood breeding, which are to be shipped as foundation stock to the purchaser's farm in Japan. The bull is by Goliah of Hollywood, and is out of a 798-pound 3-year-old daughter of Judge Segis, with three generations of high producers back of her. One heifer is by King Lyons 3d, the other by a son of his, and both are out of daughters of Judge Segis, with good show and production record backing.

JOIN AYRSHIRE ASSOCIATION.

Wilkie Brothers of Montesano, Wash., are now among the 18,000 members of the Ayrshire Breeders' association.

Area Plan of Testing

Testing cattle for tuberculosis under the area plan—that is testing all the cattle at once in a county or other area—is proving very popular in many parts of the country. One reason is that a county freed of this disease is a center to which cattle buyers are attracted; another is that large numbers of cattle can be tested at a lower cost than when only a few herds or a single herd are tested.

During the last year nearly 1,800,000 cattle were tested under this plan, and this was more than 50 per cent of all the cattle tested in the United States. A summary of 72 counties reported as having finished testing all of the cattle within their borders shows that the work was done at a cost of approximately 34 cents a head, which included all expenses, exclusive of indemnity.

So far 81 counties have finished testing all of the cattle once, an increase of 50 counties over the preceding year. Seventeen counties—one in Indiana, two in Tennessee, four in Michigan and 10 in North Carolina—have been approved as modified accredited areas and cattle may now be moved from within their borders when properly identified without a tuberculin test for a period of three years to such states as will accept this class of cattle.

200 Purebred Holsteins

AT AUCTION

Under the auspices of the Washington State Holstein-Friesian Association, Monday and Tuesday, December 3 and 4, at the Puyallup Fair Grounds, nine miles from Tacoma.

A Sale of Merit, Quality and Breeding

These cattle are consigned by reliable Washington breeders, and are selected by the Washington State Holstein-Friesian Association. They are the pick of the herds in Washington. All cattle are of good type, and tuberculin tested.

FRESH COWS, SPRINGERS, HEIFERS AND BULLS

Buy them individually, or in carload lots.
For further information and catalogue write Geo. A. Gue, sales manager, Auburn, Washington, or H. C. Stimson, secretary, Hollywood, Washington.

SALE UNDER SUPERVISION OF
Washington State Holstein-Friesian Association

For Sale: Two Registered Holstein Bulls
One year old. Chief of the Ormsbys, the sire of these bulls, is a grandson of Sir Pietertje Ormsby Mercedes and Ormsby Korndyke Lad, the two leading bulls of the breed, each with 15 daughters with records above 1000 pounds of butter in a year. His mother has a two-year-old record of 1011 pounds of butter and 1040 in the next lactation period. His grandmother, Spring Brook Bess Burke and the full sister to his sire, Bess Johanna Ormsby, are the only two cows of any breed with four records above 1000 pounds of butter in a year and Bess Johanna Ormsby is the only cow with four 305-day records above 1000 pounds of butter. She also has a 44-pound, 7-day record. The dam of one of the bulls offered traces twice to Sir Pietertje Ormsby Mercedes and has a four-year-old seven-day record of 26 pounds of butter. The dam of the other bull is a granddaughter of King Hengerveld Segis and has a nine-year-old 26-pound, 7-day butter record.
Both bulls are good individuals from good type cows and are guaranteed to give satisfaction.
GLENCLIFF STOCK FARMS, Sunnyside, Wash.

FOR SALE
A choice lot of Holstein calves, both sexes, finest Hollywood breeding, excellent individuals. Several are out of yearly record dams. Have no room for them and they must be sold. Breeding and individuality considered, they are the very best bargain on the market. Write for prices and descriptions. Excellent heifers for calf clubs, fine bulls for bull associations.
A CALF OR A CARLOAD.
HOLLYWOOD FARM, Hollywood, Wash.

SPOTTED POLAND CHINA HOGS
The coming breed of the northwest, most profitable hogs known, mature early, always ready for market, the type the packers want. The "culls" from our herd "topped the market" at Portland, Oregon, October 8.
We have boars, sows and gilts for sale at reasonable prices. Five splendid young boars, extra quality, at $25 to $50 each. Open and bred gilts. Write for description and prices.
F. T. QUIRE & SON, Breeders of Spotted Poland Chinas. Buhl, Idaho.

Royal Ranch Durocs
We have the best boars we ever raised for sale at less money than you ever bought them for. The type and breeding you want, including the 1923 junior champion of Idaho. The strongest Duroc show of the northwest. 26 herds competing. Write us your needs.
ROY SHUTWELL, R. F. D. NO. 3, Boise, Ida.

Duroc-Jerseys For sale, a choice lot of spring boars and gilts, Pathfinder type, from prize winning stock. Terms, C. O. D.
HILLCREST FARMS, R. 9, Hillyard, Wash.

Gano's Durocs Have size, quality and individuality. Am offering a choice lot of breeding boars, also booking orders for fall pigs. Prices reasonable.
F. D. GANO, Sunnyside, Wash.

Pioneer Herd Hampshire Swine
10 head choice boars; 10 head of sows and gilts, backed by show records.
J. M. FRUITTS, Cambridge, Idaho.

Weanling Hampshire Pigs
and service boars. Most popular blood lines, good individuals, reasonable prices.
J. W. PARKER, Yamhill, Ore.

American Hampshire Sheep Association
has a valuable booklet with illustrations telling you the superiority of this breed. We believe the Hampshire to be the best all round sheep in the world. Also have list of breeders; some near you. This literature is free. Write
COMFORT A. TYLER, Secretary.

LOOK FOR THE RED BALL

"BALL TRADE MARK BAND"

Speaking about "Old Standbys"

Some things you don't have to be told about. You just know they are good.

"Ball-Band" Rubber Boots, for instance. You've always known about them. Your father wore them.

Over ten million outdoor folks are wearing them.

Such a reputation never would have been made if the quality had not been kept up.

For thirty-seven years "Ball-Band" (Red Ball) Footwear has made good and given to every buyer More Days Wear.

That's a good reason for you to look for the Red Ball next time you buy any sort of rubber or woolen footwear, from heavy boots to light-weight rubbers.

We make nothing but footwear—and we know how

Mishawaka Woolen Manufacturing Company
462 Water Street Mishawaka, Ind.
"The House that Pays Millions for Quality"

There are many styles of "Ball-Band" Rubber and Woolen Footwear not shown on this page.

Write us for the free illustrated booklet, "More Days Wear." In it you will see just what you need for different jobs and all sorts of weather.

In writing, please give the name of your nearest dealer.

Dairy Judging

Washington State College Wins

With only Utah missing, which sends an animal husbandry students' judging team one year and a dairy students' the next, the annual dairy husbandry students' judging contest at the Pacific International at Portland was participated in by the same colleges which sent representatives last year, the list including Washington State college, University of Idaho, University of California, University of British Columbia and Oregon Agricultural college.

The five teams finished in the order given, the student experts from Pullman including the first and third high men of the contest, high man on Holsteins and first and third high men on Jerseys, and their scores totaling 3407.5 out of a possible 4500.

This was only a comfortable margin over the team from Idaho, which scored 3345 points, and Idaho led California by only 67.5 points.

As a whole the contest, which was the sixth annual under the auspices of the Western Dairy Instructors' association, was adjudged the best that has yet been held. It was run off with military precision under the general direction of J. E. Dorman of the western office of the United States dairy division at Salt Lake City, Utah, who declared it one of the best educational features of the show.

The judges, who are the coaches of the several teams, were well pleased also and the men in the contest show better training each year. There were some splendid classes of dairy cattle for the men to work on. "We think the class of dairy cattle shown this year a little better than in any year since the show started," said Dorman. "At least they brought out some dandies for the students. Such a contest trains coaches as well as men and makes them better instructors. It was close, clean and interesting this year."

Teams consisted of three men each, and each team was asked to pass on the merits of three classes of four breeds each—Holsteins, Jerseys, Guernseys and Ayrshires.

The winning W. S. C. team, coached by J. C. Knott, consisted of C. L. Wallmark, J. A. Porter and Lloyd Gunstone, who at the banquet of instructors and students at the Multnomah hotel on Monday night of stock show week received the Western Dairy Instructors' association plaque, most prized award of the year in dairy student circles. Wallmark was high man of the contest, with a total score of 1203.75, and received one of the three gold medals which are awarded the three high men. He was high on Jerseys also, though under the rules he might not receive the silver medal offered that winner. Porter was third high man of the contest, with a score of 1136.25, and received one of the other gold medals. He was third high man on Jerseys also, but, like Wallmark, received only the single award. The team as a whole was high on Holsteins, with a score of 888.75, and on Jerseys, with 966.25. It received a silver cup from the Holstein-Friesian Association of America for its showing on that breed, but the national Jersey breed association does not recognize the contest as do the other leading associations.

The Idaho team, coached by F. W. Atkeson, head of the dairy department at Moscow, consisted of C. R. Richards, Clarence Fales and Henry Hansen. The latter, with a total score of 1152.5 on all four breeds, was second high individual of the contest and took the third gold medal offered for individual prowess, and the team, scoring highest on Guernseys, won the plaque offered by the American Guernsey Cattle club. Fales of Idaho ranked fourth in the contest, next to Porter of W. S. C., but received no award. However, he was second high man on Holsteins, scoring next to Wallmark, hence he received the silver medal, and Richards was awarded the silver medal for being high man on Jerseys. Wallmark, Hansen and Porter all outscored him, but under the rules could not take the award. Fales was first on Guernseys also, scoring second highest of any individual on a particular breed, but having been awarded the Holstein medal could not take another.

L. R. Johnson of California, who scored 333.75 on Guernseys, took it instead, and the California team won the silver cup offered by the Ayrshire Breeders' association for high team judging Ayrshires. R. A. Sylva and J. J. McNamara were the other members, and the California team's total score was 3177.5. W. M. Regan, head of the dairy department at Davis, coached it.

Percy Murray of the Oregon Agricultural college team was the only other individual to win an award. He scored second to Hansen on Ayrshires and received the silver medal. F. E. Nelson and H. B. Aldrich were the other members of the O. A. C. team, which was coached by Roy C. Jones, professor of dairy production, and A. W. Aylard, K. A. Hay and R. G. Blair made up the British Columbia trio, which was coached by W. N. Jones. Aylard and Blair tied for third high score on Guernseys.

Oakland Six Touring Car

$945

Glass Enclosed Comfort

for only $60 *more*

For only $60—you can equip any True Blue Oakland Touring Car with a new Glass Enclosure designed by the factory, and built to fit perfectly with Oakland's new-type permanent top and its weather-tight windshield.

This Glass Enclosure is quickly installed or removed, and is absolutely rattle-proof. Only your own eyes can fully tell you how perfectly it fits, how fine it looks, and how comfortable it is on cold and stormy days.

Farmers will particularly appreciate its sturdy construction—its ability to provide all of the comforts of a closed car, and yet to negotiate the roughest roads and steepest hills with the ease and agility of an open car.

See this Enclosure installed on a True Blue Oakland Touring Car—the car with the highly developed six-cylinder engine, the sound and simple four-wheel brakes and the centralized controls. See it at your dealers—its usefulness and comfort will truly amaze you!

Sixty-Five Boys and Pauline Sherman

Representing Twenty-Two Smith-Hughes High School Departments in the Stock Judging Contest at the Pacific International Livestock Exposition

Sixty-five boys and Pauline Sherman of Cottage Grove, Ore., representing 22 Smith-Hughes high school agricultural departments from the states of Washington, Oregon, Idaho, California and Montana, participated in the vocational students' judging contest on opening day, which was won by the Santa Rosa, Cal., team, coached by W. C. Patchett, with a total score of 2664 out of a possible 3000. The Redmond, Ore., team, coached by Borden Beck, was second with a total score of 2210, and the Walla Walla, Wash., team, coached by C. B. Wilson, was third with 2189. The teams from Union and Ontario, Ore., were close up in fourth and fifth places, respectively, the former scoring 2188 and the latter 2149.

Pauline Sherman of Cottage Grove, member of the live stock judging team from the high school there which competed in the vocational students' contest at the Pacific International. She was the only girl among 66 high school live stock experts competing.

It was "easy pickings" for the California team when it came to totals, for this aggregation of three young live stock experts comprised the three high individuals of the contest. Don Weatherington lacked only 41 points of a possible 1000 perfect score; Wesley Jameson was second high with 895 points, and William Braun third with 810. It is seldom indeed that an agricultural high school student scores 595 points in one of these contests, which engage the best juvenile judges of the entire territory, and it is seldom also that the three high individuals of an entire contest will be found on one team. The real contest in this case was for second position, and here the good average work of Marvin Hibbard (739), Gerald Davidson (762), and Gordon Galbraith (709), members of the Redmond team, triumphed. None of the three was among the five high men, but all did good, consistent work, and their total was 21 points above their nearest competitors, Everett Thomas (664), Vernon Baker (809) and Howard Fenton (716) of the Walla Walla team.

H. M. Skidmore of Washington, D. C., agent for the federal board of vocational education in 11 western states, was in general charge of the contest, supervisors from competing states assisting him. All told, there were three more teams than last year, and the supervisors were very much pleased with the showing. Montana was represented for the first time, two teams, in charge of Supervisor N. J. Abbey, coming from Hamilton and Kalispell. They were picked in a state contest held last January at Bozeman, 84 teams competing and the first and second prize winners winning the trip to Portland. Supervisor William Kerr had one team from Idaho, that from Boise, selected at a preliminary contest at the Twin Falls county fair at Filer. Idaho had two teams at the show in 1922, but Moscow did not come this year. The Walla Walla team that won third was one of three from the state on the north in charge of Supervisor J. A. Guitteau. Others were from Pullman and Elma.

Supervisor E. E. Elliott had 15 teams from Oregon, which was one less than last year. The schools represented include Cottage Grove, Seaside, Knappa, Corvallis, McMinnville, Newburg, Forest Grove, Woodburn, Gresham, Dufur, Prineville, Redmond, Union, Ontario and Prairie City. Fred L. Griffin, in charge of teacher training in California, was at the show with the Santa Rosa team.

As in the case of the college students' live stock judging contest, this was the first year in the history of the show that femininity has appeared in the ranks of the high school student teams. Pauline Sherman of Cottage Grove was a member of the group from the Lane county city, and gave a good account of herself by comparison with the young fellows working around her.

At the left H. M. Skidmore of Washington, D. C., agent for the federal board in 11 western states, who had charge of the Smith-Hughes students' judging contest at the Pacific International this year. Among those assisting him, appearing in the picture, were N. J. Abbey of Montana, E. E. Elliott of Oregon, J. A. Guitteau of Washington, William Kerr of Idaho, supervisors in their respective states, and Fred L. Griffin, in charge of teacher training in California.

Nearly 70 Smith-Hughes students, representing 22 high schools of Washington, Oregon, Idaho, Montana and California, who took part in the judging contest

Wheat Conference

Favors a Tariff of 45 Cents

At a wheat conference called in Colfax, Wash., Wednesday, by Congressman John W. Summers, 175 representatives of interests connected with the industry passed a resolution calling on President Coolidge to at once exercise his powers and raise the tariff on wheat to 45 cents a bushel.

The tone of the meeting emphasized determination of wheat producers, distributors and financial interests in Washington to cease mourning over disappointing prices and take constructive action to put their industry on an equal basis with other activities. "There has been too much talk and not enough action," was the message of speaker after speaker. The method to secure immediate results puzzled the conference, but it expressed its purpose in the following resolutions:

"That this meeting go on record as indorsing the cooperative marketing of wheat and that we recommend an increase in the tariff on wheat sufficient to raise the wheat-growing industry to a par with other industries. As a necessary adjunct to the tariff we recommend some form of government control for the exportable surplus.

"That, whereas, immediate action is vital, we urge creation of an export commission and that President Coolidge raise the tariff on wheat to 45 cents a bushel."

A further resolution, submitted by E. L. French, state director of agriculture, and adopted, was:

"This convention urges Henry Wallace, secretary of agriculture, to hold public hearings in the north Pacific coast states for the purpose of adopting new grades or standards for wheat and hay raised in Washington; these standards to more nearly give true grades and a fair chance on the world's markets."

Congressman Summers suggested and the meeting agreed that a permanent committee be formed by selection of representatives from the following groups: Farm bureau, farmers' union, grange, State College of Washington, University of Idaho, national banks, state banks, intermediate credit banks, business interests, legal counselors, cooperative wheat growers and unorganized farmers. State Senator F. J. Wilmer of Rosalia was elected permanent chairman and will name his committees soon.

The committee on resolutions was J. M. Reid, Pullman; E. J. Doneen, Garfield; Roy Jones, Dusty; Harry Goldsworthy, Rosalia, and S. W. Hester, Dayton.

Potato Growers

Meet in Spokane November 20

The fourth annual meeting of the Pacific Northwest Potato Growers' association and the potato growers' conference will begin at 1:30 p. m. Tuesday, November 20, in Spokane.

Following the presidential address of George J. Cannon, W. C. Edmundson will talk on "Five Years' Experiments With Potatoes at the Federal Field Experiment Station at Greeley, Col." "The Seed Potato Industry of the Cut-Over Land of the Inland Empire" will be duscussed by A. C. Ulman of Westmond, Idaho.

Dr. G. K. K. Link, pathologist, United States department of agriculture, will open Wednesday afternoon's session on "What To Do About the Virus Diseases."

Potato disease reports will be made by H. E. Morris of Montana; C. C. Tice, British Columbia; H. B. Heald of Washington; M. B. McKay of Oregon and C. W. Hungerford of Idaho.

Then J. M. Reader of the Idaho experiment station is down for a talk on "Sulphur Treatment for Scab" and H. R. Hyslop of the Oregon Agricultural college on "Cultural Methods in Relation to Diseases."

There will be special interest in "Market day," November 22, when a conference will open with an address by D. H. Anderson of Spokane on "The Potato Business From the Brokers' Standpoint." This will be followed by W. L. McEachran, also of Spokane, on "The Potato Business From the Retailers' Standpoint." "Marketing From the Growers' Standpoint" will be discussed by J. E. Larson of Vancouver, Wash. Dr. A. H. Upham, president of the University of Idaho, will be toastmaster at the annual dinner Thursday.

Four important papers are scheduled for Friday, beginning at 1:30 p. m.: "Seed Potato Certification," by C. C. Tice of Vancouver, B. C.; "Relation of Seasonal Growing Conditions to the Potato Crop," N. G. Coe, Bend, Ore.; "Results of Test Plots of Seed Potatoes in Washington," J. C. Currey, Olympia, Wash.; "The Potato in Place of Summer Fallow on Wheat Land," I. C. Longteig, Craigmont, Idaho.

A business session will wind up the conference.

WATER AND SALT FOR CALVES.

Many feeders fail to realize the importance of providing the young calf with plenty of water. It is a mistake to think that because the calf drinks milk it does not need water. After the calf is two weeks old it should have access to plenty of fresh, clean water at all times, and when it is old enough to eat roughage it should have access to salt.

This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

A Welcome Response

The Red Cross membership drive is a welcome call to every man and woman, to every boy and girl, whose soul is not bounded and shriveled by self.

Joyfully answering this bugle call every American finds himself on a level with every other American.

Beginning with Armistice day and closing with Thanksgiving day the United States exemplifies democracy in its happiest phase.

New Variety Kale

A new variety of kale has just been established and put on the market by the Western Washington experiment station at Puyallup. It is known as "Station No. 19" and is a very leafy, low-headed kale which has the ability to hold the lower leaves better than any of the common varieties, according to M. E. McCollam, agronomist of the station.

The new kale has a much greater leaf surface than the common kale and promises to produce better crops to the acre.

Whatcom Poultry Industry

Whatcom county is rapidly becoming a poultry center as one can readily see as he travels through the country. The soil and climatic conditions are particularly well adapted to the poultry industry, and the people are the kind who believe in working together in order to get results.

This is the only county in the state that supports two branches of the Washington Cooperative Egg and Poultry association, both of which are operating their entire plants in order to market eggs and dressed poultry, as well as to furnish poultry and dairy feeds to the members.

Decentralization

For some years it has been the opinion of The Washington Farmer that the huge organization known as the United States department of agriculture needs to be decentralized in order to decrease the large waste of effort by long-arm administration. This farm journal has also seriously inquired if the administrative details of the United States department of agriculture could not be better handled from headquarters in Chicago than from Washington. Chicago is the greatest agricultural center in the United States and probably in the world.

Now comes the statement that former Secretary of the Interior Albert B. Fall advocated the removal of the entire reclamation administration organization (which great agricultural activity is located within the bounds of the interior department) to Denver, Col., or to some other western point convenient to the principal projects.

Former Secretary Fall also found, as announced from Washington, that a scientist is not always a good business man, nor is a good engineer also a good manager. He advocated that officials more conversant with the problems of a farmer be placed in charge of the government activities.

Washington Cheese Scores High

A score of 92.5 per cent was given to a Washington made cheese, which was a tie score with Montana at the monthly scoring contest conducted by the United States Department of Agriculture at Salt Lake, Utah with 14 samples scored 90.67 per cent, California with eight samples scored 90.5; Idaho scored 88.5 per cent.

The cheese on an average was very much better this month than previous months. Cooler weather, which allows the milk to be received at the factories at a much lower temperature, and managers and cheesemakers putting forth a greater effort to educate and instruct the farmers in better milk production account for improved cheese.

Pacific County Agent Work

Tuberculin testing in Pacific county during the past year resulted in the detection of six reactors out of 4263 head tested and in the accrediting of two new herds. Dairy rations have been worked out for seven farmers for a total of 97 cows, two purebred sires have been placed and one silo constructed.

This, however, is only part of the county agent's work.

Poultry flocks totaling 3000 hens have been culled, 1725 fowls have been vaccinated and 290-egg (or better) hens have been placed. Seventy-six acres of vetch this season showed great possibilities in this crop and several new varieties of grain are being studied. Partial drainage has greatly improved 25 acres of land and drainage has been laid out for 125 acres more.

In the realm of the housewife, also, progress was noted. Four septic tanks and one water system have been installed; two kitchens were remodeled and many homes have been brightened by interior changes. Four boys' and girls' clubs had a total membership of 34 and the members of the daily club did such good work that they made a trip to the Pacific International.

The total value of extension work, estimated in dollars and cents, is placed at $6000.

Fertilizer Tests

An interesting experiment with seven different kinds of fertilizers applied to berry crops has been partially concluded by H. D. Locklin, horticulturist of the Western Washington experiment station at Puyallup. Sulphate of potash gave the best results when all factors were considered, while the complete fertilizer ranked second. Nitrate of soda was the third best application, while super-phosphate stood fourth. It is interesting to note that the sulphate of potash evidently is much better suited for berries than muriate of potash, the latter standing fifth on the list. Lime and sulphur each gave very little better production than was shown on the check plots which received no fertilizer.

The experiment took into consideration yield, earliness, weight of 100 berries, firmness of fruit and the length and diameter of the canes. The results obtained this year show only the effect of the fertilizer on this year's crop. They indicate which one is the most promising fertilizer. More definite conclusions can be made at the close of next season, since some of the plots may be better able to bear fruit than others.

The complete fertilizer produced the highest yield, while sulphate of potash produced the earliest berries shown by the first three pickings. The size of the berries was affected mostly by the nitrate of soda and was shown by the weight of 100 berries. Firmness, length of canes and diameter of canes all showed up best with the sulphate of potash. Conclusive results can only be ascertained next season, since it is possible that some of these fertilizers will not have their complete effect the first season.

Washington State Gleanings

The first car of sugar beets loaded this season at Walla Walla left October 14 for the refinery at Toppenish. The valley will produce about 90 cars of beets this year, according to H. C. Rosenfelt, representative of Idaho-Utah Sugar company.

APPLE PICKER CLAIMS RECORD.

Picking 225 boxes of Romes in one day by Lee Carpenter on the A. J. Seibel ranch in the Edgemont district was considered a good record, but now attention is called to the record of Ben Wynn on the White-Peacock place, six miles west of Wapato. Wynn picked 306 boxes in one day of less than 10 hours and averaged over 250 boxes a day through the Rome harvest. Further, he far outdistanced the Ellensburg man by picking more than 225 boxes of Winesaps daily.

TWO SPANGLE FARMS SOLD.

The Morris M. Knight farm, containing 160 acres, lying five miles southwest of Spangle, has been sold for a reported consideration of $11,000 cash. The buyer is William Wheatenbaugh of Spangle, who has a farm adjoining the Knight place that he has owned 40 years.

The David Harness tract, three miles southwest of Spangle, sold for $25,000 cash to Peter Reilly of Spangle and John Reilly of Spokane, brothers. The Reillys have owned land adjoining the Harness place for 45 years.

FARM BUREAU HEAD TO RETIRE.

Considerable speculation is being evidenced at Yakima regarding a successor to H. D. Hull, county president of the farm bureau, who has announced he will not be a candidate for reelection next month. Among those who have taken active interest in the farm bureau and mentioned for the office are C. Percy Wickersham and J. Elton Hall, both of Tietonview; Dr. P. W. Cornue, Selah; E. S. Robertson, Donald; E. E. Corwin, Parker; F. A. Norton, Grandview; J. C. Childs, Donald; William McGonagle, Selah; A. D. Paddison, Ahtanum, and W. F. Medaris, Parker.

WHEAT BREEDING COURSE.

Rattan Singh, a graduate of Punjab Agricultural college at Lyallpur, India, has written Professor E. F. Gaines, of the State College of Washington, asking if it will not be possible to arrange for him a correspondence course in wheat breeding work with special reference to the control of smut in that hilly country.

Singh is agricultural assistant to the economic botanist of Punjab, and says his attention was attracted to what the state college is doing in breeding smut resistant wheats by Mr. Gaines' article on "Genetics of Bunt Resistance in Wheat," published February 10 in the Journal of Agricultural Research.

TO REMOVE FILLER TREES.

Half of the fillers on the orchard property of the American Fruit Growers, near Wiley City, will be removed before next season. Every other tree in diagonal rows through the square planting will be removed. This will open up sun spaces all through the orchard and the removal of this number of trees should mean no diminution in the yield of fruit, said I. E. Griner, superintendent of orchard properties. There will be some spread of the trees into this open space and in two years the rest of the fillers will be removed. Distributing the removal of the fillers in that way will cause no interruption in the amount of bearing in the orchard, he said.

APPLE PICKING RECORDS.

Excellent records may have been made at the Big Y plant at Yakima, but Walter B. Dauber, manager of the Sunnyside plant, claims even higher records for his crew. On October 23 a crew of 10 packers at that house packed 2339 boxes of Rome apples in 10 hours. Of this number Mrs. John Madison packed 297, Mrs. Walter Dauber 288 boxes and Mrs. D. E. Norris 257 boxes. Five others in the crew packed more than 200 boxes. Mrs. Madison's average during the week was 237 boxes, Mrs. Dauber's 232 boxes and Mrs. Norris' 213 boxes. The 10 packers put out 11,797 boxes during the week the Romes were packed and had two short delays when changing from one variety to another, said Mr. Dauber.

STOCK ASSOCIATION ELECTS.

The Peola Live Stock association, at the annual meeting November 3, elected the following officers: Warren Howard, president; W. J. Bentley, vice president; William Brockman, secretary-treasurer; William Howard, E. C. Ruchert, A. L. Dick, W. J. Bentley and Warren Howard, advisory board.

It was decided to ask Forest Supervisor J. C. Kuhns of Pendleton to call a meeting of stockmen at an early date to consider a proposition to enlarge the range for cattle in that part of the national forest used by the members of the Peola association. This territory includes three divisions, known as Pomeroy, Peola and Tucannon, which, combined, grazed 1033 cattle and 106 horses this year.

FAIRBANKS HAS FARM BUREAU.

At a meeting at the schoolhouse at Fairbanks October 31 a farm bureau was organized by State Secretary W. H. Talley, with Brick Burford, secretary of the Whitman county farm bureau, assisting. The meeting was well attended and the following officers chosen:

S. R. Warwick, president; George Engle, vice president; Mrs. S. M. Lathrum, secretary-treasurer; Mrs. S. R. Warwick, committee on entertainment; George Pittman, organization; S. M. Lathrum, committee on legislation.

Plans will be made for the winter with the study of community problems. This is one of the live districts of this region and has many substantial and successful farmers.

Brick Burford, secretary of the Whitman farm bureau, organized a boys' pig club at Oakesdale November 1. The leader will be Harold McCoy, and other members are: Glenn Jones, president; Byron Doneen, secretary; Lloyd Doneen, W. Jones, Martin Hendrickson and Leslie Ellis. Others are expected to join soon.

No boy is taken who will not agree to have a sweet clover or alfalfa patch for his hog and to keep close account of the time and material used in producing the hog. Purebred hogs only will be used and grown to show the production of pork, as against production for sale as purebred animals. Chester White, Poland China and Durocs will be chosen.

Cooperation Anew

President Coolidge's Interest Brings Subject Forward Earnestly

President Coolidge's recently announced purpose to use the department of agriculture and other federal agencies to help the cooperative movement among farmers has thrust that subject anew upon the attention of the American people. Opinions range all the way from enthusiasm down the scale to skepticism, and from skepticism still further down the line to downright knocking. "Cooperative marketing will solve the wheat growers' problems," say the enthusiasts. "It won't be worth a tinker's darn," declare its critics, including the grain-dealers.

Three notable articles by three notable authorities on farm cooperatives have recently appeared in American periodicals. Aaron Sapiro, attorney for several cooperative organizations, who has spoken before audiences in Pacific northwest, says the average farmer has never really tried cooperation. Farmers have organized, it is true, but their organizations have been local. What is called cooperative marketing is in reality only cooperative packing, grading, buying or manufacturing. These organizations did some good locally. They secured local sales for local produce and stopped petty larceny, but they never even conceived the real problem of marketing. Real cooperative marketing, Mr. Sapiro says, is illustrated by the California fruit growers, the first group who conceived the idea of distribution on a commodity basis. Tobacco, potato, rice, bean and nut growers, dairymen and stockmen are now organized on a commodity basis. Other groups are following.

That is a clear statement of a thought frequently expressed by THE FARMER as to the efficiency of the cooperative movement in the Pacific northwest. To a large extent, as we have pointed out, cooperative organizations are competing with each other. Part of the fruit growers, for instance, in one orchard district will be organized, while other growers will deal with private sales agencies. The same divided condition exists over in another orchard valley, and in another, and another. And the net result is that they cut each other's throats competing for markets.

In another periodical E. C. Lindeman explains the cooperative method in Denmark, where it has been brought to a high degree of efficiency. But the cooperatives in Denmark are built on educated loyalty in the local community groups. "In this country," he says, "there exists among cooperative organizers a theory which leaves the community emphasis until last. This," says Mr. Lindemann, "leaves the weakest point, the most vulnerable point in the entire structure undeveloped and unguarded." The legal contract binding the farmer to deliver his products to the cooperatives, which has become so popular, is in itself insufficient to produce the cohesion and loyalty necessary for a cooperative movement which will endure, according to this authority.

C. L. Christensen of the United States department of agriculture also deals with Denmark's experience of over 40 years. Eighty-six per cent of Danish farmers are members of some cooperative organization. The organizations operate on a strictly business basis, and sufficient patronage must be assured before beginning business. Control is democratic and there is capable technical and business management.

ONE CROP AND TENANCY.

Farm and Ranch: A significant fact disclosed in the 1920 census on farms, but overlooked by most writers, is found in the figures which show that the largest increases in tenacy are found in those sections devoted to the production of one crop.

Unstable as Water

Thou Shalt Not Excel--Is Taught by Scripture and History

Unstable as water, thou shalt not excel.—Genesis 49:4.

Probably more words have been spoken and more pages printed descriptive of the woes of life following the lack of purpose among men than upon any other line of conduct.

Just look up some of the many words in the language defining one phase or another of the lack of stability in character: Unsettled, fluctuating, restless, capricious, fitful, spasmodic, desultory, afloat, transient, changeable, variable, checkered, vagrant, wayward.

Stability is at the basis of business as well as at the basis of morals; in fact, it is the one basis upon which business and morals are alike builded.

Stability means responsibility, a deep-seated sense of obligation to duty to God and to our fellow man.

A price must be paid for stability of character. No man's word is as good as his bond unless that man has paid the price of denying himself in order to keep his word; unless he has curbed his desires and has them so well in hand that he can command them to be still, and a calm of soul follows.

Anybody can be as unstable as the waters without half trying.

To be capricious is the easiest thing in the world. To float with the tide requires no effort.

From all this restlessness it is but a step to waywardness and all that word implies.

To be of stable character is an achievement; to have a program in life and follow it is to take rank with the chosen minority.

FARM BUSINESS AND MARKETS OUTLOOK

WHILE barometers of trade and industrial activity have declined about 10 per cent from the high level of last spring, such elements in the situation as building operations, manufacturing volumes, and trade turnover are above normal and high enough to maintain the urban prosperity characteristic of the last year and a half. The labor shortage of six months ago has been replaced by a small surplus in scattered places, but no great degree of unemployment is noted anywhere.

Money and credit conditions, usually considered fundamental in controlling the tendency toward business expansion or depression, are without strain. The peak of the crop moving season brought no pinch as the absence of car shortage reduced the amount of funds needed. Furthermore, according to bank reports, farmers are paying their debts as crops are sold, thus helping to ease the money situation.

High costs, especially for labor, are acting as a drag upon expanding activity, but the recent slowing down has stilled the clamor for workers, eliminated the payment of bonuses in some of the trades where skilled men were hardest to obtain and restored a more normal ration between the rate of advances of wages and of the selling prices of goods. At the same time there appears to be no occasion for enough change in employment conditions to cause a slump in the volume of consumption.

Since sentiment had a good deal to do with the letdown since last spring, it is significant that business optimism is returning. The ranks of the prophets of disaster seem to be gradually thinning out. A distinct change of belief as to what the next year or two may hold seems to be taking place. Six months ago the opinion was widespread that business expansion would continue probably until the early part of 1923, by which time a depression might set in. The moderate relapse since that time apparently has revised the schedule.

It is now recognized that, to a large extent, the factors underlying the boom of last spring are still effective and will cause a continuation of a high rate of activity. For example, another year or two will be required to complete the construction work now under consideration. Any recession in costs of labor and materials will simply increase the amount of this work to be undertaken. Extensive highway construction is under way, great development in the hydro-electric field is contemplated and the railroads are still adding to their equipment. No large reserve stocks of manufactured goods are overhanging the market, while broad consumption of these goods is continuous, necessitating a correspondingly high rate of production.

Better Undertone in Cattle.

Cattle prices sagged down to the low point of the season last week, but a firmer undertone is noticeable, although weighty short-feds are hard to move. Total receipts have declined slightly for two weeks, the peak of the range run has been passed and pressure from short-feds was less pronounced, although the country remains bullish on corn. Eastern slaughterers have been buying more in the middlewest and a wider outlet for stockers and feeders has given support.

Whether the trend has definitely turned for the season or not is uncertain, as enough westerns are still back to keep up a free movement during most of November and the cornbelt is in a mood to put a lot of warmed-up steers on the rails at every favorable opportunity, so that the market is not apt to display much strength for several weeks.

Cows and heifers make up the bulk of western receipts and the market remains surfeited as the fall cleanup from all sections is under way, while the veal calf market appears not to have struck bottom thus far. In the first nine months of 1923 3,390,327 calves were slaughtered under federal inspection, compared with 3,142,375 last year, an increase of nearly 8 per cent.

The decline in the corn market has revived the demand for thin steers.

Hogs Lowest of Season.

Hog prices declined moderately last week and are at the season's low point, with the Chicago average around $7. Receipts are extremely heavy, there is but little letup on the breaks and minor upturns start a deluge again. It is doubtful if bottom has been reached, although it may be uncovered during November, as opinion is prevalent that the big run will arrive early this year as a result of high-priced corn. Cholera is reported in parts of the cornbelt, but the outbreaks are not severe.

Lamb Market Slightly Lower.

Lamb prices are lower than a week ago. Total receipts at 10 markets were nearly 40 per cent less than three weeks ago and the smallest since late August, while the dressed lamb market was sharply higher in the east. More of the arrivals were in killing condition, however, and the appetite of cornbelt feeders for thin lambs has been fairly well satisfied. The total feeder movement has been and remains a phenomenally large one, however, as Colorado is filling up at present. In the eight weeks ended October 26 1,762,279 head were shipped out from 12 leading markets, compared with 1,162,293 head in the same period last year, an increase of 52 per cent.

Sales of wool last week were at firm prices, especially on medium to low wools.

Wheat Trend Uncertain.

Wheat prices have been reactionary during the last week, but the amount of decline was relatively small. Whether or not governmental assistance will be extended remains a factor in shaping speculative sentiment and probably has an influence on demand for flour as well as on the rate at which wheat is being pressed on the market by growers. Following the issuance of the report of the Meyer and Mondell commission the market sagged, but suggestions from official sources that distress in Germany would lead to the extension of aid from this country which, at the same time, would furnish a market for our wheat and hog products revived this factor again at the close of the week. Most of the forms of assistance suggested would require legislation, so that no immediate results are in sight.

Irrespective of any assistance from the government, wheat prices appear to be low enough to have discounted much of the apparent excess of export surpluses over import needs. Enough of the surplus in this country has already been shipped that the remainder is not much of a problem, with nearly eight months in which to dispose of it. In the Pacific northwest, where the bulk of the remaining surplus is believed to be located, prices have been holding up extremely well as a result of excellent demand from the orient.

Corn and Oats.

After a sharp slump in the corn market prices have rallied briskly in the last few days.

The oats market shows little independence of action. Primary receipts have declined, so that the visible supply is probably near its peak.

The flax crop is about two-thirds larger than last year, but is below average domestic consumption. Prices compare favorably with last year.

Seed and Feed.

Clover seed prices averaged lower last week. Receipts have increased, although the movement is much below normal for this season of the year. Timothy seed prices are holding their own much better than red clover.

Feed markets are reported as dull and irregular. Prices at western milling points are fairly steady, but wheat feeds in eastern markets are weak.

Cash Grain Markets.

The range of cash grain prices for the week ended November 7 was:

CHICAGO—Wheat—No. 2 hard, $1.07@1.11 3-4; No. 3, $1.03 1-2@1.09; No. 3 red, $1.05@1.09. Corn—No. 2 mixed, 84@92c; No. 3, 84 1-2c; No. 2 yellow, 93c@$1.02; No. 3, 86@92 1-2c; No. 2 white, 92@97c. Oats—No. 2 white, 42@44 1-2c; No. 3, 41@43 1-2c; No. 4, 40@43c. Rye—70 1-2@71 1-2c. Barley—58@67c.

Receipts of Hay Increase.

The premium on choice timothy hay has attracted increased receipts, but the market is firm. Low grade are too abundant to sell advantageously. Receipts of alfalfa hay are light.

Bulge in Egg Prices.

Cold storage holdings of eggs on November 1, according to the preliminary report of the bureau of agricultural economics, amounted to 6,658,000 cases, the largest on record for the corresponding date. The figure compares more favorably with the total on November 1, 1922, of 5,726,000 than was generally expected, however, causing a reversal of sentiment among many "bears."

Butter and Cheese.

A shortage of fancy fresh butter was responsible for the advance in prices last week to the highest levels for the season.

The level of prices makes foreign butter again attractive to American buyers. About 2500 casks of Danish are reported on the way and as much more is reported scheduled to sail this week.

Liberal offerings of all styles of cheese and lower country prices resulted in sharp declines in distributing markets last week.

Fruits and Vegetables.

Carlot shipments of potatoes from producing sections have fallen off nearly 30 per cent compared with three weeks ago. Arrivals at consuming centers remain heavy, however, and prices are only steady with last week. Maine, Minnesota, North Dakota, Wisconsin and Michigan are the leading shippers. Northern round whites are quoted at 90 cents to $1.15 per 100 pounds sacked and bulk in Chicago and $1.25 to $1.50 in the east.

Carlot shipments of apples from producing sections have declined sharply in the last week, but are still heavy and arrivals at consuming centers are burdensome. Demand is not as keen as would be desirable in view of the large supply on the market. Prices are practically steady, however. Michigan and Illinois Jonathans are bringing $5 to $6 a barrel in midwestern cities. Washington medium to large extra fancy Jonathans are bringing $2 to $2.25 a box at Chicago, with fancy at $1.75 to $2, extra fancy Delicious at $2.75 to $3 and fancy at 2.50 to 2.75.

LATEST QUOTATIONS.

PORTLAND, Ore., Nov. 10.—Cattle—Beef steers, good grade, $7@7.60; medium grade, $6@7; common, $4.50@6; beef cows and heifers, good grade, $5@5.50; medium, $3.75@5; common, $3.25@3.75; canners and cutters, 1.50@3.25; bologna and butcher bulls, $3@4; feeder steers, $5@5.50.

Calves—Medium to choice, 190 pounds down, $9.50@10; 190 to 200 pounds, $7@9.50; 260 pounds up, $5.50@7; cull and common, $3.50@5.50.

Hogs—160 to 200 pounds, medium, good and choice, $7.25@8; 200 to 250 pounds, $6.75@7.25; 250 pounds up, $6@6.75; packing hogs, smooth, $5.50@7; packing hogs, rough, $4@5.50; slaughter pigs, $6.75@7; feeder pigs, 6.50@7.

Pick of Live Stock the Country Over

Progress of Pacific International Is Ever Upward and Onward Into a Stupendous Show

"From north and south and east and west they come,
From every land beneath the sun,
To tell of mighty victories won——"

"Biggest and best"—"greatest show on earth"—all ordinary superlatives—appear to have lost their potency in description of the huge exposition that annually at North Portland brings together from every nook and corner of the great west, as well as from many other sections of the Union and from Canada, the finest flesh in horses, cattle, sheep and swine.

Resort is had, therefore, to poetry, and while John Oxenham, author of the lines quoted and stolen from the beautiful text of "The Wayfarer," may have had something quite apart from pigs and chickens in his mind when he penned them, nevertheless the words describe with an accuracy which no collection of statistics can approximate, the sort of show that the Pacific International Live Stock exposition, in the fifth season of occupancy of its new quarters, has grown to be. That it compares most favorably with the other great shows of its kind, be it Chicago International, Kansas City Royal, Denver exposition, or what not, that America has to offer, is no longer anything but granted. It is simply stupendous; it can not be described; and it is not to be understood by any one who has not visited the grounds, studied the magnificent specimens of live stock and land products assembled there, and caught the spirit of the great show—the spirit of a forward and upward movement in the live stock breeding industry—of the department of agriculture, the agricultural college, the purebred bull association, the cow testing association, the breed association, the boys and girls' club, all blended into one great big inspiration for the live stock grower, the poultryman, the farmer or the mere lover of the beautiful in animals to imbibe. It is a show of shows.

If there was a single outstanding feature of the 1923 exposition—aside from the weather, which could not have been more perfect, from Saturday to Saturday, if it had been made to order—it was perhaps the spirit of optimism which prevailed among the breeders of live stock generally who exhibited and attended. Sheep, cattle, horses, swine, poultry—all have had their rounds with Old Man Gloom, and some of them went just about through the ropes. But they are climbing back, if general good nature and readiness to joke about their troubles is any indication; and the prices attained at the annual sales of breeding stock constituted perhaps the first wallops which they have delivered to depression. They were prices, particularly for dairy cattle, which have not been attained for many a long day. To $1000, $1500, $2000 they climbed, and the averages were such as to inspire contributing and observing dairymen with new confidence.

The night horse show, which fairly scintillated this year, gave nightly performances and several matinees.

From north and south and east and west, literally, the entries came, in numbers 200 more than at the great show of 1922, and with a quality and finish which it seemed had never before been equaled at this show. From faraway New Hampshire came Devons and milking Shorthorns; from Iowa and Idaho proud Percherons; from Utah and California dainty Jerseys; from Washington, Oregon, Montana and British Columbia many breeds of sheep, Brown Swiss and Hereford cattle, and many swine. And theirs were names to conjure with—Alberta Panama, Canadian champion; Tillamook Daisy, purple ribbon winner at the National Dairy show; May Rose Cherub, $10,000 winner at a score of eastern shows; Edna May's King, $12,000 son of Kentucky's greatest saddlers—champions of the show ring, at the pail and on the block, the bluest blood of the myriad splendid strains that are represented in American purebred animals.

Then there was the eighth annual Manufacturers' and Land Products show, which has come during its short tenure of the newest building to be almost as much a part of the exposition as the cows and horses themselves, and the third annual Northwest Grain and Hay show, housed this year for the first time where it belongs, under the same roof with the county displays of agricultural products from all over Oregon, rather than in a tent as a neglected side issue of a contest between bucking horses. Not reported in this issue, but a great big feature all by itself was the display of boys and girls' club live stock, which again overflowed the quarters assigned to it and attracted no end of attention from thousands. Details of the awards are available to those who desire them, in succeeding columns. Prizes were distributed totaling $90,000.

Attendance at this year's show for the week approximated 125,000 persons, according to a statement by the treasurer. This was some 20,000 better than the best previous attendance.

THE BEEF CATTLE SHOW.

With all three of the leading beef breeds having a larger number of entries than a year ago, and with probably the best average quality this show has ever had, there was a beef cattle show for the Pacific International and its sponsors to be proud of. Entries that came from six different states and British Columbia battled for supremacy in a show ring deeply fringed with fanciers of the different breeds and friends of different animals. Cattle that had been grand champions in their home state, and often on the entire fall circuit, here met the best from other circuits, and won or went to defeat. There was not a single instance in which one exhibitor completely dominated a breed, but good natured rivalry, close competition and a general division of the awards not only made matters more pleasant for all concerned, but showed the high average quality of the entries. Judging that was recognized as competent and fair was done on all the breeds and the judges, some of them here for the first time, were surprised at the splendid lot of entries no less than at the magnitude of the show. Herefords had perhaps a few more than the Shorthorns, but each was great in numbers, as well as in the quality of the entries, and the Angus show was equally as good in quality.

Shorthorns.

Another great show—greater in numbers than last year—of the premier breed was again made this year. California, Washington, Colorado and Montana all had herds competing. Large classes greeted the judge all down the line and, in most instances, competition was so close as to leave the observer uncertain until the ribbons had been placed. There were few unfit cattle, even where sale entries were shown. In many cases the difference between first and those below was extremely slight. And, with a first to the Pacheco Cattle company, and Thomas L. Miller, both of California, and one to F. M. Rothrock, the placing of the senior and grand championship on bulls was a most interesting event. But Pacheco Lad, the Pacheco company's entry, was so perfectly fitted and showed such smoothness for his four years, that he won over both the younger firsts. The Warnock entry, Pride of the Rockies, that was made junior champion, has a very strong back on a grand set of legs; shows breed character in a fine head and was fitted about as well as a junior yearling can be. The Pacheco company had the senior and grand champion female, also, on their Knight's Lassie, a 2-year-old of much scale, but with sweet femininity and splendid fitting. Rothrock won junior champion honors on the big, smooth, deep, finely fitted senior yearling, Hercules Sylvia 3d, with much breed character, good hair and an all-round good heifer.

Judge: John Robbins, Horace, Ind.

Group of three bulls owned by exhibitor—1, Pacheco Cattle company, Hollister, Cal.; 2 and

(Continued on page thirteen.)

New Stars Appear in the Boys' and Girls' Live Stock Judging World

A brilliant contest in which former team and individual champions went down to defeat before new stars in the juvenile live stock judging world, and in which teams from California and Washington outdid the best that any team among the many from Oregon could do, was the boys' and girls' club live stock judging contest for the honor of being the premier club judging team of the west and for possession of the Pacific Northwest Farm Trio trophy, a silver cup, won in 1920 by Marion county, Oregon, in 1921 by Linn county, Oregon, and in 1922 by Klickitat county, Washington. Notwithstanding that each of these counties was again represented by skilled young judges, including, in two instances at least, one or more members of the teams that had previously won, and notwithstanding the remarkable showing of Edith Pugh, girl member of the Linn county team, who was high individual of the entire contest with a total score of 800 points, the team from King county, California, consisting of Fred Giacomazzi, Raymond Hall and George Marah, and the one from Whitman county, Washington, consisting of Ralph J. Cole, Anton Harms and John Hinrichs, tied for first place with total scores of 2288 points each and shared the judging honors of this year's exposition. The following Oregon counties finished next in the order named: Clackamas (2270), Linn (2240), Marion (2233), Malheur and Washington (2197 each). Klickitat county, Washington, scored 2190, and Yakima county 2185.

Probably never before in the west has so large a number of boys' and girls' club live stock judging teams representing as many different states and counties been assembled for a contest, the brilliancy of which was enhanced by the fact that Gordon H. True, live stock expert of the University of California, was in charge of it as judge, and by the precision with which it was run off under the general direction of L. J. Allen, live stock club leader in the state of Oregon. H. C. Seymour, state club leader in Oregon, and visiting club leaders in charge of competing teams all complimented the management on the way the contest was handled and the results announced by 5 o'clock on the same day.

Not only was California very much represented by the team from King county, and Washington by teams from nine counties, including Klickitat, Adams, Skagit, Wahkiakum, Whitman, Kittitas, Yakima, Grays Harbor and Spokane, but Idaho sent a team from Latah county and Oregon 17 teams from as many different counties in every district into which the state is naturally divided, including Yamhill (one member), Benton, Marion, Linn, Polk, Washington, Multnomah, Clackamas, Lane, Josephine, Jackson, Tillamook, Clatsop, Lincoln, Union, Umatilla and distant Malheur. There were 27 counties, all told, in the contest, with full teams of three members each, besides Yamhill with one, making a total of 82 boys and girls competing.

Although two of the club experts among the members of the winning teams were among the high individuals, it was a general average of good work on the part of all members that won for King county and Whitman county the leading honors of the contest. Fred Giacomazzi of King county, scoring a total of 785 points, was third high individual of the contest and was largely responsible for his team placing where it did. His placings of Duroc and Poland China swine and of Shorthorn and Hereford cattle were all perfect, and he scored 90 points out of 100 on reasons, but evidently he was not very familiar with dairy cattle or sheep. His teammate, Raymond Hall, who scored 753, likewise placed both breeds of beef cattle correctly, also Poland China swine and Lincoln sheep, but fell down on other breeds. Marah scored 100 per cent on Durocs and Shorthorns. Cole and Harms of the Whitman county team both were perfect on Durocs, Lincolns and Shorthorns, Harms also on Poland Chinas, and their respective scores were 775 and 780, while Hinrichs, though perfect on both breeds of swine, faltered in the other departments and let his total down to 733.

Left to right—Governor Walter M. Pierce congratulating Edith Pugh of the Shedd (Oregon) Calf club judging team upon being high individual in the boys and girls' club judging contest, and Governor Louis F. Hart of Washington.

Edith Pugh, whose remarkable performance was chiefly responsible for the Linn county team being in fourth place, correctly placed Durocs, Jerseys, Shorthorns and Herefords, scored 90 per cent on reasons for Jersey placings, and was well up on all other breeds except Holsteins. Roy Harms of Clackamas county, who was second highest individual with a total score of 795, and whose splendid showing lifted his team into second place, was perfect in his placings of Durocs, Jerseys, Lincolns and Shorthorns, but fell down on his reasons for placing Lincolns. Other members of this team were Wilmer Harms and Ferdinand Kranberger, and Edith Pugh's fellow members of the Linn county team were Ralph Malson and Dellis Cornutt. The latter has been for at least three years on a team that was a top-liner at the exposition. In 1921 he and a brother helped win the cup for Linn county, and in 1922 he and two brothers formed the team that stood second only to the one from Klickitat county, Washington. Homer Bray of Marion county, who scored 783 and took fourth place among individuals this year, is an old-timer in club judging, also, as is Homer Mouncer of Grays Harbor county, Washington, who won the blue ribbon Holstein calf offered by Governor Louis F. Hart for the best juvenile judge of Holsteins at the Washington state fair this fall. Bray made four perfect placings. Harvey Varnum of the Yakima county, Washington, team, and young Harms of the winning Whitman county team, who tied for fifth place among individuals, made three and four perfect placings, respectively, but neither of them knew dairy cattle. Klickitat county, which sent a championship team last year and one which took second place in 1921, returned one which scored a total of 2190 points, but which reached only seventh place. It was made up of Kenneth Hinshaw and James Coffield, members of last year's winning team, and of Howard Norris, brother of the third member in

(Continued on page twenty-one.)

Yes, positively the lowest, rock-bottom prices in America for the very latest styles. Everything guaranteed. Everything sent on approval. You are the judge. If you are not absolutely delighted with your purchases—if you don't think they are the best bargains you ever found—return the merchandise and Sharood will gladly refund your money. Nothing could be fairer.

ROCK BOTTOM PRICES Send No Money ON WORLD'S BEST STYLES

Don't send one cent. Just letter or postcard brings anything, merely give name and number of each article you want. Also state size and write your name and address plainly. Pay nothing till goods arrive—then only the amazing bargain price and postage. If not delighted with your bargains simply return the goods and your money will be cheerfully refunded.

Women's Fleece Lined Soft, Black Kid-Finished Comfort Shoes

$2.29

State Size.

Positively America's greatest bargain in a women's shoe of this kind. Soft kid finished, pliable leather uppers, have heavy fleeced lining that keeps feet warm as toast in severest winter weather. Excellent grade natural oak leather soles and low rubber heels. A roomy last that is also dressy in appearance. Simply unbeatable at Sharood's low price. Women's size 3 to 9, wide widths. **Order 52A880. Send no money. Pay $2.29 and postage on arrival.**

Sporty Style Silk Seal Plush COAT For Women and Misses

$9.98

Where else can you buy a genuine silk seal plush coat of this jaunty style and splendid quality for such a low price? Beautifully modeled of soft, warm, lustrous, deep pile silk plush with full lining of beautiful flowered sateen. Newest loose back flared style with belt. Wide 10-in. shawl collar, two pockets and roomy bell sleeves. Length about 34 inches. Women's sizes 34 to 44; Misses' 32 to 38 bust measure. State size. **Order No. 52E-7000. Send no money. Pay $9.98 and postage on arrival. Money back if not satisfied.**

Fur Trimmed Coat for Girls and Children

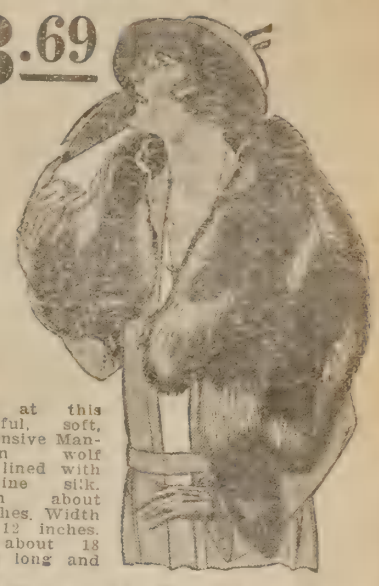
$4.48

Girls' stylish coat of polo that insures real service. Has warm Coney fur collar. Two novelty pockets. All-around belt. Novelty buttons trim pockets and belt. A durable coat at an amazingly low price. Sizes 7 to 14 years. State size wanted. **Order navy by No. 52E7308. Brown by No. 52E-7310. Send no money. Pay $4.48 and postage on arrival for either color.**

Same quality for children furnished in sizes 2 to 6 years. **Order navy by No. 52E7458. Brown by No. 52E7460. Send no money. Pay $3.48 and postage on arrival for either color. State size.**

Manchurian Wolf SCARF

$3.69



Look at this beautiful, soft, inexpensive Manchurian wolf scarf lined with messaline silk. Length about 44 inches. Width about 12 inches. Tail about 18 inches long and bushy.

Order black scarf by No. 52H9000. Order brown scarf by No. 52H9001. Send no money. Pay only $3.69 and postage on arrival.

Popular One-Strap One-Buckle Pump

Black Patent or Brown Calf Finish

$1.98

A leading style in all the big cities for fall wear. One-strap, one-buckle pump of rich black patent leather or brown calf finished leather, is well made with perforated sewed tip and medallion toe. Fancy perforation on vamp, strap and quarter. One-piece medium extension oak sole; low flapper walking heel with rubber top lift. Sizes 2½ to 8; wide widths. **Black patent, No. 52S20. Brown calf finish, No. 52S21. Send no money. Pay $1.98 and postage ■■ arrival for either leather. State size.**

Fur Trimmed Thibet Coat For Women

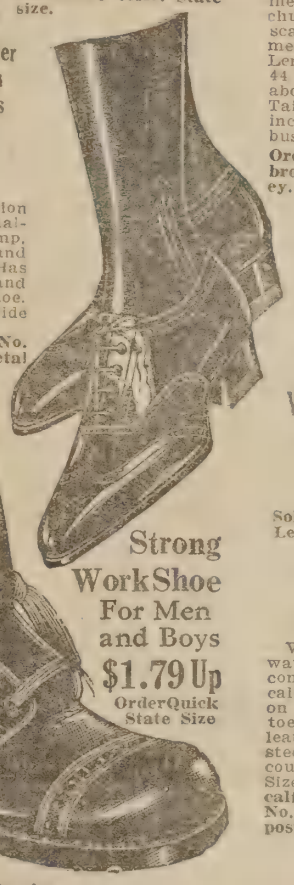
$5.98

Another sensational value in a warm winter coat. This becoming model is of splendid Thibet cloth in choice of rich brown or navy blue. The ample collar is of genuine brown Coney fur. Coat is finished with all-around self material belt and two patch pockets, trimmed with pretty buttons. Imitation cuff is also button trimmed. Coat measures about 48 inches long, and comes in sizes 34 to 44 bust.

Order brown by No. 52E7094. Navy by No. 52E7096. Order black by No. 52E7095. Send no money. Pay $5.98 and postage on arrival. State size. Order similar style black, with plush collar by No. 52E7097. Price $3.98.

Women's Patent Leather Gun Metal or Brown Calf Finished Oxfords

$1.98



Made with imitation shield tip and medallion perforated vamp, perforated lace stay and circular foxing. Has medium rubber heel and medium pointed toe. Sizes 2½ to 8. Wide widths.

Order patent by No. 52S121. Order gunmetal by No. 52S122. Order brown by No. 52S123. Send no money. Pay $1.98 and postage on arrival. State size wanted

Men's Four-Buckle All Rubber Arctics

$2.79

State Size

Order Quick.

Guaranteed best quality all rubber 4-buckle hi-cut arctic for men. Made with double thick soles and reinforced seams, snow-excluding tongue. Furnished in men's sizes 6 to 15. Wide widths. Sensational value. Send quick. **Order by No. 52A990. Send ■■ money. Pay $2.79 and postage on arrival.**

Strong Work Shoe For Men and Boys

$1.79 Up

Order Quick State Size

LIVESTOCK AND DAIRY

Pool Cattle

The advantage of pooling cattle grazed on the national forest ranges of Colorado last year over individual handling is brought out in a cost study just completed by the United States department of agriculture. Three hundred eighty-three ranchmen in 10 pools, comprising a total of 23,451 head of cattle, grazed their cattle at an average cost of $1.87 per head. Seventy-one individual operators outside of pools grazing 18,803 head of cattle paid an average of $2.26 per head.

Under the pooling system the members cooperate with one another and hire a rider or several riders to look after the cattle while on the reserve. All expenses of herding and salting cattle, maintaining drift fences, constructing new drift fences, camps or trails are pro-rated at the end of the grazing season. One or two hired riders do all the riding for as many as 50 members in some pools. The main savings made by the pools as compared with the individual system were in the cost and transportation of salt, feed for saddle horses and in construction and maintenance of trails, drift fences and camps.

The average cost of carrying the total of 42,254 head of cattle, both pools and individual profits, was $2.04. Grazing fees, labor and board of the laborers constituted from 75 to 85 per cent of the cost. The grazing fee was 27 per cent of the cost, the direct labor bill paid out to riders was 43 per cent of the cost, and groceries 10 per cent.

LOSES OUT IN THE MILK GAME.

Unfortunately, periods of maximum milk yield and maximum milk consumption do not coincide. The dealer must keep a number of cows that leave him a surplus of whole milk for the major part of the year, and dispose of the surplus, at less profit, for manufacturing purposes, or he must depend for the period of maximum consumption upon a supply obtained elsewhere, when milk is at a premium. The dealer who is not equipped to convert his surplus into manufactures is losing out in the milk game.

Learns Value of Tankage

"I am willing to admit that I am a beginner with hogs, but I have learned a lesson that will save me many dollars in the future and would have saved money for me in the past had I known more about the value of tankage," said Steve Woodhouse of Ellensburg, a breeder of registered Chester White swine. "I had one bunch of hogs which were kept in a pasture all to themselves and had access to a self feeder, but to which no tankage was added. The other lot had the same number of hogs, but they had tankage supplied by means of a separate section in their self feeder.

"When the hogs were marketed and the returns figured I found that the ones which had no tankage were sold at a loss of $6.62 for the six head, while the ones that were supplied with 10 per cent tankage in their ration netted a profit of $6.61 for the lot. All of the feed was purchased, but Mr. Woodhouse believes that he can in this way utilize much of his grain that is raised on the farm if he adds the right amount of tankage to the self feeder. Both pens had access to alfalfa pasture during the entire fattening period.

Mr. Woodhouse explained that much of the drudgery attached to the raising of hogs was eliminated by the use of the self feeder and this is an important item when labor is so hard to get and the wages higher than the average farmer can afford to pay. He believes that he can get a better price for his grain by grinding and feeding to the hogs than by attempting to raise more grain and sell it in the usual manner. The plan is a good one and is well worth a trial and could easily be taken advantage of by many other wheat farmers.

LIFE PRESERVERS FOR LIVESTOCK

By DR. E. E. WEGNER, W. S. C.

OUR ANIMAL FOOD PRODUCTS.

Little is said in the press about the danger of certain diseases being transmitted from animals to man, yet we know that certain ones may do this. Not infrequently we hear of some animal disease being transferred to a human being and for this reason we should know something about the dangers that are found in this association between man and his animals. I do not wish to emphasize this so greatly that any one will become panic stricken, but we have this condition to deal with and should look it squarely in the face.

Too frequently certain persons react to this subject by saying that we should dispose of all animals, and not be exposed to this danger; while others think that they should not eat meat or milk food products. Both of these reactions are wrong and the common sense ground is to take as much care as possible to see that we do not expose ourselves to the animal that has a disease that is transmissible, and to further protect ourselves by adding our influence to the movement to have all animal food products inspected before they are delivered to us for food, to assure ourselves that our animal food products are from healthy animals and are prepared in a cleanly manner.

Tuberculosis.

Probably the disease that attracts the most attention in connection with this subject is tuberculosis. We have known for many years that this disease was capable of being transmitted from animals to man and have taken the precaution to minimize this danger as much as possible. There are places, however, where nothing is being done to prevent this dreaded infection, and where the people do not know whether the milk that they drink or the meat that they eat is supplied from healthy animals or not.

Tuberculosis is easily taken up into the body through the digestive tract, mouth, throat, stomach and intestines, and usually gets in with the foods that we eat. How many people now reading this can say that they know the animals supplying them with their animal food products are

(Continued on page twenty-eight.)

GENERAL ADVERTISING.

Swedish Inventor Has New Oil Light

Claims Whiter and Much Cheaper Light Than Electric or Gas.

Edison enabled us to enjoy the benefits of electric light, Count Welsbach's mantle made it possible to have the incandescent gas light, but it remained for a Swedish engineer named Johnson, now living in Chicago, to devise a lamp that would burn ordinary, every day kerosene oil and produce a light said by the many scientists who have seen it to be whiter than electric. The lamp is as simple to operate as the old style oil lamp, burns without odor, smoke or noise and is proving a sensation where oil light is needed.

Mr. Johnson offers to send a lamp on ten days' free trial and will even give one to the first user in each locality who will help introduce it. A letter addressed to W. R. Johnson, 31 N. Fifth St., Portland, Ore., will bring full particulars about this wonderful new lamp. He has an interesting agency to offer, too.—Adv.

General Motors Trucks

Stay On The Job

Because they are built oversize and overweight in every part of both engine and chassis GMC trucks provide a surplus of strength that easily withstands the jolts and strains and heavy going that every farm truck must endure.

More—this extra strength keeps GMC on the job continuously. Wearing parts last longer—parts that bear the strain do not break.

And, GMC engine power is in keeping with GMC strength of construction. It will move the truck fully loaded any place where wheels can get traction.

VETERINARY

By DR. S. B. NELSON.

Ringbone Treatment—I have a horse which is troubled by ringbone. Will you publish a cure in your paper? G. A. R.
White Salmon, Wash.

If the ringbone is small and newly formed a heavy blister applied over it may be of value. The blister should be composed of red iodide of mercury, one part; powdered cantharides, one part; lard, six parts. Clip the hair off the area over the ringbone and rub it with the hands so as to get a good circulation into it. Then apply the blister with some friction, a little at a time, and rub for five or 10 minutes. Cover over the area with sufficient blister to make it about as thick as the back of a knife blade. The horse should be tied up so that he can not get at it with his mouth and blister his lips and tongue. In three or four days apply a little sweet oil or vaseline. The animal should have from two to three months' rest.

If the ringbone has been there a long time and is a fairly good sized one, in addition to this, before the blister is applied, he should be operated on by performing the operation known as "point firing." For this you would need the services of a veterinarian.

Sore Udder—I have a heifer fresh since May. About six weeks ago two or three small lumps formed in her left hind teat. These lumps seem to close the milk off. For a while the teat was sore inside, but does not seem to be now. N. B. R.
Ceres, Wash.

Paint the teat with tincture of iodine after each milking for a week or 10 days. If this does not improve you may have to use the following treatment:

If the trouble is caused by the closing of the membrane at the base of the teat near the udder, then you may have to use a "teat splitter." This instrument is closed and inserted, after it has been boiled, into the teat and pushed up through the membrane at the base of the teat, then the small knife is pushed out of the instrument and with the knife out drawn down through the membrane. The instrument is closed, pushed on up, turned half way around and opened and drawn down again. This is repeated by next turning it quarter of the way and then half the way again. When the wound heals the edges will contract and leave an opening sufficient for the milk to come down.

Sore Eyes—My cows have sore eyes. At first the lower part of the eye gets sore and then develops into a white growth over the whole eye and makes the cow blind. It seems to be very sore. I have been bathing the eyes with salt and water, but it does not help. Could you tell me what is the cause and what can be done for it? A READER.
Auburn, Wash.

Since you have a number of your cows affected with this disease, it is quite possible that it is ceratitis, a disease which runs a regular course through a herd of cows. You will find it valuable to separate the affected cows from the well ones. Also keep the affected cows in a dark place for some time. The following treatment is of value. Drop a 2 per cent solution of argyrol in water into the eyes two or three times daily.

For Sick Pig—I am writing about a pig of ours that seems to be sick. He won't eat; his legs seem to be paralyzed; he won't walk, and he has a cough. We feed him boiled potatoes, corn and a great deal of milk.
Hillyard, Wash. MRS. W. J. E.

Give the pig three grains of santonin, and two grains of calomel per 100 pounds of weight. Next day, give it one to three tablespoons of castor oil, according to its size. You are not liable to give an overdose. On the third day, begin giving five grains of potassium iodide in the feed once daily.

Asks About Kittens—I have two kittens that have something in their ears. The objects are as big as a bean and gray in color. They look like horse ticks. They don't seem to stick to their ears, for I have taken several out. There are small ones and big ones.
Toppenish, Wash. MISS H. P.

Try applying a 10 per cent solution of copper sulphate in water to the ear every two or three days. Be careful not to get any of the solution into the drum of the ear. Apply the solution with cotton and just hold it against the affected part.

Try Different Shoe—I have a mare that has a blood spavin on her hind leg. Could you give me a remedy for it. When she pulls hard it makes her limp. E. K.
Olympia, Wash.

You might try cutting the inside front quarter of the hoof off pretty thin. Then shoe her with a shoe where the inside toe has been hammered down fairly flat and the heels pretty thick. Maybe she will go better with that kind of a shoe than what you have on her. Try it.

Worms—I have a horse 9 years old that has worms. What will cure him? O. H.
Ridgefield, Wash.

Give your horse two teaspoonsful of dried iron sulfate on his feed morning and evening for one week; then starve him one meal and give him one quart of raw linseed oil with one ounce of turpentine well mixed with the oil as a drench.

Shoot a box of Remington Heavy Duck Loads

THE next time you go out after ducks take a box of the Remington *Heavy Duck* Load—the safe, hard-hitting, long range load. Comes in two gauges: 12-gauge, with No. 4, 5 or 6 shot, recommended for duck, brant and jack-rabbit, and 20-gauge, with No. 6, 7 or 7½ shot, recommended for duck, pheasant, rabbit, partridge, prairie chicken and grouse. The 20 is furnished in 2¾-inch shells—shoot them in a Model 17 Remington 20-gauge Pump Gun and you get the range and the power of a sixteen.

The Remington Heavy Duck Load is one of the new Remington Game Loads you've been hearing so much about. Shells loaded to *uniform* velocity, pattern and penetration—the right *shooting quality* for the particular kind of game you are going out after. Powder varies. Remington Game Loads do not.

Besides the Heavy Duck Load there are:

Recommended for Quail, Dove, Woodcock, Rail, Plover and Snipe. 12, 16 and 20-gauge; No. 8 Chilled or Soft Shot.

Recommended for Dove, Quail, Rabbit, Partridge, Grouse, Plover and Woodcock. 12, 16 and 20-gauge; No. 7½ Chilled or Soft Shot.

Recommended for Duck, Pheasant, Hawk, Crow, Rabbit, Partridge, Prairie Chicken and Grouse. 12, 16 and 20-gauge; No. 5, 6 or 7 Chilled or Soft Shot.

Recommended for Rabbit and Squirrel. 12, 16 and 20-gauge; No. 6 Chilled or Soft Shot.

Recommended for Goose, Fox, Turkey, and Raccoon. 12-gauge; No. 2 Chilled or Soft Shot.

Recommended for Squirrel and Rabbit. 12, 16 and 20-gauge; No. 6 Chilled or Soft Shot.

Recommended for Grouse, Prairie Chicken, Pheasant, Partridge, Dove, Rabbit, Duck and Squirrel. 12, 16 and 20-gauge; No 7 Chilled or Soft Shot.

Recommended for Deer, Black Bear and Wolf. 12-gauge; loaded with 12 pellets of No. 0 Eastern Shot.

Recommended for Snipe, Rail, Plover, Woodcock and Quail. 12, 16 and 20-gauge; No. 9 Chilled or Soft Shot.

12-gauge only; regulation charge of 1¼ ounces of No. 7½ Chilled Shot and special wadding.

Powder varies—*Remington Game Loads do not!*

Write for Booklet A—*"The Complete Story of Remington Game Loads."*

Remington

THE AUTHORITY IN FIRE ARMS, AMMUNITION AND CUTLERY

POULTRY AND RABBITS

Big Poultry Output

In the eight and one-half months, up to September 15, the Lynden branch of the Washington Cooperative Egg and Poultry association has shipped 47,429 cases of eggs, or 94 carloads, out of the county, most of which went to New York, Detroit and other eastern markets. The production this year is running approximately 300 cases per week over the production of last year, which amounts to nearly 1350 cases per week.

"Around Christmas and the second week in May we usually get our highest production of eggs," said Mr. Beernink, manager of the Lynden plant, "and our highest production has been 1606 cases, which was recorded last year. The Bellingham plant produced over 4000 cases that same week, which made a total of over 5500 for the two plants, which does not include all of the eggs in the county. Our membership in the county has reached over 1100, which includes a large portion of the 421,000 hens that were listed in the county on the last unofficial count. Ninety-eight per cent of these were White Leghorns."

In rearranging the candling room for greater efficiency in handling eggs, Mr. Beernink found that it was more convenient as well as a saving of time to have the egg cases pushed directly out into the mailing room through an opening in the partition in the candling room. The method, although very simple, eliminates much handling of the eggs on the part of the 10 candlers and they are therefore able to do more work each day. The new plan has been found very practical and it is being adapted by other plants, according to Mr. Beernink.

In the south half of the building the storage room is used for live poultry crates and it is here that the birds are fattened before going into the killing room. Storage is provided in the basement, and all dressed poultry carefully weighed, crated and packed before going into final storage, or shipped. Up to September 1, the Lynden plant has killed and dressed 89,121 hens and 46,329 head of broilers. This shows a great increase over the production of dressed poultry last year.

"We have developed our feed department largely to fill the demand for the members, and we find that the plan works out very successfully," said Mr. Beernink. "We have a separate building which takes care of all of this work and gives us all of the old building for the handling of eggs and dressed poultry. We have recently installed a large batch mixer which is used in preparing all of our mashes and dairy feeds. Our latest addition is a large grinder which will handle almost any kind of grain in large amounts and will save time as well as expense in the preparation of our different kinds of feed."

PREPARING TURKEYS FOR MARKET.

Dressing of turkeys for market should be carefully done to bring good prices. The feathers come off easily if the bird is killed by being hung up by both feet and then stuck through the roof of the mouth and so through the brain. Use a sharp, pointed knife. In packing many turkeys for the market, pack the hens and toms separately. They look better that way.

Laying Contest

The high hen in the State College of Washington egg-laying contest, which closed October 31, is owned by Fish Brothers of Seattle. It is a single comb White Leghorn and she laid a total of 314 eggs in the 365 days of the contest. She was closely followed by a hen from the pen of J. A. Duff of Tukwila, Wash., which laid 313 eggs during the year.

Third place in the individual bird record was won by hen number 50 of the Hollywood Paultry farm with a total of 309 eggs. There were three hens that tied for fourth place, all of which were single combed White Leghorns, and laid 304 eggs each. They were owned by H. J. Karcher of Olalla; the B. Z. R. Poultry farm at Puyallup and the Piatt's Poultry farm of Corvallis, Ore. The high pen records were Fish Brothers first, with a total of 1348 eggs; B. C. Young & Co. of Bellingham, with 1324 eggs, and J. A. Duff, 1291 eggs; Mrs. D. Tancred of Kent, with 1270 eggs.

There were three pens that made a run for the student's cup, which was given by the alumni students of the winter short course in poultry raising, which is given each year at the station. C. W. Shaffer won the cup with a pen record of 1177 eggs. The other two contestants for this prize were Riverside Poultry farm of Auburn, Wash., and S. D. Sanders of Puyallup. These contestants were the only alumni of the short course who entered the contest this year. Mrs. Covington of Vashon, Wash., now has possession of the cup, having won it last year. It is to become the permanent property of the person who wins it three years in succession.

The rules of the contest which has just been completed are more stringent than other contests which are held throughout the United States. No floor eggs, eggs that are laid in the litter, are counted, but only eggs that are found with the bird in the trapnest are credited to her record. Heretofore the floor eggs were counted up each month, and the total divided among the number of birds in the pen, crediting each hen with an equal share. While this is being done in some of the other contests it was not allowed at Puyallup last year, nor will it be allowed this year.

A further rule requires that all eggs laid after the fourth month must be 50 per cent standard eggs. Six birds are allowed in a pen, but only the record of the five highest birds are counted in the final contest. No substitute bird can be counted unless she has been in the pen during the entire year.

It is interesting to note the increase in production as shown by the steady progress of the contest. In the first contest which ended October 31, 1920, there were two birds that laid 312 eggs, while this record was raised to 313 the following year. The third year the world's record was beaten beyond all expectations with 335 eggs, which still stands unbeaten at any official contest. In the second contest there were seven birds over 300, while there were eight last year, and nine in the contest which is just finished.

A word might be said about the next year's contest which began November 1. There are a total of 122 entries, or 13 more than were entered last year. All possible room which could be used for this purpose has been pressed into service and the station officials will not be able to enlarge the contest until more buildings are provided. The contest was full October 1, and there were a large number of applications turned away who came in after that date.

Of the 122 entries that have been entered for the 1924, the fifth annual contest, 63 are from Washington breeders and 25 from Oregon. California has eight entries, while Idaho, Utah and Missouri each have four entries, and Canada three. The following states have one entry each: Montana, Illinois, Kentucky, Colorado, Ohio, New Jersey, Iowa, New York and Tennessee. The White Leghorns are the largest represented with 80 pens, while Barred Rocks rank second with 11 entries. There are ten pens of White Wyandottes, five of the Rhode Island Reds and five Single Combed Buff Leghorns. The other breeds represented are the Rose Comb Rhode Island Whites, Columbian Plymouth Rocks, Blue Andalusian, Ancona, Rose Comb Brown Leghorn, White Rock and Black Jersey Giant.

SEVEN HUNDRED YEARS AGO.

The first mention of zinc by a European dates from the year 1231.

ORCHARD AND GARDEN

Protect the Bees

If you expect your bees to go through the winter in the best of shape the colonies should be protected against the cold weather, especially on the east side of the Cascades. The extension service of the state college gives the following directions for the protection of bees in eastern Washington. A four-colony packing case for bees may be constructed by making the bottom 44 inches by 52 inches; sides of case 53 5-8 inches by 35 3-8; ends of case 44 by 38 3-8 inches and telescope cover 48 by 56 inches. Make a 3-8-inch runway from hives to holes bored in case, made of two boards fitted together so 3-8 inch is left between them. Leaves, clover, chaff or shavings may be used as packing. Four inches below, six inches on all sides and eight inches on top is the best thickness of the packing.

For western Washington the following suggestions have been made: a six-inch rim of cedar boards on second story of hive. Place wire screen over hole in inner cover. Place cushion of clover chaff or sphagnum moss surrounded by a half gunny sack in this rim. Wrap tar paper around two stories and rim. This leaves seven inches sticking up above all. Cut corners, fold paper over cushion, place on metal cover. If no telescope cover, make one of tar paper. Contract entrance 4x3-8 inches. Strip two inches wide and width of hive cut out for entrance.

Apple Outlook

New York is regarded as the foremost competitor of northwestern apples. Not only is New York's apple crop short but the fruit this year is small and of poor quality, due to the drouth. The production of apples in the middle west was also reduced by the hot weather and the quality lowered. H. M. Gilbert, a pioneer Yakima orchardist and business man, who thus summarizes the situation, sees a bright outlook for the Winesaps, Yakima valley's leading apple crop. He finds that the weather in the east is turning cold, increasing the demand for apples during November, the greatest apple-consuming month. The high wages still prevailing in the east make more money to spend for fruit and other luxuries.

The Yakima orchardists were a little discouraged over the market for early varieties this year, notably the Jonathans, due to the fact that both Yakima and Wenatchee forced their apples in great quantities upon the eastern centers while the weather was still warm and the demand poor, according to Mr. Gilbert. Mr. Gilbert adds: "What we need here in the Yakima valley, and the need in Wenatchee is even more pronounced, is more storage facilities.

The latest estimates place the output of Yakima valley orchards this year at 21,130 cars of apples and other fruits, the greatest yield in the history of the district. It is estimated that this output will return about $18,000,000 to growers. The soft fruit tonnage from the Yakima valley has already reached 7630 carloads, including 3000 cars of pears. Of the three million trees in the Yakima orchards, 2,100,000 are apple trees, about 360,000 each of pear and peach trees and the rest are prunes, plum and cherry trees.

The valley has facilities to store 11,795 cars of apples, divided as follows: 4490 cars in cold-proof storage; 6150 cars in frost-proof storage, and 1155 cars in common, non-frost proof storage.

Fall Weeds in Berry Patch

Fall weeds in a berry patch are not serious unless they become too large and it is often better to leave the patch uncultivated, since cultivation prolongs the growth of the plants. In our mild climate of western Washington we want the canes to stop growing and harden off before the cold weather sets in, according to H. D. Locklin, horticulturist of the Western Washington Experiment station at Puyallup. A good discing at this time will prevent most weeds seeding and the tops will act as a cover crop when plowed under.

As soon as possible after harvest all old canes of raspberries and loganberries should be removed by cutting off a few inches above the ground. This practice lessens the chances of the young canes becoming infested with insects and diseases from the old canes, besides allowing the sun and air to better harden up the canes before winter freezes come. These are both very important points, as western Washington berry growers are finding out.

Most good berry land needs more vegetable matter. This material can best be supplied by a winter cover crop of common vetch and fall rye seeded at the rate of 40 pounds of vetch and 80 pounds of rye to each acre of berries. Drill or broadcast in late August or early September. This cover crop is plowed under the following spring during late March or April.

Barnyard manure is still the best all-around fertilizer we have. Practically all berry land needs manure. Apply in the fall at the rate of eight to 10 tons per acre and plow under, leaving the dead furrow in the center between the rows to act as a drainage ditch. Re-plowing in the spring, throwing the dirt from the vines, puts the ground in a good water-holding condition and lessens the amount of space to be hoed. Plowing should be delayed to late October or early November.

Now is a very good time to mark or dig out weak and diseased hills. While the leaves are still on much more can be told regarding the health and productiveness of the plants. All plants which are dead or which have not made a reasonably good growth, whose leaves have curled back from the tips, or are mottled and abnormally narrow, should be dug out and burned. One sick plant in 10 will cut your yields down 10 per cent, to say nothing of the chances of infecting surrounding plants.

Creeping Bent-Grass

Creeping bent-grass is proving to be a very good lawn and pasture grass for western Washington, according to M. E. McCollam, agronomist of the western Washington experiment station. This grass is better known as the fine-leaved running grass that grows along the tide flats. When planted in a lawn it increases rapidly and crowds out other grasses and will stand much bad usage.

"While creeping bent-grass can be seeded in the usual manner in well-prepared soil, it can also be started by scattering sections of the stems and roots over the top of the soil and rolling them in," said Mr. McCollam. "When planted in this manner the stalks will take root at every joint and scatter their growth over the entire surface of the ground in a short time. In some of the eastern states where turf is needed for football fields, they will frequently contract for the grass to be in shape in six months' time. In such cases the contractors make small furrows and lay the roots in them and let the growth spread out over the rest of the surface of their own accord."

Pacific International Horse Show

The breeding classes of the horse show at the Pacific International compared favorably with former years, both as to numbers and quality. While there was no sensational advance, there was a decided improvement, which was the most marked in the Percheron division, where the carload entries from the breeding farm of Singmaster & Son of Keota, Iowa, tried out conclusions with the best in the west. It must be admitted that the eastern horses generally won. The Percherons made the largest show, but Shires and Belgians developed sharp competition, and the one Clydesdale exhibitor showed previous champions and their offspring. It was an excellent, well-balanced show, of which the management and the state may well be proud.

While no record of the light horse show, which furnished the night entertainment, is given here, it is well to mention the fact, attested by good judges, that no better show of the kind has been held this year in America. The high jumpers, light and heavy harness and gaited saddlers represent much investment of money, rich blood lines and perfection of action. There is no question of the interest in the night horse show, as shown by the great attendance, commencing with the first night and ending with the last one. The four and six draft horse driving contests were held at night. They were not finished when this was written, but were, as last year, one of the chief attractions of the show, and some beautiful driving was witnessed. Taken as a whole, the horse show indicates that the horse is "coming back," to a considerable extent, at least.

PERCHERONS.

Compared to last year there was a distinct improvement in the Percheron show, in spite of the fact that last year's show was of very high average quality, and this in spite of the fact that last year's grand champions were both absent. Each of them would probably have won in class and D. F. Burge's wonderful filly colt would probably have been junior champion, in the opinion of most of the ringside talent. But there was the entire string of Singmaster & Son of Keota, Iowa, most of which went to the top of their classes, and A. C. Ruby had about seven new mares and most of them stood at the top. The effect was apparent, and the claim of a better Percheron show than ever before is reasonable. Competition was sharp and close in almost every class, but the type was uniform enough to make decisions satisfactory, after they were made. The senior and grand champion stallion, Maple Grove Coco, has size, bone and substance. He has action and, while his legs are long enough, he looks massive and drafty. The junior champion, Maple Grove Sensation, is a growthy yearling of a beautiful steel gray color, with fine action and weight and breed character. Both are Singmaster & Son entries and they won both the female championships.

The Awards.

Herd sire, 8 years or over—First, D. F. Burge, Albany, Ore., on Casino; second, A. C. Ruby, Portland, Ore., on Viscount; third, C. W. Bowers & Co., Sacramento, Cal., on Romulus. Four years and under 8—First, second and fourth, J. O. Singmaster & Son, Keota, Iowa, on Maple Grove Coco (senior and grand champion), Maple Grove King and Maple Grove Cricket; third, D. F. Burge, Albany, Ore., on Careno; fifth, Ruby on Aclide Jr. Three-year-olds—First and second, Singmaster & Son on Maple Grove Abe and Iowa Lagos. Two-year-olds—First and second, Singmaster & Son on Maple Grove Sensation (junior champion); second, Ruby on Casidore. Stallion colts—First, Ruby on Presto; second and third, Burge on Careno Jr. and Casino Jr.

Brood mare, 8 years or over—First, Burge on Coquette; second, Ruby on Blark Beauty. Four years and under 8—First and second, Singmaster & Son on Fairholme Lagoretta and Pearl; third and fourth, Ruby on Nedrane 2d and Iris; fifth and sixth, Burge on Julep and Greavette. Three-year-olds—First, Singmaster & Son on Maple Grove Carteline (senior and grand champion); second and fourth, Ruby on May Belle and Lola; third, E. T. Evans, Monmouth, Ore., on Liberty Queen. Two-year-olds—First, Ruby on Cassano; second, Evans on Gallant's Beauty. Yearlings—First, Singmaster & Son on Maple Grove Maggie (junior champion); second, Ruby on Kosseus. Filly colt—First, Charles Webber, Brownsville, Ore., on Carmelle.

Mare and colt—First, Ruby; second, Burge. Get of sire—First and second, Singmaster & Son; third, Ruby. Produce of dam—First and second, Singmaster & Son; third, Ruby. Five animals—First, Singmaster & Son; second, Ruby.

BELGIANS.

While the Belgian show was not large, every class had one or more entries, and six exhibitors made real competition. A. C. Ruby of Portland was the largest exhibitor and, while he was the heaviest winner, awards were pretty well divided, three exhibitors from Idaho taking home one championship and a fair share of the money. W. J. Kennedy of Sioux City, Iowa, who judged both Belgians and Clydesdales, declared both breeds had a decidedly creditable lot of entries and that competition among the Belgians made it an interesting show. Grand championship on stallion went to J. E. Miller of Idaho Falls, Idaho, on the 10-year-old herd sire, Mack, a horse of much substance, with bone and remarkably clean legs for his age. Junior honors were won by J. M. & L. F. Mueller of Oregon City, Ore., on Brilliant d'Or, a very promising yearling. The great mare, Christabel, owned by A. C. Ruby, now almost 17 years old, and never yet defeated, still showing a good back, plenty of vitality and breedy looking, was made senior and grand champion. She had strong competition in class and at the head of the other classes, but took the judge's eye. Ruby also won junior championship on his unnamed filly colt.

The Awards.

Stallions: Herd sire, 8 years or over—First, J. E. Miller, Idaho Falls, Idaho, on Mack (senior and grand champion). Four years and under 8—First, A. C. Ruby, Portland, on Pride of Oregon; second, Richard Martin, Idaho Falls, Idaho, on Marius du Mal; third, Miller on Gen. Pershing. Three-year-olds—First, J. M. & L. F. Mueller, Oregon City, Ore., on Iams. Two-year-old—First, Miller on Cristal. Yearling—First, Mueller on Brilliant d'Or (junior champion). Colt—First, C. R. Linger, Idaho Falls, Idaho, on Confidence.

Females: Brood mare, 8 years or over—First and second, Ruby on Christabel (senior and grand champion) and Derner; third, Martin on Tutsy; fourth, Mueller on Corinne. Four years and under 8—First and second, Linger on Black Beauty and Lady Irene; third, Martin on Mabel; fourth, Ruby on Ina. Three-year-old—First, Ruby on Irma. Two-year-old—First and second, Ruby on Margery and Duchess; third, Linger on Queen of Sunnycrest. Yearling—First, Ruby on Frances. Colt—First, Ruby on unnamed (junior champion); second, Linger on Tutsy 2d.

Mare and foal—First, Martin; second, Ruby; third, Linger. Get of sire—First, Miller; second; Ruby. Produce of dam—First and fourth, Linger, second, Ruby; third, Miller. Five animals—First, Ruby; second, Linger.

SHIRES.

The Shire show was characterized by uniformity of type and average quality very gratifying when it is considered there were six exhibitors. The champions can hardly be said to be outstanding animals, but they are Shires whose breed character would mark them anywhere, and none has any serious faults. Galtmarsh, senior and grand champion stallion, stands up well under his nine years and has bone and substance as well as type. He was the only entry of his owner, R. W. Milligan of Idaho Falls. The same is true of Martha Washington of the M. W. Merritt string. She has made a big circuit this year, has never been defeated in class and has won a number of championships. The junior champions were each found in the colt classes, and the quality they showed made the selections popular.

The Awards.

Herd sires, 8 years or over—First, R. W. Milligan, Idaho Falls, Idaho, on Galtmarsh Duke (senior and grand champion); second, H. W. Merritt, Rosalia, Wash., on Champ Clark; third, A. C. Ruby, Portland, Ore., on George B. Four years and under 8—First, Ruby on Mountain King. Three-year-old—First, Merritt on Forest Prince. Two-year-old—M. W. Merritt, Rosalia, Wash., on George Cooper; second, H. W. Merritt on Sire Gould. Yearling—First, W. A. Clark, Tekoa, Wash., on Rothwell Rambler. Colt—First, M. W. Merritt on Prince Albert (junior champion); second, H. W. Merritt on Henry Ford.

Brood mare, 8 years or over—First, M. W. Merritt on Moricoa Pride; second, H. W. Merritt on Primrose Victoria. Four years and un-

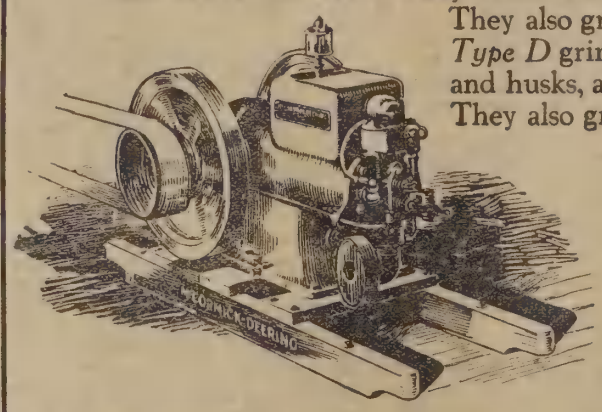
Feed Your *Low-Grade* Wheat

McCORMICK-DEERING—*the grinder with double-faced, self-sharpening grinding plates. Ask for a demonstration at your dealer's store.*

ON the advice of the best authorities, wheat is now being fed to make pork. Wheat at 75 cents a bushel [or less when it is low-grade, shrunken, and unsalable] has a hog-feeding value of $1.00 a bushel—and it is from 8 to 10% more valuable than corn as a pork builder. It is nutritious and palatable and has more mineral matter and protein. Two objects are gained by wheat feeding—the low-grade surplus is turned into good money on the farm, and the price of No. 1 wheat will be pushed higher.

All authorities agree that, because of its hardness, wheat must be ground for feeding. Coarse grinding releases 10 to 22% more feeding value. Here McCormick-Deering Feed Grinders are especially well fitted to come to the aid of the farmer. Famous for years for their fast, many-sided work in small grain grinding, they are ideal for handling surplus wheat just as desired.

There are three types and sizes of McCormick-Deering Feed Grinders. The *Type C* handles small grains and shelled corn or a mixture of both. The *Type B* mills are for ear corn. They crush the cobs and grind cobs and corn together. They also grind small grains and shelled corn. The *Type D* grinds corn in the husk, pulverizes the cobs and husks, and makes a fine meal of the whole mass. They also grind corn on the cob and small grains.



Ask for a demonstration of these general-purpose grinders at the store of the McCormick-Deering dealer. See what they will do for wheat or any other grain, or for corn in any shape. Let them show you how to get maximum food value out of grain when run by the most economical power—McCormick-Deering Kerosene Engines.

INTERNATIONAL HARVESTER COMPANY
606 S. Michigan Ave. of America (Incorporated) Chicago, Ill.

McCormick-Deering Corn Shellers

DO not forget that now is the time to prepare for your corn shelling. McCormick-Deering shellers have made excellent records for clean work and durability. They are made in seven sizes and styles, covering hand shellers, hand and power shellers, and large cylinder shellers for single farms or custom use. Capacities range from 20 bushels up to 400 bushels per hour. Here again McCormick-Deering engines and McCormick-Deering Tractors provide the most satisfactory power.

Herefords.

An even larger show of Herefords than a year ago was made by the white-face breeders. Besides Oregon, entries came from California, Idaho, Montana, Washington, Utah and Colorado and from British Columbia. The Boggs herd, from the British territory, showed the highest fitting of any herd, perhaps, that has yet been shown here. It is of high quality throughout, but reaches its acme in the mature bull, Alberta Panama, that was made senior and grand champion. He is so massive, with such a deep chest, so strong a back, so smooth all over and so nearly faultless as to make him apparently invincible. Awards were well divided and junior championship went to the junior calf, Mountcrest Mixer 2d, a Mountcrest ranch entry from California. He has masculinity, size and true Hereford type. The senior and grand champion cow, Princess Panama 2d, has great scale, great quality and remarkable breed character. She defeated Catherine 10th in class, that had stood above her at all previous shows this year, and then had no trouble in winning over the younger cows. Princess Ada, the junior champion heifer, another Mountcrest entry, is a well-fitted, breedy, thick, typy heifer of much scale for age.

Judge: James L. C. Painter, Roggan, Col.

Bulls: Aged—1, O. A. Boggs & Sons, Daysland, B. C., on Alberta Panama (senior and grand champion); 2, Diamond B ranch, Lowell, Ore., on Don Fairfax; 3, Herbert Chandler, Baker, Ore., on Debonair 119th. Two-year-old—1, A. B. Cook, Townsend, Mont., on Panama 140th; 2 and 6, Weatherford Brothers, Dayton, Wash., on Majestic Fairfax and Don Blanchard 3d; 3 and 5, Boggs & Sons on Dudley Panama and Alberta Panama 3d; 4, Chandler on Bonnie Prince 2d; 7 and 8, William P. Emery, Macleay, Ore., on Ikey and Marion Donald. Senior yearling—1, Diamond B ranch on Don Rupert 7th; 2, Mountcrest ranch, Hilt, Cal., on Prince Perfect; 3, Henry Thiessen, Sweetwater, Idaho, on Bonnie Master; 4, Chandler on Prince Donald; 5, Winterton Brothers, Charleston, Utah, on Debonair 26th. Junior yearling—1 and 2, Mountcrest ranch on Beau Sunshine and Ranger; 3, Winterton Brothers on Debonair 31st; 4, Oregon Agricultural college, Corvallis, Ore., on Anxiety March; 5 and 6, Diamond B ranch on Choice Gomez and Oregon Gomez; 7, Chandler on Rupert Debonair 2d; 8, University of Idaho, Moscow, Idaho, on Hopeful Brummel; 9 and 10, Cook on Donald Panama 3d and Donald Panama 2d. Senior calf—1, Mountcrest ranch on Mounterest Mixer 2d (junior champion); 2, Cook on Carlos Panama; 3, Winterton Brothers on Debonair 42d; 4, Weatherford Brothers on Don Blanchard 25th; 5, Cook on Panama 161st; 6, Boggs & Sons on Columbus Don Jr.; 7, Chandler on Donald Rupert 9th; 8 and 10, Henry Thiessen on Bonnie Pearl and Bonnie Grove; 9, Emery on Sherlock Donald. Junior calf—1, O. A. C. on Anxiety Junior; 2, Cook on Donald Panama 6th; 3, Thiessen on Ideal Bonnie 2d; 4, Chandler on Prince Weston; 5 and 6, Weatherford Brothers on Don Blanchard 27th and Don Blanchard 30th; 7, Diamond B ranch on J. S. Gomez.

Group of three bulls owned by exhibitor—1, Mountcrest ranch; 2, Cook; 3, Diamond B ranch; 4, Boggs & Sons; 5, Thiessen; 6 and 9, Chandler; 7, Winterton Brothers; 8, University of Idaho.

Group of two bulls bred and owned by exhibitor—1, Boggs & Sons; 2 and 4, Mountcrest ranch; 3, Cook; 5, Winterton Brothers; 6, O. A. C.; 7, Thiessen; 8, Diamond B ranch; 9, Weatherford Brothers; 10, Chandler.

Females: Aged—1 and 2, Cook on Princess Panama 2d (senior and grand champion) and Catherine 10th; 3 and 6, Boggs & Sons on Panama Lady 2d and Miss Panama; 4, Mountcrest ranch on Florence Debonair; 5, Chandler on Semoline 2d; 7, Weatherford Brothers on Rub Lass; 8 and 9, Thiessen on Miss Rupert 2d and Perfect Queen 24th. Two-year-olds—1 and 5, Cook on Lady Panama 105th and Princess Joy; 2 and 9, Mountcrest ranch on Bonnie Jane and Blossom Joy; 3, Diamond B ranch on Illah Fairfax; 4 and 6, Boggs & Sons on Panama Lady 3d and Miss Columbus Panama 2d; 7, Thiessen on Princess Debonair; 8, Winterton Brothers on Belle Marie 4th; 10, Chandler on Princess Donald. Senior yearling—1, 2 and 3, Mountcrest ranch on Miss Frances, Betty Blanchard and Lady Annabelle; 4, Cook on Lady Panama 109th; 5 and 7, O. A. C. on Sister Perfection and Marie Rupert; 6, Thiessen on Bonnie Rupert; 8, Harold Holmes, Mabton, Wash., on Eliza 2d. Junior yearling—1, Chandler on Bonnie New Year; 2 and 7, Mountcrest ranch on Lady Eileen and Wild Cherry; 3 and 4, Boggs & Sons on Panama Lady 4th and Lady Dudley 2d; 5 and 6, Cook on Joy 4th and Zool Panama; 8, Diamond B ranch on Lady Gomez; 9, Weatherford Brothers on Betty Blanchard 24th; 10, Thiessen on Bonnie Mabel. Senior calf—1, 4 and 5, Mountcrest ranch on Princess Ada (junior champion), Mountcrest Pansy and Hortensia 8th; 2, Weatherford Brothers on Betty Blanchard 35th; 3, Chandler on Miss Golden; 6, Thiessen on Perfect Lassie; 7, Boggs & Sons on Miss Columbus Panama 3d; 8, Cook on Sweet Panama; 9 and 10, O. A. C. on Phoebe and Caroline. Junior calf—1 and 3, Cook on Lady Panama 120th and Joy 7th; 2, Thiessen on Bonnie Maid; 4, Weatherford Brothers on Betty Blanchard 37th; 5, Montana State college, Bozeman, Mont., on Gwennie 6th; 6 and 8, Diamond B ranch on Princess Gomez and Blanch Gomez; 7, Winterton Brothers on Princess Lady 3d; 9, Chandler on Peaceful 2d.

Graded herd—1, Cook; 2 and 3, Boggs & Sons; 4, Chandler; 5, Weatherford Brothers. Yearling herd—1 and 2, Mountcrest ranch; 3, Cook; 4, Chandler; 5, Thiessen; 6, Boggs & Sons; 7, O. A. C. Pair of calves—1, Mountcrest ranch; 2, Cook; 3, Winterton Brothers; 4 and 10, Chandler; 5, Thiessen; 6, O. A. C.; 7 and 8, Weatherford Brothers; 9, Boggs & Sons. Get of sire—1, Boggs & Sons; 2 and 4, Mountcrest ranch; 3, Cook; 5, Winterton Brothers; 6, Thiessen; 7, Chandler; 8, Weatherford Brothers; 9, Diamond B ranch; 10, O. A. C.

Aberdeen Angus.

The show of the blocky blacks was probably the best yet made here. Two exhibitors showed full herds and two others showed a few. The Congdon & Battles herd was at least as good as it ever showed and the J. A. Scollard herd decidedly better. Awards were fairly well divided, with Congdon & Battles the heaviest winner. Scollard had senior champion bull, with the big, deep-fleshed Erickman C. B. 5th, and Congdon & Battles had both junior and grand on the senior yearling Blackmore 16th. He is wonderfully smooth, and the judge pronounced him exceptionally good over both shoulders and rump. Both female championships went to Congdon & Battles. Pride of Rosemere 37th, the senior, is a smooth, well-covered, very deep-bodied cow. But the senior yearling, Barbara C. B. 2d, is such a wonderfully developed heifer and so smooth, deep and breedy that she was made grand champion. The awards:

Judge: W. J. Kennedy, Sioux City, Iowa.

Bulls: Aged—1, J. A. Scollard, Chehalis, Wash., on Erickman, C. B. 5th (senior champion); 2, Congdon & Battles, Yakima, Wash., on Prizemere 10th. Two-year-old—1 and 2, Congdon & Battles on Blackbirdman of Rosemere and Queenmere 14th; third, Scollard on Blackmeade 2d. Senior yearling—1 and 2, Congdon & Battles on Blackmere 16th (junior and grand champion) and Erickman C. B. 8th. Junior yearling—1, Scollard on Gloriamead; 2 and 3, Congdon & Battles on Blackmere 15th and Prideman C. B. 22d. Senior calf—1 and 2, Congdon & Battles on Barbarian of Rosemere 7th and Prideman C. B. 25th; 3, Washington State college, Pullman, Wash., on Jerome's Queenman; 4, Scollard on Barbarian of Rosemere 6th. Junior calf—1 and 3, Congdon & Battles on Irenemere 6th and Prizemere 30th; 2, Scollard on Blackmeade 3d.

Three bulls owned by exhibitor—1 and 3, Congdon & Battles; 2, Scollard. Two bulls owned and bred by exhibitor—1 and 2, Congdon & Battles; 3, Scollard.

Females: Aged—1, Congdon & Battles on Pride of Rosemere 37th (senior champion) 2, Scollard on Broadmeade Mammy; 3, Harvey Barnum, Mabton, Wash., on Doris of Dundee. Two-year old—2, 3 and 4, Congdon & Battles on Barbara of Rosemere 33d, Pride of Rosemere 40th and Queen of Rosemere 15th; 2, Scollard on Blackcap of Breadmead. Senior yearling—1 and 2, Congdon & Battles on Barbara C. B. 2d (junior and grand champion) and Erica C. B. 6th. Junior yearling—1 and 2, Congdon & Battles on Queen of Rosemere 16th and Pride of Rosemere 47th; 3 and 4, Scollard on Eric 4th of Broadmead and Bonnie Rose of Broadmead. Senior calf—1 and 3, Scollard on Gloria of Broadmead 7th and Heather of Broadmead; 2 and 4, Congdon & Battles on Blackcap of Rosemere 21st and Blackcap of Rosemere 20th. Junior calf—1, Scollard on Blackcap of Broadmead 4th.

Graded herd—1, Congdon & Battles; 2, Scollard. Yearling herd—1 and 3, Congdon & Battles; 2, Scollard. Pair of calves—1, Scollard; 2 and 3, Congdon & Battles. Get of sire—1 and 3, Congdon & Battles; 2 and 4, Scollard.

DAIRY CATTLE.

Holsteins.

The black-and-white breed this year lost the position of eminence in numbers which it attained last fall, but it maintained the high average of quality which was set a year ago, as evidenced by the fact that the eastern judge who has officiated at nearly a score of state and district fairs this fall asserted—and backed up his assertion by comparisons right down the line—that the lineup of females at the Pacific International was not surpassed anywhere.

In one or two instances, at least, he put prize winners at the National below animals brought out here and he openly complimented breeders at the ringside on the quality displayed by the group of female contenders for championship honors. He said he had not seen its equal for several years. There were those who did not agree with his selection of Tillamook Daisy Butter King De Kol for first prize aged cow, senior and grand champion, over Model Segis Prilly Gelsche, the only other contender, but his explanation of the award and his development of it later at the Holstein judging school satisfied most.

Carnation Stock farms, the biggest exhibitor, swept the boards clean of championships and its winnings all through were heavy. Its animals won three blues in the bull classes to two by John L. Smith's, principal competitor, and five in the female classes to three of the Spokane man's entries. The latter "upset the dope" by winning the $1000 six-piece silver teaset offered by the eastern Holstein guests of 1921 for produce of dam bred by exhibitor, which has been won once by Carnation and must be won twice to become permanent property, and Hollywood farm won a leg on the Matador Segis Walker trophy, the beautiful silver cup offered by Carnation Stock farms for the best breeder's young herd, thus prolonging for another year, at least, competition on a trophy that was thought to be Smith's, almost for a certainty. "John L." took home for keeps one tea set, however, that was offered by President I. E. Staples of the Oregon Purebred Live Stock association for best calf herd. The Idaho breeders who were out last year were missed from the ring. Bull classes, on the whole, were mediocre.

Judge: R. E. Haeger, Algonquin, Ill.

Bulls: Aged—1 and 2, Carnation Stock farms, Seattle, Wash., on Matador Segis Walker 6th (senior and grand champion), and Matador Segis Walker Gerben; 3, J. Luscher & Son, Fairview, Ore., on King Segis Matador Veeman; 4, Vandecoevering & Evers, Forest Grove, Ore., on Matador Segis Walker Lad; 5, Ward Gano, Moscow, Idaho, on King Segis Violet Posch Idaho; 6, Clyde Madsen, Salem, Ore., on College Belle Mercedes. Three-year-old—1, Albert J. Evers, Forest Grove, Ore., on Verboort Prince; 2, Max Arp, Eugene, Ore., on Aaggie Colantha Gerben. Two-year-old—1, John L. Smith, Spokane, Wash., on Hazelwood Heilo Butter King; 2, James C. Chamberlain, Ceres, Wash., on Harry Waldorf of Cerealia; 3, Hollywood farm, Hollywood, Wash., on Goliah of Hollywood. Senior yearling—1, Carnation Stock farms on Ensign Matador Model Abbekerk (junior champion); 2, R. S. Fulton, Seattle, Wash., on Prince Diona Matador; 3, J. Luscher & Son on Segis Ruby Bonheur. Junior yearling—1, Smith on Hazelwood Fayne Ormsby Posch; 2, Adams' Eden farm, Warren, Ore., on Adamseden Pietertje Lyons De Kol. Senior calf—1 and 4, Carnation Stock farms on Harvest Jewel Matador and Commodore Matador; 2, Thomas J. Owens, Kirkland, Wash., on Firloch Piebe Veeman; 3 and 5, Hollywood farm on Goliah of Hollywood 2d and Judge Segis 20th; 6 and 7, Smith on Hazelwood Stella King and Hazelwood Heilo Butter Boy; 8, Arp on unnamed; 9, Germaine Van Basteleare, St. Johns, Ore., on Judge Hartog Segis Ormsby; 10, Washington State college, Pullman, Wash., on Chinook Piebe Ike. Junior calf—1, H. R. Shoultes, Adna, Wash., on Sir Adna Perfection; 2, Smith on Hazelwood Segis Pontiac; 3, Hollywood farm on Goliah of Hollywood 3d; 4, Arp on unnamed; 5, Peerenboom & Evers, Forest Grove, Ore., on unnamed; 6, Carnation Stock farms on Matador Segis Walker 13th; 7, Chamberlain on Korndyke Burke of Cerealia; 8, Adams' Eden farm on King Walker Aaggie; 9, J. Luscher & Son on King Matador Aaggie.

Females: Aged—1 and 3, Carnation Stock farms on Tillamook Daisy Butter King De Kol (senior and grand champion), and Tillamook Lola May De Kol; 2, C. J. Berning, Mt. Angel, Ore., on Model Segis Prilly Gelsche; 4, Hollywood farm on Snowball Powers Mutual; 5 and 6, Arp on Celusa Belle Korndyke and De Kol Wayne Rags; 7, Chamberlain on Donnybrook Harriet Waldorf. Four-year-old—1, Smith on Hazelwood Pauline Fayne; 2, William McKeown, Gresham, Ore., on Beauty Oregon Artis; 3, Chamberlain on Frances Cornucopia of Cerealia; 4 and 6, Hollywood farm on Segis Belle Pontiac and Hollywood Segis Adventuress; 5, Carnation Stock farms on Carnation Matador Queen. Three-year-old—Smith on Hazelwood Leda Heilo Korndyke; 2 and 5, Arp on Mercedes Wayne Alcartra and Lucy Freela Pontiac 3d; 3, Evers on Josephine Segis Walker Lass; 4, Carnation Stock farms on Carnation Matador Addie Segis. Two-year-old—1, Smith on Hazelwood Bessie Pauline Heilo; 2, Hollywood farm on Hollywood Dudley; 3, Carnation Stock farms on Rancocas Pohlcrest Maid; 4, Chamberlain on Laurie Prilly of Cerealia; 5, Evers on Johanna Josephine Walker; 6 and 8, Arp on Johanna De Kol Wayne Rags and Johanna May Korndyke Fayne; 7, Adams' Eden farm on Adamseden Canary Segis Fayne. Two-year-old (never having freshened)—1 and 2, Arp on Johanna Bonheur Korndyke Sena and Johanna Alcartra Mead. Senior yearling—1 and 4, Carnation Stock farms on Carnation Matador Mercedes Solah (junior champion) and Highland Grove Longfield Daisy; 2 and 5, Hollywood farm on Hollywood Segis Colantha Maid and Hollywood Segis Beryl Fayne; 3, Vandecoevering & Evers on Jennie De Kol Segis Walker; 6 and 7, Smith on Hazelwood Heilo Fayne Bessie and Hazelwood Ormsby Duchess. Junior yearling—1 and 2, Carnation Stock farms on Queen Pontiac Matador and Segis Matador Bonnell; 3, Hollywood farm on Netherland Segis Ruby; 4, Smith on Hazelwood Bessie Pauline Posch; 5 and 7, Chamberlain on Harriet Waldorf Boone of Cerealia and Bonnie Ormsby of Cerealia; 6, Madsen on Von Holingen Jewel De Kol. Senior calf—1 and 7, Carnation Stock farms on Carnation Matador Adeline Segis and Carnation Burton Brookside De Kol; 2 and 3, Smith on Hazelwood Heilo Johanna Skylark and Hazelwood Fobes Heilo; 4 and 5, Hollywood farm on Hollywood Segis Palmer Aaggie 2d and Hollywood Adventuress Lyons; 6 and 9, Arp on unnamed; 8 and 10, Chamberlain on Josephine Ormsby of Cerealia and Little Sadie Vale of Cerealia. Junior calf—1 and 2, Carnation Stock farms on Carnation Matador Parthenea and Carnation Walker Mercantile; 3 and 4, Smith on Hazelwood Segis Bonheur and Hazelwood Stella Segis; 5 and 10, Arp on unnamed; 6, Hollywood farm on Hollywood Marion Segis; 7 and 8, Luscher & Sons on Bessie Hengerveld Segis Veeman and Marie Johanna Segis; 9, Chamberlain on unnamed. Cow with official record begun at 5 years or over—1, Berning on Model Segis Prilly Gelsche; 2, Hollywood farm on Snowball Powers Mutual; 3, Carnation Stock farms on Tillamook Lola May De Kol; 4, Chamberlain on Donnybrook Harriet Waldorf. Cow with official record begun under 5 years—1 and 4, Carnation Stock farms on Tillamook Daisy Butter King De Kol and Carnation Matador Queenie; 2, Smith on Hazelwood Leda Heilo Korndyke; 3, Hollywood farm on Hollywood Segis Belle Pontiac; 4, 5 and 6, Evers on Johanna Josephine Walker and Josephine Segis Walker Lass. A. R. cow with 2 progeny—1, Chamberlain on Donnybrook Harriett Waldorf; 2, Carnation Stock farms on La Reina Hengerveld 3d.

Get of sire—1 and 4, Carnation Stock farms; 2 and 6, Smith; 3 and 5, Hollywood farm; 7, Evers; 8, Arp; 9, Luscher & Son. Produce of dam—1 and 5, Carnation Stock farms; 2 and 9, Smith; 3, Chamberlain; 4 and 6, Hollywood farm; 7, Adams' Eden farm; 8, Evers. Exhibitor's herd—1, Carnation Stock farms; 2, Smith; 3, Hollywood farm; 4, Chamberlain. Young herd—1, Carnation Stock farms; 2, Hollywood farm; 3 and 4, Smith; 5, Chamberlain. Calf herd—1, Smith; 2, Hollywood farm; 3, Carnation Stock farms; 4, Arp; 5, Luscher & Sons; 6, Chamberlain. Dairy herd—1, Carnation Stock farms; 2, Hollywood farm; 3, Arp.

JERSEYS.

With 212 head, besides 10 club calves, Jerseys outnumbered any other dairy breed. The outstanding feature, and the one which gave Jersey breeders the greatest satisfaction, was the fact that the Jerseys were, as a show, so much smoother and of so much finer quality than in any previous year. In fact, steady improvement in the entire Jersey show has been patent to every observer the last few years. Washington, Idaho, California and Utah measured swords with Oregon on her own ground and this time the outsiders won decidedly the larger share of blues and all the championships. But this was not accomplished without a battle royal, and the Oregon breeders could take much satisfaction in the fact that the world record cow for all ages, Darling's Jolly Lassie, a strictly Oregon product, was on exhibition in the same curtained booth where another Oregon cow, Lad's Iota, then the world record holder, stood a year ago. Lassie was not showing at her best, but her record was pasted in figures all could read.

Nine aged bulls made a great contest in the very first class. There was show quality clear to the end of the string, but Noble's Majesty of L, that had been grand champion for two years, again stood at the head. When the class leaders met, Waikiki farm's two-year-old, Waikiki's Oxford Count, was made senior champion. He is exceptionally smooth, with a beautiful head, straight back, capacity, good shoulders and long, straight hips. But the majority of the ringside talent were with the other bull, perhaps partly from sentiment, as the owner is a small breeder and this is the first year he has shown any but the one bull. Junior championship went to Gamboge's Count of La-Lomita, a wonderfully nice senior calf,

(Continued from preceding page.)

owned by Ferdinand R. Bain of Los Angeles, Cal.

There were 23 aged cows in the ring.

(Continued on the following page.)

The Pacific International

(Continued from preceding page.)

It was a show of quality clear to the bottom, and when they were placed, La Creole's Alta, an Oregon bred cow owned by Mossdale farm, Lockeford, Cal., stood at the top, with another California cow in second place. The class in four-year-olds brought another California cow to the top, in Imp. Val Velveteen, owned by Mr. Bain. There were cows of most correct Jersey type in every class, all having beauty of head, straightness of back, capacity and quality, but none could compare, in the judge's eye, with "Claire," and she was made senior and grand champion, to the general satisfaction of the crowd. Mossdale farm won junior championship on the beautiful senior heifer calf, Frisco Frisco of Mossdale. The grand champion cow headed the first prize dairy herd of five cows.

Judge: William Regan, Davis, Cal.

Bulls: Aged—1, J. M. Heldt, Roseburg, Wash., on Noble's Majesty of L.; 2, W. E. Wiltshire, Chilliwack, B. C., on Melia's Oxford of Coifild; 3, Harry D. Iliff, Independence, Ore., on The Maori; 4, Pickard Brothers, Marion, Ore., on Darling's Gallant Boy; 5, Mossdale farm, Lockeford, Cal., on Jolly Senator Raleigh; 6, Waikiki farm, Spokane, Wash., on Glen Tana Perfection; 7, Fox Brothers, Silverton, Ore., on Foxhall's Chief Engineer; 8, A. C. Power, Sandy, Ore., on La Belle's Noble Fern. Three-year-old—1, Waikiki farm on Belle's Pilot of Waikiki; 2, C. F. Bates, Salem, Ore., on Gertie's Royal St. Mawes; 3, G. H. Dammeier, Portland, Ore., on Dubel Volunteer; 4, B. J. Bagley, Vancouver, Wash., on Sophie's Oregon Pogis. Two-year-old—1, Waikiki farm on Waikiki's Oxford Count (senior and grand champion); 2, D. C. Howard, Beaverton, Ore., on Captain Tristram's St. Mawes; 3, Sears & Little, Winlock, Wash., on Fussy's Fern Noble 55th; 4 and 6, Ferdinand R. Bain, Los Angeles, Cal., on Pearl's Sybil's Gamboge and Gomboge's Majesty's Falcon; 5, Glen Tana farm on Glen Tana Morocco Wonder. Senior yearling—1, Bain on Gamboge Majesty's Duke; 2, Iliff on The Maori's Hector; 6, Will J. Behrmann, Jr., Forest Grove, Ore., on La Creole's Golden Pogis; 7, Dr. J. H. Connard, Bend, Ore., on Sultana's Fig. Junior yearling—1, Waikiki farm on Waikiki's Genesta's Pilot; 2, Glen Tana farm on Glen Tana Morocco Majesty; 3, Mossdale farm on Jolly Prince of Mossdale; 5, Washington State college of Washington on Chinook Monmouth Abe. Senior calf—1, Bain on Gamboge's Count of La Conite (junior champion); 2, Fox Bros. on Imp. Eagle's Double Boy; 3, Mossdale farm on Oxford's King of Mossdale; 4, Glen Tana farm on Glen Tana Wonderful Star; 5, Bates on Dorothea's St. Mawes; 6, W. O. Morrow, Independence, Ore., on La Creole's Chief General; 7, Lew Mar Price, Provo, Utah, on unnamed; 8, C. J. Reid and L. S. Lorenzen, Dayton, Ore., on unnamed; 9, Behrmann on unnamed. Junior calf—1, Mossdale farm on Monte's Star of Mossdale; 2, Waikiki farm on Waikiki Genesta King; 3, I. Nordstrom, Bandon, Ore., on Lady Fern's Noble Rex; 4, Howard on Tristram's Double; 5 and 10, Sears & Little on Fussy's Sailor and unnamed; 6, Glen Tana farm on Glen Tana Wonder Glory; 7, W. S. C. on Chinook Monmouth Ben; 8, Power on La Belle's Noble Duke; 9, O. P. Dosland, Grays River, Wash., on Pauline's Fern Lad.

Females: Aged—1, Mossdale farm on La Creole's Alta; 2, Bain on Imp. Sybil's Oxonia; 3, 5 and 9, Howard on St. Mawes Beauty's Gertie, Noble's Tinkles Mabel and St. Mawes Blossom's Rosaire; 4 and 8, Dammeier on Imp. Golden Oxford Lady and Imp. Golden Noble Rosebay; 6, Morrow on Golden Cicero's Happiness; 7, Pickard Bros. on Darling's Jolly Lassie; 10, Waikiki farm on St. Saviour's Fancy Floss. Four-year-old—1, 2 and 3, Bain on Imp. Claire Val Velveteen (senior and grand champion), Imp. Sybil's Gamboge Terry Maiden and Imp. Sybil's Gold Lock; 4, Dammeier on Imp. Oxford Noble Daisy; 5 and 8, Behrmann on Fussy Fern's Sweet Eyes and Fussy Fern's Anota; 6, Reid & Lorenzen on Chimes' Waltz; 7, Sears & Little on St. Mawes Zila Pansy. Three-year-old—1, Morrow on La Creole Chief Happiness; 2, Bain on Oxford Brown Lilly 2d; 3, Dosland on Alta's Dame Pauline; 4, Pickard Bros. on Vive La France 2d; 5, Waikiki farm on Pilot's Buttercup of Waikiki; 6, Glen Tana farm on Glen Tana Dorothy; 7 and 10, Dammeier on Oregon's Peeress Maid and Rosaire's Olga Betty; 8, Howard on St. Mawes Susette of M. L. P.; 9, Mossdale farm on Girlie of Mossdale. Two-year-old—1, Iliff on St. Mawes Lad's Susy; 2, Bain on Sultana's Hespy Lass; 3, Mossdale farm on Wardress of Mossdale; 4, Pickard Bros. on Darling's Vive Glow; 8 and 10, Reid & Lorenzen on Elora Maid of Poppy and Virginia St. Mawes Princess; 6, Glen Tana farm on Glen Tana Morocco Inez; 7, Dosland on Peer's Little Alta; 8, Dammeier on St. Mawes Anna Rosaire; 9, Waikiki farm on Imp. You'll Do Icona. Senior yearling—1 and 8, Howard on Dream of St. Mawes and Mirth of St. Mawes; 2, M. N. Tibbles, Independence, Ore., on Graymere Erdine; 3, Bain on Island Rosabelle Empress; 4 and 10, Glen Tana farm on Glen Tana Morocco Lady and Glen Tana Morocco Louise; 5 and 9, Dammeier on Xenia's Oxford Girl and Oregon's Golden Fern; 6 and 7, Waikiki farm on You'll Do's Pretty Mabel and Raleigh's Duchess Annie; Junior yearling—1, Bain on Island's Rosabelle Maid; 2, Pickard Bros. on Darling's Jolly Lassie 3d; 3, Heldt on Beauty Noble of T. T.; 4, Glen Tana farm on Glen Tana Morocco Fairy; 5, F. A. Durrah, Grays River, Wash., on Valley View Bluebell; 6 and 8, Waikiki farm on Waikiki's Hazelwood and Waikiki's Scotch Beauty; 7, Sears & Little on Dawn's Yellow Daisy; 9, Berger Olsen, Grays River Wash., on Miss Genesta of Elizabeth; 10, Dammeier on St. Mawes Rosy Glow. Senior calf—1 and 2, Mossdale farm on Frisky Frisco of Mossdale (junior champion) and King's Rose of Mossdale; 3 and 5, Waikiki farm on Beauty's Aloha of Waikiki and Waikiki's June Pet; 4 and 8, Glen Tana farm on Glen Tana Wonderful Doothy and unnamed; 6, Pickard Bros. on unnamed; 7, A. J. Firkins, Nampa, Idaho, on Red Bird's Jewel; 9, Heldt on Rinda Noble Irene of Tiptop; 10, Behrman on unnamed. Junior calf—1 and 10, Bain on unnamed and Queenie 2d and La Lomita; 2, Bates on Loreta's Princess; 3, Dammeier on Loris Rosebay; 4, Sears & Little on Midfield's Maiden Fern; 5, Mossdale farm on Alta of Mossdale; 6 and 9, Waikiki farm on Waikiki's Scotch Girl; 7, Behrmann on La Creole's Daisy Belle; 8, R. L. Burkhardt, Albany, Ore., on Gamboge's Gray Lass.

Cow having official record begun at 5 years or over—1, Mossdale farm on La Creole's Alta; 2 and 5, Howard on Noble's Tinkle's Mabel and St. Mawes Blossom Rosaire; 3, Waikiki farm on Jolly Amy of Waikiki; 4, Dosland; 6 and 7, Behrmann on Popelora and La Creole's St. Saviour Belle. Cow having official record begun under 5 years—1 and 2, Morrow on Golden Cicero's Happiness and La Creole's Chief Happiness; 3, Dosland; 4, Pickard Bros. on Darling's Jolly Lassie; 5, Behrmann on Noble Fern Helen; 6, Glen Tana farm on Glen Tana Sybil 2d; 7, Iliff on St. Mawes Lad's Susie; 8 and 9, Howard on St. Mawes Beauty's Gertie and St. Mawes Susette of M. L. P. A. R. cow with progeny—1, Morrow on Golden Cicero's Happiness; 2 and 3, Howard; 4 and 5, Behrmann on La Creole's St. Saviour Belle and Popelora.

Get of sire—1, Bain; 2, Mossdale farm; 3, Dosland; 4 and 6, Waikiki farm; 5, Glen Tana farm; 7, Heldt; 8, Bates; 9 and 10, Sears & Little. Produce of dam—1 and 4, Dosland; 2 and 7 Waikiki farm; 3, Pickard Bros.; 5, Mossdale farm; 6, Tibles; 8, Dammeier; 9, Heldt; 10, Glen Tana farm. Exhibitor's herd—1, Bain; 2, Iliff; 3, Dammeier; 4, Glen Tana farm; 5, Mossdale farm; 6, Waikiki farm; 7, Sears & Little. Young herd—1 and 3, Waikiki farm; 2, Mossdale farm; 4, Glen Tana farm; 5, Howard. Calf herd—1, Waikiki farm; 2, Mossdale farm; 3, Sears & Little; 4, Howard. Dairy herd—1, Bain; 2, Dammeier; 3, Howard; 4, Waikiki farm; 5, Reid & Lorenzen; 6, Behrmann.

Guernseys.

California was represented among the fawn-and-whites this year for the first time, and there were three exhibitors from that state, although most of the animals wearing Troutmere farm blankets, including the world record Edna of Mountain View, were northwest Guernseys purchased at recent Yakima valley sales. The single entry of W. H. Dupee of Riverside, that has been grand champion at several state fairs in the east and missed it at the National only by being "fractious," easily took the purple honors here.

Cottonwood farm of Tillamook, that made its last exhibit before the dispersal, and River Banks farm of Grants Pass were large Oregon exhibitors, and the latter won junior champion bull. One herd from Idaho and three from Washington gave the show a Pacific coast air, and among the latter was that of A. Macrae Smith of Bellingham, which took all female championships—senior and grand on an animal that was beaten last year by Jewel of Rose City, twice grand champion, but that came back and beat the 3-year-old which defeated Jewel at the Oregon state fair.

There were about 125 head of Guernseys in the show, and the beautifully decorated exhibit quarters made an attractive setting for them. The breed booth was in charge of E. L. Westover, western representative. In the ring, aged cows did not make as good a showing as last year, though in general the quality was fully up to standard. The young classes of both sexes were strong all through.

One of the interesting features was the permanent award of the Lady Oregonian trophy, presented by the late F. S. Peer for the best group of four females, to Dr. Smith, who won it last year after Appletree Point farms had taken the first "hitch" on it in 1921. The tea set offered by President Staples of the Oregon Purebred Live Stock association for best calf herd also went to Dr. Smith.

Judge: Gordon Hall, Cranford, N. J.

Bulls: Aged—1, Troutmere farms, San Francisco, Cal., on Chicona Lover Bold; 2, A. B. Humphrey, Escalon, Cal., on Nobleman of Maple Hill; 3, A Macrae Smith, Bellingham, Wash., on Kulshan Hayes May King; 4, River Banks farm, Grants Pass, Ore., on Victor's Glenwood of Thorn Hill. Three-year-old—1, Fred Yohann, Aurora, Ore., on Clover's King. Two-year-old—1, W. H. Dupee, Riverside, Cal., on May Rose Cherub (senior champion); 2, River Banks farm on River Banks Bonnie Jay; 3, F. M. Jordan, Seattle, Wash., on Oregon Ultra King; 4, Cottonwood farm, Tillamook, Ore., on Fawndale Marose. Senior yearling—1, Humphrey on Escalon Ricardo. Junior yearling—1, Smith on Fircrest French Boy; 2, River Banks farm on River Banks Golden Fancy. Senior calf—1, River Banks farm on Summerfield's Victor (junior and grand champion); 2, W. A. Goodin, Cornelius, Ore., on Yeksa Hope's Khedive of Rose City; 3, Humphrey on Escalon Valiant; 4, Smith on Fircrest LaFrance Wanderer. Junior calf—1, 3 and 5, Smith on Fircrest Golden Boy, Fircrest Sultan and unnamed; 2, Humphrey on Escalon Bell Boy and Escalon Fairy's King; 6 and 8, River Banks farm on River Banks Victor's Genius and River Banks Victor's Duke; 7 and 9, Shannon B. Shafer, Deer Island, Ore., on Columbia Pat of Clover Hill and Billy Boy of Clover Hill; 10, Goodin on unnamed.

Females: Aged—1 and 5, Smith on La France of Bralee (senior and grand champion) and Brookdale's Pink; 2, 3 and 6, Cottonwood farm on Oregon Queen, Gail of Sequoia and Janis of Sequoia; 4 and 8, Troutmere farms on Middledale Grace Darling and Edna of Mountain View; 7, Jordan; 9, Humphrey on Escalon Fairy; 10, Harry W. Bateman, Bellingham, Wash., on Kulshan Hayes May Rose. Four-year-old—1, River Banks farm on Sunny Lady of River Banks; 2, Humphrey on Escalon Lady Rose; 3 and 4, Bateman on Kulshan Hayes May Rose 3d and Kulshan Secret May Rose. Three-year-old—1, River Banks farm on Imp. River Banks Valentine; 2, Francis Hughes, Oswego, Ore., on Red Wing Doctor's Phillipa; 3, Humphrey on Pearl Souffle of Revada; 4, Thousand Springs farm, Wendell, Idaho, on Moore Villa's Marie. Two-year-old—1 and 8, Humphrey on Escalon Nancy and Escalon Joan; 2, Goodin on Lady Allegiance; 3, Smith on Fircrest La France Pride; 4, Cottonwood farm on Evangeline's Princess; 5, Jordan on Yeksa Rose of Olympic Farm; 6, River Banks farm on River Banks Nella Girl; 7, Troutmere farms on Anchor Rose of Fawndale; 9, Shafer on May Rose Babe of Clover Hill; 10, Bateman on Kulshan Sultana. Senior yearling—1, Goodin on Rose City Beauty; 2 and 3, Humphrey on Escalon Pollyanna and Escalon Lottie; 4, River Banks farm on River Banks Nella Jay; 5, Troutmere farm on Ruby Dell Butter Queen; 6 and 7, Jordan on Olympic Alyssum and Yeksa Jewel of Olympic Farm; 8, Bateman on unnamed. Junior yearling—1, Bateman; 2 and 4, Humphrey on Escalon Beauty and Escalon May Belle; 3, 5 and 10, Cottonwood farm on Gail's Annabelle, Rosebud's Prospect and unnamed; 6 and 9, Smith on Fircrest Little Jewel and Fircrest Goldie May; 7, Shafer on Columbia Corene of Clover Hill; 8, River Banks farm on River Banks Secret Lady. Senior calf—1 and 2, Smith on Fircrest French (junior champion) and Fircrest Jewel; 3, 4, 7 and 8, River Banks farm on River Banks Valentine Jewel, River Banks Lenora, River Banks Victor's Duchess and River Banks Nella Girl's Sister; 5 and 9, Humphrey on Escalon Bettie and Escalon Itchen May; 6, and 11, Goodin on unnamed and Rose City Bonnie Lassie; 10, Shafer on Columbia Sue of Clover Hill; 12, Thousand Springs farm on Virginia of Thousand Springs. Junior calf—1, River Banks farm on River Banks Victor's Leona; 2 and 9, Humphrey on Escalon Favorite Rose and Escalon Dairy Maid; 3, 8 and 11, Cottonwood farm on Buttercup of Cottonwood, Lady Molly of Cottonwood and unnamed; 4 and 10, Smith on Fircrest La France and Fircrest Beautiful Blossom; 5, Shafer on Columbia Twilight of Clover Hill; 6 and 7, Goodin on unnamed. Cow with official record begun at 5 years or over—1 and 5, Humphrey on Escalon Fairy and Escalon Lady Rose; 2, Smith on Brookdale's Pink; 3 and 6, Cottonwood farm on Janis of Sequoia and Rogue's Heroine of Hawthorne; 4, River Banks farm on Sunny Lady of River Banks; 7, Bateman. A. R. cow with progeny—1 and 2, Smith on La France of Bralee and Brookdale's Pink; 3, Humphrey on Escalon Fairy; 4, River Banks farm on Sunny Lady of River Banks.

Get of sire—1 and 2, Smith; 3 and 4, Humphrey; 5, Cottonwood farm; 6 and 8, River Banks farm; 7, Goodin; 9, Shafer; 10, Bateman. Produce of dam—1 and 5, Smith; 2 and 7, Humphrey; 3 and 10, Cottonwood farm; 4, Goodin; 6 and 8, River Banks farm; 9, Jordan. Exhibitor's herd—1, Smith; 2, Humphrey; 3, River Banks farm; 4, Cottonwood farm; 5, Bateman. Young herd—1, Smith; 2, Humphrey; 3, River Banks farm; 4, Cottonwood farm. Calf herd—1, Smith; 2, River Banks farm; 3, Humphrey; 4, Rieben Brothers, Banks, Ore. Dairy herd—1, Humphrey; 2, Cottonwood farm; 3, Bateman.

Ayrshires.

There were not quite as many Ayrshires here as a year ago, but the quality was just a little better. Five exhibitors made the show, but only two had full herds, Walter Domes and E. W. VanTassell. While there was some division of blue ribbons, VanTassell was the heaviest winner and had all the champions. His senior champion bull, Cavalier's Scottish Emperor, would be hard to beat in any show if he had a little more flesh and more upraised Ayrshire horns. But it was in the junior and grand champion, Wenatchee White Cavalier, a junior calf, that the acme of Ayrshire type, combined with smoothness, masculinity, straight lines, capacity and dairy temperament seemed to combine. Perhaps the same thing should be said of the junior and grand champion female, Stewart Girl of Wenatchee, a senior calf, except to use the word femininity in place of the masculine adjective. Wenatchee Blossom, the 2-year-old that was made senior champion, has had the honor about half way around the circuit, with her older stable mate, Empress Lady of Wenatchee, being the other winner. Lady has the more refinement, Blossom the more substance and capacity, with either one a worthy object of the prize. VanTassell won the Staples trophy for best calf herd.

Judge: R. E. Haeger, Algonquin, Ill.

Bulls: Aged—1 and 2, E. W. VanTassell, Wenatchee, Wash., on Cavalier's Scottish Emperor (senior champion) and Queen's Scottish Cavalier. Junior yearling—1 and 2, Walter J. Domes, McCoy, Ore., on Shortie of C. H. A. F. and Panagin of C. H. A. F. Senior calf—1, Wilford Domes, McCoy, Ore., on Bussie of C. H. A. F.; 2, VanTassell on Wenatchee Cavalier; 3, Walter J. Domes on Big Sentagin of C. H. A. F. Junior calf—1, VanTassell on Wenatchee White Cavalier (junior and grand champion); 2, Washington State college on Chinook Robin Hood; 3 and 4, Walter J. Domes on Shortie II. of C. H. A. F. and Patsy Boy of C. H. A. F.

Females: Aged—1, E. W. Van Tassell on Lady Bruce 2d; 2, Walter J. Domes on Fondula Girl of C. H. A. F. Four-year-old—1, Walter J. Domes on Little Miss Sentinel of C. H. A. F. Three-year-old—1, Walter J. Domes on Happy Daisy; 2, Van Tassell on Empress Lady of Wenatchee. Two-year-old—1 and 2, Van Tassell on Wenatchee Blossom (Senior and grand champion), and Stewart Lassie of Wenatchee. Senior yearling—1 and 2, Van Tassell on Elfen Scot of Wenatchee and Wenatchee Snowball; 3, Walter J. Domes on Beauty of C. H. A. F. Junior yearling—1, Van Tassell on Wenatchee Cherry; 2, Walter J. Domes on Bessie Bell of C. H. A. F. Senior calf—1 and 2, Van Tassell on Stewart Girl of Wenatchee 3d (junior champion), and Wenatchee Bluebell; 3, Walter J. Domes on Dolly Again of C. H. A. F.; 4, W. S. C. on Chinook Robinhood Alice; 5, Wilford Domes on Dula Again; 6, Earlcrest Stock farm, Eagle Creek, Ore., on Earlcrest Gem. Junior calf—1 and 2, Van Tassell on Wenatchee Scottish Bruce and Wenatchee Scott; 3 and 5, Walter J. Domes on Miss Peter Pan 2d and Miss Sentagin; 4 and 6, W. S. C. on Chinook Robin Hood Carrie and Chinook Robin Hood Bridget. Cow with official record begun at 5 years or over—1, Van Tassell on Lady Bruce 2d. Cow with official record begun under 5 years—1 and 2, Van Tassell on Lady Scott of Wenatchee and Empress Lady of Wenatchee.

Get of sire—1 and 2, Van Tassell; 3 and 5, Walter J. Domes; 4, W. S. C. Produce of dam—1, 2 and 4, Van Tassell; 3 and 5, Walter J. Domes. Exhibitor's herd—1 and 2, Van Tassell. Young herd—1, Van Tassell; 2, Walter J. Domes. Calf herd—1, Van Tassell; 2, Walter J. Domes. Dairy herd—1, Van Tassell; 2, Walter J. Domes.

Brown Swiss.

With seven exhibitors, three more than last year and three of the seven at the big show for the first time; with numbers 50 per cent greater than last year and greater by one or two than at the National Dairy show, and with quality that showed decided improvement over previous years, the "Switzers" made greater proportionate strides at the Pacific International this fall than any other breed, and the men backing them felt proportionately elated.

The Bohart string, which furnished half of the show in 1922 and which took a majority of the leading awards, was one of three of about the same size this fall, but won heavily again, yielding six of the 15 blue ribbons, however, to western Oregon breeders. The latter took all the purple awards on bulls also, but Bohart's females proved superior when it came to championships and he won the first awards in five group classes. His winnings were contested all the way, however, every class furnishing some competition and many of them being close.

The state of Washington was represented by Pawnee farm of Snohomish, which got into the money along with an eastern Oregon breeder, Ed Myersick of La Grande. A new feature of the Brown Swiss competition this year was that for the tea set offered by President Isaac E. Staples of the Oregon Purebred Live Stock association, for the best calf herd. The set went to Brugger & Son of Gresham, Ore., along with the senior and grand champion ribbon on bulls.

Judge: R. E. Haeger, Algonquin, Ill.

Bulls: Aged—1, T. Brugger & Son, Gresham, Ore., on Jessie's Lot (senior and grand champion); 2, John Boeckli, Linnton, Ore., on Sunnyhill Bob; 3, W. O. Bohart, Bozeman, Mont., on Zell A. W. Three-year-old—1, Joe Schumacher, Slayton, Ore., on Queen's Baby; 2, Bohart on D's Dick; 3, B. M. Hillis, Snohomish, Wash., on Velvad St. Patrick. Two-year-old—1, Bohart on Alice's Beauty; 2, Ed Myersick, La Grande, Ore., on Victor Granger. Senior yearling—1, A. Grossen, Linnton, Ore., on Tassa M's Beauty (junior champion); 2, Boeckli on Weissenstein; 3, Brugger & Son on Buckskin Buster. Junior yearling—1, Bohart on Nick's D; 2, Schumacher on Bozeman 2d; 3, Hillis on Lord Barn. Senior calf—1, Bohart on Nellie's Beauty 2d. Junior calf—1 and 3, Schumacher on Sublimity's Pride and Golden's Baby's Prince; 2, Bohart on Nick's D 2d; 4, Myersick on Buckskin Ned; 5, Brugger on Admiral A.

Females: Aged—1 and 6, Bohart on Nellie B. Cook and Zell's Beauty; 2 and 3, Brugger & Son on Adaline and Ruby's Gem; 4, Schumacher on Eva M.; 5, Boeckli on Jenny; 7, Myersick on Trixy 2d. Four-year-old—1, Bohart on Katherine's Heifer (senior and grand champion); 2 and 3, Boeckli on Limmat and Aare; 4, Brugger & Son on Rosebud. Three-year-old—1, Bohart on Nick Master's Nellie; 2, Boeckli on Rhone; 3, Schumacher on Idella; 4, Brugger & Son on Lueible; 5, Myersick on Julie July. Two-year-old—1, Brugger & Son on Bella T; 2, Schumacher on Golden Rose; 3, Bohart on Beauty's Nick C.; 4, Myersick on Daisy Alice; 5, Boeckli on Glatt; 6, Hillis on Lady Lucille. Senior yearling—1, Bohart on Dick's Helen (junior champion); 2 and 3, Boeckli on unnamed and Rander; 4, Hillis on Lady Nellie; 5, Schumacher on Eva M's Beauty; 6, Brugger & Son on Tilly May. Junior yearling—1, Schumacher on Idella's Lotty; 2 and 3, Myersick on Nick's Rosebud and Mona; 4, Bohart on Beauty's Alice H. Senior calf—1 and 5, Bohart on Miss Roundup and Dick's Nick C.; 2, Brugger & Son on Caroline Tell 2d; 3 and 4, Schumacher on Eva's Queen of Mistland and Idella's Lotty. Junior calf—1 and 2, Bohart on Delia H. and Beauty's Jura; 3, Brugger & Son on Hilda; 4, Myersick on Velvet Victoris; 5, Boeckli on Crissie's June; 6, Alfred Yaun, Boring, Ore., on Boring Lassie; 7, Schumacher on Julia Daisy of Mistland. Cow having official record begun at 5 years or over—1, Bohart on Nellie B. Cook. Cow having record begun under 5 years—1, 2 and 3, Bohart on Katherine's Heifer, Nick's Master Nellie and Zell's Beauty. A. R. cow with two progeny—1, 2, 3 and 4, Bohart on Nellie B. Cook, Zell's Beauty, Katherine's Heifer and Nick's Master's Nellie.

Get of sire—1, Boekli; 2 and 4, Bohart; 3, Schumacher; 5 and 6, Brugger & Son. Produce of dam—1 and 2, Dohart; 3, 4 and 5, Boeckli; 6 and 7, Schumacher. Exhibitor's herd—1, Bohart; 2, Brugger & Son; 3, Schumacher; 4, Boeckli; 5, Myersick; 6, Hillis. Young herd—1, Bohart; 2, Schumacher; 3, Boeckli; 4, Brugger & Son. Calf herd—1, Bohart; 2, Brugger & Son. Dairy herd—1, Bohart; 2, Boeckli.

THE DUAL-PURPOSE SHOW.

The advocates of dual-purpose cattle certainly had their innings at this show. With a splendid string of Devons from New Hampshire, one good herd of Red Polls and a remarkable lot of milking Shorthorns, the idea of "both beef and milk" had more exponents than some dairy breeds and as much quality as some of either. They occupied a good position in the beef barn and had their full share of attention.

Judge: W. A. Simpson, Lyndonville, Vt.

Milking Shorthorns.

With five exhibitors and nearly 100 head of milking Shorthorns, that strain had more cattle on exhibition than ever were here before, and the universal agreement was that they averaged higher in show, quality, type and fitting. Innisfail herd of Davis, Cal., not only was the largest winner, but took three of the four championships. Innisfail Superb, their bull calf that was made junior champion, shows unmistakable dairy temperament, but is masculine and is smooth, long and deep and not leggy. Their heifer calf, Innis-

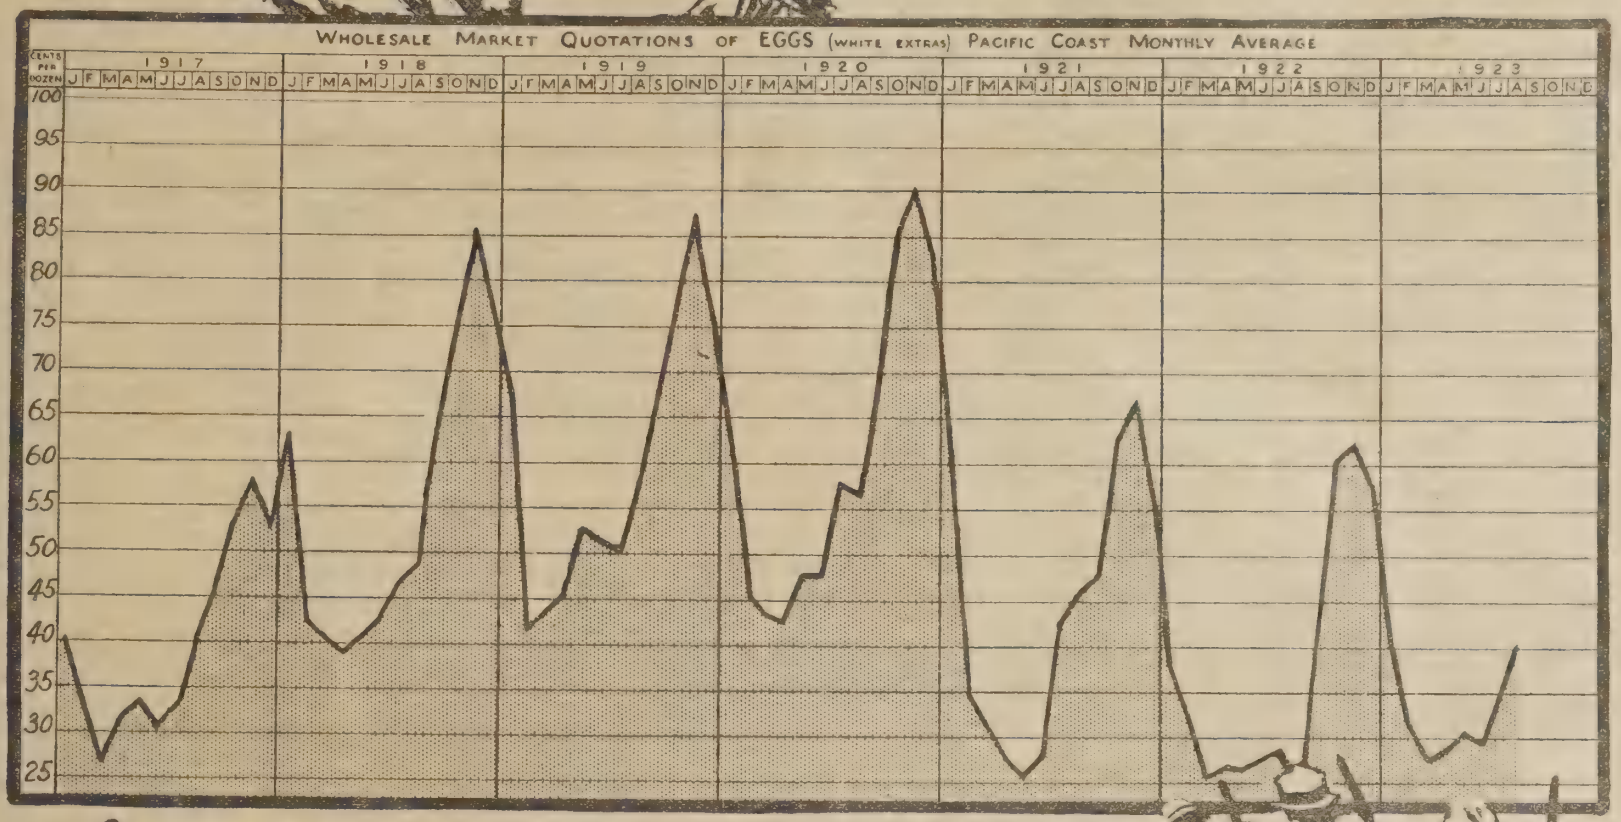
The PIKE'S PEAK of the Poultry Business

—do you know when to climb it?



In NOVEMBER

THE chart tells the tale—egg prices reach their highest peak in November. But that doesn't mean the poultryman can climb up and look out upon a wonderful panorama of profit. You could—if your hens were laying heavy. But, unfortunately, your hens at this season are "laying low."

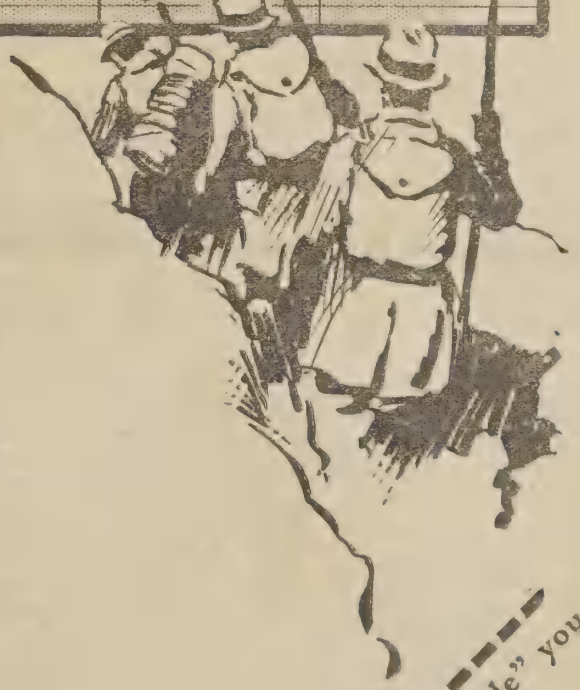
Veterans in the business will tell you that in the fall and winter every poultryman faces a threefold job:

First—to get all the eggs possible during the fall period of high prices.

Second—to maintain the health and vitality of the flock and prevent disease [such as colds, chicken pox, etc.] during the moulting period and wet weather.

Third—to prepare the birds for the spring, when poultry profits really are highest.

If you feed your flock wisely and well—and that means Sperry Surelay—your job will be a lot easier and your birds will be a lot better off. Put your feed-faith in Surelay—time-tried, uniform, dependable! Let it do for you this fall and winter what it has done for thousands of other poultrymen—guide you up above the "timber line" where there is no "dead wood" to eat up your profits!



SPERRY SURELAY

Free—an expert book that will "guide" you

The Pacific International

(Continued from page fourteen.)

fail Amy, that won junior female championship, has all the smoothness of the bull, with a sweet femininity, depth of body and fine hide. Their senior and grand champion female, Innisfail Betty, is only a 2-year-old, but she was grand champion at Chicago International last year, as a calf, and is expected to be again this year. She has an udder as perfect as an Ayrshire, a hide like silk, a neat head, and yet is a well-covered beef animal. She is a remarkable cow. Bachelder farms had the senior and grand champion bull in Manor Supreme, a bull with that almost indescribable something which marks dual-purpose Shorthorns, without detracting from their breed type.

Bulls: Aged—1, Batchelder farms, Mount Vernon, N. H., on Manor Supreme (senior and grand champion); 2, Innisfail herd, Davis, Cal., on Innisfail Perfector; 3, Northwood farms, Redmond, Wash., on Gretna Challenger; 4, Foothills farms, Carlton, Ore., on Innisfail Favorite. Two-year-old—1, Northwood farms on Northwood Pride; 2, Batchelder farms on Knowsley Batchelder 5th; 3, E. C. Truesdell, Centralia, Wash., on Walgrove Protector. Yearling—1, Foothills farm on Foothills Prior; 2, Batchelder farms on Oxford Batchelder; 3, Innisfail herd on Innisfail Beggar Boy; 4, Northwood farms on Northwood Salem. Under 1 year—1 and 2, Innisfail herd on Innisfail Superb (junior champion) and Innisfail Bellview; 3, 4 and 5, Northwood farms on Northwood Colonel, Northwood Sam and Northwood Monarch; 6, Batchelder farms on Shelburne Lad; 7, 9 and 10, Foothills farm on Foothills Concord, Foothills Sea Rover and Foothills Milkman 3d; 8, Truesdell on Roan Herdsman.

Females: Three cows in milk owned by exhibitor—1, Batchelder farms; 2, Innisfail herd. Two cows in milk bred and owned by exhibitor—1, Innisfail herd; 2, Foothills farm. Five years or over—1, 3 and 4, Batchelder farm on Portbury Margaret 9th, Imp. Lady Christina 11th and Rose; 2, Innisfail herd on Bessborough Dorothy; 5, Northwood farms on Molly. Three years and under 5—1, Northwood farms on Mary 5th; 2, Batchelder on Knowsley's Matchless; 3, Foothills farm on Foothills Kismet; 4, Innisfail herd on Gypsy Girl. Two-year-old—1 and 3, Innisfail herd on Innisfail Betty and Innisfail Daisy 3d; 2 and 5, Batchelder farms on Dorrit Batchelder and Primule Batchelder 2d; 4 and 7, Northwood farms on Oxford's Lady 5th and Northwood Winnie 2d; 6, Foothills farm on Foothills Winnie 2d; 8, Truesdell on Ora Jewel. Yearlings—1 and 8, Batchelder farms on Portia Batchelder and Newport Batchelder; 2, 4 and 6, Foothills farm on Foothills Kismet, Foothills Halcyon and Foothills Kismet 15th; 3 and 7, Innisfail herd on Innisfail Alma 2d and Gypsy Girl 2d; 5 and 9, Truesdell on Alma Jewel and Missie Jewel. Under 1 year—1, Innisfail herd on Innisfail Amie (junior champion); 2, Foothills farm on Foothills Paragon; 3 and 4, Batchelder farms on Princess Batchelder and Lovely Batchelder; 5, 6 and 7, Northwood farms on Northwood Polly, Northwood Molly and Northwood Maggie; 8, Truesdell on Knight's Jewel.

Graded herd—1 and 4, Batchelder farms; 2, Innisfail herd; 3, Northwood farms; 5, Foothills farm. Yearling herd—1, Foothills farm; 2, Batchelder farms; 3, Innisfail herd; 4, Northwood farms. Pair of calves—1, Innisfail herd; 2, Northwood farms; 3, Batchelder farms; 4, Foothills farm; 5, Truesdell. Get of sire—1, Batchelder farm; 2, Innisfail herd; 3, Foothills farm; 4 and 5, Northwood farms; 6, Truesdell.

Red Polled.

F. H. Porter of Halsey, Ore., showed the only herd, well fitted, as he always shows them. Their uniform color and placid appearance pleased all who saw them and made friends for the hornless dual-purpose breed. His awards:

Bulls: Aged—1 on Peach Knott (senior and grand champion). Junior yearling—1 on Peon 4th (junior champion). Senior calf—1 on King. Junior calf—1 on Jobe.

Females: Aged—1 and 2 on Violet (senior and grand champion) and Mamie. Two-year-old—1 and 2 on Peona 3d and Jennie. Senior yearling—1 and 2 on Pascola and Neva. Junior yearling—1 on Friette (junior champion). Senior calf—1 and 2 on Dee and Victoria. Junior calf—1 on Missie.

Porter was also awarded first on aged herd, young herd, pair of calves and produce of dam and second on produce of dam.

Devons.

It is no small thing even for the Pacific International to have a herd of cattle of a breed not usually seen from far-away New Hampshire, and the presence of the famous show herd of Batchelder farms from Mount Vernon was a distinct achievement for Manager Plummer, who is always "doing things." Mature animals and young stock all well illustrated the Devon type and the dual-purpose idea. Batchelder farm awards:

Bulls: Aged—1 on Devondale (senior and grand champion). Two-year-old—1 on Nebo Batchelder. Junior yearling—1 on Knight of Batchelder farms. Senior calf—1 and 2 on Devondale Batchelder (junior champion) and Lonewood Batchelder.

Females: Aged—1 and 2 on Last One and Laurel 3d. Two-year-old—1 and 2 on Songstress of Batchelder Farms (senior and grand champion) and Tina 3d. Senior yearling—1 on Duchess Batchelder. Junior yearling—1 on Frances Batchelder. Senior calf—1 and 2 on Batchelder's Pride (junior champion) and Cherry Red Batchelder.

Batchelder farms also received first and second on aged herd, pair of calves and produce of dam and first on young herd.

THE SWINE SHOW.

The swine show has been a little larger in one or two previous years, but no year has shown fewer hogs of poor type or poor fitting. It is interesting that at least three states competed in every breed. California had a decidedly good showing in almost every breed, while Montana, Idaho, Utah and Colorado all were represented. It was a big type show and every judge showed his preference for the stretch, bone and high back of the modern hog. While this was especially true of Poland Chinas and Duroc Jerseys, it was evident anywhere. Interest in the show was keen, and good-sized crowds watched the judging most of the time. H. C. McKelvie of Lincoln, Neb., who judged Poland Chinas and Duros Jerseys, said this show compared favorably with many of the eastern shows and that the breeders here had just as good stock, but that the average quality would not rate as high; that back there generally the stock not fully fitted or of the best was left at home. The other judge was equally complimentary. It was a great show, well displayed and well judged.

Poland Chinas.

So far as numbers are concerned, there was not much difference from a year ago, and the extreme high quality which characterized that show was again in evidence. There was not a really poor entry in the list. Big type was decidedly in the ascendency and very little else was shown. The senior and grand champion boar was found in Navy Bob 2d, a junior yearling shown by the veteran breeder, Thomas W. Brunk. He was not only of true big type, with high, strong back, good feet and plenty of bone, but he was probably the best finished boar in the show. The junior champion, a C. K. Loe entry, is a junior pig of great size, with true big type, remarkably strong back and good feet and bone. Loe had both senior and junior champion sows, as well, the grand champion being the senior, Loe's Wonder, a 3-year-old that has raised two litters within the year and is smooth, with good feet, bone and high back. She has the breedy look of a mother and almost perfect Poland China type, and she had to beat several younger ones, especially Brunk's Lady Rose 1st, that is remarkably deep and smooth, and which the judge considered in too high flesh. Loe's junior champion, Nellie 1st, is one of his winning litter in the futurity and open class, and is another growthy, smooth, heavy-boned youngster. Montana was represented by one strong herd, that of Hugh Walter of Townsend, who was a heavy winner. Prizes were fairly well divided among 11 exhibitors.

Judge: H. C. McKelvie, Lincoln, Neb.

Boars: Aged—1, R. W. Hogg, Salem, Ore., on Black Oak. Junior yearling—1, Thomas W. Brunk, Salem, Ore., on Navy Rob 2d (senior and grand champion); 2, Hogg on Petro; 3, 5 and 6, Hugh Walter, Townsend, Mont., on Ringmaster, King's Liberator 2d and Checker's Climax; 4, C. K. Loe, Silverton, Ore., on Mutt. Senior pig—1, Walter on Dempsey; 2, Loe on King Tut; 3 and 4, Oregon Agricultural college, Corvallis, Ore., on Jane's Buster and Jane's Big Bone. Junior pig—1, Loe on Clan's Equal (junior champion); 2, Clarence Herr, Silverton, Ore., on Peter's Long Giant; 3, W. C. Creech, Salem, Ore., on Fashion Bob; 4 and 6, Walter on Lucky Strike and Clansman Bob; 5, Hogg on Susie's Petro.

Females: Aged—1, Loe on Loe's Wonder (senior and grand champion); 2, Walter on Giantess Wonder 4th; 3 and 4, Hogg on Susie Equal and May Oregon Equal. Senior yearling—1, Walter on Mildred. Junior yearling—1, Brunk on Lady Rose 1st; 2 and 3, Walter on Miss Sweetheart and Giantess Belle 2d; 4, Hogg on Black Oak Susie 2d; 5 and 6, O. A. C. on Jean and Lew's B. B. Senior pig—1 and 2, Loe on Nellie's 1st (junior champion) and Nellie's 2d; 3 and 5, Walter on Alice 2d and Alice 3d; 4, O. A. C. on Big Jane 1st; 6, Stephen Rentz, Gervais, Ore., on Bustress M. Junior pig—1, Rentz on Susie's Masterpiece; 2, Walter on Tim's Lady; 3, Hogg on Susie's Delight 2d; 4 and 5, Loe on Miss Willamette and Miss Willamette 2d; 6, Creech on Bob's Quality.

Aged herd—1 and 3, Walter; 2, Brunk; 4, Hogg. Aged herd bred by exhibitor—1 and 2, Walter. Young herd—1, Loe; 2, Walter; 3, O. A. C.; 4, Creech; 5 and 6, Hogg. Young herd bred by exhibitor—1, Loe,; 2, Walter; 3, O. A. C.; 4, Creech; 5 and 6, Hogg. Get of sire—1 and 4, Walter; 2, Loe; 3, Hogg; 5, O. A. C.; 6, Creech. Produce of dam—1 and 4, Walter; 2, Loe; 3, Hogg; 5, O. A. C.; 6, Creech.

Duroc Jerseys.

With 14 exhibitors, the Duroc Jersey show was possibly a little larger than a year ago. Quality was at least as high and probably higher. Two California herds and a few head from Washington made a state competition, and California, it must be admitted, got away with a liberal share of the prizes, including two championships. Jumbo Giant, the deep-bodied, typical big type boar that was grand champion at the Oregon state fair, repeated the trick here. His size, depth of body, high back and correct type made him invincible, and this in spite of the fact that he had just come out of a bad spell of pneumonia. A. N. Doerfler felt lucky in not having lost him. Junior honors went to the very classy, big-boned junior pig, Keys Sensation Giant 2d, owned by Slocum & Sons of Hamilton City, Cal. She is a senior yearling of great size, true type and good back, feet and bone. The junior champion, Sensation Queen, owned by Jones Prater of Dayton, Ore., has about everything a young sow needs to make her great, including good feet and legs, a high back, stretch and correct type. She defeated some other youngsters in class so good a reversal would hardly have been criticized.

Judge: H. C. McKelvie, Lincoln, Neb.

Boars: Aged—1, A. N. Doerfler, Silverton, Ore., on Jumbo Giant (senior and grand champion). Senior yearling—1, Mossdale farm, Lockeford, Cal., on Charnock Sensation Leader; 2, L. S. Berry, Troutdale, Ore., on Sheik Alhamed. Junior yearling—1, H. C. Compton, Boring, Ore., on Pathfinder Dapper Dan; 2, Berry on Pathmaster's Ace; 3, Mossdale farm on Jumbo of Mossdale; 4, W. F. McCall & Co., Salem, Ore., on Unique Achievement. Senior pig—1, Berry on Robin Hood; 2, Mossdale farm on Red King of Mossdale; 3 and 5, Compton on Blitzen and Mogul; 4, C. C. Mason, Hermiston, Ore., on Pathfinder Sensation. Junior pig—1 and 2, H. P. Slocum & Sons, Hamilton City, Cal., on Keys Sensation Giant 2d (junior champion) and Keys Sensation Giant; 3 and 4, Compton on Donder and Vixen; 5, Jones Prater, Dayton, Ore., on Sensation Wonder; 6, McCall & Co. on Unique Redtop.

Females: Aged—1, Berry on Ideal Lady; 2 and 3, Mossdale farm on Diamond Bar Queen and Wonder Sensation Girl. Senior yearling—1, Mossdale farm on Charnock Mammoth Lady (senior and grand champion). Junior yearling—1 and 4, Berry on Miss Pathfinder Unexcelled and Uneeda Polly Prim; 2, Mossdale farm on King's Lady Sensation; 3, Lowell Stockard, Hermiston, Ore., on Rosie; 5, McCall & Co. on Oregon Leader; 6, Joe Kincaid, Pullman, Wash., on Palouse Duchess. Senior pig—1 and 2, Mason on Edith Pathfinder and Queen Pathfinder; 3, Mossdale farm on You'll Do Miss S; 4 and 5, Compton on Carmen and Red King's Buttercup; 6, W. F. Bartlett, Camas, Wash., on Crescent's Sensation 2d. Junior pig—1 and 5, Prater on Sensation Queen (junior champion) and Sensation Queen 2d; 2, Berry on Wild Irish Rose; 3 and 6, Doerfler on Ioka Irene and Ioka Sensation 1st; 4, Slocum on Keys Sensation Beauty.

Aged herd—1, Mossdale farm; 2, Berry. Aged herd bred by exhibitor—1, Berry. Young herd—1, Prater; 2, Compton; 3, Mason; 4, McCall & Co.; 5, Berry. Young herd bred by exhibitor—1, Prater; 2, Compton; 3, Mason; 4, McCall & Co.; 5, Berry. Get of sire—1, Slocum & Son; 2, Doerfler; 3, Prater; 4, Berry; 5, Compton; 6, Mason. Produce of dam—1, Slocum & Son; 2, Doerfler; 3, Prater; 4, Berry; 5, Compton; 6, Mason.

Chester Whites.

Big type, large bone and good size characterized the Chester White exhibit. One herd from Utah and one from Washington, competing with four Oregon breeders, gave interstate character to this show. Results were, to a great extent, a triumph for the old boar, Oregon Buster, shown for the third year by Cass A. Nichols of Salem, Ore. This boar won senior and grand championship with as much apparent ease as when first shown. His great scale, strong legs and good feet carry a body much smoother than that of most boars of his age, whatever their size. As he gets older his quality, which was questioned earlier in life, becomes more apparent. His son, Oregon Giant 2d, owned by Theodore Resch of Aurora, Ore., a junior pig of stretch, bone, strong feet and good quality, was made junior champion. Enola's Blossom, a daughter of the old boar, a senior yearling with her third litter less than 10 days old, won senior and grand championship for Nichols, who bred her, and junior champion sow was another daughter, an unnamed junior pig of the Nichols entries. While this was quite a sweep for one man and one boar, it should not indicate a weakness in the balance of the show, for competition was keen and close in almost every class.

Judge: E. H. Hughes, Davis, Cal.

Boars: Aged—1, Cass Nichols, Salem, Ore., on Oregon's Buster (senior and grand champion); 2, Lew Mar Price, Provo, Utah, on Price's Premier. Senior yearling—1, Nichols on King of Brookside. Junior yearling—1, Nichols on Brookside Monster. Senior pig—1, Price on The Sid; 2, Theodore Resch, Aurora, Ore., on Evan's Commander. Junior pig—1 and 2, Resch on Oregon Giant 2d (junior champion) and Eastern Goods; 3 and 4, Nichols on Brookside Big Boy and Brookside Hero; 5 and 6, Price on Bayview Nobleman and Bayview Meddler.

Females: Aged—1 and 2, Nichols on Miss Buster and Marjorie B; 3, Price on Maida's Model. Senior yearling—1 and 3, Nichols on Enola's Blossom (senior and grand champion) and Model E. Rose; 2, Ed Schoel, Albany, Ore., on Buster's King; 4, Resch on Satris Giantess; 5, Ralph J. Cole, Pullman, Wash., on Opal's Sensation 2d. Junior yearling—1 and 2, Nichols on Brookside Wonder and Brookside Beauty; 3 and 4, Price on Premier's Jewel and Monster's Princess. Senior pig—1 and 2, Nichols on unnamed (junior champion) and unnamed. Junior pig—1 and 5, Leslie Davis, Mount Angel, Ore., on Oregon Bess and unnamed; 2, 3 and 7, Nichols on Brookside Iola, Brookside Giantess and Brookside Princess; 4, Resch on Miss Oregon; 6, Schoel on Liberty Belle; 8, 9 and 10, Price on Bay View Constance, Bay View Delight and Bay View Pride.

Aged herd—1 and 2, Nichols; 3, Price. Aged herd bred by exhibitor—1, Nichols. Young herd—1 and 3, Nichols; 2, Resch; 4, Price. Young herd bred by exhibitor—1 and 3, Nichols; 2, Resch; 4, Price. Get of sire—1 and 3, Nichols; 2, Resch; 4, Price. Produce of dam—1, Resch; 2 and 3, Nichols; 4, Price.

Berkshires.

The Berkshire show was mainly a battle between River Banks farm of Grants Pass, Ore., and A. B. Humphrey of Escalon, Cal. Five others exhibited, including one herd from Washington and a couple of pig club boys. They all had good Berkshires, especially the Oregon Agricultural college, but the above named firms won all the championships and the lion's share of the blues. River Banks' grand champion boar, River Banks Mastadon, is the same one that won similar honors at the Oregon state fair this fall, and was declared by the judge there to be the best Berkshire boar he ever saw. His massive bone, deep body, short, straight pasturns and stretch mark him as a really great boar of the breed. Humphrey won junior championship on G. W. Charmer 2d, a senior pig of stretch, high back, good bone and feet. Escalon Artful Princess, the senior and grand champion sow, is an Humphrey entry also, a great 2-year-old, heavy with pig, which increased her great depth, but pressed down her pasterns a little. The junior champion sow, River Banks Baroness 5th, is a junior pig, growthy and with good bone and feet, a strong back and approved type.

Judge: E. H. Hughes, Davis, Cal.

Boars: Aged—1, A. B. Humphrey, Escalon, Cal., on Escalon Artful Leader 5th; 2, River Banks farm, Grants Pass, Ore., on River Banks Champion 26th. Senior yearling—1, River Banks farm on River Banks Mastodon (senior and grand champion); 2, Humphrey on G. W. Demonstrator. Junior yearling—1 and 2, River Banks farm on River River Banks Longfellow 3d and River Banks Longfellow 4th. Senior pig—1 and 5, Humphrey on G. W. Charmer 2d (junior champion) and Escalon Artful Leader 12th; 2 and 3, River Banks farm on River Banks Mastodon 7th and River Banks Mastodon 8th; 4, Oregon Agricultural college, Corvallis, Ore., on August Dominator. Junior pig—1 and 2, River Banks farm on River Banks Longfellow 5th and River Banks Longfellow 6th; 3 and 4, Humphrey on G. W. Leader 22d and G. W. Leader 23d; 5, O. A. C. on Domino; 6, A. Blokland, La Grande, Ore., on unnamed.

Females: Aged—1 and 2, Humphrey on Escalon Artful Princess (senior and grand champion) and G. W. Bernice 13th; 3 and 4, River Banks farm on River Banks Laurel 45th and River Banks Laurel 34th; 5, Kenneth Hinshaw, Goldendale, Wash., on Grapewild Fashion 5th. Senior yearling—1 and 2, Humphrey on G. W. Rose 39th and G. W. Rose 40th; 3, James Richards, Mount Angel, Ore., on Leader's Lady 18th; 4 and 5, River Banks farm on River Banks Longlady 4th and River Banks Longlady 5th; 6, Gilbert Dickson, Mount Angel, Ore., on Leader's Lady 17th. Junior yearling—1 and 2, Humphrey on Escalon May 32d and Escalon Lassie Rose 5th; 3 and 4, River Banks farm on River Banks Longlady 6th and River Banks Longlady 17; 5, O. A. C. on Ruth Dominator. Senior pig—1 and 2, River Banks farm on River Banks Baroness 4th and River Banks Baroness 2d; 3 and 4, Humphrey on G. W. Fashion 9th and G. W. Bernice 21st; 5, O. A. C. on Violet's Dominator 5th; 6, Hinshaw on Violet's Dominator 4th. Junior pig—1 and 4, River Banks farm on River Banks Baroness 5th (junior champion) and River Banks Longlady 9th; 2 and 3, Humphrey on G. W. Rose 45th and G. W. Princess 7th; 5 and 6, O. A. C. on Dominator's Violet 2d and Dominator's Violet 3d.

Aged herd—1 and 2, Humphrey; 3 and 4, River Banks farm. Aged herd bred by exhibitor—1 and 2, Humphrey; 3 and 4, River Banks. Young herd—1 and 3, River Banks farm; 2 and 4, Humphrey; 5, O. A. C.; 6, Blokland. Breeder's young herd—1 and 3, River Banks; 2 and 4, Humphrey; 5, O. A. C. Get of sire—1 and 4, Humphrey; 2 and 3, River Banks farm; 5, O. A. C.; 6, Blokland. Produce of dam—1 and 2, River Banks farm; 3, Humphrey; 4, O. A. C.; 5, Blokland.

Hampshires.

Never have the belted hogs made a better showing here, and the number of exhibitors was encouraging to the lovers of the breed. One herd came from California and one from Idaho, with five from the home state showing from a few to a full herd. Awards were fairly well divided, with J. M. Fruitts of Cambridge, Idaho, the heaviest winner. He and A. V. Buell of Carpinteria, Cal., each won two of the championships and each a purple ribbon. Senior and grand champion boar went to Buell on the 3-year-old, Dreamwold Parole, with strong back, immense bone and approved Hampshire type. His junior champion sow, Viola, a senior pig, has been grand champion three times in big California fairs. She has type, size and quality. The junior champion boar is a junior pig with stretch, wonderful feet and plenty of bone. J. M. Fruitts, who bred and showed him, has won many high awards with this dam. His senior and grand champion sow, Silver Moon, a junior yearling, is big and smooth, with ideal feet and stretch and depth.

Judge: E. H. Hughes, Davis, Cal.

Boars: Aged—1, A. V. Buell, Carpinteria, Cal., on Dreamwold Parole (senior and grand champion); 2, J. M. Fruitts, Cambridge, Idaho, on Silver King; 3, F. A. Welch, Gresham, Ore., on Lookout Silk; 4, Adams' Eden farm, Warren, Ore., on Emergency Lad. Senior yearling—1, De Young & Jones, Battle Ground, Wash., on Dandy Boy. Junior yearling—1, Welch on King Sappnire; 2, Fruitts on Tipton Chief; 3, Buell on T. N. T. Senior pig—1 and 2, Fruitts on Quargo Tipton Master and Rambling Kid 2d; 3, Buell on Spark Plug; 4 and 5, De Young & Jones on Maple Grove's Master and Maple Grove's Go-Getter. Junior pig—1 and 2, Fruitts on unnamed (junior champion) and unnamed; 3 and 4, Adams' Eden farm on unnamed and Tiptoe Lad; 5, L. H. Stone, Troutdale, Ore., on unnamed; 6, Buell on King Tut.

Females: Aged—1 and 3, Fruitts on Alabama and Fruitts Model; 2 and 4, Buell on Floreine 2d and Senator Maid; 5 and 6, Adams' Eden farm on Polly Perkins and Maggie Jiggs. Senior yearling—1 and 3, Fruitts on Midnight and Goodenough; 2 and 4, Buell on Mary Marie and Thyer; 5, Adams' Eden farm on Cherokee Lass. Junior yearling—1 and 3, Fruitts on Silver Bell (senior and grand champion) and Silver Moon; 2, 4 and 6, Buell on Our Princess of H, Nellie A and Tot; 5, Welch on Lieutenants Lassie 23d. Senior pigs—1 and 2, Buell on Viola (junior champion) and Two-spot; 3 and 4, Fruitts on Spark Plug and Snake River Nellie; 5, Adams' Eden farm on Sallie of Eden; 6, Stone on Jenny Lind. Junior pig—1 and 2, Fruitts on unnamed; 3 and 6, Welch on Welch's Oline and Welch's Doll; 4 and 5, Buell on Dolly of Hillcrest 1st and Dollie of Hillcrest 3d.

Aged herd—1 and 3, Fruitts; 2 and 4, Buell; 5, Welch; 6, Adams' Eden farm. Aged herd bred by exhibitor—1, Fruitts; 2, Buell. Young herd—1 and 4, Fruitts; 2 and 3, Buell; 5, Welch; 6, Adams' Eden farm. Young herd bred by exhibitor—1 and 4, Fruitts; 2 and 3, Buell; 5,

Adams' Eden farm. Get of sire—1 and 5, Fruitts; 2 and 3, Buell; 4, Adams' Eden farm; 6, Welch. Produce of dam—1 and 4, Fruitts; 2 and 3, Buell; 5, Adams' Eden farm; 6, Welch.

FAT STOCK.

Here Are the Awards on Fat Stock.

Fat Cattle.

Shorthorns (purebred, grade or cross-bred steer): Senior yearling—1, University of Idaho, Moscow, Idaho, on Seeley's Gift; 2, University of California, Davis, Cal., on Topsman; 3, A. Bendler, Cornelius, Ore., on Bender's Mildred. Junior yearling—1, T. S. Glide, Davis, Cal., on Hillcrest Jack; 2, U. of I. on Red Knight; 3 and 4, Washington State college, Pullman, Wash., on Chinook Gift 2d and Chinook Gift 3d. Senior calf—1, Mounterest ranch, Holt, Cal., on Straloch Challenger; 2, Montana State college, Bozeman, Mont., on Roan Brace; 3, George Bertrand, Castle Rock, Wash., on Criterion; 4, John Mathieson, Hot Lake, Ore., on Snowball; 5, Glide on Hillcrest Commander. Junior calf—1 and 4, U. of I. on E-dah-ho (champion), and Sultan Sunshine; 2, F. M. Rothrock, Spokane, on Hercules 3d; 3, W. S. C. on Cumberland Rex. Herd of three—1, U. of I.; 2, W. S. C.

Herefords (purebred, grade or cross-bred steer): Senior yearling—1, Montana State college on Avalon Pride; 2, O. A. C. on Belmont 2d; 3, L. E. Willard, North Portland, Ore., on unnamed; 4, U. of C. on California Lincoln Lad. Junior yearling—1, U. of I. on Everlasting; 2 and 4, M. S. C. on Montana Jack C and Augustus; 3, A. Blokland, La Grande, Ore., on unnamed; 5, A. H. Barnum, Moro, Ore., on Carlos Stamp. Senior calf—1 and 2, Mounterest ranch on Sir Colent and Beau Perfect; 3, U. of I. on Prince Donald; 4, O. A. C. on Anxiety Silk; 5, Herbert Chandler, Baker, Ore., on unnamed; 6, Barnum on Bonnie Lad. Junior calf—1, A. B. Cook, Townsend, Mont., on Panama 164th (champion); 2, M. S. C. on Floweret C; 3, U. of I. on Deserter; 4, Barnum on Bonnie Carlos. Herd of three—1, M. S. C.; 2, U. of I.; 3, Barnum.

Aberdeen Angus (purebred, grade or cross-bred steer): Senior yearling—1 and 3, Congdon & Battles, Yakima, Wash., on Black Betsy and Roseman 3d; 2, U. of C. on U. C. Jock 6th. Junior yearling—1, Congdon & Battles on Blackbirdman C. B. 20th; 2, J. A. Scollard, Chehalis, Wash., on Ericmead 5th. Senior calf—1 and 2, U. of I. on Advance of Netherwood and Ace of Netherwood; 3, Congdon & Battles on Queenmore 21st. Junior calf—1, Congdon & Battles on Queenmore 24th (champion). Herd of three—1, Congdon & Battles.

Grand champion steer of the show—University of Idaho on E-dah-ho, Shorthorn.

Car lots: Two years or over—1 and 3, Rothroth; 2, J. E. Smith, St. Paul, Ore. Yearlings—1, Rothrock; 2, Glide; 3, W. J. Townley, Hot Lake, Ore.

Feeder cattle: Two years or over—Blokland. Champion carload—Rothrock, Shorthorns. Champion carload feeding steers—Blokland, Herefords.

Fat Sheep.

Rambouillet: (Champion) Yearling wether—1 and 2, University of California, Davis, Cal.; 3, J. M. Moran, Starbuck, Wash. Wether lamb—1, Moran. Pen of 3—1, Moran.

Southdown: Yearling wether—1, 2 and 4, University of Idaho, Moscow, Idaho; 3, U. of C.; 5, J. G. S. Hubbard & Son, Monroe, Ore. Wether lamb—1 (champion) and 2, U. of C.; 3 and 4, U. of I. Pen of 3—1, U. of C.; 2, U. of I.

Shropshire: Yearling wether—1 (champion) and 2, U. of I.; 3 and 5, U. of C.; 4, Oregon Agricultural college, Corvallis, Ore. Wether lamb—1 and 3, U. of C.; 2 and 4, U. of I. Pen of 3—1, U. of C.; 2, U. of I.

Hampshire: Yearling wether—1 (champion), U. of C.; 2, Thousand Springs farm, Wendell, Idaho; 3, O. A. C. Wether lamb—1, Foothills farm, Carlton, Ore. Pen of 3—1, Washington State college, Pullman, Wash.

Oxford: Wether lamb—1 (champion), Eldon Fox, Silverton, Ore. Pen of 3—Fox.

Dorset: Wether lamb—1 (champion), Fox. Pen of 3—1, Fox.

Romney Marsh: Yearling wether—- (champion), William Riddell & Sons, Monmouth, Ore.

Cotswold: Yearling wether—1 (champion), O. A. C. Wether lamb—1, O. A. C. Pen of 3—1, O. A. C.

Lincoln: Yearling wether—1 (champion), James Coffield, Goldendale, Wash.

Grades and crossbreeds (medium wool or down types): Yearling wether—1 and 3, U. of C.; 2, U. of I.; 4, Corriedale Sheep company, Hollister, Cal.; 5, Archie C. Stewart, Aldergrove, B. C. Wether lamb—1 (champion) and 2, U. of C.; 3 and 5, Anton F. and Eugene L. Harms, Pullman, Wash.; 4, U. of I. Pen of 3—1, U. of C.; 2, Harms.

Grades and crossbreds (long wool types): Yearling wether—1, Kenneth Hinshaw, Goldendale, Wash.; 2, O. A. C.; 3, U. of I. Wether lamb—1 (champion), David Kirby, McMinnville, Ore. Pen of 3—1, Kirby.

Grand champion wether of the show—University of California.

Car lots—1 and 2, Bohoskey & Creath, Lyle, Wash.; 3, T. B. Johnson, La Grande, Ore.

FAT HOGS.

Poland Chinas: Heavy barrow—1 and 4, University of California; 2 and 3, Oregon Agricultural college; 5, W. L. Creech, Salem, Ore. Light barrow—1 and 2, Creech; 3 and 4, Walter; 5, R. W. Hogg, Salem, Ore. Pen of 3 heavies—1, O. A. C.; 2, U. of C. Pen of 3 lights—1, Creech; 2, Hugh Walter, Townsend, Mont.; 3, Hogg; 4, Kelly Ranch company, Helmville, Mont.

Duroc Jerseys: Heavy barrow—1 and 2, U. of C.; 3, W. F. McCall & Co., Salem, Ore.; 4, A. N. Doerfler, Silverton, Ore. Light barrow—1, Doerfler; 2, Mossdale farm, Lockeford, Cal.; 3, Doerfler; 4, Billy Wangaman, Hermiston, Ore.; 5, McCall & Co. Pen of 3 heavies—U. of C. Pen of 3 lights—1, Doerfler; 2, Mossdale farm; 3, W. F. Bartlett, Camas, Wash.; 4, Billy Wangaman; 5, McCall & Co.

Chester White: Heavy barrow—1, Cass Nichols, Salem, Ore.; 2, Theodore Resch, Aurora, Ore. Light barrow—1 and 2, Avrial Brown, Corvallis, Ore.; 3 and 4, Resch; 5, Nichols. Pen of 3 heavies—1, Resch. Pen of 3 lights—1, Brown; 2, Resch; 3 and 4, Nichols.

Berkshires: Heavy barrow—1 and 2, River Banks farm, Grants Pass, Ore.; 3 and 4, U. of C.; 5, O. A. C. Light barrow—1 and 2, U. of C.; 3, River Banks farm; 4, A. B. Humphrey, Escalon, Cal.; 5, Albert Strauss, Eagle Point, Ore. Pen of 3 heavies—1, River Banks farm; 2, U. of C. Pen of 3 lights—1, U. of C.; 2, Humphrey; 3, River Banks farm; 4, Elmore Tedrick, Eagle Point, Ore.; 5, Strauss.

Hampshires: Heavy barrow—1, U. of C.; 2 and 3, J. M. Fruitts, Cambridge, Idaho. Light barrow—1 and 2, Fruitts; 3, Lester Hamilton, Central Point, Ore.; 4, John Lathrop, Medford, Ore. Pen of 3 heavies—Fruitts. Pen of 3 lights—1, Fruitts; 2, Hamilton; 3, Lathrop; 4, Vernon Turpin, Medford, Ore.; 5, Richard Anderson, Central Point, Ore.

Grades and crossbreds: Light barrow—1 and 2, Howard Norris, Goldendale, Wash.; 3 and 4, Bruce Willard, Dayton, Ore. Pen of 3 lights—1, Norris; 2, Willard.

Grand champion barrow, any breed or weight—University of California on heavy Poland China.

Grand champion pen—River Banks farm on Berkshires.

Carload lots: Lights—1, J. F. McNaught, Hermiston, Ore.; 2, T. B. Johnson, La Grande, Ore.; 3, Kelly Ranch company, Helmville, Mont.; 4, Hermiston Poland China Breeders' association, Hermiston, Ore. Heavies—1, George Strohm, Hermiston, Ore.

Champion carload of the show: McNaught, on Poland Chinas.

In the horse show awards, published elsewhere in this issue, Professor E. L. Potter judged the Percherons and Shires and Professor W. J. Kennedy the Clydesdales and Belgians.

The sheep awards and other features of the Pacific International will be given in early issues of The Washington Farmer.

Corn Makes Good Yields

"Corn does well in this section of the irrigated country," remarked W. M. Zindel of Kennewick, "and if properly cared for it will make good yields. The worst enemy we have to fight is the worms that come in from the silks and eat the kernels in the milk stage. This, however, does not injure the corn to any great extent if we can use it at home for feed and it therefore opens a possibility for hog feed.

"Almost any variety of Dent corn will grow well here and I hope to find some kind that will mature early enough to ripen before the worms affect it. Corn worms seem to be the worst enemy we have here and some of the growers have used the lead arsenate powder, which is dusted onto the silks at the proper time. This, however, takes a lot of time and it adds to the chores that are necessary at that time of the year. If it is found to do the work, it would be worth while and farmers could well afford the time in order to produce a better grade of corn.

"While much of the corn grown in this district is grown for silage, there are more and more that are raising crops for the grain and they have the stover to feed to the cows or horses, or it can be put into the silo dry if water can be added in the cutter or run in with a hose when the silage is tramped. It should be remembered, however, that stover silage which has had the ears removed does not have as high feeding value as does silage made from the entire corn plant in the ordinary manner."

Barns and Dungeons!

Bright Lights, More Eggs

Keeping the Iron Hot

Lighting the Bedroom

Lighting the Living Room

A dark barn is as cheerless as a dungeon. Its gloom makes easy work harder, robs you of time for other things.

Darkness is an enemy, ever ready to lead you into accident—or worse.

Thirty-one years ago science made a wonderful discovery—the way to banish darkness on the farm. That discovery was Union Carbide. A little mixed with common water makes Union Carbide Gas, which gives the most beautiful and restful light known, and the hottest flame for cooking, ironing, or water heating. 398,000 strong has been the farmers' response!

The Colt "Gas Well" makes this Union Carbide Gas automatically

The Colt "Gas Well" is planted at a convenient place in the yard. It makes Carbide Gas just as needed. Small iron pipe carries the gas to all parts of the house, barn, and other outbuildings. No matches required for lighting. For many years, on thousands of farms in every State in the Union, Colt "Gas Wells" have been taking the gloom out of the morning and evening chores.

With the Colt "Gas Well" on *your* farm you won't have to hurry to get the night chores done while there is yet light of day. You can do more and better work—and be safer, too! You won't have to guess about that loose board—that top step—that doorsill—nor your stock, either. Colt "Gas Wells" are helping thousands make their farms pay. Why not for you, too? You buy Union Carbide direct from Union Carbide Warehouses at factory prices.

Get your Colt "Gas Well" now—take a year to pay

Get the story of what the Colt "Gas Well" is doing on other farms. Learn all that Union Carbide Gas will do for you—learn how to light up the henhouses and harvest more eggs. The first step is to send in the coupon NOW.

der 8—First M. W. Merritt on Martha Washington (senior and grand champion); second, E. P. Swarbuck, Idaho Falls, Idaho, on Primrose; third, H. W. Merritt on Lady Victoria Rose. Three-year-olds—First, Clark on Mary Pickford; second, H. W. Merritt. Two-year-olds—First, H. W. Merritt on Nancy Lee. Yearlings—First and second, H. W. Merritt on Princess Victoria and Bessie Gould. Filly colts—First and second, H. W. Merritt on Henry Retta (junior champion) and Lillie Hollis.

Mare and foal—First, M. W. Merritt; second and third, H. W. Merritt. Get of sire—First and second, H. W. Merritt; third, M. W. Merritt. Five animals—First, H. W. Merritt.

CLYDESDALES.

Robert C. McCroskey of Garfield, Wash., was the sole exhibitor of Clydesdales, but many a show with competition has had less quality. His 15 head, in charge of H. W. White, made a thoroughly representative show. In a majority of the classes he had two entries and the judge had some work in placing them. His aged herd sire, Hope's Pride, 10 years old, with lots of substance, type and quality, and standing up like a 4-year-old, was made senior and grand champion, with the 2-year-old, Sir Harry Lauder, that beat the old horse for grand champion at the Washington state fair, as junior and reserve champion. June, senior and grand champion mare, has the type, bone and breedy look that stamp a great Clydesdale. She has been a winner at many other shows, although the 3-year-old, Bonnie Brae Jean, has been placed above her at one or two fairs. The latter is smoother, but has scarcely the size or bone.

The Awards.

Stallions: Herd sire, 8 years or over—First, Hope's Pride (senior and grand champion). Four years and under 8—First, Megg's Chief. Two-year-old—First, Sir Harry Lauder (junior champion), and second, Prince.

Females: Brood mare, 8 years or over—First, Lady Ramsey 2d; second, Colony Nancy. Four years and under 8—First, June (senior and grand champion); second, Fairholme Meg. Three-year-old—First, Garfield Belle; second, Bonnie Brae Jean. Two-year-old—First, Lady May (junior champion). Yearling—First, Bonnie Brae Gem; second, Bonnie Brae Topsy. Filly colt—First, Bonnie Brae Nancy; second, Bonnie Brae Peggy.

Mare and foal—First and second. Get of sire—First and second. Produce of dam—First and second. Five animals—First.

JACKS.

A. C. Ruby, Portland, Ore., was the only exhibitor. Most of his entries had good bone and plenty of size. His awards included first on 4-year-old, 3-year-old, 2-year-old, yearling, colt, produce of dam and five jacks, also senior and grand champion on Cress, junior and reserve champion on Sam W.

Women Make Own Hats

It was not the question as to whether, "Have I money for a new hat," but rather, "Have I time to attend the meeting when they teach me how to make a new hat?" that bothered the Spokane farm women. As the result of millinery extension work conducted in Spokane by Miss E. Belle Alger, clothing specialist of the extension service of the State College of Washington, and Miss Inez Arnquist, home demonstration agent of Spokane county, 262 new hats were made, 58 remodeled and 108 newly trimmed during the summer months. Local women leaders were trained in schools and then went home to their respective communities and helped their neighbors with their hat making. Mrs. Howell, a leader at Vera, put on a class in millinery after attending the county school and trained 12 other women.

THE FIRST ARTIFICIAL TEETH.

Rubber dental plates came into use in 1855, but artificial teeth date from an earlier period. We find one of Washington's biographers authority for the statement that the settled expression of mouth acquired in later years by the great patriot was at least partly due to artificial teeth.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

This is the season when you take long walks beside the sea, in the field and woods or on the mountains. You are likely to slip and fall. As a result you may sprain your ankle. What is to be done?

Dr. Copeland.

You attempt to get home by the help of a stick or by some conveyance. Then you apply cold compresses until the pain subsides, and you are satisfied there will not be great swelling.

If the cold applications do not relieve the pain you may try hot-water compresses. The latter are more grateful and useful in some cases.

After these applications have been discontinued, the foot should be bandaged, beginning at the toes and gradually wrapping the foot, ankle and lower part of the leg. This bandage should be left in place until you can provide yourself with adhesive plaster. When it can be had, cut strips of adhesive about half an inch wide. Beginning at the great toe, apply the adhesive around the edge of the foot, back of the heel, across the top of the foot to the place of beginning.

Start the next strip a little above the first, but overlapping it.

Keep on till the foot is covered. Then carry a strip from one side of the ankle, under the heel, to the opposite side of the ankle. Overlap this with another strip and keep on till the foot is covered.

This arrangement protects the foot and ankle and thoroughly supports it. The injured person may not be able to walk on the foot, but anyhow he will be very comfortable.

After the pain, tenderness and swelling have disappeared, the part should be massaged and exercised carefully.

An injury to the knee or to another joint may cause great pain. If in the knee, it is almost impossible to bend the leg. Every effort to walk is painful.

Under these circumstances the point should be "fixed." That is, it should be so dressed that it can not be bent. It may be covered with a layer of cotton to protect the skin, and then firmly bandaged from the ankle to some distance above the knee.

It is amazing how quickly the pain disappears after fixing the joint.

LEGUMES PLOWED UNDER.

Over 652,000 acres of legumes were plowed under for green manure in 1922 by farmers following the advice of agricultural extension workers on methods of building up soil fertility, according to reports to the United States department of agriculture.

As a man eateth so is he —

THINKING moulds the mind and exercise develops the body, but food supplies the materials for building mind and body.

Grape-Nuts, made from wheat and malted barley, is a crisp, delicious cereal food, rich in wholesome nutriment.

The important mineral elements of the grains are readily available in this splendid food. The essential Vitamin-B is supplied in generous measure. The nutritious starches of the wheat and barley are partially pre-digested by 20 hours' baking.

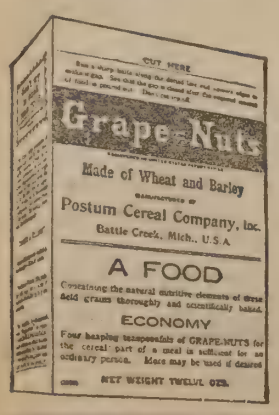
Grape-Nuts with milk or cream is a complete food. Its compact form makes a little go a long way.

Sold by Grocers Everywhere!

GRAPE-NUTS
Six Minute Pudding

1 cup Grape-Nuts
1½ cups scalded milk
1 tablespoon sugar
½ cup raisins

Cover Grape-Nuts with scalded milk. Add sugar, raisins, and a little nutmeg. Cook six minutes directly over the heat, stirring constantly, and serve with any good pudding sauce. Makes four to six portions.



Grape-Nuts

These tracts are selling at rock bottom prices on very easy terms and make the ideal farm home. Located few miles from the largest vegetable, berry and fruit canneries in the northwest. Also close to the big markets of Seattle and Tacoma. Gateway Land Company, 504 Hinckley building, Seattle, Wash.

55 ACRES, YAKIMA VALLEY, IRRIGATED; government water rights; 25 above ditch; grow corn, spuds or anything put in ground; good house, barn, chicken house; fine climate, school, church; two railroads; no better land in valley; will sell $2000 under value to some one who wants good home and willing to work; reasonable payments; easy terms. H. L. Williams, W924 14th, Spokane.

A MONEY MAKER THAT WILL ALWAYS show handsome profits; 130 acres, near Yakima; good water rights; excellent buildings and well equipped; large dairy herd. Price $22,000; good terms. Western Lands, Inc., owners, 918 Green bldg., Seattle.

FOR SALE OR EXCHANGE 703

160 ACRES; 80 IN CULTIVATION; GOOD buildings; running water; good roads; near school. Otto Peterson, Colville, Wash.

STORE BUILDING IN SPOKANE, RENTED, $30 month; trade for cattle. Price $4000. A. Clark, Valley, Wash.

Cattle Ranch To College

By Russell Doubleday (Copyright by Doubleday & McClure Co.)

CHAPTER XX.

A Transformation.

The love of adventure that possesses the soul of most boys was not a characteristic of John Worth. An adventurous life he had always led and thought nothing of it; it was too commonplace to be remarkable to him. This starting forth in search of knowledge, this seeking of the "dude" and his ways in his own haunts, was an entirely different matter; it was almost terrifying, and he was half inclined to turn back. To mix with men who wore white "boiled" shirts habitually, who dressed and went down to dinner, and who did all sorts of things strange to the frontier, seemed to John a trying ordeal, and he dreaded it.

He had no definite plan, for he could not quite realize what lay before him. A cowboy merely he would not be; he now felt that there was a larger place that he could fill, and he knew that this could be reached only through education.

A sound body and brain, enough money to last till spring, a good horse to carry him, and a strong resolve to get somewhere were his possessions.

For 10 days he and Lightning wandered around from one settlement to another, from town to town; he was enjoying his freedom to the utmost, so much so in fact that none of the towns he passed through suited him. Finally he woke up to the fact that he was avoiding a decision, and he pulled himself up with a round turn.

"Here, John Worth," he said to himself, "you're afraid to begin; any of those towns would have done."

He was in the open when he came to himself, riding along on a good horse, dressed in a complete outfit of cowboy finery, fringed chaps, good, broad-brimmed felt hat, heavy, well-fitting riding gloves, and silver spurs, the envy of every man he met.

For the second time a storm helped to decide his destiny, for as he rode along the sky became overcast and soon the snow began to fall heavily. "Come, 'Lite,' let's get out of this," he said to his only companion; and heading the pony toward the place where he knew ——— was located, he urged him forward. Just before dark he reached ——— and after finding a stable, put up at a neat little hotel near by. Even if he had wished to go on to some other place he could not now, for the storm developed into a regular blizzard, which prevented man or beast from venturing outside the town limits. John soon turned to the hotel keeper, a loquacious individual who believed in his town and could sound its praises as well as any real estate boomer.

"Schools?" in answer to one of John's inquiries. "Schools? Why, we've got one of the best schools in Montana; higher'n a high school! Schools and churches—we're great on schools and churches."

He took his cue from John's questions; he could discourse just as eloquently about the shady part of the town, its slums, its dives, and dance halls; there was nothing in that town that should not be there and everything that was desirable—at least that was the impression this worthy strove to convey.

"Schools and churches," said John to himself. "That's what Mr. Baker said I must hitch up to."

For several days the blizzard continued, so long in fact that John grew restless and longed for something to do. He had about decided that he did not like this town and thought he would move on as soon as the weather permitted.

One day the landlord was declaiming earnestly on the merits of the town and its institutions.

"Now, there's the academy," said he. "Now that academy is——"

"What's an academy?" interrupted John.

"Oh! that's a place where they teach you things."

"What kind of things?" persisted John.

"Reading and arithmetic and geography and—here's Gray, he'll tell you all about it, he goes there. Henry, come here a minute," he shouted.

A young man in overalls, well sprinkled with ashes, and carrying a fire shovel, appeared.

The landlord introduced them and told Gray that John was looking for information about the academy. Then he went off, leaving them together.

"Well," said Gray, a slight, dark-haired, bright-eyed, thoughtful fellow, after some preliminary talk, "you begin with arithmetic; then comes algebra, then geometry and trigonometry in mathematics; the languages are Latin, Greek, French and German."

The mere recital of these things was enough to scare John, who had scarcely heard the names before. When Gray went on to enlarge on the fine course of study the academy afforded, as a loyal student should, his hearer was appalled by the amount of learning necessary even to enter a school, and feared the ranch after all was the place for him.

"Some of the fellows are good workers," Gray went on, "but some do nothing but talk to the girls."

"Girls!" thought John. "So girls go to school with the boys here." This boy, who had hardly seen a girl, was terrified at the idea of being brought into such close association with them—he was quite sure now the ranch was the place for him.

That night he made up his mind to go back to Mr. Baker and ask for his old job, but the next morning was no better than the preceding ones.

For lack of something better to do, after much persuasion on Gray's part, he went with him to the academy.

The things he saw there were as strange to him as they would be to an Eskimo.

An old-fashioned school of 150 students seated at rows of desks, the boys on one side of the room, the girls on the other. The principal sat at one end, surrounded by blackboards. Gray found a seat for John at the back of the room, out of the range of curious eyes, and he sat there and watched and listened—wonderingly.

The classes went up and recited one by one or demonstrated mathematical problems on the blackboards. John heard with amazement youngsters answer questions which he could not comprehend at all, and yet he noticed that their faces were care-free and happy, as if they had never known what trouble was. The faces he knew, young and old, bore distinctly the traces of care and hardship. He was intensely interested and enjoyed the whole session keenly.

When noon came, Gray approached, as he thought, to return to the hotel with him, but to his surprise he was marched up to the principal's desk and introduced to Professor Marston. John was awe-stricken, but the principal knew boys thoroughly, and soon put him at his ease.

"Will you come with us?" asked Mr. Marston after a while.

"I wanted to, but I guess not now." Somehow John's resolve seemed rather foolish in the presence of this kindly faced man with the high forehead.

"Why? What's the trouble?"

"Oh, I changed my mind."

"What's your reason?" persisted the professor. "You don't look like a fellow who changes his mind with every wind."

His manner was so kindly, his interest so evident that John let go his reserve and told of his ambitions and hopes and then of the futility, as he thought, of a fellow at his age beginning at the very lowest rung of the ladder when boys much younger than he were so far advanced. This applied not only to actual schooling but to all the little things wherein he saw he was different from these town-dwelling youngsters.

Mr. Marston was interested. He invited John to call and see him after school. "I think we shall be able to talk our way out of this difficulty," he said, as the boy bade him good by.

At the appointed hour John appeared, eager to be convinced but altogether dubious. Professor Marston received him cordially, and, taking him into his private office, talked to him "like a Dutch uncle," as John assured Gray afterwards. He spoke to him out of his own wide experience, told him of men who had worked themselves up to a high place from small beginnings by determination and hard work. He showed John that he believed he could do the same, and finally brought back the confidence in himself which for a time had been banished.

"How did you come out?" called Gray as John burst into the hotel, his face beaming, his eyes alight—confidence in every gesture.

"Bully! he exclaimed. "I'm going to start right in."

"That's the way to talk," said his friend, delighted at his good spirits.

"Professor Marston is going to help me, and I'm to get some one to night-herd me; between the two I'm going to round up all those things and put my brand on 'em. I mean," he hastened to explain, as he realized that Gray might not be up on all the cow-puncher's phrases, "I hope to put away in my mind some of the things that go to make up book-learning."

He was sensitive, and it tried his soul to stand up with the primary class—he almost a full grown man.

Whereupon Gray volunteered to act as his night-herder, as John called his tutor. The offer was gladly accepted, and the two went out to get the school books which Mr. Marston had recommended.

John's first day was, as he expected, an ordeal. He was sensitive, and it tried his soul to stand up with the primary class—he almost a full-grown man. He heard the remarks spoken in an undertone that passed from lip to lip when he stepped forward with the youngsters, and he would have been glad to be able to get his hands on the whisperers and bang their heads together; but he only shut his firm jaws together a little tighter, clinched his hands, and drew his breath hard.

He did not even know the multiplication table, but under Gray's coaching he picked it up very rapidly. Mr. Marston made everything as easy for him as possible, and under the considerate aid of these two he made great strides in his mental training. His application and capacity for work was tremendous, and the amount he got through quite astonished his teachers.

The jeers of his schoolmates, however, not always suppressed, drove him more and more to himself. Gray, Professor Marston, and "Lite" were his only companions. "Lite" was now living in clover; never in his short life had he imagined such ease, so much povender, and so little work; he was therefore fat and exceedingly lively, so that when John was astride of him his master was able to show his school mates his absolute superiority in one thing at least.

As he advanced in his studies and demonstrated his ability as a horseman and a boxer (he soon had an opportunity to show that he knew how to "put up his hands") the respect of his schoolmates increased—at least that of the boys did—but it was only the kindly glances from one girl's big soft eyes that saved the whole of girl kind from complete repudiation on his part.

John's first visit to a church was an event that he did not soon forget. It was at Professor Marston's invitation. He came early, and as he told Gray afterward: "The millionaire took me clear up front. My clothes were stiff and my shoes squeaked, and I know every one in the place was looking my way." The music was strange to him; the only thing familiar was "Old Hundred," and even that "had frills on it," he asserted. The form of service was new and the good clothes of both men and women oppressed him. The sermon, however, he could and did appreciate. A sermon was the only part of a religious service he had ever listened to. Frim time to time hardy missionaries visited the cow camps and sheep ranches, and he had often been one of the congregation that, rough though they were, and little as they appreciated what they heard, listened respectfully to the good man's sermon. John had often on such occasions, after the preacher had finished and gone away, mounted on the wagon tongue and repreached the sermon, using his own words but the same ideas. He was therefore able to appreciate and enjoy this sermon preached in what seemed to him a most elaborate house of worship. This was his first attendance at a "fancy church," and it was the last open one for a long time. In the evening he was wont to steal in in time to hear the sermon, he excusing himself thus: "I can't do it all at once; I'll have to learn their ways first."

The dinner at Professor Martson's which followed his first church-going was a red-letter occasion of another kind. John's earnestness and sincerity always made friends for him, and he speedily won the heart of Mrs. Martson. She took great interest in the boy and gave him many hints as to the ways of civilized life, so tactfully that he could feel only gratitude.

He left her home full of content; he had discovered a new phase of life—to him a heretofore closed book—the "home beautiful."

John Worth was a good student, a hard, conscientious worker, and with the aid of his friend Gray and his instructor he made more and more rapid progress. As spring advanced he began to hear talk about "vacation"—a word the meaning of which was strange to him.

When he found out what it was he wondered what new wrinkle would be "sprung" on him next. But it was a serious thing to him; he could not afford to stay in town and do nothing—he wanted to keep on with his work.

Professor Martson called him into his office just before school closed, and after learning of his difficulty suggested that he get a job during the summer and come back to school in the fall, when he would give him work that would pay his necessary expenses while he kept on with studies. John's heart was filled with gratitude, but his benefactor would not listen to his thanks, and bade him good-by and good luck.

The boy went away thinking he was indeed in luck. The only trouble was to secure a job for the summer. This problem was speedily solved by Gray, who proposed that they should try to join a party of tourists that were to visit Yellowstone park and act as guides and guards. To their great joy they were able to accomplish this, and soon after the commencement festivities they rode out with the tourist outfit. John always had pleasure in remembering one of the number, a fearless, undaunted rider who won his admiration then, and still more later, when he became Colonel Roosevelt of the "Rough Riders." John in his old cowboy dress and mounted on Lightning was happy enough: as for the horse, he fairly

An official of the board of health in a certain town notified a citizen that his license to keep a cow had expired. In reply the official received this epistle:

Monsieur Bord of Helt—I just got your notjs that my licens to keep my cow has expire. I wish to inf rm you, M'sieur Bord of Helt, that my cow she beat you to it—she expeir t'ree weeks ago. Much oblige. Yours with respeck, Petc."

The Maiden's Prayer.

"Dear Lord, I ask nothing for myself! Only give mother a son-in-law."—Exchange.

Upholds Alien Land Law

Supreme Court Declares States May Legally Prohibit Ownership of Soil

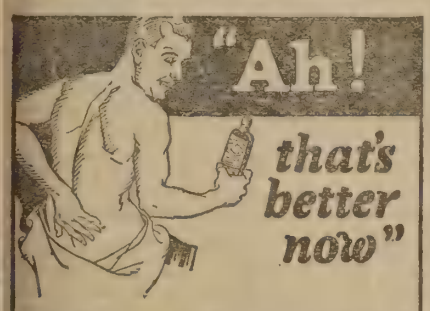
Aliens can be prohibited by states from owning land provided there is no treaty stipulation to the contrary, the United States supreme court announced Monday in an opinion ending a legal controversy which for years had been an issue on the Pacific coast.

The issue reached the supreme court in two cases, one from Washington brought by Frank Terrace and his wife and N. Nakatsuka, and the other from California, brought by W. I. Porterfield and Y. Mizuno. While the cases presented only the question of the proposed leasing of land to ineligible aliens, the court passed upon the broad question of the constitutionality of the law. It held that states could, as Washington had, prohibit from owning land aliens eligible to citizenship, but who had not declared their intentions, as well as aliens ineligible to citizenship, or, as California had, restrict the prohibition to aliens who had not in good faith declared intention to become citizens.

California and Washington sought to have the cases disposed of upon the declaration that in neither case had there been an actual violation of the law, there having been no leases made nor any confiscation of land as provided by the two states as penalty for the violation of the law. They had been successful in having the attack decided in the lower courts without going into the merits of the constitutionality of the laws.

The supreme court found, however, that there were presented certain equitable rights which entitled both the land owner and the proposed Japanese lessor to a decision on the validity of the laws before they had incurred liability to punishment. It therefore assumed full jurisdiction to review the cases from every point of view. The main decision was handed down in the Washington case, the court explaining that the grounds upon which the Washington alien land law was attacked included those on which the California act was assailed.

It not only found the laws in harmony with all rights guaranteed under the Constitution, but in their direct application to the Japanese it discussed the treaty with Japan, concluding that it guaranteed the subjects of that empire no such right as that for which they contended in the matter of owning or leasing land.



OF COURSE it is. One application of Gombault's Balsam quickly relieves the most stubborn pain. A second use and you're well again, feeling sound as a dollar.

If you have a lame back, stiff neck, cut, bruises, strain or sprain, sore throat, bronchial cold, muscular or inflammatory rheumatism, sciatica or lumbago, get a bottle of Gombault's Balsam today—it will drive out the pain in a hurry.

Safe, healing, antiseptic—this remarkable remedy has been the favorite in many households for a full forty years. Unequalled for external application.

People who have used Gombault's Balsam are never without it. There's no need to suffer if you have it handy.

Sold by druggists everywhere for $1.50 per bottle, or sent by parcel post direct upon receipt of price.

GOOD FOR ANIMALS, TOO

GOMBAULT'S Balsam is a safe, reliable and effective remedy for most horse troubles. Keeps your horses sound and working. The Lawrence-Williams Company, Cleveland, Ohio. Sole Distributors for the United States and Canada.

HEALING and ANTISEPTIC

Average $215

Holsteins at Matt Poynor Sale

When the 23 head of registered Holsteins owned by Matt W. Poynor of Wiley City, near Yakima, were sold at auction at the old Elmer Marks ranch on October 15, they brought an average of $215 for the cows in milk, and $171 for the entire lot. This was a good price considering that it was a cash sale and the cattle were only in ordinary farm condition. The total of all sales was $3935.

The sale was held in order to dispose of the greater part of the herd, since Poynor intends to go out of the dairy business and keep only a few head on his own farm, which is located only a short distance down the Ahtanum valley. Only what few head of heifers and bulls that didn't sell will be kept and sold in the spring after feeding through the winter.

The top animal was Lady Poynor, a 9-year-old daughter of King Dirkje of Rock and with Mutual Piebe De Kol the grandsire on both the dam's and sires' sides. She has a seven-day record of 26.12 pounds of butter and 695 pounds of milk. She was bid off to J. A. Stevenson of the Gromore district for $300.

There were 10 head that sold for $200 or over and 16 for $150 or over. Ten of the cows were purchased by J. C. Scott for the state land settlement project at White Bluffs and Hanford.

The sale was cried by George A. Gue of Auburn.

A list of all animals sold, with their buyer and price paid, follows:

Lady Poynor, J. A. Stevenson, Gromore, $300; Lady Yellowstone Poynor, State Land Settlement project, White Bluffs, $230; Lady Yellowstone Segis, State Land Settlement project, $225; Lady Poynor Segis, A. W. Cushman, Wapato, $260; Lady Yellowstone Fobes, State Land Settlement, $210; Alice Burke Spofford Model, State Land Settlement project, $215; unnamed heifer, State Land Settlement, $200; Ruby Akkrum Segis, State Land Settlement, $260; Model Vesa, State Land Settlement, $215; Annie De Kol Fobes, State Land Settlement, $200; Von Heim Tritomia Valdessa, H. C. Davis, Granger, $195; Aaggie Cascade Ormsby Fobes, State Land Settlement, $185; Eleanor Segis De Kol Korndyke, J. W. Stewart, Yakima, $150; unnamed heifer, E. V. Taylor, Selah, $150; unnamed heifer, Nels Nelson, Yakima, $105; unnamed heifer, Nels Nelson, $120; unnamed bull, Ben Ashbal, Wiley City, $110; senior calf, unnamed, Woodhouse Bros., Yakima, $85; Kooistra Princess McKinley Segis, J. W. Frasier, Granger, $55; Bertha Mutual Tritomia, State Land Settlement, $180; unnamed heifer, consigned by Bellingham Milk Products company, State Land Settlement, $125; unnamed heifer, consigned by Bellingham Milk Products company, A. L. Blake, Yakima, $65.

Lower Naches Fair

Apples were the chief part of the agricultural display at the sixth annual Lower Naches community fair, which was held November 1 and 2. The entire center of the hall was used for a display of about 50 trays of apples, all of which were of exceptional quality. The schools of Lower Naches were represented by a complete display of the work done in the different classes. F. L. Sincock, superintendent, was in charge of the display.

Home economics also had a hand in the showings which were displayed in booths along one side of the hall. One of these was entered by Mrs. Charles Dean, who had worked in a very attractive block of apples. Substantial prizes were offered for the winners. A. E. Lovett, the county agent, judged the agricultural exhibits; W. L. Close, district horticultural inspector, the fruits, and Miss Edna Ladwig, the county home demonstration agent, the women's department.

The winners of the main varieties of apples were: L. J. Leibert, first prize on Delicious; J. Sundquist, second prize. Thomas Cloughley won first on Jonathans and John Dobie second. The first prize on Winesaps went to A. R. Fossum and the second to J. R. Holcomb. John Dobie had the prize Romes and E. R. Stout was awarded second prize. E. T. Barnet took first on Yellow Newtown and L. R. Clark second. Thomas Cloughley took first on Winter Nellis pears.

Packed Boxes Shown.

In the agricultural display A. H. Bair won first prize on Netted Gem potatoes and John Dobie second. Eleanor Trout won first on eggplant. Yvonne Atkins received the blue ribbon on crookneck squash and J. B. Bannerman the red ribbon. J. J. Bean had the best cabbage and the Rev. W. B. Trout the best popcorn.

Golden Delicious apples, shown by H. K. Stahler, attracted a good deal of attention. There was an exhibit of packed apples by the Big Y, including a box each of Spitzenburg, Arkansas Black and Rome, while the Winthrop orchards showed a box of Jonathans and a box of Delicious. These packed boxes were donated by the two concerns and went into the auction sale of fruit at the close of the fair.

New Stars in Live Stock Judging

(Continued from page six.)

1922, and its work was consistent, at least. All three members placed Duroc and Poland China swine correctly, and averaged about the same on other breeds.

Other Oregon county teams participating, and the scores they made, are as follows: Yamhill — Alex Cruikshank (775); Benton—Elwood and Kenneth Bradshaw, Arial Brown (1860); Umatilla—Sherlock and Lowell Stockard, Thomas Lenhart (2128); Washington — Frank Peters, Elmer Koenig, Waldo Flint (2197); Multnomah—John Fleming, Robert Kerslake, Percy Carlson (2110); Marion — Homer Bray, Lyle Rains, Leslie Davis (2233); Malheur—Alvah Van Boren, Dennis Patch, Wilford Webber (2197); Josephine—Howard Lewis, Emerald Morrison, John Smith (2197); Lane—Curtis, Carrole and Lloyd Robinson (2288;) Lincoln — William Stokes, Morris Johnson, Sidney Robertson (2045); Clatsop—Alton Berg, May Carl, Thomas Nordstrom (2042); Jackson—John Bohnert, Vernon Turpin, Lester Hamilton (2070); Tillamook — Flora Schild, Peter Betschert, Roletta Watson (2070); Union — Clair Smith, Howard Gassett, Marion Daniel (2055); Polk—Leslie Stewart, Wilford Domes, Donald Byngs (1840). Washington counties participating, but not previously mentioned, include: Adams—Lawrence Gillispie, Will Buscher, Walter Thorne (2163); Skagit—Walford Youngquist, Harry O'Brien, Henry Burkland (2150); Wahliakum—Noyes, Whitten, Arthur Engelson, Raymond Rasor (1870); Kittitas—Eugene and Thilmore Wilson Erling Hanson (2175); Yakima — Harold Holmes, Gerald and Harvey Barnum (2185); Grays Harbor—Homer Mouncer, Forth Twidwell, Walter Askew (2080); Spokane — Jack Adams, Gordon Brown, Margaret Campbell (2080). The only Idaho team was from Latah county. It consisted of Homer and Elmer Sawyer and Felix Papineau, and they scored a total of 2073.

Buy Dairy Plant

The purchase of the Royal Dairy Products company plant at Bellingham by the Whatcom County Dairyman's association has been reported at a purchase price of $110,000. The plant will be equipped for the manufacture of condensed milk, skimmed milk powder and butter, as well as ice cream and bottled milk for the city delivery.

The purchase of the new plant was considered necessary for the expansion and growth of the association, which now handles nearly 100 tons of milk daily.

Hanna Leaves College

Richard Hanna, who for many years has been herdsman at the Washington State college at Pullman, has resigned from the position and has gone to Cottage Grove, Ore., where he will engage in farming with his son. Mr. Hanna is recognized as one of the best fitters and showmen of cattle in the northwest. His specialty is fitting steers and piloting them to victory at the big fairs and stock shows.

RAW COTTON LARGEST EXPORT.

By far the largest export from the United States is our raw cotton. Next in value ranked, in the year 1920, iron, steel and manufactures therefrom. Third in value were breadstuffs, and fourth, dairy products and meats, taken together. Of the latter we also imported, buying frozen fresh beef and mutton from abroad, while sending away cured and tinned meats.

True Public Ownership

Do you know that five billion, one hundred million dollars is now invested in the electric light and power industry in the United States?

THAT 1,750,000 individuals, mainly customers of the industry, have invested their savings in these securities?

THAT through this customer ownership real "public ownership", as distinguished from political or government ownership, is rapidly becoming a fact?

THAT more than $750,000,000 of new capital is required each year to complete new plants, additions and extensions to meet the constantly growing demand for service?

THAT the cost for the use of this capital is a big factor in the cost of service and that the extent to which the electric light and power companies are given fair treatment materially influences the cost of this capital?

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

I would be true for there are those who trust me,
I would be pure for there are those who care,
I would be strong for there is much to suffer,
I would be brave for there is much to dare;
I would be friend to all the poor and friendless,
I would be giver and forget the gift,
I would be humble for I know my weakness,
I would look up and love and laugh and lift."

Experience Letters

Dear Mrs. Barland: You surely do give the best advice I ever read to young folk. If it was put into practice we parents would have less to worry about. Since the boys of today are to be protectors of the women of the future, why not be protectors of the girls of today?

We have three nearly grown sons and we would be ashamed of them if they should treat other girls in a manner that they wouldn't want their sister treated. They are very proud of their sister.

There is another side to the question of dancing and other questionable amusements; young people must have some place to go and if suitable amusement is not provided they will go and find it elsewhere.

I will tell you a few ways in which we take pleasure. (These are for winter evenings): One evening we will spend in games and singing and other music, another in games and candy pulling and another in skating, with apples and popcorn before starting home. We parents are always expected to take part in the whole program.

I would say to the parents, be chums with your children and enjoy them while you may. I ride horseback with my children and they consider it great sport, as they are very proud of their horses and like to show them off. Don't say this is too much work or too much bother. One can accomplish more with a light heart, even if the muscles are a little stiff and tired. A plain home without regrets is much better than an elaborate house and a sorrowing heart. A. M. D.
Idaho.

Dear Mrs. Barland: I enjoy your talks and the letters very much. I liked the letter by "Rosy Cheeks"; she is a dear girl with a dear, good mother. Let me say to the mothers: Try to make things pleasant for your children so their dearest memory shall be of you. Many a time my sister and I have cried because we didn't have a mother's care. She was far from dear and still is. We are grown up now and in our 20s, but we still long for the love of a good mother.

I am trying to be everything to my children that a mother should be. I don't find it hard to love them or to make them love me. I don't believe in much whipping, but I try to rule my children by love.

I believe that most husbands can be managed by love, too. The first two or three years my husband and I were not happy, but I learned that things went better when I showed him that I loved him and there isn't a happier couple now than we are. The children always meet him with a cheerful manner when he comes home tired from work, for happy faces rest a tired man when he comes home.

I am trying out a new way (for me) of making money at home. I have a pair of registered Airedale dogs and I am going to raise puppies for sale. When I have had more experience I will write and tell you what success I have had. HAPPY.

Family Circle Boys

Dear Mrs. Barland and Family Circle girls and boys: This is my first letter to the Circle, although I have read all the recent discussions. I am sure these have been of benefit to the readers. The question has been discussed: "Have the girls the same right to smoke as the boys?" Why shouldn't they have?

The only reason I can think of is that people expect better behavior and more self-respect on the part of the girls than the boys. But if they have more self-respect than boys it would be a reason why they wouldn't smoke and not why they shouldn't.

I don't believe any one ought to think they have a right to smoke and still consider themselves good American citizens. There is no good in it, it is annoying to nonsmokers and weakens the physical strength of the youth of the nation.

It is a well-known fact that opium has made China a weak nation and tobacco would do the same for our country in the course of a few generations if used by both fathers and mothers.

Too many think, when offered a smoke, that they will take "just this one," and before they realize it they have accepted too many "ones" and the habit has been acquired. Most of us have seen some man who has been a habitual user of tobacco trying to break from the habit and knows how very hard it is to do so.

Boys and girls, we don't think deeply enough into this question. It doesn't concern ourselves alone. It concerns all about us and the nation as well. We all have a duty to our country and to keep ourselves fit for any demands that may be made upon us is something within the power of all of us.

I think the subject of education suggested by Happy Daisy a good subject for discussion and as I am 15 years old and in my first year of high school I think it will be helpful to me. "HANK," Wash.

Dear Mrs. Barland: The girl who had a letter some time ago signing herself "Blanch," stated that she wasn't popular. I want to say a few words hoping to help her out.

Entertaining at a party in one's home makes a girl popular and it needn't be expensive either. Helping with community affairs, being a good friend and a good sport with every one, being sweet, and happy and sincere to everybody are helps to popularity.

I know a young girl who is now very popular with us all (and she was not at one time); she did a wonderful thing one day. We were all at a country dance and there was a young man who was a stranger there and felt a little embarrassed because he knew no one.

Hattie left her boy friend and entertained the stranger the rest of the evening. She didn't overdo it, but seemed to understand how the strange boy felt. Hattie never sneers or snubs any one, no matter how much she may dislike them, and that is why she is popular. Every one likes her because she is such a true friend.

Many girls have a way of snubbing and showing dislike; we all have feelings, you must remember.

Another lady in our circle started the "Every two weeks club." Every member has to take her turn in giving a party or a dance or something, and we have had some of the finest times at some of the novelty parties given by members of this club. Our latest novelty was a "string party. JAY. OREGON.

Dear Jay: Will you please write again soon and tell us all about those parties. You will be doing the circle a real service, for the winter is close at hand and the long evenings invite fun and frolic.
A. W. B.

LAYING LINOLEUM.

A kitchen floor should be free from cracks, non-absorbent of grease, easily cleaned and comfortable to stand upon. Covering with a good quality of linoleum seems to meet all these requirements better than any other treatment.

A poorly laid linoleum is likely to buckle and crack. In order that it may become "set" to the floor, a new linoleum should be laid at least two weeks before it is tacked down. It should then be tacked through the center of the room with small brads or headless tacks. If two widths are necessary, the edges should be joined under a flat metal strip made especially for this purpose and then tacked. It should fit up under the lower edge of the baseboard or quarter-round, but should not be tacked at these outer edges.

LET LIGHT ABOUND.

In the kitchen the light should be strong, and should fall upon all working surfaces, such as tables, stove and sink. In order to get this at the best angle and that the worker may not stand in her own light, the windows should be placed in at least two sides of the room.

SUCCESS IN
Bottle Feeding
depends largely on three things: Proper food. Proper preparation. Cleanliness.
Mothers who use Dennos and follow our methods, have little trouble in keeping baby well and growing. Ask for free sample and booklet.

Just Folks

Most failures are self-made.

When is fortune misfortune?

Play is not always recreation.

Lordly asking is polite begging.

If you have a right to ask, ask.

Formidable things are not half formidable.

Begging becomes a prerogative with some persons.

Prohibition is denial and denial is contrary to human nature.

Passing by a store window this morning, I snatched the sight of a book entitled, "How to Build Mental Power." It seemed to me a simple proposition to tell how. To build mental power, use the mind. The harder you use it the more power you will have. It is not quite as easy to do as to tell how to do it. Hard thinking is not easy work.

Did you ever scrutinize the face of a man of power and influence in the community when a troublesome problem confronted him? I have almost stood in awe before the workings of the countenance at such a time. There was nothing easy in the situation.

Most persons had rather do anything else than work their minds. E&S

FEDERAL AID ROADS BEING BUILT.

A total of 26,536 miles of federal aid roads was completed by June 30, 1923, according to the United States department of agriculture. Some 8820 miles of federal aid highways of different types were constructed during the fiscal year ended on that date. The projects under construction at the close of the year totaled 14,772 miles and were estimated as 55 per cent complete.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4545. Ladies' dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires five and five-eighths yards of 40-inch material. The width of the dress at the foot is two and one-fourth yards. Price 10 cents.

4209. Girl's coat. Cut in five sizes: 6, 8, 10, 12 and 14 years. A 10-year size requires two and one-fourth yards of 54-inch material. Price 10 cents.

4557. Girls' dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size requires three and five-eighths yards of 40-inch material. Price 10 cents.

4330. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires four and one-fourth yards of 40-inch material. The width of the skirt at the foot is two and one-fourth yards. Price 10 cents.

4548. Ladies' apron. Cut in four sizes: Small, medium, large and extra large. A medium size requires three yards of 27-inch material. Price 10 cents.

4574. A "fancy dress" for masquerades, parties, etc. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires five and one-half yards of 35-inch material. To make fichu and sash of contrasting material requires one and five-eighths yards 36 inches wide. Price 10 cents.

4577. Santa Claus or Kris Kringle costume. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches breast measure. A medium size requires three and one-fourth yards of 54-inch material. For leggings alone three-fourths yard of 54-inch material is required. Price 10 cents.

4392. Ladies' one-piece dress. Cut in eight sizes: 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. A 38-inch size requires six and one-eighth yards of 32-inch material. The width at the foot is two and one-half yards. Price 10 cents.

4570. Child's dress. Cut in three sizes: Six months, 1 year and 2 years. A 1-year size requires one and one-half yards of 36-inch material. Price 10 cents.

4579. New doll outfit. Cut in three sizes: For dolls 12, 16 and 20 inches in length. To make the doll in a 16-inch size requires one-half yard of 36-inch material. The dress and cap require seven-eighths yard. The cap alone requires one-fourth yard. Price 10 cents.

2967. A set of toy animals. Cut in one size. The cow requires five-eighths yard of 27-inch material and the horse seven-eighths yard of 36-inch material. Price 10 cents.

4566. Boys' suit. Cut in three sizes: 2, 4 and 6 years. A 4-year size requires two and three-eighths yards of 36-inch material. Price 10 cents.

Send 12 cents in silver or stamps for our up-to-date fall and winter 1923-1924 book of fashions.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.
Wells & Richardson Co., Burlington, Vt.

High Points in News of the Week

France and the United States have come definitely to the parting of the way on the proposal to enlist American aid toward a solution of the reparations problem. Premier Poincare was advised by Secretary Hughes through Ambassador Jusserand, Friday, that restrictions insisted upon by France would serve to "frustrate" the object of the Washington government in offering American cooperation in an expert reparation inquiry plan.

WILSSON'S MESSAGE.

Woodrow Wilson, addressing the American people directly through a radio instrument at his home in Washington for the first time since he left the White House, declared America's attitude after the world war was "deeply ignoble, cowardly and dishonorable." France and Italy, Mr. Wilson also declared, in a discussion of world affairs, have made "waste paper of the treaty of Versailles." Mr. Wilson added:

"Happily, the present situation of affairs in the world affords us an opportunity to retrieve the past and to render to mankind an incomparable service by proving that there is at least one great and powerful nation which can put aside programs of self-interest and devote itself to practicing and establishing the highest ideals of disinterested service and the constant maintenance of exalted standards of conscience and of right.

THANKSGIVING PROCLAMATION.

In his Thanksgiving proclamation, President Coolidge refers to the two tragic experiences which have deeply affected our people, the death of President Harding and the unparalleled disaster to Japan, adding that "by experiences such as these, men and nations are tested and refined." And again:

"We will do well then to render thanks for the good that has come to us and show by our actions that we have become stronger, wiser and truer by the chastenings which have been imposed upon us. We will thus prepare ourselves for the part we must have in a world which forever needs the full measure of service. We have been a most favored people. We ought to be a most generous people. We have been a most blessed people. We ought to be a most thankful people."

RED CROSS ENROLLMENT.

President Coolidge has been duly enrolled as a member of the American Red Cross for the year 1924. He paid $1 as dues to Miss Janet Moffett, daughter of Rear Admiral William A. Moffett and she pinned on his coat the Red Cross button which will be given to all members enrolled during the annual roll call starting Armistice day.

WHEAT COUNCIL.

The Pacific northwest is represented by three men on the advisory committee of the wheat council of the United States, as announced by Sidney Anderson, the president of the council: Dean E. J. Iddings of the College of Agriculture of the University of Idaho; Walter J. Robinson, general manager of the Washington Wheat Growers, and Chester C. Davis, state commissioner of agriculture of Montana. Other members of the advisory committee are W. M. Jardine, president of the Kansas State Agricultural college; E. C. Stackman of the University of Minnesota; H. W. Moorhouse of the Oklahoma Agricultural and Mechanical college; Dean John Lee Coulter of the West Virginia College of Agriculture; Alonzo F. Taylor of Stanford university; M. R. Benedict of the State College of South Dakota; J. D. Black, ex-governor of Kentucky; F. M. Crosby and L. E. Wettling. This advisory committee also will cooperate with the U. S. bureau of agricultural economics, of which H. C. Taylor is chief.

The U. S. department of agriculture wheat council was formed a few months ago as a direct outgrowth of wheat investigations made by representatives of that department at the order of President Coolidge.

The advisory committee composed of leading wheat and agricultural authorities of the country has been made to formulate a production program for stabilization of wheat growing in the United States and has its first meeting in Chicago this week.

Marketing of surplus wheat through a federal export commission offers the only remedy for the situation for growers of this year's crop, in the opinion of Walter J. Robinson, head of the Northwest Wheat Growers, Associated.

STOCKS BOOSTED.

The declaration of one-quarter of one per cent extra dividend on United States Steel common amounted to only $1,250,000, yet the declaration of this extra dividend caused advances in Wall street stocks amounting to between $400,000,000 and $500,000,000. Subsequent reaction due to the foreign situation reduced this total, but the net result of the spectacular upturn in prices has been a general heartening of American industry.

WHITE ROSE ON SOLDIER'S TOMB.

President Coolidge laid a wreath Sunday on the tomb of the Unknown Soldier at Arlington as the Armistice day tribute of the American people to the memory of "those who did not see the end, but died that the end might come."

As the president was turning to leave Mrs. Coolidge stepped to the tomb and laid beside the wreath a white rosebud, the special tribute of American womanhood.

The act of tribute to the dead of the World war was performed by the chief executive with little ceremony and in strict accord with the custom established a year ago by President Harding.

FARM AREA LESS.

While agricultural production in America has shown an increase in the last decade, the farm area is less, according to statistics compiled by the institute for research in land, economics and public utilities, with headquarters at Madison, Wisconsin. The study indicates a return of agriculture by the steady increase in population. The farm area increased only approximately nine per cent from 1910 to 1920 and most of this was in the semi-arid states. There were fewer acres in farms in 1920 than in 1910 in virtually all the states east of the Mississippi river.

Farm Business and Markets Outlook

(Continued from page five.)

Sheep and lambs—Lambs, 84 pounds down, medium, good and choice, $10@11.25; cull and common, $7.50@10; yearling wethers medium to choice, all weights, $6@9; wethers, $5.50@7.50; ewes, medium to choice, $3.50@6.50.

Wool—Valley wool, fine, 28@30c; medium, 28@30c; coarse, 25@27c; cotswold and braid, 20c; matted, 15c; Eastern Oregon, good average, 32c.

BOSTON WOOL.

BOSTON, Nov. 10.—The Commercial Bulletin quotes the following: A better tone prevails in the wool market this week with medium domestic wools occupying the strategic position; in fact, prices for such wools are tending upward. Fine wools still are slow. Medium to low scours are strong, with price strengthening for low foreign wools. Exports seem likely to decline.

The goods market is still unsettled, but improvement is noted in spots.

The foreign markets keep firm and London is about 10 per cent up on all greasy wools over the last series. America is buying next to nothing abroad. The first offerings of fall wools will be made in Texas presently.

Mohair is quiet locally, but steady.

The rail and water shipments of wool from Boston, January 1, 1923, to November 8, 1923, inclusive, were 125,472,300 pounds against 110,593,675 pounds for the same period last year. The receipts from January 1, 1923, to November 8, 1923, inclusive, were 391,265,000 pounds, against 363,713,511 pounds for the same period last year.

The Commercial Bulletin publishes the following scoured wool quotations:

Oregon Eastern No. 1 staple, $1.25@1.28; fine and fine medium combing, $1.20@1.25; eastern clothing, $1.10@1.15; valley No. 1, $1.15@1.18.

Mohair: Best combing, 73@83c; best carding, 70@75c.

"Starts every time Hot or Cold"

FAIRBANKS-MORSE

'Z' engine

C. E. Sumner, Nettleton, Miss., says: . . . "Three years ago I bought a 'Z'. I have not spent one penny for repairs. It starts every time you call on it; makes no difference, hot or cold. Uses less fuel for power developed than any other I ever ran." . . . . R. H. Kingsbury, Fort Worth, Texas, says: . . . "I have been using a 'Z' engine for about three years for irrigation. I have never suffered a loss due to insufficient water."

Over 350,000 users have approved the "Z" Engine. No matter what your power requirements, there is a "Z" Engine to exactly suit your needs. Over 5,000 dealers carry these engines in stock and will save you money on freight.

Reduced Fac-Simile Gold Medal

STUART'S PLAPAO-PADS are different from the truss, being mechanico-chemico applicators made self-adhesive purposely to hold the distended muscles securely in place. No straps, buckles or spring attached—cannot slip, cannot chafe or press against the pubic bone. Thousands have successfully treated themselves at home without hindrance from work—most obstinate cases conquered.

Reduced Fac-Simile Grand Prix

Soft as velvet—easy to apply—Inexpensive—awarded Gold Medal and Grand Prix. Proof of recovery is natural, so afterwards no further use for trusses. We prove it by sending trial of Plapao absolutely FREE. Write name on coupon and send today.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie re those from cousins whose names follow. A ew of these will be published each week in the egular edition of THE FARMER and others ill appear from time to time in The Junior armer:

Ursula L. Warmoth, Goldie Cox, Gertrude inster, Henrietta J. Pinster, Mildred Shawgo, ohn Blake, Margaret Irwin, Helmi M. Johnson, uella Hayward, Shirley Brooks, Mildred icken, Adelaide Sanborn, Melvin Grigsby, ilma Johnson, Viola Underwood, Harry Monoe, Luella Partch, Agnes Raff, Victor Anderon, Annie Elizabeth Anderson, May Pendell, erbert Scheuer, Mary Daly, Annie Eeschart, race A. Brown, Gertrude Thomi, Herbert Mile, Carol Wurcher, Leonard Carroll, Ellen Moerg, Goldie Pier.

BEDTIME STORIES

By THORNTON W. BURGESS.

THE TROUBLES OF MR. AND MRS. REDEYE.

A dreadful, dreadful thing is greed;
A thing for which there is no need.

Redeye the vireo and Mrs. Redeye were a peck of trouble. It was the talk of all the old orchard. You see, hateful Sally Sly had left one of her eggs in their nest about the same time she left one in the nest of Tiny the warbler. Like Tiny, they had done their best to get that hateful egg out, but their nest was so deep that they failed. They had thought of leaving their nest and eggs, but they couldn't bear to do that, so finally had made up their minds to make the best of a bad matter. Perhaps that hateful egg wouldn't hatch. But it did. It was the first one to hatch, and the ugly baby who came out of it was twice as big as the biggest of their own babies when they broke their shells. It was then that the real troubles of Redeye and Mrs. Redeye began. It is hard enough to feed a growing family at best, but it is a labor of love. But when a big, greedy, ugly stranger is added what can one do? That is what puzzled Redeye and Mrs. Redeye.

"Let him starve," said Sammy Jay when he heard about it.

"I would," said Chatterer the red squirrel. "I'd like to see any one make me take care of their children!"

But Redeye and Mrs. Redeye could not do that. They just couldn't. You see, they felt that it wasn't the fault of the ugly stranger that he was in their nest. It was the fault of his good-for-nothing mother, Sally Sly, the cowbird, who had laid the egg from which he had hatched. So they felt that they just couldn't let him starve while he was too young to take care of himself. It wouldn't be right.

But, oh, dear, oh, dear! he was such a greedy fellow! Being bigger and stronger than the Redeye babies, he snatched food right out of their mouths. Being so much bigger than they, he needed twice as much food, anyway, but he wasn't content with this. It seemed as if he wanted all the food. He was greedy, greedy, greedy. At the rate he gobbled everything he could get hold of, Mr. and Mrs. Redeye could have kept more than comfortably busy just hunting food for him alone. But there were three babies of their own, and they had to be fed, too. So from the first break of day to the coming of the black shadows Mr. and Mrs. Redeye hunted for food for their family and almost starved themselves. They grew thin and they had no time to care for their clothes, so that they grew shabby and untidy looking. Every one said that it was a shame, and it was.

Those were the unhappiest weeks that they ever had known, and they should have been the happiest, for all parents love to work for their children. But they could not be happy when they were so terribly anxious. Their own children were not getting enough to eat, and so, of course, were not growing as they should. They did their best to feed their own babies, but the greedy, ugly stranger was so big and strong that he would reach over and snatch the food intended for some other little gaping mouth. So the Redeye babies cried all the time because they were hungry, and their father and mother worked themselves to skin and bone trying to feed them, while the ugly stranger grew fat and big and presently began to crowd the others so that there was danger that one or more would be crowded out of the nest.

"Let him starve," said Sammy when he heard about it.

The result was that the little Redeyes left the nest before they really should have, and this added to the troubles of their father and mother. You see, they were terribly afraid that something would happen to their babies. But it made it easier to feed them, for the ugly stranger could not snatch the food from them. He was in no hurry to leave that comfortable nest himself. He was lazy and liked to be waited on. So he would squall and squall until they brought him food. Yes, indeed, those were weary and hard days for Redeye the vireo and his little mate.

PROTECTION

In stormy weather your family is protected by rubber clothes and boots to prevent colds and other illness.

In good weather or bad, the enamel of your teeth (the protective outer covering) needs to be cared for against the constant attack of decay. Mothers and school teachers should see that children's teeth are brushed at least twice a day with a *safe* dental cream, to remove food particles in which harmful decay germs breed.

Colgate's Ribbon Dental Cream contains no grit, no harmful drugs or chemicals. Children use Colgate's regularly and willingly because of its delicious flavor. It is recommended by more Dentists than any other dentifrice.

Colgate's cleans teeth the right way and sells at the right price—25c Large Tube

Export Commission

Means of Handling Surplus Wheat

The creation of an export commission to handle the surplus crop of wheat is urged upon President Calvin Coolidge by Walter J. Robinson, general manager of the Washington Wheat Growers' association. Mr. Robinson takes open issue with Eugene Meyer, managing director of the War Finance corporation, and Frank W. Mondell, director, in their recent report to the president. Mr. Meyer recommended against the export commission. Mr. Robinson says: "I have attended many meetings in many different sections and have yet to find a meeting that did not appear to be almost unanimously in accord with the idea that it will be necessary for government assistance in handling the surplus wheat. Mr. Robinson adds:

"The plan under discussion involves a sufficiently high tariff to give wheat its prewar relative purchasing power and a government agency with sufficient capital and authority to purchase and merchandise the surplus wheat and pro rate the loss back over the entire crop. This agency or corporation could determine through the department of agriculture the probable surplus and necessary tariff. The probable loss on the export could be handled possibly by a form of sales tax on wheat which might be collected by licensing the different elements in the grain and milling business.

"This system would not necessarily destroy the relative milling values of different wheats, but would more probably raise each in proportion to its milling value. If such were the case the loss should be borne jointly by all wheats. This difficulty was taken care of by the grain corporation and could surely be handled justly by an export corporation.

"The export agency would stand ready to move wheat or flour out of the country at any time it was evident that the market was not benefiting by the tariff. The export could be handled directly through this agency or by a drawback system through the regular exporters and cooperative marketing associations."

Acreage Readjustment.

Minimum cost of production, highest quality of product and an aggregate production for the country as a whole are the conditions most desired for wheat growing in this country, according to Sydney Anderson, president of the wheat council of the United States in opening the session in Chicago Monday of the production committee of the council.

Mr. Anderson said that during the last four years the United States has increased its wheat acreage about 25 per cent, while the population has increased only about 14 per cent. Canada has increased wheat acreage 80 per cent and Argentina 20 per cent, he stated.

"Therefore, I think that the matter of readjustment in wheat acreage in this country to a point where it shall not be at the mercy of a world price, fixed by the surpluses from the cheap lands of other countries is worthy of the serious consideration of this committee," said Mr. Anderson.

"Farmers of the United States can not hope to make any money growing wheat for export, except in occasional years. So long as we produce a surplus, our domestic price is generally a reflection of the world market price. I hope that this committee will work out a program for readjustment acreage which, if carried out, will place this country on a domestic basis, where domestic demands will establish a price and not the surplus from our foreign lands."

RUSSIAN WHEAT.

The Manchester Guardian of England announces that the negotiations which have been in progress during the past month for the formation of an Anglo-Russian company for the purchase and shipment of Russian grain are now complete, the agreement between the parties having been signed. On the Russian side the participants are the central organization of the Russian Cooperative society, the Russian Grain Exporting organization, on which both the state and the cooperatives are represented. The English representatives are the cooperative wholesale society, together with a firm of grain brokers and a firm of shipping agents. It is understood that the support of leading English banks is forthcoming to the extent of providing credit of one million sterling at one time to cover Russian grain on seaboard in Russian ports or afloat.

The Manchester Guardian adds that it is expected that the shipments of grain under the new company's auspices from Russian ports this season will be very considerable, and it is specially significant that leading English banks and commercial institutions are prepared to finance operations in Russia on ordinary commercial lines.

The intention is to supply the British market in the first instance, but shipments will also be effected to France, Italy and other Mediterranean countries, which absorbed Russian grain before the war. It is not too much to say that the transactions contemplated by the new company represent the most important step yet taken towards the resumption of normal pre-war trade between Russia and this country.

AGRICULTURAL DEBTS.

The volume of agricultural debts lies at the bottom of financial difficulties in the agricultural districts to a greater extent than present low price levels for farm products, in the opinion of M. L. Corey, member of the farm loan bureau, Washington, D. C., chief executive of the intermediate credit banks. Mr. Corey and August Dezavala, examiner, spent Saturday in Spokane.

Illustrating the increase in agricultural debts, Mr. Corey said short-term debts in 1914 were $2,650,000,000 and in 1921 they had increased to $3,870,000,000. Farm mortgages in 1914 were $3,598,000,000 and in 1921 they aggregated $7,857,000,000.

Speaking of the intermediate credit banks, Mr. Corey declared that $60,000,000 capital is available, but "we are actually using only $20,000,000, leaving the balance in the treasury for any emergency that may arise.

Mr. Corey further explained how country banks can re-discount through the credit bank, how it works with agricultural associations and with cooperative marketing associations. He said the credit banks today have loans out to 250,000 members of the latter for probably $30,000,000, and commitments of an additional $28,000,000. "Our particular problem now is," said Mr. Corey, "to care for the cooperative organizations and live stock comes second."

Benefit From the Experience of Hundreds Who are Confronted With Problems Just Like Yours

Probably you have often gone to some neighbor or else your neighbors have come to you to discuss some feature of the farm work. One of you wants the benefit of the other's knowledge about treating a sick animal, judging the best time to spray, how to trap gophers, deciding on what variety of seed to plant, or some other matter such as is constantly coming up in the routine of farm work. Swapping ideas with your neighbor puts you on the right track as no other source of information could.

Realizing the truth of this, The Washington Farmer constantly maintains an experience exchange as wide as the state itself. It is constantly gathering and printing the experiences and ideas of practical farmers, fruit growers, market gardeners, poultrymen, stock breeders and dairymen in all sections of the state. In the course of a year we publish hundreds and hundreds of experiences—not from some distant region where conditions are radically different, and not from "rocking-chair farmers" or theorists—but from practical men and women who are meeting problems and perplexities just like yours; your fellow workers in your own state. This broad exchange of experiences is undoubtedly one of the most worth while and popular features of this paper.

Details of the methods you have successfully followed are always welcome. Sending them to us is one way you can cooperate in making this paper more valuable to every reader. Another way of cooperating, that we greatly appreciate, is sending in your subscription order at least 60 days in advance of the expiration date on the wrapper of your paper, and including your neighbors' orders with your own.

Such cooperation eliminates expense and helps us maintain our rock-bottom price of $1 for five years.

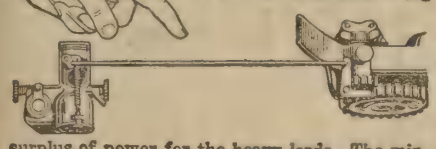
WITTE Throttling Governor ENGINES

NOW, more than ever, the need for economical, dependable power is felt by the producer who is faced with ever-increasing labor costs. **WITTE Throttling-Governor ENGINES** answer this important question perfectly—now an economical, dependable power plant is within the reach of everyone.

Today the WITTE ENGINE sells at the lowest price in history. Into this WITTE has gone the ripe experience of more than 40 years of engine building—over 100,000 users all over the world have placed upon it their stamp of approval. You, too, can put a WITTE on your place, secure in the knowledge that it represents the STANDARD OF POWER.

The Witte Throttling Governor

the original and leader of the throttling-governor type. An even steady speed with a big



surplus of power for the heavy loads. The minimum in fuel consumption—the WITTE ENGINE burns kerosene, gasoline, distillate or gas at a fuel cost of less than 2c an hour. Simple, trouble-proof and guaranteed for a life-time of hard work.

The WICO Magneto

—the most perfect system of high tension ignition known. Makes starting easy, even at

40 below zero—sure performance in any climate or temperature. Not affected by rain, hail, snow or sleet. The perfect replacement for old-style battery-equipped engine.

Makes All Jobs Easy and Cheap

No need to do the hard, back-breaking work—no need to pay high prices for poor labor—you can show $1,000.00 more profit every year you have a WITTE working on your place. Investigate now!

All sizes, 2 to 25 Horse-Power

News for Breeders

WASHINGTON BRED AYRSHIRES.

Two Washington-bred Ayrshire bulls, both bearing the well-known farm name of Willowmoor, have been admitted to advanced registry recently. One is owned in Colorado and the other in Illinois.

FIRST IN STATE FOR MILK.

Nora Segis Prospect, a junior 2-year-old in the Piet Bergsma herd of Holsteins at Ferndale, has just completed a seven-day test that places her first in the state for milk, with 521 pounds of milk and 21.164 pounds of fat. The fat record is said to be the second highest in the state.

WINS SILVER MEDAL.

Quecchie of Wenatchee, an Ayrshire heifer tested by Wenatchee Ayrshire farm, Wenatchee, Wash., at 3 1-2 years of age, wins a silver medal on her production of 10,862 pounds of milk and 479.47 pounds of butterfat. This record makes her senior 3-year-old champion of Washington and eighth highest roll of honor cow for her age of the breed.

WINS SILVER MEDAL.

St. Mawes Lad's Gertrude, a junior 3-year-old in the Shortley Brothers' herd at Orcas, San Juan county, recently won a silver medal with a production of 586.33 pounds of fat and 8830 pounds of milk in class AA. A second silver medal was won by Maid's Liberty Lass, a junior 2-year-old in the same herd, with a production of 472.06 pounds of fat and 7745 pounds of milk.

RECORD OF 30,000 POUNDS MILK.

Hollywood Lilith Palmyra Abbekerk, a Holstein cow bred by Hollywood farm of Hollywood, Wash., on October 23 finished a yearly record which was the first 30,000-pound milk record ever made in southern California. The animal had 30,015 pounds to her credit September 23 and with another month to go was expected to have about 32,000 pounds for the year. In 11 months she made 1128.6 pounds of butterfat, which is the highest southern California fat record, and early in October she had passed both Adirondac Wietske Dairy Maid, champion of California, and Segis Pietertje Prospect, milk champion of the world. The record promised to be not only the highest for butterfat production ever made on the Pacific coast, but at least third highest in the entire United States, with a total of close to 1200 pounds. Only one other 30,000-pound cow has made a correspondingly high fat record.

USE PUREBRED SIRE.

Mason county has a number of dairymen who believe in the use of a purebred sire to build up the production of the heifers, even with a grade herd. Joe and Edward Priszner of Matlock have used a registered brown Swiss bull on their herd of 11 grade cows of the same breed. All of the heifers that have freshened so far have shown better milking qualities than their dams and the older grades will be disposed of as their place is filled by the younger animals.

Since the first herd bull has passed his usefulness in the herd he has been replaced with a new animal from Bushton, Ill. The sire of La Marnick B of Bowerhome, the youngster in question, is Nick's Prize Master and the dam is La Mark 3d of Sedgely. On the sire's side is College Bravura 2d, who had a record of 798 pounds of fat. Both of these blood lines are well known to dairymen of this breed and Mr. Priszner feels that he has a foundation for a real herd of Brown Swiss.

NEW HERD BULL.

C. E. Entsminger of Arlington has been breeding up a grade herd of Guernseys and for the first time entered some of his best cows against strong competition at Everett this fall. Three of the cows in the herd are bred to Lishman's Son, the Valley Gem herd bull, and four others have been bred to the Fred Jenner herd bull. His herd is now large enough to warrant the use of a new herd bull, Traveler's Dellwood Masher, a son of Sunny Girl of Chicona, one of his foundation cows.

The feed problem on the Entsminger farm is largely solved by the use of clover and barley silage, mangles and clover hay. Some of the grain mixtures fed to the cows are ground from oats, barley and other grains that are grown on the farm. In this way Mr. Entsminger is able to keep the purchased feeds down to a minimum, since he buys alfalfa only when his own hay runs short. The pasture was good last season and it was not necessary to feed green feed during the summer.

INDIA'S RICE ACREAGE.

Rice acreage in India is now reported at 70,784,000 acres in a recent cable received by the United States department of agriculture from the international institute of agriculture at Rome. The acreage reported on the same date last year was 73,800,000 acres.

Vigor

Vigor is one of the most important characteristics of a dairy cow.

VIGOR IN HOLSTEINS MEANS --

Less trouble to the dairyman at calving time -- fewer losses from [illegible] or injury to cows through calving -- stronger, healthier calves at birth -- more rapid gains in the offspring from calfhood to maturity -- large, steady production under adverse conditions.

Berkshire Boars for Sale

Two high class, aged herd boars, one a Laurel champion, the other a Matchless Lee 8th. At your own price.

INDIAN CITY FARM.
DR. W. J. KEYES, 202 FERNWELL BLDG., SPOKANE, WASH.

BERKSHIRES

The big kind with quality and finish. Breeding stocks, both sexes, different ages, for sale. Special prices on spring boars and unrelated trios. Popular blood lines.

REICK BROS., Macleay, Ore.

BERKSHIRES

For sale—2 fall, 1922 boars. Also choice lot of last March and April boars. Four of these are full brothers to junior champion boar and junior champion sow at Washington state fair, 1923.

FRED H. SINNES, R. 2, Prosser, Wash.

Royal Ranch Durocs

We have the best boars we ever raised for sale at less money than you ever bought them for. The type and breeding you want, including the 1923 junior champion of Idaho. The strongest Duroc show of the northwest. 26 herds competing. Write us your needs.

ROY SHUTWELL, R. F. D. NO. 3, Boise, Ida.

Turner's Durocs

For sale—Registered spring boars and gilts, sired by grand champion boar. Also booking orders for fall pigs. Prices reasonable.

H. W. TURNER, Sunnyside, Wash.

Duroc Jersey Boars Spring boars sired by my Jr. yearling boar Gem Sensation Leader, the boar that weighed 700 lbs. at 18 months, and was Sr. and grand champion in 1923 at Idaho's greatest hog show. These boars are priced to sell. Let me write you about them.

J. P. Hunt, Route 1, Buhl, Idaho.

Duroc-Jerseys For sale, a choice lot of spring boars and gilts. Pathfinder type, from prize winning stock. Terms, C. O. D.

HILLCREST FARMS, R. 9, Hillyard, Wash.

Entermille's Polands

Sired by Giant Liberator and out of a Big Buster sow, win first and third junior sow pigs at state fair in class of 42. Have a few choice spring pigs and some wonderful fall stock for sale.

FRED D. ENTERMILLE, Baker, Ore.

Big Type Poland Chinas

Young boars ready for service. Also weaned pigs at bargain prices. Best breeding of the times.

H. J. STILLINGS, Hermiston, Ore.

Pioneer Herd Hampshire Swine

10 head choice boars; 10 head of sows and gilts, backed by show records.

J. M. FRUITTS, Cambridge, Idaho.

Richly Bred Jersey Bull

Oxford Lad of Ingleside, dropped July 6, 1922. Sire, LaBelle's Oxford Lad, half brother to ex-world record cow, St. Saviour Belle, and first prize aged bull, Pacific International, and headed first prize herd, 1920. Dam, Lady Jamieson of Ingleside, 520 lbs. fat at 3 yrs., 1 mo., milked twice a day, herd care. Type and production combined.

B. C. ALTMAN, Gresham, Ore.

Imported and American Bred Jerseys

Blood lines of phenomenal production and most perfect Jersey type.

CRANDALL & LINN, Salem, Ore.

Richly Bred Young Jersey Bulls

Sired by Gertie's St. Mawes and out of tested dams with good records.

C. F. BATES, Rt. 5. Salem, Ore.

Gold and Silver Medal Jersey Breeding

Heifers and bulls, offspring of the great gold and silver medal bull, Silver Chimes of S. B.

DEL PERKINS, Carlton, Ore.

Graymere Jersey Heifers Bred and open, from 6 to 18 months old. Myra's Missionary, Plymouth Lad and Oxford Majesty breeding.

WARREN GRAY, Box T, Jefferson, Ore

Midway Farm Jerseys Herd headed by St. Mawes Lad of Midway, son of St. Mawes Lad and Lad's Littie Pauline, 941 lbs. fat.

W. B. McCONNEL, Shedd, Ore.

Jersey Bull Calf Full brother junior champion, S. W. Wash. fair, 1923. Sire, son of Poppy's St. Mawes, a gold medal bull. Dam, daughter of Poppy's Golden St. Mawes, sire to two world record cows.

A. T. FLAGG, Rt. 2, Chehalis, Wash.

Registered Herefords cows and heifers, yearling and bull calves of popular breeding; priced very reasonable.

WALTER BLANCHARD, Buhl, Idaho.

Brown Swiss Stock Farm

Breeders of Brown Swiss cattle, the farmers' dairy cow. Young stock for sale.

THEO BRUGGER, Route 3. Gresham. Ore.

FOR SALE

A choice lot of Holstein calves, both sexes, finest Hollywood breeding, excellent individuals. Several are out of yearly record dams. Have no room for them and they must be sold. Breeding and individuality considered, they are the very best bargain on the market. Write for prices and descriptions. Excellent heifers for calf clubs, fine bulls for bull associations.

A CALF OR A CARLOAD.

HOLLYWOOD FARM, Hollywood, Wash.

Vandervelden's Jerseys at Auction

Monday, November 19, 1923

Twenty head, entire herd, heavy producing cows, heifers, bulls and young calves. All American bred, but founded on the best of island blood. The cow that was the foundation for the most of this herd was an imported cow, champion of the show ring and winner of milk contest at the fair.

Sale to be held on the Vandervelden farm, near Roy. The catalog tells how to reach the sale. Send for one.

J. W. VANDERVELDEN, Owner, Forest Grove, Oregon.

E. A. RHOTEN, Sale Manager, Salem, Oregon.

free from tuberculosis? Quite a number know that they are of clean animal origin, but many do not know anything about the source of this food.

Too often the man who owns his own cows is quick to say that his herd is clean, when in reality he knows nothing about it. Diseased animals may not show their illness in the early stages of the disease, but look as healthy as any animals in the herd. I have known animals in the private one-cow dairies to be responsible for fatal infections in the family, and all the while the family would have been offended if one had asked whether the cow had been tested for tuberculosis or not. They were sure that their cow was all right until they were forced to find out the truth.

The danger from the milk food products is greatest because we use so much of it in the raw state and this organism will live through many of the processes by which milk food products are prepared. They may be found in the milk, ice cream, butter or cheese. The children especially are frequent sufferers because we encourage them to drink lots of milk, and it is right that we should, because there is no better food for them, but we should know that this product is from healthy animals.

The meat may be the source of infection and no doubt is responsible for many of our tubercular people, but the danger is lessened because we cook our meat before it is eaten and thereby lessen the danger. Meat food products are not usually eaten raw and even rare cooking kills the tuberculosis organism.

Need of Inspection.

The safeguards against the above disease lies in having competent inspection of the dairy herds and all animals tuberculin tested, no matter whether they are in the great dairies supplying milk to hundreds in the cities or the single private cow. There is no occasion for taking chances with your life or the life of your children when this can very certainly be avoided by having the animals tested.

Cleanliness in the handling of milk is also essential, and while it may not cause a specific disease, it is worth while knowing that the product is clean and wholesome. Meat should be inspected at the time of killing if possible to determine the presence of tuberculosis and all organs should be seen if possible.

It is easily possible to avoid the dangers of tuberculosis of animal origin if the people who use these products, and that is all of us, would just make it our business to see that the animals from which these products come were healthy and free from this disease. This can be done by supporting a movement to have adequate meat and milk inspection, and this applies to the small town as well as the large city.

Cattle Ranch to College

(Continued from page twenty.)

bubled over with joy and gladness. He showed it in his usual unconventional fashion by trying to throw John "into the middle of next week" but his master understood him well and took all his pranks good-naturally, sitting in the saddle as if it was an every-day occurrence and not worth bothering about.

The boy's leech-like riding attracted the attention of his employers at once and especially one—a young easterner named Sherman, who was a college man.

The summer's experience was a very pleasant one; compared to the work and hardship that John had formerly endured this was child's play.

On the long summer evenings young Sherman would often join John while he was keeping his vigil over the saddle stock, and they would have long talks. John telling of his experiences with Indians, cattle and horses, while Sherman in turn told of colllege life, its advantages and pleasures and the hard work connected with it.

Shortly before the time set for the return of the party Sherman, who had learned to respect and like John greatly, said: "Suppose you study hard next fall and spring and prepare for college. If you can bone up enough to pass the examinations I think I can get you a scholarship."

The proposition took John's breath away, but he was not the kind of a boy to be "stumped," and when they separated he assured Sherman that he'd do "some tall trying."

The party of tourists among whom John was soon broke up. Sherman went east after exacting a promise from John to "carry out that deal."

John returned to —— and to the academy, his path now marked out clearly before him and a prize worth striving for at the end.

The Lowest INSTALLED Price ever announced for a Farm Electric Light and Power Plant

The DELCO-LIGHT Man is ready NOW to install your DELCO-LIGHT Plant COMPLETE—

only $599.50

for the most popular farm size plant

UNEQUALLED installation facilities, including a nation-wide organization of over 4,000 installation men, make it possible for Delco-Light with their quantity production to set the lowest price ever announced for an electric light plant *completely installed.*

And—it is highly important, in purchasing any lighting plant that you know the *installed* price.

The installed price for the most popular size Delco-Light plant includes not only the plant itself—it includes the freight to nearest railroad station—it includes the actual installation of that plant, except purchaser is to build concrete base and battery rack and haul plant from nearest railroad station—it includes the standard Delco-Light Exide Battery composed of sixteen large capacity cells, built for long life, with extra thick plates and heavy glass jars; the wiring of your house for ten lights to be located anywhere you wish; one power outlet wherever you may want it; a standard set of ten drop lights with sockets and the installation of these lights; and ten standard electric light bulbs—the complete installation ready for you to turn on the lights.

This is the way to buy your electric light and power plant.

Terms So Easy You Cannot Afford To Be Without One

To make it easy for you to get your Delco-Light Plant we have set a very low first payment and made the terms very easy. The local Delco-Light man will explain these terms to you. A liberal discount allowed for cash.

Purebreds Prove Profitable Pork Producers---Page 3

Better Sheep at Pacific International

There was a distinct increase in the number of sheep this year over last, and most of the breeds had the best average quality in the history of the show. Flockmasters and shepherds, reflecting the optimism which prevails among them, had come out with their best, fitted as never before. The sheep division drew a large share of the visitors every day, and those who know sheep were well repaid.

The Oregon Shropshire association had built a beautiful booth in which writing material and reading matter were plentiful and visitors were welcomed. Its members were the most aggressive boosters for the "woolly coats," and their enterprising "stunt" drew much favorable comment.

Judge W. F. Renk of Wisconsin, who had the heaviest task in the ring, compared the Hampshire classes very favorably to the ones at the Chicago International last fall, and complimented local breeders on the general quality of the show. He said he had no idea there were so many good sheep in this territory.

Superintendent O. M. Nelson had 721 sheep, 71 Angora goats and 35 milk goats, a total of 827 head. The grand total for sheep in 1922 was 589, and Nelson expressed the opinion that if this ratio of increase keeps up, the management would not know what to do with the sheep next year. It was distinctly a sheep year.

Among the awards were the following:

Fine Wools. Judge: J. H. Butterfield, Enterprise, Ore.

Rambouillets.

With the largest and best show of Rambouillets in the history of the Pacific International, it was curious that all the entries were from outside of Oregon. California, Idaho and Washington made the show, and it was a royal contest, with a fair division of the ribbons among the different exhibitors.

Rams: Aged—1 and 4, Burlingame & Craig, Walla Walla, Wash.; 2, University of Idaho, Moscow, Idaho; 3, Bullard Bros., Woodland, Cal.; 5, J. M. Moran, Starbuck, Wash. Yearling—1 (champion) and 4, Bullard Bros.; 2, Moran; 3, U. of I.; 5 and 6, Burlingame. Lamb—1 and 2, Bullard Bros.; 3 and 5, U. of I.; 4 and 6, Moran.

Ewes: Aged—1 (champion) and 2, Burlingame & Craig; 3 and 6, Moran; 4 and 5, Bullard Bros. Yearling—1 and 2, Burlingame & Craig; 3, U. of I.; 4 and 5, Bullard Bros.; 6, Moran. Lamb—1 and 2, U. of I.; 3 and 5, Bullard Bros.; 4 and 6, Burlingame & Craig. Flock—1 and 4, Bullard Bros.; 2 and 6, Burlingame & Craig; 3, U. of I.; 5, Moran. Flock bred by exhibitor—1 and 4, Bullard Bros.; 2 and 5, Burlingame & Craig; 3, U. of I. Pen of four lambs—1 and 3, U. of I.; 2 and 5, Burlingame & Craig; 4, Bullard Bros.; 6, Moran. Pen bred by exhibitor—1 and 3, U. of I.; 2 and 6, Burlingame & Craig; 4, Bullard Bros.; 5, Moran. Get of sire—1 and 3, Burlingame & Craig; 4 and 6, Bullard Bros.; 5, Moran; 5, U. of I. Produce of dam—1 and 2, Burlingame & Craig; 3, U. of I.; 4, Bullard Bros.; 5 and 6, Moran.

Tell Us Your Happiest Christmas

First prize of $5
Second prize of $3
Third prize of $2
Five prizes of $1 each

for the story of your best Christmas.

Think over your past Christmases and pick out the one which you are the happiest to remember. It may or may not have been the most delightful one, but the one which has given you the greatest satisfaction during the years that have passed.

These prize articles must be within 500 words in length.

In order to be judged for a prize all these articles must reach our office on or before December 8.

Mail direct to Prize Editor, The Washington Farmer, Spokane, Wash.

GREAT NORTHERN URGES SAFETY

Be Careful at Grade Crossings

Almost daily there is reported a very large loss of life through preventable accidents, and many people who are not killed outright are maimed and crippled in such accidents.

Carelessness in crossing railroad tracks was responsible for more of these accidents than any other one cause. They are public as well as individual misfortunes. Your turn may come next if you, too, are not careful. Recklessness on your part will menace those on the train as well as yourself.

There is always a train coming; it may be nearer than you think. A track ahead always means great danger.

About 80 per cent of the automobile drivers do not stop or look in either direction before crossing a railroad track; in about 20 per cent of automobile crossing accidents the automobile is run into the side of a train. No such accidents could happen if automobile and other drivers were careful at every grade crossing.

The train can not turn out for the automobile, and must cross the highways at its usual speed in order to maintain the service that the people need and demand.

Railroad employees and railroad companies are showing praiseworthy zeal and making rapid progress in the adoption of safety precautions and the liberal use of safety appliances in shops and switching yards as well as on the line. What is being done along this line will be more fully developed in another talk.

Be Careful at Grade Crossings

LOUIS W. HILL,
Chairman of the Board.

Talk No. 9.

Purebreds Prove Profitable Pork Producers

Promoting Bred Sow Sales, the Boys' and Girls' Swine Club Work and Ton-Litter Contests

By C. M. HUBBARD

Extension Specialist in Live Stock, W. S. C.

"The purebred boar and sow are so much more efficient than the grade or scrub that we can not afford to raise other than purebreds. We carry 1000 brood sows, 700 of which are purebred, and we are rapidly increasing the purebreds," said R. C. Woodruff, manager of the Pacific Meat company's ranch near Seattle. "The purebreds farrow larger litters, grow more rapidly and put on a cheaper gain." This statement was made last February at Yakima at a meeting of representative hog men of the state who had gathered to discuss ways and means of developing a more efficient swine production in Washington. These hog men were of the unanimous opinion that an increased use of purebred hogs for pork production was the cornerstone of the whole structure.

Purebred Feeder Pigs.

Hog men of Washington, meeting at the Washington state fair at Yakima this fall, reapproved their faith in the purebred for efficient pork production. J. F. Pfander, secretary of the National Duroc Jersey Breeders' association, meeting with breeders at Lewiston, stated that "There is a rapidly increasing sentiment in the corn belt in favor of the purebred for the production of pork. Many farmers are paying a premium for purebred feeder pigs."

By what methods can more farmers be interested in carrying good purebred sows? Bred sow sales, the boys and girls' swine club work, the "Ton Litter" contest, press stories indicating the superior results obtained by litters from purebred sows, the influence of our best farmers and breeders, all point the way toward spreading interest in a more general type of high-class farm hog.

The Bred Sow Sale.

The value of the bred sow sale as a means of placing good hogs on the farms of their communities is being more appreciated by swine breeders as time passes. Good sows so placed make a convert of the buyer to the purebred ranks and to the particular breed concerned. Again these sales make strong breed publicity.

The better breeders are watching closely the quality of the hogs they consign to such sales with the idea in mind of giving complete satisfaction to purchasers. They offer only high-class specimens, sending the plainer material to the pork barrel. Only bred sows from large litters are offered, realizing that sows from small litters themselves average small litters and that the farmer's hog is always a hog capable of farrowing large litters. Pedigrees on sale consignments are on hand, as the breeder knows that if any one thing exasperates a farmer it is waiting from several months to half a year for the certificate of registry.

Strong sentiment developed at the state fair swine meeting in favor of a series of purebred sow sales in favorable localities of the state this late winter and early spring as a means of meeting the farmer's demand for better hogs.

Boys and Girls.

No phase of swine improvement offers greater opportunity for progress than does the boys and girls' swine club work. Carrying with it the use, in nearly all instances, of purebred females and using bred sows or gilts in the majority of instances, the club work is a relatively rapid means of spreading good hogs in a given neighborhood.

A local swine club leader in the Latah community, Spokane county, says, "This swine club work in this community for the last two years has put the hog industry on its feet. A year ago there was a demand for at least 60 registered gilts among the farmers in the community. Now from 40 to 50 per cent of the farmers are adopting swine club methods in this community."

Not only are the club members assisted in purchasing a good purebred sow or gilt, but they are also given instructions on feeding, management and judging work and interested in taking a few head of their best pigs to the county fair. Club members are informed by their leaders that, while now and then a gilt or boar may be good enough to sell for a fancy price, still practically all the gilts will sell to farmers at or a trifle above, farmers' prices or else go into the pork barrel and that the male pigs will travel the same route.

Grand champion pen barrows at the Pacific International Live Stock show, from River Banks farm, Grants Pass, Ore.

Older Folks Follow.

In nearly every county in the state where swine club work is being conducted a healthy increase in membership and interest in the work is noted. In 1923 a 15 per cent increase in enrollment over 1922 was obtained in all counties carrying county agents. The swine club work is receiving the hearty and enthusiastic support of the hog men of the state in its work of educating the young people, as well as older farm folk, toward a higher class of hogs.

The swine men of Washington favor the "Ton Litter" contest, being carried on again in 1924, as another means of improving the quality of our hogs. The production of a ton of pork from one litter in six months calls for good breeding and high-class care and management. It calls for large litters, nearly every pig of which must be saved; for modern type hogs rather than short, chunky ones; a good strong growing ration for the sow and litter for the first few months, with later on a change to the fattening type; and for the use of pasture of a legume or grain nature in order to keep down the cost of production. Last year in the Indiana contest every one of the 36 winning litters were from purebred dams. Surely here is another lesson in efficient pork production.

Farm Leadership.

Numerous prominent farmers over the state might be pointed out as using purebred sows for pork production purposes. Among these may be mentioned J. Huston McCroskey, local leader of the Garfield swine club, Lester Daily of Palouse and Roy Perringer of Belmont, who are running purebred shoats with the object in view of cleaning up their wheat stubbles and pea fields more efficiently.

With the United States department of agriculture stating that good purebred hogs are 38 per cent more efficient pork producers than grades and scrubs, and with the experience of practical hog men reaffirming this statement surely here is an avenue toward a greater profit open to the rank and file of our farmers.

Breeders' Sales at the Pacific International Livestock Show

More sales than ever before and higher prices for dairy cattle than have been realized for several years is the story in a few words of the live stock sales at the 1923 Pacific International. New this year were the Duroc-Jersey swine and the Guernsey cattle sales of Wednesday afternoon, the latter of which set a high average for other sales of the week; the sales of Shropshire sheep on Friday, and the private sales of Hereford cattle on Saturday; and while it could hardly be said that prices received by beef cattle breeders for their splendid offerings were satisfactory, yet they probably were better than expected under the conditions. The sales offer a good medium for an annual clean-up, and this year there was a splendid average of quality in the consignments.

The total turn-over was close to $100,000, of which boys and girls' club consignments, disposed of this season for the first time in a separate sale, furnished nearly $10,000, or about 10 per cent. The splendid conditioning that their animals had received, particularly the fat hogs in the Portland Union Stockyards company contest, was frequently remarked at the sale ringside. The largest amount of money was received in the Holstein sale, backers of which pride themselves on the fact that it was the eleventh annual. Fifty-four head brought over $17,000, and the top prices of $2000 for a bull and $1000 for a female, and the average of around $320, renewed the confidence of many a breeder. Sixty head of Jerseys brought $14,265, and while their average ($237) and their top ($1225 for St. Mawes Anne Rosaire) did not quite equal those of other breeds, the sale was entirely satisfactory. Thirty-eight Guernseys brought $12,365, making their average of $325 highest of the week. Janis of Sequoia, state and northwest leader in production, was their headliner at $1500. Thirty-three Herefords brought $4110, averaging $124; 65 Shorthorns $7993, averaging $123; and the Duroc-Jersey and Shropshire bred ewe sales brought in totals of $1400 and $825 more, respectively. In the sales of fat stock (including carloads), sensational features of former years were lacking, but 151 steers brought over $14,000, 283 hogs over $5750, 194 sheep nearly $2500, and the total was $22,622.27.

Forty-nine steers and a heifer, disposed of in the sale of boys and girls' club stock, brought $6287.50 as returns for the work of the young but very rapidly coming breeders. Hogs numbering 184 brought $3421.27, and lambs numbering 17 were disposed of for $194.67. These figures are staggering when compared with the comparatively small totals of two or three years ago, but they truly indicate the wonderful growth which club work is undergoing.

Not including two private sales of Herefords, on which figures are not available, the grand total of sales for the week, in round numbers, was $90,715.

Fifty-four Holsteins, 49 females and five bulls, brought a total of $17,240 and an average of $320 each in the 11th annual sale at the Pacific International Live Stock show at Portland. The list included principally consignments from the herd of F. R. Beals of Tillamook, who sold 19 head, and practically the entire herd (33 head) of Max Arp of Eugene, Ore., who quit the breeding game following a destructive fire. J. Luscher & Sons of Fairview, Ore., consigned one bull and Thomas J. Owens of Kirkland another, a royally bred youngster that topped the sale at $2000 and became the property of the imperial Japanese government.

The Guernsey sale at the Pacific International was one of high class, including consignments from the herds of Albion L. Gile, Chinook, Wash.; Olympic farms, Seattle, Wash.; Minnie W. Miller, Wendell, Idaho, and the following Oregon breeders: River Banks farm, Grants Pass; J. A. and J. T. Richey, Boring; H. L. Carl, Hubbard, and Shannon B. Shafer, Deer Island; also a complete dispersal of the Cottonwood farm herd, following dissolution of the partnership which owned it. The average of the sale was $325 for 38 animals of both sexes and all ages. Janis brought $1500 from Troutmere farm and Gail $800 form R. C. Hallberg of Independence, Ore., who vied with a California buyer and with Claig L. Spencer of Seattle for the highest total of purchases. His total for four head was $2000, including a daughter of Gail and a half-sister by the same sire. Troutmere farm totals was $2200 for three and Spencer's $2985 for 10 head from six different herds.

The first Duroc Jersey hog sale at the Pacific International hog show was held November 7. Three consignors made the sale and 32 hogs went through the ring. Top price was paid by Mr. and Mrs. Robert H. Warren of Forest Grove, Ore., who took the litter mates, Red King's Butterfly and Red King Buttercup for $115 each. Berry's top gilt brought $75 and was taken by Henry Zorn of Aurora, Ore.

Another new live stock sale was inaugurated at the Portland International this year when the Oregon Shropshire association put on a bred ewe sale. Seventeen ewes and three rams were sold. Prices were not high, but they were sufficiently satisfactory that the announcement was made, with the sanction of the breeders who had consigned, that the sale would be held again next year.

With a top price of $1225 and an average for the 53 females of $239 and $201.43 for the seven bulls, the Jersey sale at the Pacific International was deemed successful in every particular. There was almost every kind of Jersey consigned from calves barely 6 months old to cows past 10 years. The top price was for the young cow, St. Mawe's Anna Rosaire, consigned by G. H. Dammeier of Portland. The buyer was David Spencer, Ltd., of Vancouver, B. C., who was one of the best buyers of the sale. He took seven head for a total of $2880.

About 37 head of Herefords were sold at the Hereford sale at the Pacific International, about evenly divided between bulls and females. Top price for bulls was $250 and the average was $141. Average on the females was $120.

The Shorthorn sales at the Pacific International reflected the fact that the beef cattle business is still in a demoralized condition. Prices were decidedly low. Forty-two head of females were sold for an average of $112 and the 23 bulls averaged $145. Top price was $315, paid by the University of Idaho for one of the prize females from the F. M. othrock consignment.

Valley Apple Show

The biggest Spokane Valley Apple show yet held closed last Saturday night, with both attendance and exhibits outstripping those of last year. Although the exhibits of 1922, which were afterward sent to the Pacific International Fruit show at Seattle, won the sweepstakes there, the apples displayed this year were uniformly of even higher quality, stated J. B. Felts, manager of the show. About 30 varieties were shown in all by the 77 growers who exhibited individually, and in all some 400 trays, plates and boxes. Singles trays and three-tray exhibits, single plates and plates of five different varieties competed for the prizes to individual exhibitors, and there were beside exhibits by the valley clubs. In the women's department more than 100 varieties of apple product were displayed. Manufacturers

(Continued on page twenty.)

Winter Poultry Show

Five states—Washington, Oregon, Idaho, Montana and California—and the Canadian province of British Columbia were represented at the Western Winter show, the 14th annual exhibition of the Oregon Poultry and Pet Stock association, which is the poultry division of the Pacific International. Over 2000 birds were exhibited by more breeders than ever before, and from a wider territory, and C. S. Whitmore, secretary of the association, and Superintendent E. C. Shearer, both of whom have acted in their respective capacities for five years past, agreed that the 1923 exhibition established the high water mark of Portland shows, so far. Early November is too early in the season for the birds to be in good show condition, but even so, the other benefits which accrue to the exhibition by being held in conjunction with the Pacific International are held fully to justify its continuance

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign ,one year, $1 25.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Spinach for the Cannery

Two hundred tons of spinach were raised for the cannery by farmers in the Yakima valley. This crop affords a chance for getting two crops from land that is to be planted later to potatoes, or other row crops. An average yield of 3½ tons has been estimated for the Yakima section.

Corn Clubs Popular

Corn clubs have been very popular with the boys' and girls' clubs in Benton county, there being a total of four such clubs in the county this past summer under the supervision of Miss Gertrude M. Gage, the county club leader. Each member took one-half acre of ground and prepared it for planting, planted the seed, cultivated and harvested the corn. In each case the member was required to keep accurate account of all labor and money expended, which figures were kept in the record book which is furnished by the extension service of the state college. All of the corn this year was some variety of Dent and many had yields that would have been a credit to their fathers' fields.

Prohibits Japanese Ownership of Land

Japanese ownership or leasing of lands in Washington and California was knocked higher than a kite by the supreme court of the United States in a sound, well-reasoned decision, as announced in the last issue of The Washington Farmer.

The constitution of the state of Washington, adopted in 1889, prohibits alien ownership of land. Additional to the constitution, a state law forbids the leasing of lands by Japanese.

The supreme court not only found our state constitution and laws in harmony with all rights guaranteed under the United States constitution, but declared that the treaty with Japan gives the subjects of that empire no such right as that for which they contended in the owning or leasing of land.

The supreme court's decision follows the line of reasoning that was advanced by The Washington Farmer when this issue was thrust into the courts. The fundamental doctrine is laid down in this decision that "the quality and allegiance of those who own, occupy and use the farm lands within its borders are matters of highest importance, and affect the safety and power of the state itself."

We hope that this decision disposes of a problem that carries a good deal of dynamite. It does not necessarily follow though that this ends the issue. We are safe from the evil of Japanese ownership and leasing of land so long as the present treaty stands with Japan, but it is possible that a new treaty could be negotiated and ratified by the United States senate that would give Japanese subjects the right to own and lease land in the United States and in that event the treaty would be superior to our state constitution and laws.

That is a possibility, but is highly improbable. The spirit of the people of the Pacific coast and Rocky Mountain states is resolutely against Japanese occupancy of our agricultural lands, and it is not likely that any administration at Washington would care to flout that spirit by negotiating an objectionable treaty with Japan. Even if our state department should negotiate such a treaty it would not come into effect until it had been ratified by two-thirds of the members of the United States senate.

It is theoretically conceivable that Japanese subjects could yet be put in the way of acquiring land in this and other states of the west coast, but as a practical political proposition it seems that the issue was effectively disposed of when the United States supreme court sustained our state constitution and law.

Menace to the Dairy Industry

The National Milk Producers' federation has been in session at Pittsburgh, Pa. At the opening session, Charles W. Holman of Washington, D. C., the secretary of the federation, uttered a warning to American farmers that they must protect themselves against the continuing menace of Oriental vegetable oils. Mr. Holman reviewed the fact that American farmers united in a fight to secure some measure of protection in the permanent tariff act of 1922; that they were opposed by a powerful lobby, financed by the organized soap interests, and uttered the further warning:

"Our farmers should not delude themselves with the belief that this lobby is now asleep. It is still on the job in Washington, engaged in the gentle task of trying to array one class of farmers against another and thus defeating all farmers. Connected with this lobby are large importers of vegetable oil."

The speaker also cautioned dairymen that they must prepare still further to protect their interest against butter substitutes. The vegetable margarine interests are preparing to wage a bitter fight to loosen restrictions, said he. "The first battle ground will be in the state of Washington, where a referendum vote has been ordered on a law which practically stamps out the margarine traffic and which was secured by the organized cooperative dairymen and the consumers of that state. I am informed that the opponents of this law are prepared to spend unlimited sums to defeat it at the polls. They fear the extension of this form of legislation to other states and they fear particularly the example which Canada has set in forbidding the importation, manufacture and sale of margarines in the Dominion."

The law passed by the last legislature of Washington, referred to by Mr. Holman, is given below, and is entitled "An Act Relating to Milk Products, to Prevent Fraud Therein, and the Adulteration Thereof, Regulating the Manufacture and Sale Thereof and Providing Penalties for Violation Thereof."

Section 1. It shall be unlawful for any person or corporation to manufacture for sale, sell or exchange or expose or offer for sale or exchange any condensed or evaporated milk, or any substance containing any milk or milk products and designed or intended to be used, or capable of being used for or as a substitute for condensed or evaporated milk, unless the milk used in the manufacture thereof is pure, clean, fresh, healthful, unadulterated and wholesome milk; provided, that nothing herein contained shall be construed as prohibiting the manufacture or sale of condensed or evaporated milk manufactured from pure, clean, fresh, healthful, unadulterated and wholesome skimmed milk; and it shall be unlawful for any person or corporation to manufacture for sale, sell or exchange or expose or offer for sale or exchange any condensed or evaporated milk containing any vegetable fat.

Section 2. It shall be unlawful for any person or corporation to manufacture for sale, sell or exchange or expose or offer for sale or exchange any substance containing any milk or milk product and designed or intended to be used, or capable of being used, for or as a substitute for butter, unless the milk contained therein, or used in the manufacture thereof, is pure, clean, fresh, healthful, unadulterated and wholesome milk from which none of the cream or butterfat has been removed, or to manufacture for sale, sell or exchange or expose or offer for sale or exchange any substance containing any milk or milk products, and designed or intended to be used, for or as a substitute for butter, which contains any vegetable fat.

Section 3. Every person or corporation violating any provisions of this act shall be guilty of a misdemeanor, and for a second and each subsequent violation thereof shall be guilty of a gross misdemeanor.

The dairymen of the state and all the friends of the great industry which is threatened must keep wide awake in defeating this referendum.

Washington State Gleanings

C. H. Greeley of Ridgefield won the $50 prize for the best bushel of certified Netted Gem seed potatoes exhibited at the Land Products show held at Portland during the week of the Pacific International Live Stock show.

TAX PAYMENTS INCREASE.

Internal revenue collections for the district of Washington, which includes Alaska, already have reached a total of $13,617,240 for this year. According to Burns Poe, collector, of Tacoma, this year's business of his office will greatly exceed that of 1922.

FARM BUREAU REORGANIZED.

W. H. Talley, secretary of the state farm bureau, and Brick Burford, Whitman county agent, reorganized the farm bureau at Thornton. Claude Comegys was elected president; Anson Patterson, vice president, and Mrs. Charles Hughes, secretary-treasurer.

GROW GROUND CHERRIES.

Ground cherries promise to become one of the principal crops in the Pasco district, according to County Agent Harold Simonds. The fruit has not been grown extensively, but a number of farmers have tried it this year and the crop proved very satisfactory. The cherries are unusually large and of good flavor.

EGG RECEIPTS AT WINLOCK.

Receipts of eggs at the Winlock station of the Washington Cooperative Egg and Poultry association for the week ended September 29, 1923, were 504 cases, compared with 220 cases for the corresponding week of 1922. For the week ended October 6, 1923, cases received totaled 421, compared with 208 a year ago the same week.

WILL SHIP APPLES TO EUROPE.

E. E. Ullberg, Seattle agent for the Cunard Steamship company, announced October 26 that 20 carloads of apples have been bought at Walla Walla for shipment to Europe. People of England and Scandinavian countries are in the market for smaller apples, he said. The apples were purchased from J. L. Johnson, Freewater, Ore., and T. A. Jones, Walla Walla.

LUMBER CARGOES FOR JAPAN.

Grays Harbor will ship 250,000,000 feet of lumber to Japan next year, according to H. N. Anderson of the Twin City Lumber company, who said that the independent lumber companies of Grays Harbor are specializing in Japanese trade and have chartered ships until May 1, 1924. The ships were chartered at low rates immediately after the earthquake disaster.

SHIP 50 CARS OF APPLES.

The apple season at Peach, in Lincoln county, is drawing to a close, reports Lynn Carter, manager of the White Brothers and Crum fruit warehouse. The company has sent 50 carloads of apples from this point. There were about 60 varieties included in these shipments, but Rome Beauties predominated. Probably 15 cars have been consigned by independent shippers.

YAKIMA ONIONS GRADE HIGH.

Yakima valley onions very readily make United States grade No. 1, according to W. L. Close, district horticultural inspector. The requirement for that grade is that the onions be not less than 1 1-4 inches in diameter and very few onions here are smaller than that. Those 1 1-4 to 1 3-4 inches in diameter are No. 1 medium and those still larger are the United States No. 1 large. The crop is greater than had been estimated and may run as high as 250 to 300 cars.

DECIDE TO PICK APPLE CROP.

The Stanton Investment company, owners of the Baker-Langdon orchard at Walla Walla, have finished picking about 20,000 boxes of Rome Beauty apples which it had planned to leave on the trees. Improvement in the apple market caused the decision to pick the apples. The company has 100 carloads of apples in storage in Chicago and Kansas City and 30 carloads in Freewater, while 10 carloads were shipped to England. The company has packed 210,000 boxes besides about 25,000 boxes to be used for byproducts.

1000 BOXES APPLES TO ACRE.

One thousand boxes to an acre on C. E. Chase's 20-acre ranch on Okanogan avenue is one of the largest yields reported this year at Wenatchee. Twenty thousand boxes for the entire orchard, is the latest estimate, and final figures will not vary materially from that.

In 1920 the trees had set their record at 20,436, which this year's crop has failed to beat. In 1921 they produced 17,900, and in 1922, 18,400 boxes. The trees are now 17 years old.

Mr. Chase's ranch is believed to be typical of the yields in the lower valley, most of them running beyond the early estimates for this year.

HORNET-YELLOW JACKET WAR.

Hornets and yellowjackets proved a more serious menace to fire wardens in Pend Oreille, Stevens and Chelan counties during the last season than did forest fires, according to Ted Goodyear and A. E. Schaller, who are now in Olympia after their season's work in eastern Washington. Not only were the hornets a constant source of annoyance to the men, but they were the third most frequent cause of fires, it was reported.

In a number of instances farmers and tourists who were bothered by the insects burned them out and the fires set to destroy the pests spread to the near-by forests, requiring the services of rangers to put them under control.

Lightning was the most common single source of forest fires on the East Side this year, the wardens stated, with the work of careless tourists coming next in order. Pend Oreille county suffered most from lightning, 35 of the 65 fires being attributed to it, Warden Goodyear reports. Thirty tourists, mostly easterners, were fined for leaving fires burning in the Blewett pass country, Warden Schaller states.

Although the latter part of August and all of September were highly favorable for forest fires, the loss was extremely low, it is said. In Pend Oreille county not more than 937 acres of land was burned over, only 47 acres of which contained merchantable timber, and of the 2900 acres burned over in Stevens county, not more than 300 acres was timber land.

Every Farm a Factory

Practice Has Drifted a Long Way from that Safe Mooring

"Every farm a factory" is the slogan proposed by the American Society of Agricultural Engineers, on recommendation of a committee report submitted by Professor L. J. Fletcher of the University of California, following a year's study of the problems involved in the preparation of farm products for the consumer.

"Manufacturing on the farm is not a new idea," the report says. "It was commonly practiced 2000 years ago throughout the Roman empire. Today the majority of the farmers of the United States are selling their products as raw material, while the manufacturing is carried on by separate highly specialized organizations."

The committee need not have gone back to the Roman empire. All through the colonial period of American history manufacturing was carried on right on the farm. Every well-equipped farm of that period had its forge, and many of them made boots and shoes, clothing and other commodities needed by the farmer, his family and his workers.

That practice extended down to the latter half of the last century. There are today many men and women in the Pacific northwest whose childhood was passed on farms where a flock of sheep provided the wool that was carded, spun and woven by the grandmothers and mothers of that period. The well-balanced farm then had its bees for honey, its sorghum patch for sirup, and even a little patch of broom corn for the family brooms. A yearly outlay of a few dollars for coffee and tea and perhaps a little sugar, required the handling of very little money by the successful farmer of that period. He was independent and he was out of debt. He was efficient himself and brought up his boys and girls to efficiency.

Farming has drifted a long way from that safe mooring, particularly in parts of the Pacific northwest. On too many farms there is even lacking production of the butter and milk, the poultry and eggs, the garden produce and the fruit that is consumed by the family on the farm.

That is one thing that is ailing American agriculture today. In the opinion of some observers it is the chief ailment.

Call for More Dairy Production

The call is constantly for more dairy production in this country. The distressed wheat growers are advised from many sources that if they would go into diversified farming and turn to dairying they and the country would be better off. We think that is true. We should like to see agriculture in the Pacific northwest turn more to dairying. But to bring about that happy condition the dairy producers must be given the fullest assistance compatible with the public interest.

There are two causes tending to keep down dairy production in the United States. One is the increase of butter substitutes. The consumption of oleomargarine, for instance, is steadily increasing. Complete revised figures of the bureau of internal revenue show a production of colored oleomargarine during the fiscal year that ended June 30, 1923, of 6,766,000 pounds, an increase of nearly 2,000,000 pounds over the production in the preceding year.

In the same year, ended June 30 last, production of uncolored oleomargarine reached the stupendous total of 202,852,000 pounds, an increase of nearly 20,000,000 pounds over the production of the preceding year.

At the same time the records of the government show that foreign butter is coming into the American market, although it has to pay a tariff tax of 8 cents a pound. Imports at New York in September amounted to 823,000 pounds, including 168,000 pounds from Argentina, 56,000 from Denmark, 72,000 from Holland, 52,000 from Ireland, 67,000 from Esthonia and 404,000 pounds from Siberia. The total butter import at New York from January to September of this year amounted to 12,282,000 pounds.

One does not have to be a high tariff supporter to see that our dairy producers do need protection. If more than 12,000,000 pounds of foreign butter could be sold in the single market of New York in nine months and pay a tariff of 8 cents a pound it is not difficult to speculate on what would happen if we had free trade in butter.

When the tariff law of 1922 was under consideration in congress, representatives of the great dairy associations told the congressional committees that a tariff tax of 8 cents a pound would be insufficient to shut out foreign competition. The records now show that they were right.

KEEP THE DOCKAGE AT HOME.

Northwest Farmstead: Let's keep the dockage at home, feed it to our own live stock, save the freight on it, and get pay for good grain instead of dirty grain. The first lesson in marketing is always that quality pays.

Good to Give Thanks

For Thou, Lord, Hast Made Me Glad Through Thy Work

It is a good thing to give thanks unto the Lord, and to sing praises unto thy name, O most high:

To shew forth thy loving kindness in the morning, and thy faithfulness every night.

Upon an instrument of 10 strings, and upon the psaltery; upon the harp with a solemn sound.

For thou, Lord, hast made me glad through thy work: I will triumph in the works of thy hands.

O Lord, how great are thy works! and thy thoughts are very deep

A brutish man knoweth not; neither doth a fool understand this.—Psalm 92:1-6.

HARD LABOR AND CLEAN LIVING.

Rural New Yorker: Several of our presidents were born on a farm and as boys were well acquainted with farm life. Washington was an aristocrat, one of the largest land owners of his time. It could not be said that he represented the typical farm life of his age. Lincoln was a farm boy—the exact opposite of Washington in social standing. It can not be said that his log cabin and rough boyhood surroundings represented the ideal country home. The fair type of what we consider the true rural American home lies between the lordly estate and the rough cabin, and we think the boyhood home and the early life of President Calvin Coolidge come close to the ideal of what we should consider typical farm surroundings. It means something to maintain a New England farm through four generations from the original pioneer, keep the land clean and in good tilth, hold the thrift which follows wise economy, and preserve the solid independence which gave such character and power to the old-fashioned farmer. This seems to be what has been worked out on the Coolidge farm in Vermont, and the more we hear of the president's farm life and the character of his parents the clearer it seems that he has come from about the finest starting point a man can have; that is, a practical farm, where hard labor and clean living are essential to a livelihood.

FARM BUSINESS AND MARKETS OUTLOOK

NO new clouds are apparent on the business horizon to suggest that a storm is brewing. Developments of last week contained a reasonable proportion of sunshine. In the farm market field a more steady undertone in cattle and sheep, the advances in corn and cotton and the evidence of sustained consumption of dairy and poultry products at good prices put the majority of changes on the favorable side.

The Harvard committee on economic research expresses its conviction as to the business future as follows:

"Favorable money and credit conditions give assurance that the readjustment which has been under way will be completed without development into depression. If fundamental conditions had generally been unsound the business recession of the last five or six months would have resulted in frozen credits and money stringency which would forecast business depression. General wholesale commodity prices, following the sharp recessions of late spring and early summer, have been stabilized. Retail trade has remained good. Thus the general business situation, despite weakness in certain lines, appears sound; and the strained credit conditions from which depressions ordinarily develop are absent."

Roger Babson looks for a further recession in business and industrial activity in the immediate future, but is hopeful of improvement in the farm field with a possibility that before the end of next year farmers may even be in a better position financially than their city brothers.

The November review of the Cleveland Federal Reserve bank makes this statement:

"Business has entered into the final quarter of the year, with production less active in certain lines than it was a month ago, but still large in volume and sustained by the consumption requirements of a well-improved population.

"Agricultural conditions are showing a steady improvement and it is the opinion of those in close touch with the farm trade that farmers in certain sections are coming into the market for those necessities which they have needed for the last three years."

Comeback in Steer Market.

A better undertone is perceptible in the cattle market, with trade more brisk, sales more prompt and steer prices at the highest point in a month. Market supply was slightly smaller and the lightest since mid-August, but the eastern beef market was sluggish as pork and poultry are abundant and cheap and the total amount of beef to be consumed is above normal.

Prices remain unsatisfactory, however. Few mature steers are selling above $10.75, but yearlings at $10.75 to $11.75 are numerous. Handyweights also get quick action.

Stocker and feeder purchases are running below last year and many feeders are taking light cattle, presumably to be carried along rather than to be forced on feed immediately, so that the prospect for the midwinter fat steer market is improving.

Hog Market Lowest in Season.

Under steadily mounting receipts the hog market sank to the lowest point yet reached this fall. The supply continues to outdistance that of the corresponding period of last year, and indications that the big runs are due to premature selling of light hogs and liquidation of brood sows are becoming more clear cut. The department of agriculture reports that the number of stock hogs on farms on September 1 for the country as a whole was only 3-10 of 1 per cent more than last year. For the corn belt the increase was 4.3 per cent. The greatest percentages of increase were shown by the western states.

Lamb Market Higher.

Lighter receipts and a stronger dressed market in the east finally turned the lamb market upward. Cull lambs, fat sheep and feeding lambs were slightly higher. Most of the range lambs arriving are thin, indicating the clean-up stage, and many of the "comebacks" from corn fields are not fat. Feeder lamb shipments of the country continue at an extraordinarily high level, with most of them going into Colorado and adjacent territory at present.

A better tone was reported in the laggard Boston wool market last week with medium wool prices tending upward. Fine wools are inclined to be slow. Values on imported wool are stiffer, but a substantial amount was sold for reexport last week.

Wheat Market a Puzzle.

Wheat prices declined early last week, but the market steadied rather promptly on a moderately lower level. Both the behavior of the market and the probable outcome of the various factors likely to shape the course of prices are more puzzling than usual.

Corn and Oats.

Corn prices have been fluctuating rather wildly in the last two weeks, but have held up better than expected.

Sales of oats by producers and shipments from country points show further falling off. The visible supply declined last week for the first time since the heavy after-harvest movement started. It is probably near its peak for the fall, the present total of 20,272,000 bushels comparing with 33,827,000 bushels last year.

The rye market is trailing wheat.

Cash Grain Markets.

The range of cash grain prices for the week ended November 14 was:

CHICAGO—Wheat—No. 2 hard, $1.05@1.06; No. 3, $1.02 1-2@1.03. Corn—No. 2 mixed, 93@96c; No. 3, 85 1-2@90c; No. 4, 83 1-2@89c; No. 2 yellow, 97c@$1; No. 3, 91 1-2@93c; No. 4, 86 1-2@95c. Oats—No. 2 white, 43@45c; No. 3, 41 3-4@43c. Rye—69@70 1-2c. Barley—54@69c.

Seed and Feed.

The November estimate of the clover seed crop was 1,121,000 bushels, compared with 1,251,000 bushels a month ago and 1,875,000 bushels harvested last year. On this basis, the 1923 crop is the smallest in a number of years and below average requirements.

The feed market was quiet last week, with western mills offering wheat feeds to the east for immediate shipment at slightly lower prices.

Hay Markets Firm.

Light receipts and a good demand caused a firm tone in hay markets, with higher prices at several points toward the end of the week. Dairymen are good buyers of alfalfa at Kansas City.

Egg Prices Firm.

Receipts of fresh eggs showed a marked falling off last week. Prices advanced sharply, but declined when the output of storage stocks increased as dealers supplied more of their needs from this source. As fresh eggs continued scarce, however, the market recovered part of its loss and further advances are not improbable. Cold storage holdings of eggs on November 1, according to the preliminary report of the bureau of agricultural economics, amounted to 6,658,000 cases, the largest on record for the corresponding date. The October movement of storage eggs in the United States was more nearly equal to that of last year than in the preceding month, so that the November figures compared more favorably with the total of 5,726,000 cases on November 1, 1922, than was generally expected.

Butter Market Is Strong.

Butter prices remained practically unchanged last week. Receipts of fresh butter are declining gradually, as is usual during the late fall, and reports from production centers indicate further shortening of supplies. Storage butter withdrawn to supplement the fresh last week kept prices from advancing. Cold storage holdings on November 1, according to the preliminary report were 76,630,000 pounds, a surplus over last year of only 2,773,000 pounds, indicating a fairly rapid out of storage movement at the interior points. Thus far this month withdrawals at the four leading markets have been in excess of the same period last year. Dealers view the market with confidence, although prices are not expected to advance into much higher ground before the first of the year.

Cheese prices remained unchanged last week and the undertone appears stronger. Receipts are still liberal, but are beginning to fall off and consumption continues high, so that firmer prices are to be expected.

Fruits and Vegetables.

The November estimate of the white potato crop was 417,000,000 bushels, an increase of 15,000,000 bushels over a month previous, mostly in New York and Pennsylvania. Sweet potatoes were estimated at 97,000,000 bushels or an increase of 1,000,000 bushels over last month. The combined yield of 514,000,000 bushels compares with 561,000,000 bushels harvested in 1922. Per capita production of white potatoes is about 3.8 bushels, which is above the average. Carlot shipments from producing sections have declined over 40 per cent in the last month and further shrinkage can be expected up to the first of the year. Northern round whites are quoted at 90 cents to $1.20 per 100 pounds in Chicago, with Idaho Rurals at $1.25 and Russets at $1.85 to $1.90.

The commercial apple crop estimate was increased slightly in the November returns to 33,522,000 barrels, compared with 30,955,000 barrels last year. Carlot shipments from producing sections last week were about one-third less than two weeks ago, but consuming markets have not recovered from the heavy movement and prices have not made much progress. Middlewestern A 2 1-4 Jonathans and Northern Spies are quoted at $5.50 to $6 a barrel in Chicago and northwestern medium to large extra fancy Jonathans at $2 to $2.25 a box, fancy at $1.75 to $2, extra fancy Delicious at $2.85 to $3.15 and fancy at $2.60 to $2.85.

Sugar Beets

Made to Pay in West Washington

Sugar beets were tried out in western Washington the past season, and the general conclusions of several trial fields in Whatcom county show that they can be made to pay. H. B. Carroll Jr., county agent, has compiled the following figures which are self explanatory:

Horse labor—Plowing, $4.50; preparing seed bed, $3.25; seed and drilling (15 pounds to the acre), $3.25; cultivating four times at 65 cents per time, $2.60; plowing out beets at harvest time, $2.75; hauling 20 tons at 75 cents a ton, two miles, $15. Hand labor—Thinning, $8; first hoeing, $2.50; second hoeing, $1.50; harvesting, $16.50. Barnyard manure, $10. Total estimated cost of labor and seed, $69.50 an acre.

Returns—Twenty tons of beets at $8 a ton (paid in 1922), $160; less labor, etc., $69.50; income without taxes charged, $90.15.

In addition to the above income per acre, Mr. Carroll points out that there would be nearly eight tons of beet tops that could be used as feed, either for green feed or to put into the silo and fed out later in the season.

Even where the yield was lighter there would usually be enough profit to warrant the growing of beets. If there were only 15 tons to the acre and the total cost of producing the crop, the same as above, the gross return would be $120 from 15 tons at $8 per ton. That would mean a net income of more than $50, which does not include taxes and there would still be six tons of tops for feed.

While beets are yet in the experimental stage, the trials are conclusive enough to warrant further plantings in this territory provided the tonnage made this year can be equaled in future years. There seems to be little reason why this crop would not combine well with dairy or poultry farming. Mangles have already proved their value as a root crop but are used only as cow feed. Yields of as high as 50 and even more tons to the acre have been reported and there is a possibility of raising the tonnage of sugar beets. The highest yield of the latter in the trial plantings was close to 30 tons to the acre.

DR. HOLLAND SAILS FOR EUROPE.

Dr. E. O. Holland, president of the State College of Washington, sails for Europe this week to study the changed social and economic conditions of England, France, Germany, Russia and perhaps Czecho-Slovakia.

Twice before the war Dr. Holland visited Europe, traveling over much of England and the continent and acquainting himself with conditions as they then were.

Wheat Committee Announced

The personnel of the wheat committee authorized at the recent Colfax conference was announced Monday in Spokane by F. J. Wilmer, Rosalia, state senator from Whitman county, appointed chairman at the Colfax meeting. He reports that most of his appointees have sent acceptances and he expects them from all the others.

The Colfax resolutions specified organizations that should be on the committee to work out a wheat marketing plan that will solve present difficulties, if possible. Mr. Wilmer's appointments follow:

Peter McGregor, wheat grower, Hooper, representing the federal reserve bank and Adams county.

Arthur D. Jones, Spokane business men and wheat growers.

R. L. Rutter, bankers and war finance corporation.

Ward M. Buckles, Intermediate Credit bank.

A. W. Davis, Spokane, attorneys.

State Senator W. J. Sutton, Cheney, national banks and wheat growers.

H. Jurgenson, Wilbur, farmers' union and Washington Wheat Growers' association.

Ralph Comegys, Thornton, state banks and wheat growers.

County Commissioner Edward Powers, Starbuck, wheat growers.

State Representative H. E. Reynolds, Walla Walla, wheat growers.

W. C. Halsey, Asotin, wheat growers.

F. W. Hungate, Pomeroy, bankers, wheat growers and Garfield county.

J. Houston McCroskey, Garfield, farmers and farm bureau.

F. J. Wilmer, Rosalia, bankers and wheat growers.

Roy V. Peringer, Belmont, Washington Wheat Growers' association.

E. L. French, state department of agriculture.

E. J. Doneen, Farmington, farm bureau.

H. W. Cordell, department of economics, Washington State college.

Harrison C. Dale, department of economics, University of Idaho.

A member is yet to be named to represent Grant and Douglas counties. The committee will have its first meeting in Spokane Monday, December 3, under present plans. In the meantime every member will be furnished with publicity matter on the various plans to expedite action when they get together.

"The 'dirt' farmers have the majority on the committee, but we believe this is right," said Chairman Wilmer Monday. "Whitman county also has a large representation, but there was a motive in this. The indorsement by Whitman county of any plan will go a long way in the other counties. We will probably do our first work in Whitman county.

"The committee will endeavor to find a workable plan. It will consider every plan—cooperative marketing, fixed price, export surplus and any other that may be presented. We feel that we have a committee that will work well together. Every interest is represented and yet I don't believe we have any members who are sold on any one plan, or will be inclined to dictate policies."

Winter Poultry Show

(Continued from page three.)

under present arrangements. Cash premiums this year totaled $2500 for standard and commercial breeders' classes, egg show and rabbit show.

The fact that the Rhode Island Red Club of North America this year held its annual meeting in Portland and brought along some of its fancy stock to exhibit is partly accountable for the splendid showing of Reds, which was the largest of any breed, over 200 birds being caged. J. G. Dickson of Spokane was the largest exhibitor of this breed, but for comprehensiveness the display of Mr. and Mrs. J. T. Emert of Portland won most laurels. A group of Tacoma breeders contributed largely to the showing of Barred Plymouth Rocks, which with 100 birds was second largest. White Leghorns came next in numbers, but not in quality, for the constant striving of this breed toward high production has led it far afield from the standard of perfection. Buff Leghorns, Black Minorcas, White Plymouth Rocks and Anconas all were strong, the last named especially so, and there was a good display of turkeys.

Judges included W. M. Coates of Seattle, who has officiated every year since the show was started; J. C. Williams of Fullerton, Cal.; Tom Wilkinson of Nanaimo, B. C.; and H. E. Osborn of Portland. The latter named handled the awards on rabbits.

Holstein Sale

Twenty-nine head of purebred and grade Holsteins sold in the Clarke county breeders' first annual consignment sale at the fairgrounds, east of Vancouver, October 25, brought a total of $4875. Sixteen purbred females averaged exactly $200 each, but five grades averaged nearly $150 and one brought $255, within $50 of what the top price purebred sold for. Russell J. Case of B. O. Case & Sons' Longmeadow ranch, Vancouver, who arranged the sale, said that its proceeds satisfied all the consignors. These included Case & Sons, who sold 10 purebreds, mostly of their breeding, and five grades; Casper Jenny, who sold five purebreds; H. A. Simmons and W. C. Groth, who sold two each; J. M. Beveridge, M. B. Cunningham and Lloyd Whipple, who sold one each.

Tell Us Your Happiest Christmas

First prize of $5
Second prize of $3
Third prize of $2
Five prizes of $1 each

for the story of your best Christmas.

Think over your past Christmases and pick out the one which you are the happiest to remember. It may or may not have been the most delightful one, but the one which has given you the greatest satisfaction during the years that have passed.

These prize articles must be within 500 words in length.

In order to be judged for a prize all these articles must reach our office on or before December 8.

Mail direct to Prize Editor, The Washington Farmer, Spokane, Wash.

Electric Light Companies

Are Big Taxpayers

Electricity is your fellow taxpayer---and a big one, too.

The electric industry in Washington pays annually over $1,600,000 in taxes, making it one of the largest contributors to the support of the commonwealth.

Out of every hundred dollars that the various light and power companies receive for the sale of service, $9.60 goes right back to the public in taxes.

All the new money that these companies bring into the state in development means more property to carry tax assessments—a wider distribution of tax burdens.

Which is better—that your light and power facilities be furnished by properties which help to share your taxes, or by properties municipally owned which pay no taxes and increase your bonded indebtedness?

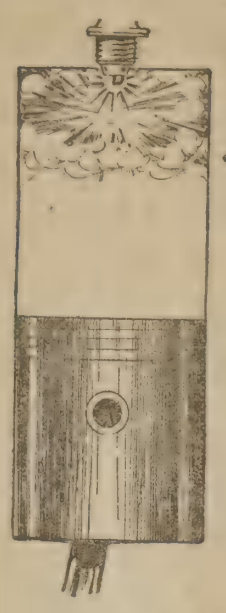
Just What You Want

may be offered in this week's want ads at a bargain. It's a good idea to look them over every week

With Union Non-Detonating Gasoline the Explosion thrusts the poston throughout the stroke, like this.



With detonating gasoline the Explosion may end here.

Non-Detonating Gasoline

Works a Full Stroke

Gasolines explode in two ways. One kind explodes with a crash. It **detonates.**

The piston receives but a single smashing impulse for each stroke. The power of the explosion is over before the piston is half way down the full length of its stroke.

Due to the tendency to explode prematurely, **detonating** gasoline limits compression in your cylinders.

It causes much of the "knocking" you notice on hills, or when a tractor is pulling hard. And the repeated crashing blows increase vibration, thus increasing wear and tear.

The Sustained Explosion

The explosion from Union Gasoline is of the **other kind.** It is sharp, but sustained—nondetonating. It gives impulse to the piston for the **full length** of the stroke.

Power and efficiency are increased as a result of increased compression, because, as all authorities know, nondetonation permits added compression.

New Speed

This added smoother power means a new "lift" on hills. You take grades with a rush. Your motor doesn't "knock."

There's more snap in your pickup and new speed on the level.

Vibration is reduced, which saves wear and tear. Fuel mileage is increased due to better efficiency all around.

So there are ample reasons for selecting Union **Non-Detonating** Gasoline for motor cars and tractors.

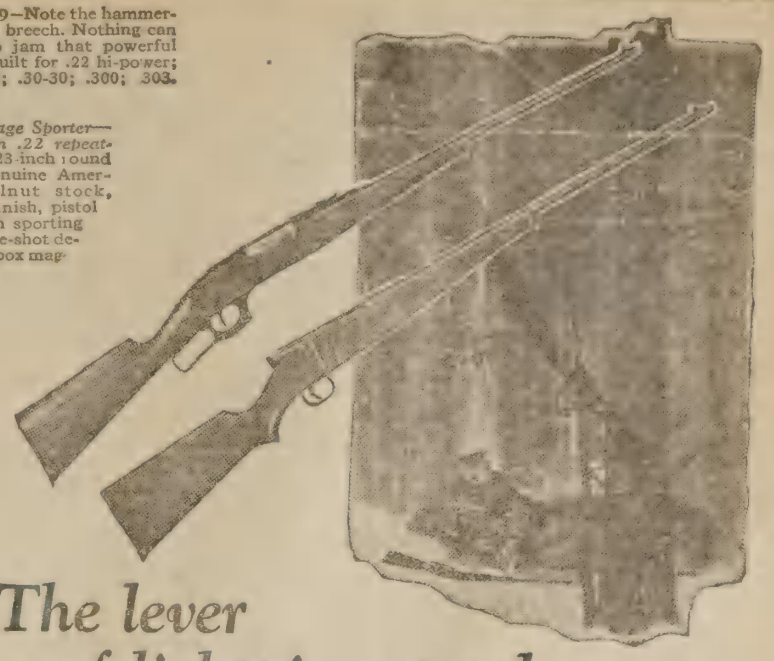
Union is the product of progressive refining methods. Its quality is governed by exhaustive tests. The research of able engineers and chemists, equipped with every accepted facility for studying refining methods, is constantly devoted to its improvement.

Union Oil Company
of California

Union Gasoline

Model '99—Note the hammerless, solid breech. Nothing can get in to jam that powerful action. Built for .22 hi-power; .250-3000; .30-30; .300; .303.

The Savage Sporter—bolt-action .22 repeating rifle. 23-inch round barrel, genuine American walnut stock, varnish finish, pistol grip, open sporting sights, five-shot detachable box magazine.



The lever of lightning speed

THERE'S speed in a Savage lever-action—in the short throw of the lever—in the powerful action that *always* functions.

There's speed, too, in the bolt-action—that smooth-working, easy-throwing bolt-handle. And deadly accuracy. Lever or bolt-action, a Savage shoots true.

And into the Savage magazine you can cram your soft points without denting a nose. For the Savage rotary magazine supports the cartridge *at the base*—no battering from recoil.

There's a Savage for every kind of American game

.22 Hi-power. Ideal for small and medium game—from woodchucks to wolves. Accurate at long and uncertain ranges.
.30-30. A standard and ever-dependable for deer and similar game at moderate ranges.
.303. The hard-hitting old .303—famous for 20 years. Ideal for deer; caribou and black bear. Unsurpassed for timbered country.
.250-3000. An all-around rifle. Terrific speed and low trajectory make it *the* gun for mountain sheep, goats and deer at extreme ranges.
.300. Delivers a smashing blow. Big enough for the biggest game. Splendid for moose and elk.

And the Savage .22s—the *Sporter*—the new bolt-action repeating .22—and the slide-action, Model '14—every feature originally and distinctively Savage—sturdy and accurate. Ask at your dealer's or write direct for our interesting catalog.

LIVESTOCK AND DAIRY

Silage Trials

Show Corn Not Adapted to the Low Lands

The silage crop trials on the Hercules stock farm at Sprague have proved beyond a doubt that corn is not well adapted to the lowlands on the creek bottom. It is for this reason that F. M. Rothrock, the owner, has turned his attention to sunflowers for the silage since it is less easily frosted than corn. It is true that the cattle will eat more of the corn silage than of the sunflower product, but they soon become accustomed to the latter and do very well on it, according to results of the last three years' feeding.

This year Mr. Rothrock has 20 acres of sunflowers on his bottom land, which has not been irrigated. The yield was not measured, but a careful estimate shows a production of 12 to 15 tons of silage to the acre. On one patch last year, which was irrigated, the sunflowers produced approximately 20 tons to the acre. The seed was planted thick in the rows, which caused the plants to grow with smaller stocks, which are more easily cut and readily digested by the stock.

Some of the wheat farmers on the upland wheat sections of Lincoln county have tried sunflowers and find that they make a very good crop for the silo. They will withstand more drought and more severe frosts than will a crop of corn, and usually produce a larger tonnage of silage to the acre. Some dairymen have even planted sunflowers along the pasture fences and in waste places and allowed the cattle to browse from the leaves while the plants are growing. While this often helps the summer pasture problem, it does not solve the question of winter feed, which is an important problem in any wheat section where the wheat harvest requires a large part of the attention during late summer.

LIFE PRESERVERS FOR LIVESTOCK

By DR. E. E. WEGNER, W. S. C.

DISEASES OF MAN AND ANIMALS.

Many other diseases besides tuberculosis are transmissible to man. Glanders, a disease of horses and mules, is rather readily transmitted to the human being. This disease, however, is not commonly seen in man because he is usually careful in handling cases of this kind, and especially so if he realizes the danger to himself.

The principal symptom of glanders is the nasal discharge, and the ulcers on the membranes of the nose. These may go unobserved, however, by the animal owner, who is of the opinion that a nasal discharge is the result of catarrh or a diseased tooth or other noninfectious condition. Certain other diseases are associated with the discharge from the nose, so the nasal discharge is common in so many diseases that it is likely to arouse very little suspicion.

Glanders is transmitted from one animal to another by the infectious discharge being spread from one being to another. It may be spread from animal to man in the same way. The person then who is handling an animal with the glanderous discharge is in danger of infection all the time and if this material should get into the eyes or the mouth or other place where it could be easily absorbed into the system the result would likely be an infection of the human being.

But Little Hope of Recovery.

It is true that men have worked animals with glanders for years and have not caught the disease, and looking at the problem from that angle it might seem that there is relatively little danger, but we can not help but remember that when once this disease is contracted there is little hope of recovery, so we do not relish the idea of contracting glanders. It means weeks, months or years of suffering and ultimately death, as practically no recoveries are recorded.

I have in mind the case of the children who had a pony with a discharge from the nose that was supposed to be a simple thing and in no way dangerous. When this animal was presented to their veterinarian for treatment it was found to be glanders instead of the simple discharge from the nose. This animal had been used by the children for some time and none of the children contracted the disease, but it was only the good fortune of the little folks and not the precaution of the elders that was responsible for this happy termination.

A great deal is being done at the present time to eliminate the danger from this and all infectious diseases by trying to suppress them and prevent the spread among animals. When this is accomplished and the diseases have largely disappeared among the animals, there will be a greatly lessened danger to human beings.

We are quite sure that this disease is not as common as it used to be, but we found during the war time, when large numbers of horses were being assembled in the remount stations, that there was still a sufficient number of cases, and that the fight was not over yet by any means.

The only certain method of diagnosis in animals is the application of the test for glanders, known as the mallein test. This is a very effective method of making a diagnosis and few errors are made. The valuable feature of this test also is the fact that it will pick out the cases that are just beginning and allow us to catch them before the discharge appears or any other symptoms. The veterinarians, in controlling this disease among animals, have done a great service to the human family. Their constant fight to suppress animal diseases has protected human health more than any one fully realizes.

Glanders in Man.

Glanders in man may run a long or a short course, sometimes it acts like a case of blood poisoning and runs a rapidly fatal course. At other times it is a chronic disease characterized by the formation of chronic ulcers that are large and painful and difficult if not impossible to heal, finally involving larger and larger areas and eventually causing death.

The problem of suppressing animal diseases that may be transmitted to man is

From GRASS to DRY FEED
Now, the pasture field and range must give way
—to the stall and manger, the feed lot and self-feeder, the barnyard and fodder rack.
Include
DR. HESS STOCK TONIC
in the ration

You have often noticed stocking of the legs, roughness in the hair, highly colored urine—all on account of the change from grass to dry feed.
Not so where Dr. Hess Stock Tonic is fed. The Tonics, the Laxatives, the Diuretics, take care of all that. No worms; the Vermifuges settle them.
Then you are all set for heavy feeding, a good yield of flesh and milk throughout the winter.
Tell your dealer what stock you have. He has a package to suit. GUARANTEED.

I spent 30 years in perfecting this Tonic.

10% More Milk Will Double The Profit from Your Cows
You do not expect bumper crops from your fields without fertilizing and extensive cultivation. Why, then, expect a maximum milk yield from your cows unless you keep their milk-making organs in top-notch health? The hard-worked milk-producing functions of the cow need frequent aid to keep up a full flow and retain the stamina to resist disease.
Kow-Kare has such positive action on the digestive and genital organs that its benefit is soon shown in the milk yield. Thousands of successful dairymen are now using it regularly about one week in each month for every cow. Especially during the winter months it aids in keeping up a full yield from dry rough feeds.
Dairy authorities say that the average dairy can double the net profit if measures can be found to increase the milk 10%. Kow-Kare is a regular part of the feeding course in thousands of dairies where surprising increases in milk yield are being accomplished.
Kow-Kare, of course, is primarily a cow medicine. It increases milk flow only because it builds up the same set of organs that must be reached when cow diseases are being treated. Such troubles as Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite can be successfully eliminated by Kow-Kare because it restores health to the genital and digestive organs.
There is a definite profit advantage for every user of Kow-Kare. Cow health and big milk yields are inseparable. Our free book, "The Home Cow Doctor," is yours for the asking. It tells the various uses of Kow-Kare, with which every cow owner should be familiar.
Feed dealers, general stores and druggists sell Kow-Kare, $1.25 and 65c sizes. If dealer is not supplied, order direct. We pay postage.

Have you glanced over the farm bargains on the "Want Ad" page?

one that should interest everybody; not that they can all help with the work in a direct way, but they can lend their influence to the movement already well under way to continue the work of eradication of animal diseases that are transmissible to man. A large force of veterinarians are now doing this and their work should be appreciated and more generally understood by the general public. This is an age of preventive medicine and the men who are protecting the human family from disease by suppressing diseases among animals are doing more to attain the desired end than the public realizes.

VETERINARY

By DR. S. B. NELSON.

Bloody Milk—What can be done for a cow that gives bloody milk? A. J. H.
Maplehurst, Wash.

Give the cow a teaspoonful of hypo-sulphite of soda in a pint of water morning and evening for some time.

Worms—I have a calf that is a year old and for the last four months it has been coughing as if there was something in the throat. She has lost some flesh. P. S.
Mount Vernon, Wash.

It is possible that your calf has worms in the windpipe. The treatment for that would be to put the calf in a closed room. Put a tub with about two inches of water in it on the floor; put some bricks in the tub, and put a pie pan full of sulphur on the bricks and set fire to the sulphur. Then let the calf breath the fumes as long as she can stand it, and turn her out. Repeat in three or four days, if necessary.

Goitre—I have a cow that has a goitre. What causes goitre in cows and calves and what can I do for the cow? J. O. H.
Aeneas, Wash.

Goitre is caused by lack of iodine in the system and the thyroid gland works overtime trying to produce it and consequently becomes enlarged. The iodine should as a rule be taken into the body in sufficient quantities through feed and water. About three grains of iodine daily would be the correct treatment for the cow.

Warts—We have a cow that has warts all over her teats. What can we do to increase the flow of milk? B. G.
Tenino, Wash.

Use the following prescription for warts on the teats: Chloral hydrate, 1 1-2 drams; acetic acid absolute, 1 1-2 drams; salicylic acid, 1 dram; spirits of ether, 1 dram; collodion, 4 drams. Apply morning and evening.

Since I do not know how long since the cow freshened, or what you are feeding, I do not know what I can say in the way way of advice that might result in an increased flow of milk.

Udder Trouble—I have a cow that has something wrong with one quarter of her udder every three to six weeks. Sometimes it changes from one quarter to a different one of an evening. The quarter affected seems to be caked inside and seems quite sore. The next morning it is gone, but she gives lumpy milk for a milking or two and she falls off in her milk for a few days. T. B. Z.
Prosser, Wash.

Give your cow one pound of epsom salts in three quarts of water. Two days later begin giving her 1-2 teaspoonful of potassium nitrate in her drinking water, preferably at noon. If you water her in the morning, give it to her then. In the evening give her one tablespoonful of fluid extract of phytolacca in a pint of water.

Wireworm Investigations

Professor George Dean, in charge of the division of field crop insect investigations of the United States department of agriculture, was at Pullman recently in conference with Dean Edward C. Johnson and Dr. A. L. Melander, relative to cooperative investigations of the wire-worm, a serious pest of potato and truck crops in the Yakima valley. He was accompanied by M. C. Lane and L. P. Rockwood, field men in insect investigations for the department of agriculture.

The experiment station of the state college, on the request of nurserymen and potato growers in the Toppenish section, commenced investigational work on the wire-worm in nurseries and potatoes last summer. It is now planned that the United States department of agriculture and the experiment station in cooperation undertake a comprehensive investigation of the entire wire-worm problem in the irrigated section, with a view to working out methods for its control. Mr. Lane for several years in cooperation with the experiment station, has been working on the wire-worm pest of wheat in the dry land section and has developed cultural practices for its control. It is expected that arrangements will be made for him to devote a large part of his time to the cooperative investigations of the wire-worm under irrigation conditions.

MADE THINGS HUM.

The electric dynamo was one of the inventions that memorialize the year 1866.

Test This Out for Yourself—

MANY people who drink coffee regularly are troubled with insomnia; or they feel nervous, "headachy," or suffer from indigestion.

It may be hard for such men and women to believe that coffee is responsible for the way they feel. Because they have always drunk coffee, it hardly seems possible that this old habit *could* cause trouble.

But there is one sure way to find out whether coffee is harming you. Just stop its use for a week or so, and drink Postum.

Postum is a pure cereal beverage—absolutely free from caffeine, the drug in coffee, which disturbs the health and comfort of many.

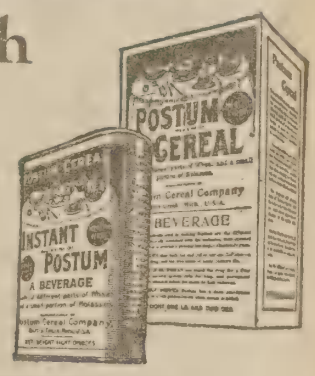
After a week or two on Postum, you will sleep better and feel better; then your own good judgment should decide whether you go back to coffee or continue on the Road to Wellville with Postum.

Sold by grocers everywhere!

Postum
for Health

"There's a Reason"

Your grocer sells Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer the flavor brought out by boiling fully 20 minutes. The cost of either form is about one-half cent a cup.



You need this Free Book

It tells how farmers without experience make as high as $35 a day sawing their own and their neighbors' wood lot timber with an American Portable Saw Mill.

POULTRY AND RABBITS

Caponizing Leghorns

Some interesting results from caponizing White Leghorn cockerels come to us from W. H. Boggs of North Bend, King county, Washington.

On May 9 he caponized 120 young birds with the help of his son, L. C. Boggs, who has specialized in poultry husbandry at the state college. The birds came through in fine shape, only two dying from the operation and a few died later from exposure.

"After the weaker ones were taken out and a few more used for home consumption there were by August 29, 72 capons left for sale," said Mr. Boggs. "These were sold at 30 cents per pound live weight in Seattle to a retail shop for $93.20. Figuring the cost of the cockerels to start out with, we took the price that we could have bought them for at that age (about eight weeks).

120 birds at 15 cents each	$18.00
Feed and labor from May 9 to August 29	50.06
Total cost	$68.06
Received for 72 capons August 29	93.20
Net profit	25.14

"This made $25.14 on $68.06 invested in four months and shows that it pays to caponize Leghorns. It takes a Leghorn too long a period to get heavy enough to be sold as a capon, so it does not pay to hold them for the holiday capon market. They will, however, develop much more rapidly than a cockerel of the same age for about five or six months. The advantage in caponizing Leghorn cockerels is in getting more rapid development so they can be sold for broilers or friers at from 2 1-2 to 3 1-2 pounds per bird."

The greatest objection to caponizing has been their light weight and the supposed ability to put on fat during the first few months of growth. The experience of Mr. Boggs, however, throws a new light on the question and accounts for the many breeders who are using this means to sell their cockerels on the late summer market.

Poultry Problems

By R. T. PARKHURST.

Will you please tell me how many ounces of food or grain I should feed my hens each day? I want to figure how much it would cost to feed 100 chickens for five months, or from now until April 1. How many pounds to each fowl per month. R. I.

The usual allowance of feed per hen is two ounces daily. For 100 birds, we usually recommend 15 pounds of scratch ration and 10 pounds of mash daily.

The amount of grain and mash consumed will depend upon, to quite an extent, as to whether or not sour skim milk is given.

A Leghorn pullet lays about 200 eggs during the year and will consume about 85 pounds of grain, mash, grit and oyster shell when sour skim milk is not given. When sour skim milk is available, she will consume about 75 pounds of grain, mash, grit and oyster shell and about 200 pounds of milk.

I should like to know if I can expect my pullets to lay on the following rations: Corn morning and night, mash of bran and shorts (ready mixed mill feed) all the time and all the sour milk they want. They have full range and are very nearly five months old. MRS. E. L. P.

Your pullets will give good production from the ration which you have outlined. However, the ration can be materially improved by using with the corn in the scratch ration so that it will be either equal parts of wheat and corn or two parts of wheat and corn and also by the addition of cornmeal, ground oats and peameal to the mash so that it will be equal parts of bran, shorts, ground oats and peameal.

Lays 346 Eggs in Year

The Pacific coast is not the only part of the northwest where high egg record hens are produced. A poultrymen at Terrace Heights, near Yakima, has kept his own trapnest records and reports a hen which recently finished a year's laying with 346 eggs produced, which is 11 eggs more than the world's record hen had to her credit last year at the close of the contest at Puyallup, and 10 eggs better than the record of a hen at the Hollywood Poultry farms, which produced 336 eggs in a year.

This record of 346 eggs in a year was made by No. 413, one of 600 pullets which Mr. Westaby trapnested in the 1922-23 season, and she is one of six in the flock that produced more than 300 eggs. The highest run made by her was 80 eggs without a miss and she finished up her year with a run of 42 eggs without a miss. "She only missed then because housing conditions and feed were changed on her so she would quit and go into a molt," said Mr. Westaby.

Records of more than 300 eggs in a year are very exceptional and may be appreciated by the fact that in the classification of hens as to production by the extension service of the Washington State college, hens laying from 150 to 200 eggs a year are rated as good hens and those laying more than 200 eggs a year as extra good hens. She has produced twice as many eggs as a layer must to be classed as a good hen. Mr. Westaby's bird missed only 19 days in the whole year.

Mr. Westaby keeps Tancred stock and all the hens on the place are trapnested. At present he has 800 pullets that are laying well and will be trapnested to get their records, as nothing but high producing birds will be used for breeding purposes in his establishment.

MASON POULTRY ASSOCIATION.

A countywide poultry association was formed by the poultrymen of Mason county. This association was the result of the former community organizations which the poultrymen have outgrown. It is the purpose of the organization to further the accredited hatchery and other phases of the industry vital to the success of poultry raising. Along the line of development 20 250-egg cockerels produced in the county this season were placed in flocks which are to be used for breeding stock. In each case these high-producing cockerels will head flocks where scrub cockerels which had no trapnest records were ruling.

WHITE LIGHT FROM OIL LAMP NOW

Government Tests Prove New Light Beats Electric—Sensational Invention.

A new lamp has recently been invented which burns common kerosene oil and produces a soft, white light said to be even better than electric or gas. Tests by the government and leading universities prove this new light is superior to ten ordinary oil lamps. It burns without odor, smoke or noise, is simple and economical, requires no pumping up and has been approved by the underwriters for insurance.

The inventor, W. T. Johnson, 161 Union ave., Portland, Ore., is offering to send one of these new lamps on ten days' free trial, or even give one to the first user in each locality who will help him introduce it. Write him today for particulars. Also ask him to explain his agency proposition.—Adv.

Tire Values Are at the Peak

You can see from the above simple chart how consistently Goodyear Tire prices have been kept below the average price level for all commodities.

Today Goodyear values are at the peak; Goodyear prices, for example, being 45% below those of 1920, and 39% below those even of 1914.

In the face of these low figures, Goodyear Tires are better than ever before, in every respect of performance, reliability and freedom from trouble.

Embodying highest-grade long-staple cotton, the improved and longer-wearing All-Weather Tread—they are the greatest money's worth you ever bought.

Now is a good time to buy Goodyear Tires. Prices are low and quality was never so high.

Made in all sizes for Passenger Cars and Trucks

ORCHARD AND GARDEN

Storing Foods

Keep Your Friends in the Dark

M. D. ARMSTRONG.

What would your opinion be of the man that ordered 100 pounds of ice on a hot July day to cool his food and drink and then left it on the sidewalk in the sun for an hour before putting it in the ice box? And yet, this man would show just as much wisdom as do the most of us in buying and storing a great many of our foods. Even the producers and the dealers, too, often neglect the provision of storage which would keep the produce in prime condition.

Thousands of tons of potatoes are lost every year in the United States through decay and shrinkage while in poor storage and yet perhaps a greater loss is suffered in the quality of the remaining potatoes. Aside from commercial storage, a great many folk keep their table supply—where it is too warm; where there is too much light; or where the air is too dry. Even a week's supply of potatoes, kept in a warm room is often materially depreciated in quality before they are used.

The potato is a living thing and its source of energy is entirely within itself. It uses up a great deal of energy when stored in warm, dry air and in a light room the food values are lost very rapidly. The best storage is that in which the energy required to live is at a minimum.

Even a few days in the light will cause quite a chemical change in the potato starches, which materially lowers the food value as well as the flavor. You needn't be ashamed of the Murpheys, but keep them in the dark until ready to use.

Warm temperatures increase the activity of the living cells and quickly exhaust the life of any vegetable. This is one reason why the southern states send annually to the north for their seed stock which has more energy and produces stronger plants.

In the processes of all life, materials poisonous to the individual are being continually thrown off. With the potato these poisons are thrown off in gasses. This is not a serious matter with 100 pounds of potatoes, but in any commercial quantity a good supply of fresh air is needed to displace these poisons. A dry air evaporates too much moisture from the tubers, resulting in a wilted or flabby condition. Most storage houses are too dry and practically all potatoes for the table supply are too dry and quickly wilt. From 5 to 15 per cent in weight is a common loss through shrinkage in good storage. Some modern storage houses, however, draw the fresh air over long troughs of water or through a water spray. Others have a false floor with water in a pit below, which keeps the air moist. The air, however, should never be quite saturated with moisture, as this favors the fungus rots.

Diseased, broken and cut tubers should be sorted out before storing, as they can not be expected to keep well. Very muddy, wet, dirty potatoes are apt to heat in large piles which do not ventilate well, and it is seldom advisable to store more than six feet deep.

For the best results: (1) store only sound, clean tubers in piles not over six feet deep; (2) keep the temperature from 35 to 42 degrees if possible; (3) provide sufficient air which is not quite saturated with moisture and (4) exclude every ray of light. For the table the No. 1 potatoes are the cheapest. Keep them until ready to use away from the frost, but in a cool, dark place.

Orchard Problems

By C. C. VINCENT.

Please send me a bulletin on artichokes, also something as to their food value and cultivation. H. S. H.

We have no available literature on artichokes, but a quotation taken from one of our textbooks on "Garden Farming," by Corbett, will answer your questions:

"The Jerusalem artichoke is in reality a tuberous-rooted sunflower native to North America and, like the globe artichoke, is an herbaceous perennial. This plant differs from the globe artichoke in that it produces an edible tuber instead of a blossom bud. The plant is grown both for human consumption and for stock food; but, although it is perennial, hardy and easily propagated, the tubers, while numerous, are small and the total yield is insignificant in comparison with Irish or sweet potatoes. Its food value is practically the same as that of the potato. Artichokes are seldom grown in sufficient numbers to be shipped to distant markets, but are to be found the year round in most southern markets.

To establish a plantation the tubers are planted in the same way as Irish potatoes, in rows from 30 to 36 inches apart, with the plants in each row 10 to 12 inches apart. The plant thrives on any fertile loamy soil, but does not do well on heavy clay. After a plantation is once established, it will maintain itself for several years, unless heavily dug or pastured by hogs. In some localities the crop is depended upon for a portion of the succulent food for hogs, the animals doing their own digging."

Some farmers in my community want information on the propagation of grapes. C. L. P.

Send for Farmers' Bulletin No. 471, entitled, "Grape Propagation, Pruning and Training," United States department of agriculture, Washington, D. C.

Kindly give me information in regard to the best variety of peaches to plant in this locality. The altitude is 5320 feet and coldest temperature in the winter is possibly from 15 to 25 degrees below zero. J. S. S.

I would be afraid to grow peaches extensively at an altitude of 5320 feet where the lowest temperature varies from 15 to 25 degrees below zero. We do know that peach buds can withstand a temperature of 25 degrees below zero if the wood is well ripened in autumn. However, you will find that in most peach districts the growers are always apprehensive of injury, even when the buds are in good condition and all other factors favorable, where the temperature reaches 10 to 20 degrees below zero. I have always considered that 15 degrees below zero is the usual danger line when it comes to growing peaches. In a small way try such varieties as Alexander Hales Early and Crawford.

FRUIT IS HEALTHFUL.

Well ripened, sound fruit is healthful.

Breeders Meet

During Pacific International

At the western Guernsey breeders' banquet, held in connection with the Pacific International Live Stock show, there was an attendance of about 140. A. L. Gile, director of the American Guernsey Cattle club, was chairman of the evening.

After-dinner speakers were Karl B. Musser, secretary of the American Guernsey Cattle club, who spoke on the progress of the Guernsey breed in America. R. R. Graves of Washington, D. C., spoke on the proper sires to use in proving the Guernsey breed. Vincent Phelps, superintendent of Chilimark farms, Ossining, N. Y., spoke on the Guernsey breed of the Atlantic coast as compared to the Pacific coast. Mrs. A. Macrae Smith of Bellingham, Wash., owner of the Fircrest farms, spoke on the show on Guernsey island. Mrs. Smith has recently returned from Europe and told of some very interesting things in connection with the Guernsey cattle industry on that Island. Mrs. Minnie W. Miller of Thousand Springs farm, Wendell, Idaho, spoke on Guernseys in Idaho. Gordon Hall, owner of the Osceola farms, Cranford, N. J., and judge of Guernsey cattle at the Pacific International, spoke on the importance of type in the dairy herd. J. D. Mickle, secretary and manager of the Oregon dairy council, spoke on the importance of milk in the diet.

At the meeting of the Oregon Jersey Cattle club the committee on the purebred sire campaign favored the survey proposed by the extension service of the Oregon Agricultural college and the use of salesmen who are to receive $15 for each bull sold. The campaign is to be in charge of the local committee in each county. Each breeder also is to be charged $5 in addition to the commission.

D. C. Howard moved that a chautauqua be held in place of the Jersey jubilee next spring and the president appointed to have charge of the affair L. C. Daniels of Tillamook, E. C. Howard of Beaverton, Clarence Brown of Shedd and Jacob Fox of Silverton. The president and secretary were made members of the committee. On motion of D. Brooks Hogan, it was decided that no sale be held by the association during the chautauqua.

In addition to the "Holstein school," which was held during the Pacific International Stock show, the annual meeting of the Oregon Holstein breeders was held. W. E. Meyer, who was the principal speaker, explained the plan for a purebred sire campaign, which is to be under supervision of the extension service of the Oregon Agricultural college and is to be worked a county at a time. Indorsement of the plan was voted and active participation was pledged by most of those present.

After the judging of the Brown Swiss cattle at the Pacific International Stock show the breeders exhibiting and a few others met and organized the Northwest Brown Swiss Breeders' association. Nine breeders became charter members. Joe Schumacher of Stayton, Ore., was elected president; W. O. Bohart, Bozeman, Mont., vice president, and Theodore Brugger, Gresham, Ore., secretary-treasurer. An appropriation of $250 was made for boys and girls' calf club work.

Official testing was urged.

At the annual banquet of the Northwest Shorthorn breeders the principal speaker was John Robbins of Horace, Ind., who judged the Shorthorns and who urged the breeders not to go out of the business just now, when beef cattle are beginning to "come back."

At the Oregon Shropshire breeders' banquet Gordon True of the University of California declared some of the classes at the Chicago International were no stronger than at Portland. Frank Robertson, treasurer of the stock show association, said that about $450,000 had been expended on the plant on which the show was held. B. L. Clark of the Bodine & Clarke Live Stock Commission firm urged orderly marketing. Walter Priddy of the Corriedale Sheep company of Hollister, Cal., spoke of the early maturity of the Shropshire which enabled them to be marketed as lambs. Superintendent of the sheep department said that 721 sheep were on the grounds, the increase in Shropshires being 20 per cent. W. F. Renke of Wisconsin, who judged the middle wool sheep, complimented the show.

At the sale of the prize fat stock O. M. Plummer, manager of the show, bid in the champion Shropshire wether at 35 cents per pound, which was the high price for any fat sheep. He gave the banquet to the Shropshire breeders and used the wether, which, under the competent hand of Henry Thiele, made a most appetizing lamb roast.

The meeting closed with the presentation of an all-wool blanket to Judge W. F. Renke by President Doerfler.

AND TOOTHACHE FOLLOWED.

Sugar was brought into Europe from Asia in 625 A. D. Large quantities began to be brought from the same source in 1150. It was first refined in Europe by a Venetian in 1503.

Tell Us Your Happiest Christmas

First prize of $5
Second prize of $3
Third prize of $2
Five prizes of $1 each

for the story of your best Christmas.

Think over your past Christmases and pick out the one which you are the happiest to remember. It may or may not have been the most delightful one, but the one which has given you the greatest satisfaction during the years that have passed.

These prize articles must be within 500 words in length.

In order to be judged for a prize all these articles must reach our office on or before December 8.

Mail direct to Prize Editor, The Washington Farmer, Spokane, Wash.

BE YOUR OWN LANDLORD

Thousands of Former Renters Now Own Their Own Good Paying Farms in CANADA

Get This FREE Illustrated Book Today

$20.00 Per Acre Average Price

No matter how hard you work or what you sacrifice no man can overcome the lack of natural opportunity. High priced, low average yield lands collect their penalty before you harvest a single crop. Facing these odds and the possibilities of drought, pests, crop failure, run-down soil or possibly poor improvements, wouldn't you be better off farming with natural opportunities in your favor? Thousands of farmers that were hard up against the discouragements that face you now will tell you and show by their experience that in Canada they gained happiness, success, real independence. Some have been able to pay for their farms from the value of one year's crop.

Canada's rich black loam gives high yields per acre. Average prices for farm products should give you independence and success.

There are still good farms and millions of acres of fertile land in Canada at very reasonable prices and terms. Convenient marketing facilities, railroads, grain elevators and stock yards, towns, cities, good roads, schools, churches, agricultural colleges and universities provide modern recreational and educational advantages that are the equal of your own.

THE RENT YOU ARE PAYING WILL BUY A FARM IN CANADA

The price of fertile farm land is so low that many renters unable to succeed in high priced land districts, find it easy to pay for their farms in Canada. Large yields per acre mean more money. The work you put into your farm builds up something you own—not something to hand back to the other fellow.

Canada's opportunities are not restricted to Renters only. Here you can buy several times as much acreage for the money you now have invested in land. The fertile soil produces bigger crops per acre. That means more money—and the chance to get the rise in value on much larger acreage. Here there is land for expansion—and land on which to set up your sons.

MIXED FARMING IN CANADA PAYS BEST

Canada's 1923 wheat crop broke all previous records. In 12 years Canada has won 11 Wheat Championships and many awards in Live Stock Championships.

But Canada does more than produce one-fifth of the world's wheat supply. It is the center of increasing activity in mixed farming. World's records in wheat, oats, beef, dairy and poultry are proving that Canada is ideal for diversified farming. Canada has an ever increasing number of creameries to care for the rapidly growing dairy industry.

EASY PAYMENTS LOW PRICES—LOW TAXES—INCREASING VALUES

You can buy land unsurpassed for fertility along the lines of the Canadian National Railways for an average of $20.00 an acre. Easy terms place it within reach of all. You make only a first small payment, usually 10% or less—the balance being spread over a term of years with low interest rates and small land tax. No tax at all on buildings, improvements, animals, machinery or personal property.

SPECIAL EXCURSION RATES

Reduced railway fares are in effect for landseekers and their effects to encourage inspection along the lines of the Canadian National Railways. Personally conducted excursions will also be arranged.

IMPROVED FRENCH PRUNES, ITALIAN prunes, apple, cherry, pear, peach, franquette grafted walnut and filbert trees. Order direct and save agents' profit. Fruitland Nursery, 161 South 14th st., Salem, Ore.

TREES—NOW BOOKING MAIL ORDERS AT reduced prices for limited time only. Apples, pears, peaches, nut trees, prunes, cherry, small fruits, etc. Live agents wanted. Lafayette Nursery Co., Lafayette, Ore.

ITALIAN PRUNE TREES, 4 TO 6 FEET, ONE year old, $12.50 per 100; 3 to 4 feet, $7 per 100. All kinds of fruit trees at reduced prices. Powell Valley Nursery, R. 1, Portland, Ore.

NURSERY STOCK—PRUNES, WALNUTS, FILberts, fruit trees of all kinds, gooseberry and small fruits. Buy direct and save 50 per cent. Brooks Nursery, Lafayette, Ore.

TREES—CHERRY, PEAR, PRUNE, APPLE, walnut, filbert. Mazzard cherry seedlings. Prices based on production costs only. Homer R. Brixey, McMinnville, Ore.

NURSERY STOCK SOLD DIRECT TO PLANTers; apple trees a specialty; no agents employed; can save you money. Write for prices. Lawson Nursery, Gates, Ore.

FILBERT AND WALNUT TREES, THE BEST paying crops for the northwest. Write for prices on the different grades. Villa Nurseries, Route 1, Portland, Ore.

STRAWBERRY PLANTS—SIXTEEN VARIEties. Asparagus and Munger black caps. Prices low. Brigg's Fruit Ranch, Olympia, Wn.

EVERYWHERE TO SELL OUR COMPLETE line of fine nursery stock. Cash weekly. Kimberly Nurseries, Kimberly, Idaho.

FARM LANDS FOR SALE 651

ROGUE RIVER VALLEY PEARS WIN OUT again this year; fine return. We have some good orchards. Write for data. Rogue River Land Company, Medford, Ore.

SIXTY ACRES, SOME STOCK; NEAR SCHOOL. $3750 down. E. Schilling, Route 1, Sherwood, Ore.

FARM LANDS FOR SALE (Continued) 651

CUTOVER LANDS, EASY TO CLEAR; $8 TO $20 per acre; 25 miles north of Spokane; on hard surfaced highway; Great Northern and Milwaukee railways; excellent opportunity for dairying and stock raising with Spokane markets and creamery near at hand. Will help the man who will live upon the land and agree to clear a part each year by giving lumber to help start his buildings, and a purebred Jersey bull to groups of farmers. Interest and payments low. Write Milan Farms Development company, Dept. T, Old National Bank bldg., Spokane, Wash.

5000 ACRES, SMALL TRACTS; NEWAUKUM river valley lands; easy terms; employment. Big mill and timber companies are selling their large holdings in this well known and fertile valley, at Chehalis, Washington, on most advantageous terms and conditions, where settlers are assured steady employment, good wages and live at home. Positively all high type agricultural land; level bench and valley. No gravel. No mountains. No irrigation required. Already well settled community; good schools and markets. 20 acres or more, $15 to $50. Terms to suit purchaser. Graham Land Company, 1008 American Bank bldg., Seattle.

RAISE HOGS IN SUNNY SOUTHERN Alberta and increase your profits. Large crops of alfalfa, corn, oats, barley, produced cheaply on irrigated land. The bringing of 105,000 acres rich land under irrigation in the Lethbridge Northern Irrigation District gives you wonderful opportunity to secure paying farm at low price and on easy terms. Excellent climate, rich soil, ample water. Near towns, railways and schools. Write for particulars to the Irrigation Council of Alberta, 12 Provincial Building, Lethbridge.

HARRINGTON DISTRICT — 540 ACRES good wheat land; 100 acres pasture; creek; good buildings; macadamized road; two miles from Harrington; main line Great Northern; good schools, churches, stores; small payment will handle, balance easy terms; bargain; no trades. Owner, W. E. Shrader, Harrington, Wn.

319-ACRE WHEAT RANCH FOR SALE—ALL in cultivation; one-half summer fallow; in winter wheat; fenced and cross-fenced; hog-tight; good seven-room plastered house and good outbuildings. This is a real farm. Price $90 per acre; best of terms. Albert Reiha, Reardan, Wash., owner.

FOR SALE—BARGAIN. OWNER MOVING TO city; 80 acres alfalfa, grain and dairy farm; gravity irrigation system; 1½ miles from town; moderate improvements; no encumbrance; on R. F. D. and rural school route. Write for description and easy terms. Postoffice Box 236, Shoshone, Idaho.

BIG OPENING SALE OF YAKIMA VALLEY farm land, under an assessed state and government approved irrigation project; best, deep soil; close to town and good roads. Price $25 per acre and up. Very easy terms. Western Lands, Inc., owners, 918 Green bldg., Seattle.

BIG LUMBER COMPANY LAND SALE—IN Skagit county; 40-acre tracts, $1400; $200 cash, balance easy. Lots work for the settler. Splendid district, roads, schools, towns. Information free. H. C. Peters, 726 3d ave., Seattle.

WHATCOM COUNTY, WASH.; 47 ACRES; EXceptional fertility; 2 springs; family orchard, etc.; fine dairy section. For quick sale, $5250; terms if desired. Owner, Mrs. Laura Smith, 802 Cole ave., Los Angeles, Cal.

SELL YOUR PROPERTY QUICKLY FOR cash; no matter where located. Particulars free. Real Estate Salesman company, 501 Brownell, Lincoln, Neb.

1280 ACRES WHEAT LAND; GOOD BUILDings; ample water; for $58,000; good terms; write for particulars. Bessie Gross, Rural 6, Walla Walla, Wash.

FAILING HEALTH COMPELS ME TO SELL 5-acre poultry ranch; fully equipped; modern improvements. C. Dimmick, Gig Harbor, Wash.

160; GOOD LOCATION; SOLD FOR 1-3; small trade; near town; possession now or spring. Box 1620, Bossburg, Wash.

140 ACRES, ALL OR IN PARTS; LOCATED in heart of poultry industry. Write today, Carl Laakso, Winlock, Wash.

BARGAINS IN DRY AND IRRIGATED farms. Oregon Mortgage Co., Paulsen bldg., Spokane.

OLE H. SATHER, REAL ESTATE. FARMS and city property. Canby, Ore.

FARM LANDS—Wanted 654

NO COMMISSION — SELL YOUR FARM through Washington Farm Bureau Exchange, represented in 45 states. Lists of farms for sale by owners mailed free. 312 Lindelle bldg., Spokane, Wash.

I HAVE INQUIRIES FOR FARMS IN NORTHwest. Describe fully and state price. R. A. McNown, 310 Wilkinson bldg., Omaha, Neb.

WE HAVE BUYERS FOR SEVERAL FAIR priced farms and ranches. Central Land Bureau, New Franklin, Mo.

FARM WANTED FROM OWNER ONLY—SEND full particulars. Ray Smith, Maplewood, Mo.

FARM LANDS—Wanted to Rent 660

WANTED—TO RENT, LEASE OR WORK ON a salary, a farm with implements and horses and seed; term of year. L. M. Boyer, Crabtree, Ore.

IRRIGATED LANDS—For Sale 663

OPENING OF THE NEW WHITESTONE IRrigation district—8000 acres of irrigable land. This project was constructed under the direction of the Department of Observation and Development of the State of Washington. Adapted for diversified farming, livestock, dairying, poultry and fruit growing. A picturesque location in the foothills of the Cascade range, Okanogan county, Washington. Write for free picture folder, giving full details. E. C. Leedy, general agricultural development agent, Great Northern railway, Dept. 109, St. Paul, Minn.

FARMERS AND STOCK MEN—THE COLUMbia irrigation district has several tracts of irrigated lands of various sizes, in the famous Kennewick valley, with plentiful water supply. The district wishes to get these tracts into the hands of good farmers who will put them to work, and will make very low prices and long terms to such men. No speculators need apply. One tract 580 acres, especially suitable for stock or dairy ranch. Write the secretary, Columbia Irrigation District, Kennewick, Wash.

THIS FARM IS SHOWING A GOOD PROFIT — $7000 income this year; 131 acres; close to Yakima; good water rights; excellent buildings; well equipped; good dairy herd. Good terms. Western Lands, Inc., Owners, 918 Green building Seattle.

72-ACRE IRRIGATED FARM; YAKIMA VALley; ½ mile from Outlook; paved highway, schools, churches; thirty acres alfalfa, rest general farming; fine fruit land; $175 acre; terms. W. C. Wright, Outlook, Wash.

Cattle Ranch To College

Russell Doubleday Copyright by Doubleday & McClure Co.

CHAPTER XXI.

Twelve Hundred Miles Awheel to College.

The academy reopened with some new pupils and many old ones. John shook hands with his few friends, glad to get back, and, with firm determination to carry out the purpose that now possessed him, started to work.

Professor Marston kept his word about the winter job, and John was duly installed as janitor of the building, with opportunity to make extra pay by sawing wood and doing errands.

He was fully occupied, as may well be imagined, and poor Lightning, though sure of good care, missed the companionship that both he and his master delighted in. John foresaw that he would not be able to keep the horse, and he finally decided what to do with him. He would give him his freedom.

One day the boy took him out on the prairie some distance from the town.

"Lite, old boy," he began, rubbing his nose and patting him, "we've had good and bad times together, and we've been good friends, but we've got to separate now."

He took off the saddle and bridle: "Take care of yourself, old boy."

The horse looked at him a moment inquiringly; then curvetted around a minute in high glee; but as he saw his much-loved master leaving him he turned and followed, refusing to be cast off. "Go back, Lite," John commanded, waving his hat to scare him. "Go back!" But the little horse refused to leave him, and followed him back to town, where he was taken in and petted again. John was touched to the heart by this loyalty and affection.

Next day a stableman took him out among the range horses and dismissed him. This time he stayed, and John never saw or heard of him afterward.

That was a wrench.

Lightning gone, John allowed himself no pleasures, but instead took every bit of work that came his way, whether it yielded money or knowledge.

He joined the debating society and made it a duty to do his best when called upon. Toward spring, as wood sawing became scarce, he took to delivering morning papers to the more distant parts of town; and in order to do this more quickly he hired an old bicycle, learned to ride it, and made his rounds just after daybreak on that. So he was able to get back to the schoolhouse and study a while before opening up.

"I don't see how you do it all, Worth," said Professor Marston.

"Well, I couldn't, I guess, if I didn't have a big stake to work for. If I keep my present school work up and study this summer I'll get into college this fall," and John told him of the offer Sherman had made him.

"I hope your friend won't forget," the professor suggested, fearing that his pupil was building high hopes on an insecure foundation.

"He won't forget; he's not that kind."

"I hope not; but how are you going to get there? It's a long way."

John looked up quickly; he had not thought of that before. It was a serious question.

"I don't know; but I'll get there somehow." He spoke confidently, but he was much perplexed, for he was without money, his clothes were threadbare, and it was a necessity to study all summer, with no chance to earn money. It was certainly a question that could not be answered offhand. He studied over this matter for days and no solution presented itself. Borrow he might, but this he would not do without giving security, and of security he had none. He left it for a while, hoping to be able to think of a way out of the difficulty later.

Before he realized it commencement had arrived, and with it the open meeting of the debating society at the opera house. To his astonishment he found that he was appointed one of the two orators of the occasion. In vain he protested that he was busy, that he was unfitted; he had to accept. "Orator—Opera House—Me!" he fairly gasped with astonishment. He was rather worried about it, but Gray, whom he consulted that night, reassured him.

"Don't worry, anyhow," he advised. "Take a subject you're interested in, write out what you think about it, boil it down so you can repeat it in 20 minutes, then memorize it."

John also consulted Beeman, the other orator, who said he was going to speak about the Chinese question.

"Against them," he said, in answer to the other's sharply put query. "That's the only way to please a crowd—take the popular side."

"Well, I'm going to take the side I want, and I'll tell 'em what I think about it, too," said John vehemently, his spirit thoroughly roused.

"Go ahead," said Beeman, visions floating before him of an opportunity to hurl

"He did not know that he had aroused the enthusiasm of people naturally prejudiced against his side of the question."

his thunders at a definite champion (and an inexperienced one) of an unpopular cause.

John set to work on his speech with his usual eagerness and energy. His heart was in it, and the prospect of a contest of wit or muscle always stirred him. He wrote, rewrote, cut down, filled in and polished until Gray, his friend and critic, pronounced it "good stuff."

In the meantime, he not only kept at work at his studies, his duties as janitor and paper boy, but he was at work at something else that he thought might prove most important.

At a half-mile race track, a little distance out, a very early rising citizen, if he happened to be in that vicinity at daybreak, would have wondered greatly to see a half-clad figure on an old bicycle go flying round and round the track. If, overcome by curiosity, he had waited a while, he would have seen the same figure, neatly clothed, appear from under the grand stand carrying a bundle of papers under his arm. Then if he watched he would see him mount an old bicycle and ride off. But this performance took place so very early that no one witnessed it.

At last the day of the debating society's open meeting came—the day on which John was to make his first public appearance. His speech was complete, memorized and ready for delivery. He spouted it for the last time to Gray, who put the stamp of his approval on it and advised him to forget it all till the time came to speak.

The opera house was crowded when John and Gray reached it, for the town's people took great interest in its institutions, and of these the academy was one of the most important.

John looked out from the wings on the sea of upturned faces, appalled.

Beeman came first. He went out before the audience, cool, self-possessed, graceful, and delivered his oration smoothly, forcibly and well. He chose the popular side, and the audience rewarded him with generous applause.

Then John heard the chairman announce, "Oration by John Worth."

He walked out from the dimness of the flies into the full glare of the brightly lighted stage, bewildered, and, without any preliminaries, began:

"In the history of every country, however just, however good or great, there are certain pages besmirched by the record of black deeds of wrong."

So his carefully written, carefully memorized speech began. As he stood before his audience he saw nothing but the pages of his manuscript; he felt that he must keep his mind on them or he would be lost. He followed down the first page, mentally turned it over, and began the second. Beeman had touched a point on the second page, and treated it in a ridiculous way, he thought. His concentration was broken, and he began to fear for the first time that his memory would fail. A dozen lines down the second page he faltered, stopped, and stood riveted, miserable. The few moments' pause seemed endless. He tried to think of the next line, next page, anything; in vain, it was all a blank. The pile of manuscript, a minute ago so clearly before his mind's eye, had vanished, and he stood staring at the crowd before him. Some one behind tried to prompt him; it brought him to life. Beeman's fallacies had incensed him; he'd tell them so, and in no uncertain way. With a whole-arm gesture he mentally cast away his carefully prepared speech.

"It's wrong! All wrong!" he said intensely, and with conviction in his tones. His own voice electrified him. His first few sentences were mere bursts of indignation, his tongue went on of its own volition, it could scarcely give utterance to his stirred feelings. As he went on, his emotions grew more quiet, but none the less earnest. Constant yodeling to cattle for years had given him a voice which carried to the farthest corner of the building. He had carefully studied his subject, and now that he had regained his nerve he spoke his mind with enthusiasm and vigor. His arguments were well chosen and his language terse and to the point. Stimulated by excitement, new ideas came, and he uttered them with a confidence that afterward amazed even himself. Parts of his own prepared oration came back to him and he spoke it as if it was impromptu, with force and freedom.

The time had come to stop, and without a pause he launched out on his original peroration with the ease, confidence and fire of a veteran orator. The closing sentence rang out clear and strong: "Men and women of America, let us wipe out the blot from this page of our country's history and make her in truth the Land of the Free and the Home of the Brave."

His speech over, John stumbled, rather than walked, off the stage to the street. The reaction was great. He did not hear the applause, the cheering; he did not know that he had aroused the enthusiasm of people naturally prejudiced against his side of the question.

John went straight to his room and to bed, but not to sleep—his nervous tension would not allow that. The thing uppermost in his mind, the thing that worried him, was that he had forgotten his speech—the speech he had so carefully prepared and learned by heart.

The papers had to be delivered in the morning, however, and a certain self-imposed engagement at the racetrack kept, so he was up betimes.

After these two duties were finished, he rode down the street to discover if possible the depths of ignominy to which he had been brought by forgetting his speech. The idea that he had disgraced himself still clung to him. Two fellows appeared right away, and before John could voice his greeting they called out: "Say, Worth, you just ate Beeman up last night. Are you sure you wrote it yourself?"

"He doesn't know that I forgot it," thought John, who hesitated a minute before he answered aloud: "Of course, it was all my own."

"Well, it was a rattling good speech, anyhow."

John thanked him, and then the talk drifted to the games to be held next day, and to the bicycle race especially, where the winner would receive a brand new up-to-date bicycle as a prize.

"That's going to be a hot old race," said Searls, one of the two students. "Every pedal kicker in town is after that new wheel."

"Yes, that's a prize worth riding for," and John had a look in his eyes that Searls did not understand till later.

Several times that day persons of various degrees of importance—among them Mr. Haynes, the financial and political cornerstone of the community—stopped John, called him by name, and chatted pleasantly with him. Mr. Haynes said that he was a credit to the school and the town. So John's self-respect began to come back. His good fortune was dawning, now that he was making preparations to leave it all.

Field day came clear and beautiful, and the crowd came en masse to see the sports. A series of well-advertised events were to be run, the climax of which was the one-mile bicycle race. The prize wheel had stood labeled in the donor's window for a week, and every wheelman and boy in the neighborhood had gazed at and coveted it.

The early events were well contested, and worked the spectators up to a fever heat of interest. By the time the bicycle race was announced the crowd was wildly enthusiastic. Discussions as to the probable winner were rife.

"There's none of them that'll beat Tucker," said one. "He'll have a walk-over."

"He won't walk over Bolton," declared another.

And so it went, till the contestants appeared on the track. Tucker and Bolton were the favorites.

As the men lined up at the stake some one remarked: "Why, there's Worth, with the old bike, too. He's the fellow that made the speech. I thought he had more sense than to go out with that old rattletrap."

"They're off!" The shout went up as the starter's pistol cracked.

Tucker jumped to the front, and everybody cheered him; but Bolton was near, and as the riders passed the stand for the first time it was seen that he was close behind. Following Bolton's rear wheel closely was a strange rider on an old wheel, whom the crowd did not recognize at first.

"By George! It's Worth," said a student, surprised. The men swept by, closely bunched, their wheels rattling, their legs going like pistons, and the bodies of some swaying as they exerted themselves to the utmost to keep up.

"Bolton's going past. He's leading!" And the speaker jumped up and down in his excitement. But John clung to the leader's rear wheel and went with him. Faster and faster they raced, past Tucker, opening a big gap between the bunch. Bolton was riding for glory, but John was riding for something besides glory; his

Fired for Cause.

"Say, mamma, was baby sent down from heaven?"

"Why, yes."

"Um. They like to have it quiet up there, don't they?"—The Legionnaire.

Wouldn't Give It Up.

Miss Cora was taking her first trip on the train.

The conductor came through and called for the tickets. Cora readily gave up her ticket.

A few minutes later the butcher-boy coming through called, "Chewing gum!"

"Never!" cried Cora bravely. "You can take my ticket, but not my chewing gum."—Bison.

Practical Admiration.

Soon after the first baby was born, a certain man's wife went up stairs one evening and found her husband standing by the side of the crib and gazing earnestly at the child. She was touched by the sight, and tears filled her eyes. Her arms stole softly around his neck as she rubbed her cheek caressingly against his shoulder. He started lightly at the touch. "Darling," he murmured dreamily, "it is incomprehensible to me how they can get up such a crib as that for 99 cents."—The Staley Journal.

Good Enough.

Mrs.: "I must dress at once, dear. The Browns are coming this evening to make us a visit. Should I put on the percolator?"

Mr.: "Don't bother; you're dressed good enough the way you are."—Flamingo.

Hands to Hold.

Mrs. Henpeck (sartastically)—I s'pose you've been to see a sick friend—holding his hand all evening!"

Mr. Henpeck (sadly)—If I'd been holding his hand, I'd have made some money!—Harvard Lampoon.

True Enough.

"Young man," said the boss, "you told me yesterday afternoon you had an engagement with your dentist."

"Yes, sir, I did."

"Well, I saw you at the ball game."

"Yes, sir. The tall man sitting next to me was my dentist."—Boston Transcript.

An Inspired Definition.

Miss Simpington, the teacher, was reading to her class when she came to the word "unaware," and asked if any one knew the meaning. One little girl timidly raised her hand and offered the following definition:

"It's what you put on first and take off last."—Philadelphia Public Ledger.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

WORTH WHILE.

It is easy enough to be pleasant,
When life flows by like a song,
But the man worth while is the one who will smile
When everything goes dead wrong.
For the test of the heart is trouble,
And it always comes with the years,
And the smile that is worth the praises of earth
Is the smile that shines through tears.

It is easy enough to be prudent,
When nothing tempts you to stray,
When without or within no voice of sin
Is luring your soul away;
But it is only a negative virtue
Until it is tried by fire,
And the life that is worth the honor on earth,
Is the one that resists desire.
—ELLA WHEELER WILCOX.

Dear Family Circle Girls: This is to be a reply to the poor, little, misguided and headstrong "flapper" girls who haven't given me their names that I might have tried to set right some of their expressed ideas in personal letters.

Let us imagine that we are alone, just you who have written me claiming to belong to the "flapper" class, or the "gang" or the "bunch." We will say that there are 40 or 50 of you and that we are gathered around a cheerful fireplace in a cozy room. We are met to talk these things over that have been mentioned in your letters. We will get started right, and the first thing I want to impress upon your minds is that I have no idea of scolding or lecturing you, but that we may have a quiet little talk just such as I would give you if you were my girls.

There are some things I want to tell you. In reading your letters I have noticed one very strange thing, and that is that almost every one of you who have laid claim to wildness, such as vulgar dancing, smoking, midnight (and later) auto rides, have laid claim also to drinking. And all of you who have so written have added this accomplishment to the others of your own accord, for that habit was not under discussion except as brought into it by yourselves.

This fact is to me significant. It makes it appear that the loose and misguided ideas of the girls who claim they have the right to smoke are sufficiently broad to include drinking, even to the extent of getting drunk. By the admission of many, the two go together where girls are concerned. This is not true of all, for a good many girls have admitted that they smoke, but in the next sentence express themselves strongly against drinking.

The impression I received is that smoking does have a tendency to pervert the minds of the girls and to make it easy to slide one degree farther down the grade into the drinking habit. If there were no other argument against the smoking habit for girls, that one should be sufficient. Girls, it is hard enough to be good, to be decent, to have a clear head and a right balance in this rather complex business of leading a useful life, without befuddling the brain with alcoholic drinks.

There are none among you who advocate drinking who would think of breaking into a house and stealing, or picking anybody's pocket, or murdering some one; but you admit drinking liquor and claim that you have a perfect right to do so. And yet, every time any one does take liquor as a beverage he breaks the law of our country just as completely as he who murders or steals. I wonder if you ever think of it this way. I am not going to discuss the public dance—I gave my views on that several months ago—but this I wish to state, that you girls who claim to belong with the wild set, without one exception, have grouped dancing, smoking, petting parties and drinking together, as things you claim you have a perfect right to do and which express your idea of a "good time."

For a number of years I had under my personal supervision a household of 30 girls, different ones from week to week as they were sent out on parole and others committed to the care of the state. I came in closest touch with them and was fully informed as to the causes of their being taken from their parents and their homes. I know the history of hundreds of these girls, and 99 out of every 100 were sent to this reform school because the law laid hands on them in their headstrong course, and they were traveling the very same road that you girls tell me you are determined to travel, because it is there you find your "good time" which you must have "while you are young."

You are perhaps thinking that these girls were different from yourselves. Well, every sort of girl was represented, so there were many of your kind, whatever that may be. They were many of them very pretty girls, bright and with some education, a few having been to high school.

It was the same old story—girls deceiving the parents, lying, sneaking out at night to go to public dances, on wild rides, suppers in questionable restaurants, smoking, drinking. You know it all or write me that you do. And this is what you call a "good time," and say it is positively no one's business, since this is what you want to do.

You have taken the reins into your own hands and claim the right to do all sorts of things that common decency forbids, because you are young but once, as you say, but after you have read this message I am sending you, telling you what I know out of my own wide experience with girls, you can never again say that you didn't know.

Many have written me since we have been discussing these social questions, that they had gotten started just a little way in the wrong direction and the letters and my private appeals to them in personal letters have made them see their mistakes and they have changed their course. This is what I am striving to do, dear ones whom I have gathered around my imaginary fireplace, for our heart-to-heart talk. Oh! if I can turn some of you back, yes if I can turn even one of you back from the wild race you are on, I shall feel repaid.

You are not yet bad at heart; I know many are not by the way you write to me. You are just misguided and mistaken in your ideas. You are ignorant of the consequences of your course. I am not. I could tell you of girls who were under my care who, regardless of all that was done for them, and that was a great deal, are now down to the very deepest abyss in social mire and are hopelessly lost forever. The brightest girl I had, the most lovable, the most capable, is one of them. I would save you from a fate like hers. Another had a wonderful voice and the state had a director of music who taught her for three years, she had an opportunity to become a professional singer of much note. After she became of age and the state had no further control of her, she went out into the world and in just two weeks had gone down straight to perdition. I could go on and on, dear girls, but I have told you enough, I am sure.

Think this message over and let me know what you think about the matter. I shall be very glad to hear from you.

There is no noble height you can not climb.
All triumphs may be yours in time's futurity,
If whatsoe'er your fault, you do not faint or halt,
But lean upon the staff of God's security.

And now goodnight, your friend,
ALICE W. BARLAND.

FIGURES WENT UP.

The census valuation of farms in the United States increased, between 1900 and 1920, from $20,429,000,000 to $77,924,000,000, or over 271 per cent, while capital employed in manufacturing increased from $9,814,000,000 to $44,688,000,000, or over 355 per cent. The wealth produced on farms increased from $5,099,000,000 to $18,263,000,000, or more than 258 per cent, while the value of manufactures increased from $11,407,000,000 to $62,418,000,000, or over 447 per cent. The figures are those of inflation plus actual growth, but show the relative degree of the various increases, at least.

NO TOPERS FOR HIM.

Drunkenness was punishable by death in Scotland in 870 A. D., during the reign of the Scottish king, Constantine.

"EAT MORE WHEAT"

THERE'S something *to* a Roly Poly, even when made with ordinary flour. It's a hearty, substantial winter dessert in which any variety of fruit may be used. And, when it's made with Sperry Drifted Snow Flour, there's *something more* to it. There's a crunchy crispness, a delicious even-baked "feeling" that can come only from a uniform, even-blended flour. Try this tested recipe for Sperry Roly Poly. You'll find it a fitting match for the heartiest appetites that grace your table:

2 cups Sperry Drifted Snow Flour
1 teaspoon salt
4 teaspoons baking powder
2 tablespoons shortening
½ cup milk or equal parts of milk and water

[*Note:* All measurements are level and flour is sifted once before measuring. One-half pint measuring cup is used.] Mix and sift dry ingredients; work in shortening with knife or finger tips. Gradually add the liquid, mixing it with a knife to a soft dough. Toss on a floured board, pat or roll lightly to one-half inch in thickness, cut in four-inch squares. In the center of each square place fruit; bring the four points of the square together at the top and press edges together. Place in greased baking pan or muffin tins, and bake in a hot oven. Serve with the fruit juice boiled down until thick, adding one teaspoon of butter, or use a pudding sauce.

High Points in News of the Week

Frederick William, the former German crown prince, his wife, Princess Cecilie, and their children arrived at Oels, Germany, November 13 from Holland. Three cars brought the former German heir and his followers 400 miles from the Dutch border. There was nothing spectacular about the arrival, which was said to have been completely in keeping with the promise to the German government to avoid ostentatious display during the course of the journey. The party is housed in a famous sixteenth century castle at Oels and are reported to have enjoyed a happy dinner party, it being the first complete reunion of this branch of the Hohenzollern family in more than five years. Great Britain, which took the initiative in the sending of a coercive note to Germany regarding the return of Frederick William, is now said to be desirous of dropping the whole matter, while France, who was at first indifferent, but later came to favor action of some sort, is ready for such action.

President Coolidge believes that the American people will sympathize with any move to be taken by the allied government to prevent restoration of the Hohenzollerns to power in Germany, although the American government can not, in accordance with long established policy, take definite action in the matter which has been brought up by the return to Germany of the crown prince, Frederick William.

GERMANY TO REPUDIATE TREATY.

Germany has decided to repudiate the treaty of Versailles and not to comply with either the reparations clause or any other of the clauses of the treaty as long as the French and Belgians occupy the Ruhr, says a dispatch to the London Daily Mail from Berlin.

England definitely refuses to sanction further French punitive measures against Germany, while the Italian government decides not to give approval to any further invasion of Germany by France.

In the meantime, the French chamber has given a decisive vote of confidence to Poincare, who rides roughshod over all opposition.

WHEAT COMMISSION.

A wheat commission plan of handling America's surplus wheat is being worked out in his department, Henry C. Wallace, secretary of agriculture, indicated November 14 in an address before the Chicago Association of Commerce.

"Such a commission as I suggest," he said, "and which we are now outlining will look after the wheat surplus, from behind a tariff wall, so that prices can rise in the domestic market to the point where a bushel of wheat will buy as much for the farmer as it did before the war."

The secretary suggested that any effort to fix wheat prices by governmental agencies will only add to the difficulties of the producers.

PARLIAMENT DISSOLVED.

King George, acting on the advice of his cabinet, Friday dissolved parliament in preparation for the general elections to be held December 6. Parliament will reassemble on December 20.

The British election will be fought on the square issue between protection and free trade. It is estimated that between 30 and 40 women will seek admission to the house of commons.

TO ENFORCE PROHIBITION.

President Coolidge has given his approval to treasury plans for expansion of the coast guard for prevention of rum smuggling. The plans contemplate expenditure of $20,000,000 for new craft and additional personnel.

In addition to the $20,000,000 lump sum, congress will be asked for an appropriation of $8,500,000 for pay and maintenance of the additional personnel. It is proposed to increase the number of commissioned officers from 209 to 353, warrant officers from 396 to 716, and enlisted personnel from 4051 to 7122.

DISCUSS FARM RELIEF.

Burton L. French, representative from the First district of Idaho, and expected to be chairman of the naval subcommittee on appropriations, called on President Coolidge Saturday and discussed the administration program of agricultural relief. He gave the president his views on legislation to help the wheat farmer. Mr. French is a member of the house appropriations committee.

OREGON'S INCOME TAX.

The official returns show that the state income tax in Oregon was carried by a majority of 506, the vote on the measure being 58,647 in favor and 58,141 against.

Wool—Valley wool, fine, 28@30c; medium, 28@30c; coarse, 25@27c; Cotswold and braid, 20c; matted, 15c; Eastern Oregon, good average, 32c.

BOSTON, Nov. 16.—The Commercial Bulletin will say tomorrow:

The wool market is strengthening on somewhat broader buying, including some speculation. Medium wools, especially, are eagerly sought, both scoured and greasy, while low wools are also in good request, with fine wools sentimentally, if not actually, stronger.

In consequence of this hardening of prices, exports are made more difficult. The manufacturers are lending more or less support to the market, although apparently anticipating heavy weight season's requirements in part, while the goods market is still hardly settled.

The foreign markets, both secondary and primary, are tending upward. South America, especially, advanced this week and prices were about 5 per cent higher for the week for the best wools in Australia, America buying rather freely in the light of favoring exchange. Fall wools in Texas brought 85 to 90 cents, clean basis, landed Boston, according to the character of the wool.

Scoured basis: Texas fine 12 months, $1.15@1.20; fine 8 months, $1.05@1.10.

California — Northern, $1.15@1.20; middle county, $1.10; southern, $1@1.05.

Oregon—Eastern No. 1 staple, $1.25@1.28; fine and F. M. combing, $1.20@1.25; eastern clothing, $1.10@1.15; valley No. 1, $1.15@1.18.

Territory—Montana, fine stable, choice, $1.28@1.30; half-blood combing, $1.18@1.22; three-eighths-blood combing, $1.02@1.05; quarter-blood combing, 85@88c.

Pulled—Delaine, $1.20@1.25; AA, $1.10@1.12; A supers, $1.

Mohair—Best combing, 78@83c; best carding, 70@75c.

best by test Means CALUMET

The Economy BAKING POWDER

Has proven most satisfactory because of the unfailing results that are always obtained where it is used.

The largest and most sanitary baking powder factories on earth are kept busy supplying the enormous demand from millions of housewives who refuse to accept anything but Calumet. They know that its more-than-the-ordinary leavening strength means economy on bake-day.

Calumet is absolutely uniform—the can you buy today contains the same high quality leavener as the first can made and that was thirty five years ago.

EVERY INGREDIENT USED OFFICIALLY APPROVED BY U. S. FOOD AUTHORITIES

Sales 2½ times as much as that of any other brand

THE WORLD'S GREATEST BAKING POWDER

Just Folks

Courtesy is an attribute of strength.

Wide reading may be narrow living.

The inevitable captures the weak mind.

The dynasty may change, but force continues to rule.

Every moment you live you are taking another chance.

Few rich, a crowd of poor and a growing middle class ambitious to live like the rich—this seems to be the modern program of life.

They tell us that the so-called poor of today are rich when compared with the poor of yesterday; that the middle class outvies the nabob of yesterday.

Is there one standard of life for the rich, another standard of life for the middle class, and yet another standard of life for the poor? Or is there only one standard of life—the American standard—and is it only a matter of money as to the extent you can attain that standard of life? The rich man can easily attain that standard, the middle class man can approach it half-way, while it is up to the poor man to dream of it, hope for it, and work for it, and haply might find it.

It goes without saying that the standard of life today is a question of money, but is it a question of just so much money? Is it a question of just a particular make of automobile, just a particular cut of quality of clothes, just the number of electrical conveniences in your house? What is the standard of life, anyway?

HANDY LIFTERS.

Several pads to lift hot kettles or pans off of the stove will be found handy in the kitchen. These may be made by putting several thicknesses of overall cloth, outing flannel or woolen material together and stitching around the edge. The tops of old stockings also make good pads and are easy to wash. These pads should be about five or six inches square. Sew a metal ring or put a loop of strong cord in one corner and hang them on a nail near the stove and you will have fewer dish towels to launder.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.

Just What You Want

may be offered in this week's want ads at a bargain. It's a good idea to look them over every week

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

Dear Aunt Nellie: I am 7 years old. I have two brothers and one sister. My brother is in the fifth grade at school and I am in the third grade.—Garland Harris, Grant county, Wash.

Birthday Greetings

THURSDAY, November 22—Johnny Melvin Dahl, 9 years old; Hazel Schafer, 11.

FRIDAY, November 23—Leslie John Beardsley, 6 years old; Magdalene Pflugrath, 9.

SATURDAY, November 24—Jewel Field.

SUNDAY, November 25—Helen Magnuson, 11 years old; Edith Spurgeon, 6; Charlotte Treadwell, 10; Evelyn Whitbeck, 9.

MONDAY, November 26—Evelyn Armours, 11 years old; Ruby May Schrag, 10.

TUESDAY, November 27—Jessie Hendersen, 8 years old; Harry Lee Kellogg, 9; Nellie Powell, 11; Jessie Rupp, 9.

WEDNESDAY, November 28—Victor Anderson, 8 years old; Gladys Cook, 11; Erma Sherry, 11.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Frances Mae Fox, Edna Amend, Myrtle V. Foye, Elsie Boeck, Bertha Boeck, Ellen Olson, Thelma Melger, Vera Ayers, Alice Lavina Halsted, Evelyn Olsen, Mozelle Van Syckle, Gertie Rehn, Pearl Lonie, Florence Molinder, Virginia King, Audell Wilson, Alice Hunt, Marvin Whitman, Mae Sundberg, Freda Stuner, Saima Carlson, Lillian Robinson, Emma Miller, Ethel Miller, Mary Armstrong, Hilda Wagner, Viola Johnson, Lena Boeck.

Bessie Ada Pendell, Nellie Roe, Mamie Richey, Leo Anderson, Grace Shaw, Olaf Swanson, Hisayo Okinaka, Mildred Wuorinen, Beth Verbeck, Peter Wigen, Norma Baines, Cora Kelso, Velma Lewis, Marian Pace, Lester Glover, Ellis Sawyer, Doris E. McDonnell, Mary Lou Jenkins.

BEDTIME STORIES

By THORNTON W. BURGESS.

ALL IS WELL THAT ENDS WELL.

When the storm's over and sun shining bright
The clouds are forgotten and everything's right.

It is just the same way with fears and troubles. When they are over and things have come out right, as they are bound to do in the end, the troubles are forgotten, or at least are little thought of, and this is the way it should be. It was so with Redeye the vireo and his hard-working little mate. Their troubles came to an end at last and then all was well.

That lazy cowbird baby whom they had fed and cared for, and who had forced their own babies to leave the nest before they were really strong enough to, at last made up his mind that he would try his own wings. Perhaps it was because he was so greedy that he couldn't bear to see the Redeye children getting all the food they needed while he got only what he squalled for. You see when they were in the nest with him he got most of their share, as well as his own, because he was so much bigger and stronger than they. But when they left the nest their father and mother could feed them as they should be fed, and he couldn't help himself.

When he found that he was no longer getting the biggest share he made up his mind that it was time to try his wings. There was no reason in the world why he shouldn't have tried them long before. He was big enough and strong enough, but he was too lazy. It was his greediness that finally overcame his laziness. As soon as he was out of the nest he joined the Redeye babies and began his old tricks of crowding in and snatching the food meant for them. But it wasn't so easy to do it now as when they were all together in the nest. So the little Redeyes got their share and grew fast, and presently were beginning to hunt worms for themselves.

But the young cowbird had no idea of doing this until he had to. So he followed Mrs. Redeye about all day long, hurrying up to her and squalling at the top of his lungs every time she caught a worm or bug so that she was glad to give it to him to stop his dreadful noise. It certainly was disgraceful and all the other little people in the old orchard said so. They called the young cowbird a nuisance, and said that it was a shame that little Mrs. Redeye should be so imposed upon. Here was this young stranger bigger than she and demanding that she feed him because he was too lazy to hunt for his own food.

At last several of them put their heads together and decided to do something. "That noisy nuisance is big enough and old enough to take care of himself," sputtered Jenny Wren. "Let's all get together and drive him out of the old orchard. It's the only way we'll ever get rid of him.

"A good idea," said Welcome Robin. "He's a disgrace to the whole neighborhood. Let's do it right now."

The young cowbird had just begun to squall for a worm which Mrs. Redeye had found, when he saw Welcome Robin and Winsome Bluebird and Jenny Wren and Tiny the warbler and a lot more of the little orchard people headed his way, and they looked so angry and determined that he suddenly made up his mind that he didn't want that worm at all. In fact, right then and there it came over him that he was tired of the old orchard and it was time he saw more of the great world. So without a word of thanks to little Mrs. Redeye for taking care of him when his own mother, Sally Sly, had deserted him, he spread his wings and flew as fast as ever he could in the direction of the old pasture and never once looked back.

The others followed to the edge of the old orchard to make sure that he had really gone, and then returned to tell Redeye and Mrs. Redeye how foolish they had been to be so tender hearted to such a lazy, good-for-nothing fellow. But now that their troubles were at an end Mr. and Mrs. Redeye could remember only that it wasn't the young stranger's fault that he had been hatched in their nest, and in their hearts they were glad that they had not been cruel enough to let him starve when he was helpless. They thanked their nighbors for having got rid of him for them, and then sighed thankfully. "All is well that ends well," said little Mrs. Redeye, cocking her head wisely.

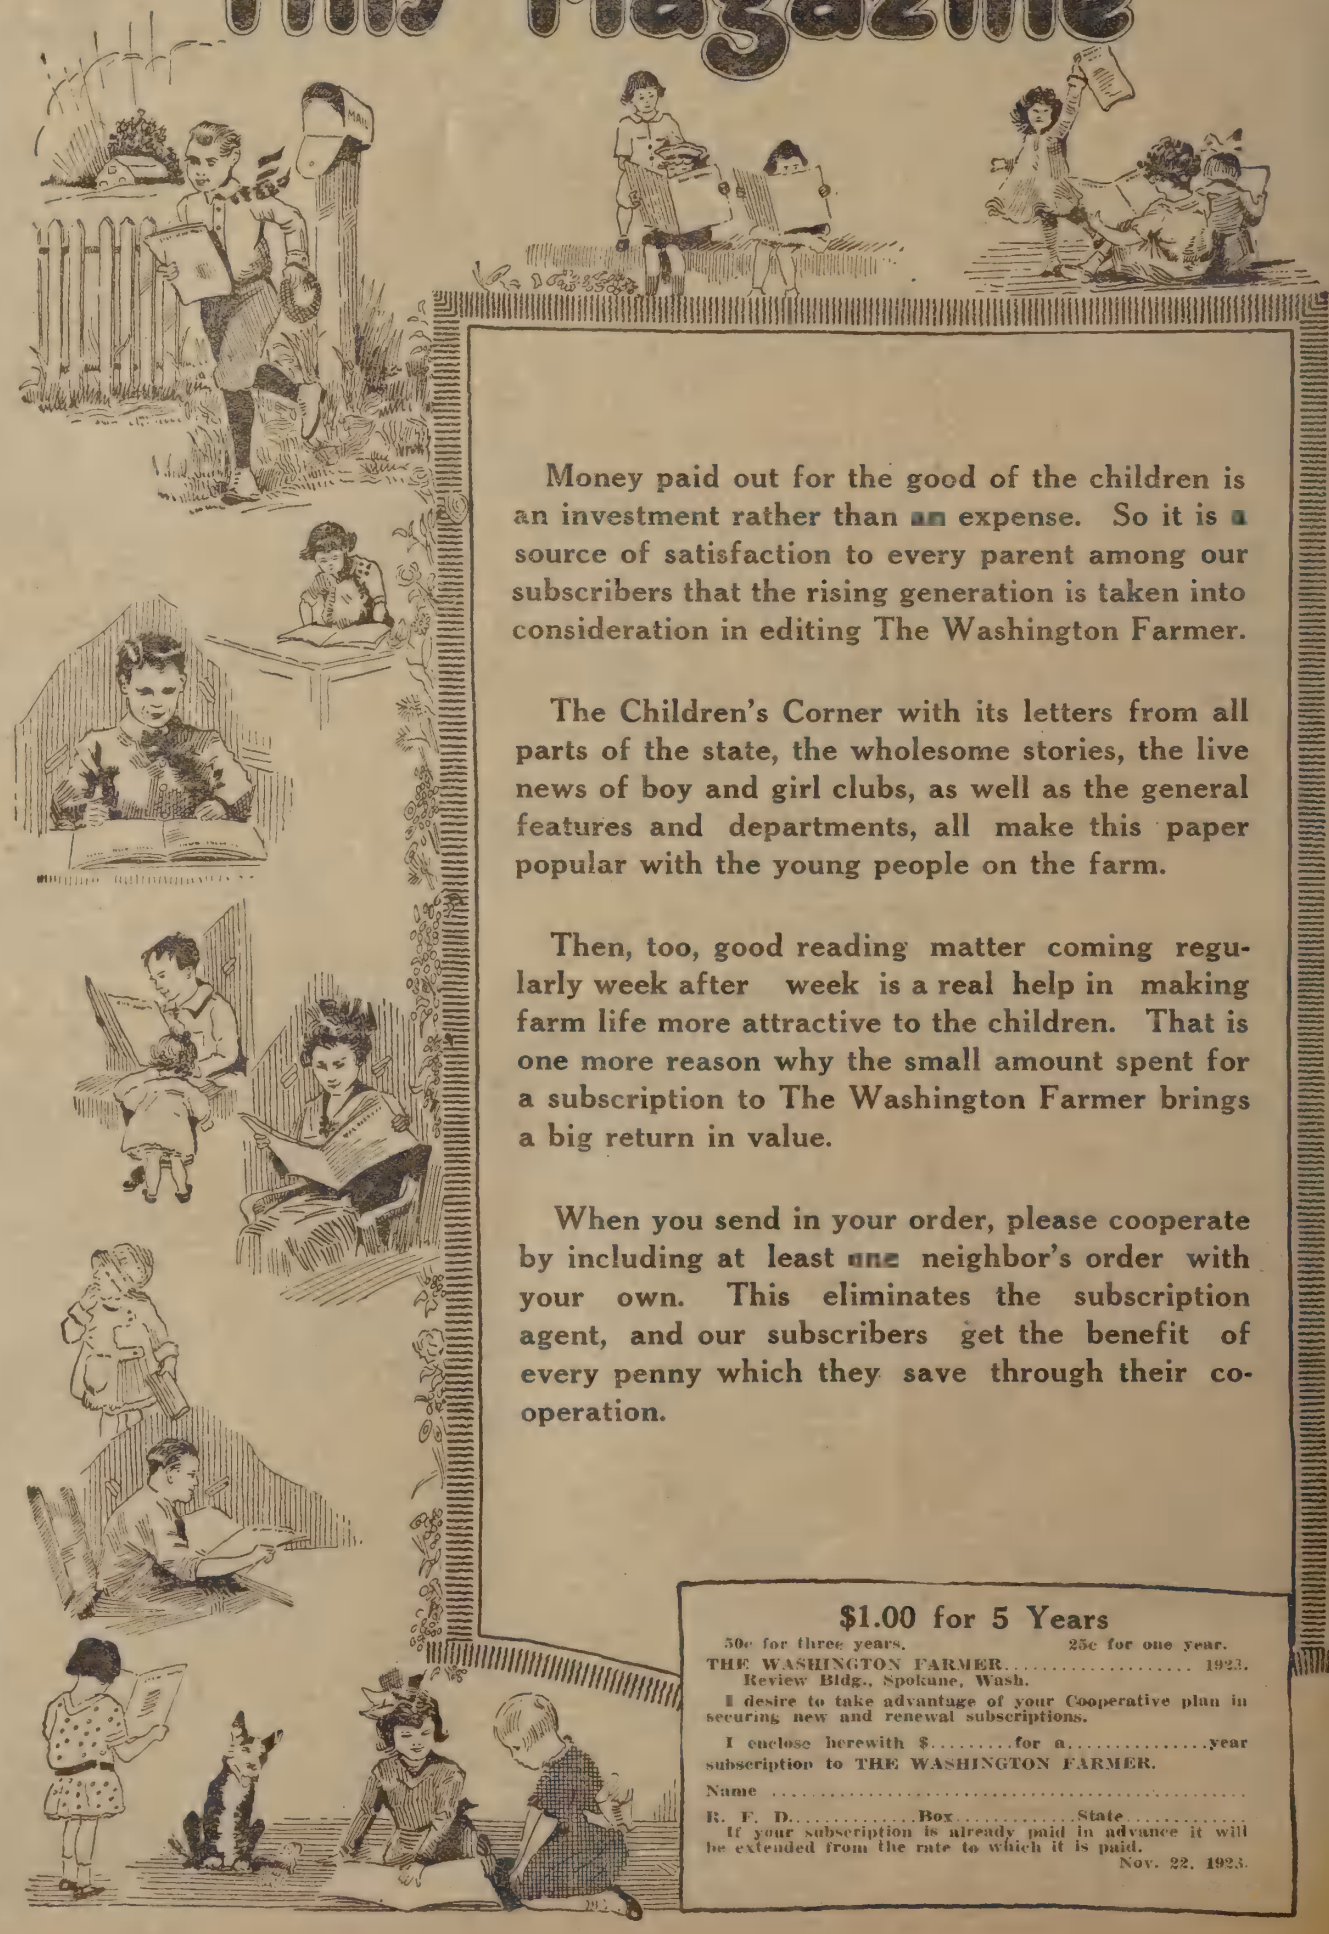
Children Welcome This Magazine



Money paid out for the good of the children is an investment rather than an expense. So it is a source of satisfaction to every parent among our subscribers that the rising generation is taken into consideration in editing The Washington Farmer.

The Children's Corner with its letters from all parts of the state, the wholesome stories, the live news of boy and girl clubs, as well as the general features and departments, all make this paper popular with the young people on the farm.

Then, too, good reading matter coming regularly week after week is a real help in making farm life more attractive to the children. That is one more reason why the small amount spent for a subscription to The Washington Farmer brings a big return in value.

When you send in your order, please cooperate by including at least one neighbor's order with your own. This eliminates the subscription agent, and our subscribers get the benefit of every penny which they save through their co-operation.

$1.00 for 5 Years

News for Breeders

ANOTHER RECORD HOLSTEIN.

Washington now has another record Holstein cow. Donnybrook Cornucopia Clothilde, a mature cow owned at the Western State hospital at Fort Steilacoom, recently completed a 10 months' test in which she produced 22,042.4 pounds of milk and 987.8 pounds of butter. This is a new butter record and raises the record of Cascade Blossom of Yakima by four pounds of butter and 2000 pounds of milk.

She comes from Todd breeding on the sire's side, her sire being a grandson of Sir Johanna Ruth Payne, and her dam, a daughter of the noted Sir Colantha Prilly, is from a 32-pound dam. At the end of her 10th month this remarkable young cow made an official seven-day record of 646.1 pounds milk, 28.22 pounds butter, the highest milk record ever made in a seven-day test so far after calving.

NORTHWEST AYRSHIRE OFFICERS.

Following a banquet and meeting of the Northwest Ayrshire Breeders' association, held in Portland on November 8, the following were elected for the various offices of the association for the year 1924: E. W. Van Tassell, Wenatchee, Wash., president; J. D. Honeyman, Portland, Ore., vice president for Oregon; E. V. Ellington, Pullman, Wash., vice president for Washington; L. K. Saum, vice president for Idaho; A. E. Wells, Sardis, B. C., vice president for British Columbia, and J. U. Smith, Route 1, Newberg, Ore., secretary.

DOUGLAS FARMERS BUY BULL.

Ed Hoem of Snohomish reported to County Agent A. Z. Smith the sale of a Holstein bull calf to farmers in Douglas county. The Valley Gem farms report the sale of a purebred Guernsey bull calf to James McCauley and also the sale of two grade heifer calves to L. O. Stubb of Norman. The sale of the two calves was conducted through the Snohomish Cow Testing association's "Sales" scheme. In the "Sales" idea the cows are classified according to production of butterfat, based on cow testing association records.

HIGHEST MILK RECORD.

Kolrain Finderne Bess, a Massachusetts Holstein, recently completed a strictly official yearly record of 35,087.5 pounds of milk and 1117.43 of fat, that has been exceeded for both milk and butterfat only by Segis Pietertje Prospect, Carnation's world champion. The milk record is the highest strictly official one ever made, and the butterfat record the second highest, at this writing.

Lays Early Ground Work

The picture herewith is that of Max Merritt, aged 7, of Rosalia, Whitman county. In his left hand is a silver cup that he won at the Spokane Interstate fair in September when he showed the best colt in the boys' and girls' contest for the trophy given by John H. Roberts of Spokane, superintendent of the horse division at the Interstate fair. The animal that the young horseman is riding is not the colt with which he won, but is a Shetland of which he is perhaps little less proud. The colt that he showed at the fair was a purebred Shire only a few months old, but tall enough that the youngster need-

ed a step-ladder or a manger to groom him thoroughly, which his showmanship at the fair indicated he had done many a time in preparation for the event. In fact, the interest that M. W. Merritt, the lad's grandfather, with whom he lives, and one of the well-known Shire breeders of the west, took in the lad's winning has led horsemen generally who know the situation to believe that he had devoted much of his time and skill for several weeks previous to the show in training his grandson in the art of showmanship and horse judging.

"Do you want to know why your colt didn't win?" Max asked the boy who showed the winner of second place. Without waiting for an invitation to tell the reason, he continued, "Feet too flat," indicating that he had learned already that one weak point may defeat an otherwise high-class horse.

H. W. MERRITT, Rosalia, Wash.

SHIRE HORSES

"BEST IN THE WEST"

At the Pacific International Stock Show, November 3-10, the Merritt Shires won every blue ribbon for which they competed, except two, and were awarded three of the four championships. They won junior champion stallion, on Prince Albert; senior and grand champion mare, on Martha Washington, and junior and reserve champion mare, on Henry Retta.

They won first, second, third and fourth on get of sire, and first, second, third and fourth on produce of dam. All these were the get of the great herd sire, March Ankeny.

Substantially the same winnings were made on entire fall fair circuit.

A few choice animals of both sexes for sale at all times.

FOR SALE

A choice lot of Holstein calves, both sexes, finest Hollywood breeding, excellent individuals. Several are out of yearly record dams. Have no room for them and they must be sold. Breeding and individuality considered, they are the very best bargain on the market. Write for prices and descriptions. Excellent heifers for calf clubs, fine bulls for bull associations.

A CALF OR A CARLOAD.

HOLLYWOOD FARM, Hollywood, Wash.

BERKSHIRES
For sale—2 fall, 1922 boars. Also choice lot of last March and April boars. Four of these are full brothers to junior champion boar and junior champion sow at Washington state fair, 1923.
FRED H. SINNES, R. 2, Prosser, Wash.

BERKSHIRES
The big kind with quality and finish. Breeding stocks, both sexes, different ages, for sale. Special prices on spring boars and unrelated trios. Popular blood lines.
REICK BROS., Macleay, Ore.

Berkshires Improve your stock on my easy payment plan. Grand champion boar and Jr. champion sow at Spokane fair. Blood lines unsurpassed. Cedar Canyon Farms.
F. M. CURTISS, Prop., Fruitland, Wash.

Big Type Polands
The Royal Designer herd of the best blood lines. We offer a few March boars, 1 two-year-old boar and a number of March gilts, tried sows and fall pigs at weaning time. Write for prices. Satisfaction guaranteed. JOHN F. LYNN & SON, Peach, Wash.

Pioneer Herd Hampshire Swine
10 head choice boars; 10 head of sows and gilts, backed by show records.
J. M. FRUITTS, Cambridge, Idaho.

American Hampshire Sheep Association
has a valuable booklet with illustrations telling you the superiority of this breed. We believe the Hampshire to be the best all round sheep in the world. Also have list of breeders; some near you. This literature is free. Write
COMFORT A. TYLER, Secretary.

Have you glanced over the farm bargains on the "Want Ad" page?

COMP G O EXPERIMENT STATION URBANA ILL

Cattle Ranch to College

(Continued from page fourteen.)

success meant position, standing, a great opportunity, a future.

A hundred feet from the finishing tape he bent his head and made a tremendous effort. Early morning training stood him in good stead now, for he began to gain on Bolton, and inch by inch to pass him. The old machine groaned alarmingly, but it stood up to its work in spite of its protests. Twenty feet from the finish John seemed to leap forward, and crossed the tape just ahead of the laboring Bolton.

The crowd was rather disappointed to see its favorites beaten, but applauded the winner generously as he went up to the judge's stand to receive his shining prize.

Gray was the first man to wring his hand; his was an honest, unfeigned, glad congratulation.

"Say, Gray," said John, "you ride her home. I want a farewell ride on this old wheel. I pull out tomorrow."

"What!" ejaculated Gray in astonishment.

"Yes, that's what I wanted that wheel for. I straddle it tomorrow and go east. I haven't said anything about the plan, for I wasn't sure the wheel would be mine."

"Did you expect to win?" Gray asked.

"I've trained a month. That's what gave me the wind to finish so strong. You see, my plans need transportation east. I had to win. I'm going to ride that wheel to college."

That evening John bade the Marstons goodby. They tried to dissuade him from going; they pictured the career that was open to him in the town where he had made friends and had gained a reputation, but his mind was made up, and though he was touched by their kindness, go he must.

"I don't like to have you leave," said the professor. "You'll be thrown into circumstances unlike any you have ever met before. But I know that you can adapt yourself to new conditions, and for that reason it may be best for you while your mind is growing. You will never forget the west, but I feel sure you will not leave the east, once you are settled there. Goodby, my boy, and God bless you."

John never forgot the kind parting words nor Professor Marston's always considerate treatment.

The two friends, Worth and Gray, talked long and earnestly that night and it was late when they retired, but at daybreak they were stirring. John ate a deliberate breakfast, strapped a few necessaries to his wheel, bade his friend a sincere farewell, and rode off.

He pedalled on in the crisp morning air till he reached a high point, where he dismounted and took a long look at the town where he had struggled so hard, but which was the scene of his triumph as well as his trials. His satisfaction was mixed with regret, for he left behind good, true friends and a known esteem, for—he knew not what. The town lay in the hazy valley below, morning smoke-wreaths now curling from many chimneys, the gray shingle roofs embedded in dark-green foliage; it was a scene of contentment and rest. He contrasted this with other scenes, active, restless, hazardous ones; the cattle range, the sheep camp and the mine. The thought of his home was not so clear as the later scenes, though he had visited it during his stay at school. He had found Ben an almost grown-up, vigorous, business-like ranchman, glad to see his brother, but interested in his own affairs; not the same old boyish Ben of old.

It was with real regret that he turned and left the town that had in a way been a cradle and a home to him.

Day after day the traveler pushed on, following the windings of the roads now where formerly he would have ridden his horse as the crow flies.

Seventy miles a day. Eighty miles a day. Population increased; roads were better, 90 miles a day. His training for racing stood him in good stead. One hundred miles a day; his face aldays turned eastward.

Rains came; the roads became rivers of mud. He was driven to the drier railroad track and jolted along over the ties. Sixty miles a day. The end not yet in sight, money exhausted, prospects not very cheerful; but with resolution undaunted he pushed along. A brickyard afforded temporary work. Five dollars earned, he "hit the trail" again.

Midday was fiercely hot; he took advantage of the cool mornings, and by twilight pedalled continuously. Wide swamps intervened. Insects, stinging vicious, beset him. The sand along the river banks was heart-breaking to a wheelman and the mountains formed almost unsurmountable barriers. People he met misdirected or were ignorant, and he often went far out of his way.

But the goal was sighted at last. The day he reached Sherman's town he made 120 miles and rode up the main street a sorry specimen — tired, dirty, tanned leather color by sun, wind and rain.

His plans were fully made. The wheel was pawned at once, and two hours later John Worth emerged from a little hotel bathed, shaved and neatly clothed.

The address of his friend written for him was made nearly illegible by friction, sweat and dirt. But by the aid of a friendly policemtn he was able to find Sherman's house. He rang the bell, was admitted promptly by a neat maid, and ushered into a sumptuously furnished parlor, the like of which he had never seen before. The chair that he at last dared to use was soft and luxurious, and the journey had wearied him so that he was just about dropping off to sleep when Sherman entered.

"How do you do, sir?" Sherman's greeting was rather formal. "What can I do for you?"

At the sound of his voice John started to his feet with a jump.

"Don't you know me, Sherman?" he said.

"You—you can't be John Worth? Why, bless my heart, is it really you?" cried Sherman.

In an instant the one idea that had sustained him through the trying hours and apparently endless miles of his journey came to John's mind.

"Yes," he said, the light of triumph in his eyes. "I'm John Worth. And I've come to college."

(The End.)

Valley Apple Show

(Continued from page three.)

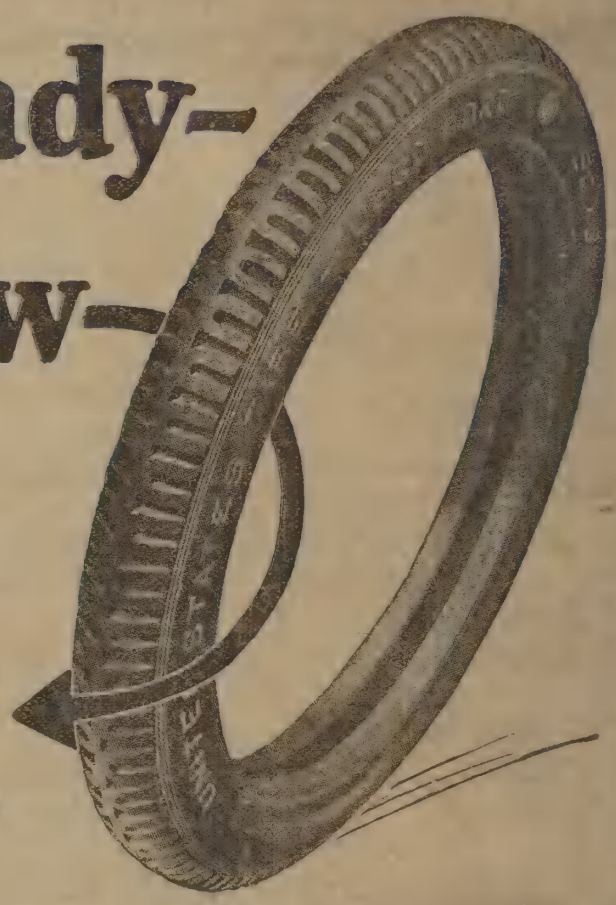
and retailers exhibited also.

The evening programs were well varied and excellently attended. Monday's, that of opening night, included music by the Spokane valley and Millwood bands, fancy dancing, community singing and the president's address. Fred Krug spoke on strawberry culture. Tuesday evening the Vera Community club put on an entertainment program, with additional features by the Spokane Chamber of Commerce and with an address by Professor C. L. Vincent of the University of Idaho, on head lettuce culture and a talk by Commissioner David T. Ham on pioneer conditions. The Opportunity and Pinecroft community clubs staged the fun Wednesday evening, with the Spokane Advertising club assisting, and possibilities of poultry were discussed by Helen Dow Whittaker. Thursday night was Greenacres night, and the Lions and Kiwanians of Spokane contributed to the entertainment features. Professor O. M. Morris of Washington State college discussed orchard problems. Friday evening the Orchard Avenue, Millwood, Dishman and Pasadena clubs entertained the crowd, asisted by the Spokane Rotarians, and John Wiley, district horticultural inspector, advocated pest-control districts made up of solid blocks of orchards, to curb leaf roller and codling moth. The opportunity is to be given the growers of the region to meet again and talk over this plan of control, which, it is estimated, would protect the orchards at a cost of but $1 per acre. There were 400 paid admissions that evening. On Saturday evening the successful show closed with a harvest carnival dance.

There were, in addition to the educational evening features, instructive afternoon features, in the course of the week, including a demonstration by Miss Inez Arnquist, county home demonstration agent, of home manufacture of pectin, the jelling principle, from apples, and a review of the outlook for head lettuce growing in the valley by Professor C. L. Vincent of the University of Idaho.

Read the "Want Ad" page this week for good offers of all kinds.

Now Ready—
The New—
USCO CORD



THE makers of Royal Cord Tires consider this, next to the Royal Cord, the greatest tire value that has ever been produced. The price is only a little more than that of the celebrated USCO Fabric.

The new USCO Cord is made in all regular sizes including 30 x 3" clincher and in both clincher and straight side in 30 x 3½".

It has the familiar, time-tested, practical USCO tread. It is distinguished from the USCO Fabric by three circumferential ribs beneath the tread pattern and the United States Rubber Company Seal in white on the side-wall.

Built on a new construction principle the USCO Cord in spite of its low price more nearly approaches the famous Royal Cord in service value than any other tire that has ever been produced.

Do not confuse the USCO with other low-priced cords.

It is a high-grade cord tire in every respect.

A scientific tire through and through—

A remarkable tire at a remarkable price—one that is stirring up the liveliest interest among value seeking tire buyers and legitimate tire dealers.

See the new USCO Cord Tire at the U. S. Sales and Service Dealer —on your next trip to town.

SPOKANE. SEATTLE.

Not Afraid

Third Annual Pacific Northwest Potato Show---Page 3

Northwest Hay and Grain Show

The third annual Northwest Hay and Grain show was held at Portland the week of the Pacific International and was by far the most successful of any so far held. There were 750 entries all told of different grains, seeds, corn and hay. The sweepstakes awards were divided quite evenly between several Oregon counties. Idaho and Washington came in for their share.

The wheat exhibits were especially good. The sweepstakes award for the best bushel in the show went to Jaeger brothers of Condon on a bushel of Turkey red which weighed 63 pounds, was a beautiful dark copper red in color and free from mixtures of all kinds.

Its closest competitor for the $50 prize was an entry of Marquis from Walter Kraft of Bozeman, Mont. Mr. Kraft won the sweepstakes premium last year at the International Hay and Grain show at Chicago.

The outstanding feature of the wheat exhibit was the splendid showing of all varieties of wheat from Umatilla county, nearly 200 entries in all. This county won the big majority of the ribbons, taking six blue ribbons on wheat and dozens of lesser places. The Umatilla exhibit of White Club was especially noteworthy. There were about 150 entries in this class in the show, over half of them coming from the one county. The judge working on this class went over the entire lot carefully, eliminating all of the lots except those of outstanding merit. When he had selected only the very good lots he found that these numbered 5. This gives some idea of the splendid quality of the whole show.

Contest is Close.

The contest for first place in the White Club class was close between lots owned by C. A. Knowles of Dufur, Wasco county, and J. A. Gaskill of Imbler, Union county. The blue ribbon finally went to Mr. Knowles, but both lots were exceptionally pure and of fine quality. There were 15 other placings made and Umatilla county won most of them.

In the hard red spring class all of the honors went to Montana Marquis. Many of these Marquis entries had been previously shown at the big grain show at Wichita, Kan., where they also carried off the ribbons.

As was the case last year and in 1921, the showing of Hard Federation was spectacular. In the class hard white, where it was competing with dozens of entries of Bart, Bluestem and Galgalos, it won all of the 10 places. As was the case last year, the leading competitors for first place were J. A. Gaskill of Union county and Otto Reiman of Umatilla county. Last year Mr. Reiman's wheat placed first. This year it placed below that of Mr. Gaskill. Other owners of exceptionally fine lots of this variety were Roscoe Myers, Echo; John Marten, Pendleton; E. F. Zaugg, La Grande; W. L. Ledbetter, Alicel; Ralph Reese, Echo; Harry Lanius, Prineville; A. S. Gangier, Pendleton, and Herbert Egbert, The Dalles. Several of the above men, notably Marten, Ledbetter, Reese and Egbert, have been consistent winners with Hard Federation at shows for the last two years.

Turkey red entries showed a big improvement over last year. There were 125 entries of this variety. Both of the leading entries came from the Jaegers of Condon, although the competition was keen for all of the 17 placing. R. J. DeGroot of Antelope, Wasco county, is a new exhibitor at this show, but his bushel placed third in a very close class. In former years Montana has had no trouble in annexing the first four or five places in this variety, but this year had to be content with only the fourth and fifth places. Last year James Dolan of Columbus, Mont., won first place with no difficulty, but this year he placed fourth. It is unusual for wheat cut with a header or combine to be in as good show condition as that cut with a binder, but this year dozens of Oregon and Washington entries of combine and header cut Turkey red had the same rich dark color as the binder cut Montana grain. Other entries of outstanding merit were grown by T. A. Krause, Pendleton; J. B. Schwerger, La Crosse, Wash.; Tom Boylen, Echo; George Hill, Pendleton; Boylen & Smythe, Echo; Shumway & Krause, Echo, and Jess Fleming, Maupin.

In the variety special on Jenkins Club the Wheatland stock farm of Worley, Idaho, won first place. Claude Price of Weston won first on Red Chaff Club, and S. R. Thompson of Pendleton won the blue ribbon for the best entry of Forty-fold.

All premiums on Bluestem were won by farmers near Pilot Rock in Umatilla county, Mrs. Johnson taking first.

A new class in the show this year was a special premium for Willamette valley white wheat. In this class the placings were: Theo. Vanderzanden, Banks, first; Baker Cummings, Corvallis, second; and W. M. Hathorn, Laurel, third.

Barley and Oats.

The barley and oat entries this year were far superior to former years. Ed Moser of Aberdeen, Idaho, won the $25 sweepstakes on barley and Lay Brothers, Molalla, Clackamas county, won the oat sweepstakes. The entries of barley from Weston and Cabbage Mountain of Umatilla county were particularly good. Western Washington and Oregon carried off most of the oat money.

The sweepstakes money on corn went to William Brewer of Parma, Idaho, on exhibit of 10 ears of White Dent. The corn show is divided into two parts, exhibits from east of the Cascades and those from west of the Cascades.

In the eastern division Malheur county and adjacent Idaho points won all premiums with corn which would have been a credit to many shows of the corn belt.

In the western division the outstanding exhibit was as usual the exhibit of the White Dent from the Hughes family of Woodburn.

Boys' and Girls' Corn Contests.

In the boys and girls' club corn contests most of the eastern division money for Yellow Dent went to the Parker family of Parma. These boys live in Malheur county, but get their mail at Parma. In the White Dent class Volmer Hickox of Adrian, Ore., and Lee Johnson of Parma won first and second. They are both of Malheur county. In western Oregon some of the winners were R. Anderson, Central Point; George Weisner, Gervais; and Fred Herb of Banks.

The hay exhibit was small. C. S. and J. F. McNaught of Hermiston had little trouble in winning the bigger share of the alfalfa premiums, and H. G. Ziegler of Barlow won on red clover.

For the first time an intercollegiate crop judging contest was held as a part of the show. Students from O. A. C., the University of Idaho and Montana State college competed. Each school sent a team of three men. The Montana team had little difficulty in winning with a score of 4760 out of a possible 5400 points. Idaho followed with 4555 points, and Oregon was third with 4430.

The judging was done by G. R. Hyslop, professor of farm crops at O. A. C., and H. W. Hulbert of the farm crops department at the University of Idaho.

Vetch for Green Feed

The farmers of Thurston county have been growing vetch for green feed and silage crops for several years, but this year a total of 40 acres were grown for seed crops alone. Both spring and winter vetch have been grown in this district with good results, according to E. B. Stookey, the county agent.

A total of 200 acres of Rosen rye have been recorded for the last year. This crop produced better yield by 10 bushels to the acre than the common rye, which has formerly been grown in this district. The acreage of this crop for next year is expected to be much greater.

"Power at Cost"

Municipal ownership advocates are constantly asserting that a so-called privately-owned utility must operate at a profit, while a municipal or state owned utility does not need to make a profit but can sell "power at cost." A brief analysis shows how ungrounded this claim is.

Every utility, whether municipally or privately owned, must raise the money to construct its plant. Municipal corporations do this by issuing bonds. Private companies by issuing bonds and stocks. In either case the investor must receive the interest upon his money.

The operating expenses of both plants must be paid, a depreciation fund to take care of worn out equipment must be created, and a surplus maintained to take care of unusual conditions.. The state department of public works permits the privately owned company to earn its operating expenses, its depreciation, a small reserve and a fair rate of return in the form of interest and dividends upon the capital actually and honestly invested. A municipal plant must meet these same charges. It must make sufficient profit from its operation to pay its bond interest.

The rates which either plant charges must be sufficient to pay these charges and in case of a privately owned utility they are limited to doing this and no more.

It will thus be seen that both plants require the same revenue unless the municipal plant operates at a deficit and seeks to throw the burden on the tax payers of the state.

The people of this state are today getting "power at cost" —the cost of operation plus the cost of money.

Grading Counts Big in Potato Market

Pacific Northwest Potato Growers Show and Conference Give Rise to Important Points

The Pacific Northwest Potato Growers, at their annual sessions and banquet at Spokane last week, heard and discussed many interesting phases of the potato industry, reelected their president, George J. Cannon, and their secretary, E. R. Bennett, and took unto themselves a new staff of vice presidents. The nominating committee, in making its report, deemed it unwise to make changes in the principal offices at an early stage in the history of the association, but regarded a distribution of the vice presidencies over new territory as conducive to new local centers of interest in the organization.

The newly elected vice presidents are: F. W. Cater of Burley, Idaho; Thomas Herrin of Helena, Mont.; A. E. Skidmore Colville, Wash., and E. M. Alderman of Dayton, Ore., while in British Columbia C. Tice of Victoria was retained in office. The principal committees stand as organized last year.

Discussions this year were led by representatives of the grower's, the broker's, the retailer's and the scientist's standpoint.

The potato exhibit was not so extensive but of higher quality, on the whole, than that of last year, it was generally considered. H. O. Werner of the University of Nebraska judged the exhibits, assisted by Chester L. Vincent of Washington State college, F. M. Harrington of Montana State college and L. E. Longley of the University of Idaho.

Certification, strain of potato, type of seed-piece and growing environment, and their comparative importance in seed potato production, were the theme of live discussion at the first session. W. C. Edmundson, of the federal field experiment station at Greeley, Col., rolled the ball into the field, presenting results of five years' investigation in the seed potato. Strain and the knowledge of where you can get it reliably, is a factor that pays, and that you can afford to pay for, in the experience of Mr. Edmundson. It began, he said, to seem a tenable conclusion that potato strains only "run out" under unsuitable soil conditions or when affected by disease. Bin selecting of the seed and hill selecting and marking had given so little difference of result, where the seed was rogued with care in any case, as not to seem to justify the more laborious methods of selecting superior seed. Irrespective of varying methods, some growers had been able to develop highly productive and disease-free strains, roguing carefully, it goes without saying.

> The interplay of two factors was noticeable throughout the potato conference which was held in Spokane last week. There was the man and the thing, the producer and the production including the marketing of the production.
>
> Obviously the means of production and especially the means of marketing have been monopolizing attention of late.
>
> But the man, the producer himself, should never be lost sight of. F. Benz, the well-known Yakima valley potato producer and now working with the Northern Pacific railway in furthering the development of the country through which that road passes, laid stress on the man. There was considerable talk at the conference about potato seed certification. Mr. Benz declared that the man was of more importance than the documentary certification; that he would rather buy potatoes of a man whom he knew to be an intelligent, industrious and upright producer of seed, whether that man's product was certified or not, than to buy the common run of certified seed produced by a man in whom he did not have confidence.
>
> Of course, here again there might be an argument as to the man who certifies. If he knew what he was about, one might say that the producer might be left out of the question.
>
> It remains, however, that Mr. Benz struck the keynote of the problem. The man is more than his product. The man finds the means of production and the means of marketing and it is to the man that we must revert in seeking fundamentals. In cooperative marketing, however perfect the system, the man, the manager, is the important factor.
>
> Here again morals enter into the question of producing and marketing potatoes as a dominant factor. Again and again, it was brought out in the conference that the stamp of a grower, whose word was known to be as good as his bond, on a sack of potatoes facilitated the sale of that sack at a premium price. It is the man element in a cooperative association that grades and stamps the potatoes to be sold which has the same effect as the individual stamp in fact, it is the individual integrity of the cooperative management that counts.
>
> The ambitious and upright man who has learned how, through sweat of brow and brain, to economically produce quality potatoes, and who, through sweat of brow and brain, has learned how to economically market potatoes either individually or through an association, is the important factor in the potato problem.

"Irrespective of varying methods, some growers had been able to develop highly productive and disease-free strains, roguing carefully, it goes without saying.

"In other words," questioned C. L. Smith, agriculturist for the O.-W. R. & N. railway, "since you emphasize strain so highly and not the special method of growing it, beyond careful roguing, one could say that the increased yield of good strains is due to the absence of disease more than any other factor?"

"Probably that is so," was the reply. At Greeley, Mr. Edmundson said, good strains had continued to yield highly after nine years, in the case of well cared for Pearls and Rural New Yorkers, tending to refute the notion that potato strains "just naturally run out." Furthermore, even the celebrated Forbling super-strain went to naught with two years of careless growing, it was said.

"One sure way of improving the seed stock," remarked President Cannon, "is to have it understood by the grower that he will pay for it." Whereupon followed the next speaker, F. Benz, a resident of Toppenish, Wash., and agricultural agent for the Northern Pacific railway. "I would say that the selection of the grower is even more vital than selection of the seed," he declared. "In poor hands the best stock will go down." Certification had in his experience meant little to a seed potato, but very bad stock obtained under certification had been brought to standard and better under careful management. Planted alongside, uncertified stock had yielded at the same high rate, which had eventually climbed to 800 bushels per acre.

Rising in defense of certification, Mr. Edmundson quoted figures from the north Atlantic coast of yields, respectively, of certified and uncertified stock, as follows: Vermont, certified seed, 200 bushels, to 150 of uncertified; New Hampshire, certified 337 busheds, uncertified 160; New York, certified 175, uncertified 103; Pennsylvania, certified 316, uncertified 83; Maryland, certified 210, uncertified 65.

"I say, only," responded Mr. Benz, "that some certification doesn't certify. We should have to be able to certify the farmer who handled the stock just before us, and the soil conditions. The grower of certified potato seed must be on the lookout every hour, day and night, of the growing season. In the Yakima valley, at least, the potato with the best of breeding yields to environmental conditions." He hoped a day of wholly reliable verification yet would come. A critical market, he added, is to the advantage of the conscientious and careful producer, but hard upon the other type. Mr. Benz, who had just been through the east, pronounced the 1923 potato crop in Maine this year of high quality and bringing good price, while that of the middle west was extremely poor in quality and that of the west was better. The Yakima region had produced smaller yields, and on the West Side the quality was but medium and the yield less than last year, he said.

"We can grow good seed potatoes in the Yakima valley, but it demands extra work," said Mr. Benz, "so we discourage their production there, leaving it for your lighter soils and shorter season."

J. K. McCornack of Spokane, as president of the show, welcomed the growers with brief opening remarks. "The quitter is the man who loses," he declared. "Results over a number of years show at least moderate gains for the man who stays in."

R. C. McCroskey, Jr., of Garfield, Wash., a vice president of the association, pronounced the potato game, like any other, that of survival of the fittest. Bankers in the Palouse, at least, he remarked, had been perhaps, if anything, too obliging and big-hearted, not holding the producer down quite enough for his good.

H. E. Morris, a pathologist at the Bozeman station, reported on potato diseases for the Montana territory, and observed

Louis J. Taber Elected Master of National Grange

Four Thousand Members Initiated in the Seventh Degree at the Big Gathering in Pittsburgh

The outstanding event at the 57th annual session of the National Grange of the Patrons of Husbandry, which opened at Pittsburgh, Pa., November 14, was the election of Louis J. Taber as national master. Sherman J. Lowell having positively declined reelection.

Mr. Taber is well known as a farm and grange leader, as master of the Ohio State grange, member of the National Wheat Price committee, president of the Ohio Home Protective league, a rural organization. He was born at Mount Pleasant, Ohio, in 1878 and was reared on a farm.

A forward movement will be inaugurated to strengthen the Patrons of Husbandry in every section of the United States, Mr. Taber, the newly elected master, declared in a statement outlining the policies of the new administration.

Mr. Taber's statement says:

"There seems to be a feeling in all sections that the hour of grange opportunity is at hand. The new administration, recognizing the strategic position in which the grange finds itself, will inaugurate a forward movement to strengthen the grange in every section of the nation. Next to grange growth it will be the purpose of the administration to broaden and extend the service that the grange can render to the American farmer. After fifty-eight years of honorable service it is believed it will be possible to rally the enthusiasm and earnest purpose of our organization to the cause of agriculture and to the service of the nation."

The other national grange officers elected were:

Overseer, John J. Black, Roslyn, Md.
Lecturer, Orlando J. Martin, Plainfield, Vt.
Steward, Herman Ihde, Nenah, Wis.
Assistant Steward, Allen B. Cook, Niantic, Conn.
Chaplain, Rev. W. W. Deal, Nampa, Idaho.
Treasurer, R. P. Robinson, Wilmington, Del.
Secretary, C. M. Freeman, Tippecanoe City, O.
Gatekeeper, J. H. Hutchinson, Brookings, S. D.
Ceres, Mrs. W. Grace Sawyer, Atkinson, N. J.
Pomona, Mrs. Isabelle C. Chapman, Westerly, R. I.
Flora, Mrs. GGeorgia Johnson, Boaz, W. Va.
Lady Assistant Steward, Mrs. Cora Agans, Three Bridges, N. J.
Member Executive Committee, Leslie R. Smith, Hadley, Mass., re-elected.
Other executive committee members are W. J. Thompson of Maine and E. A. Eckert, Illinois.

With an attendance at the opening days' sessions which reached its high point on Friday, when more than four thousand members of the grange were initiated in the seventh, or highest, degree of the secret work of the order, and the ceremonies witnessed by two or three thousand others already admitted to the Court of Demeter.

The emphasis placed at every annual session of the National Grange upon the esoteric, secret, and social features, occupying the first four days of the session, emphasize the great importance which is attached in this farmers organization to the development of the home life, the duties of citizenship, and of education, and the development of better men and better women, as superior to, and underlying the work emphasized by most other farmers' organizations, of crop, and live stock improvement, more profitable agricultural and marketing, and the making of more money.

The annual address of the national master, Sherman J. Lowell of Fredonia, N. Y., was a valedictory, as well as a discussion of both grange and national problems, as in it he announced positively that he would not accept another election as the head of the order. High points in his address were opposition to class rule, and to its development in the form of congressional blocs, in any interest, opposition to the sales tax, and the ship subsidy, a strong declaration for a "dry America" and for united effort for law enforcement, opposition to radicalism and paternalism in government, a statement that rural education was of outstanding importance, but that consolidation was a local problem, rather than a state or national one, and an urgent appeal for more active and devoted work in organization and extension by those responsible in the order for these activities.

The organization of over 800 new granges in his term of four years, and the organization of 145 granges, and a fine growth in membership, was noted, along with a note of regret that the rate of growth which has been found in the three previous years had not continued during the past year.

"Pay-as-you-go" was stressed as the only safe method of state and federal financing, especially as to highway construction, and the message took strong ground in opposition to increasing costs of government, and the burden it has imposed on agriculture in the form of state and local taxes.

The Pennsylvania State grange gave a banquet Wednesday evening in honor of the National grange, with 1100 seated. Governor Pinchot of Pennsylvania was chief speaker.

The sixth degree, preparatory to the big seventh degree class, was conferred by the Pennsylvania State grange, Wednesday afternoon. Secretary of Agriculture Henry C. Wallace spoke to about 6000 at the opening of the big public meeting Wednesday evening.

The National Grange has continued to flourish because it has kept constantly in mind the thought of the farm as home. President Coolidge declared in a message read by Secretary of Agriculture Wallace before the National Grange.

The president in his message, characterized the grange as "one farm organization which has survived through many periods of adversity and prosperity," he continued:

"It seems to me that one of the reasons why the grange has continued to flourish is that it has kept constantly in mind the thought of the farm as a home and is represented in its membership by the various members of that home. It has recognized the need of a full home life and a wholesome rural life and has never failed to present these as things most to be desired. At the same time it has recognized the fact that a satisfactory home life and rural life must be based upon reasonable reward for labor on the farm.

"The progressive conservatism of the

(Continued on page twelve.)

First Chapter Next Week

Our New Serial Story Contains About All the Elements We Like—Adventure, Love, Heroism, Nature, Mystery

We have all heard about trackless woods, but every woodsman knows that woods are not trackless. Jack Warhope was a true son of nature. He knew the trees, the birds, the wild life and things under foot with unerring accuracy. And the way he read the signs of the Flatwoods and acted upon what they revealed to him makes our new story, "The Red Lock," one of the most gripping that we have been able to offer our readers. There are bad men in the story, and we do not exactly like them, but the sterling manhood and the ability of Jack Warhope to defeat their wicked purpose will make every boy that reads this story resolve to do big, worth-while things, to be a man.

It is not possible to hint the theme or outline of this story without disclosing that surprising thing which David Anderson, the author, has held back, not only from the reader, but from the actors in his drama as well.

But as in "The Blue Goon," Mr. Anderson has gone again to his native soil, the Flatwoods, for his romance. He has portrayed again the men and women he knows as a doctor knows his patients; he has once more painted the Wabash scenery with a brush of many colors, and has told as before a neighborhood drama of violent action and elemental emotions.

"The Red Lock" is a most unusual story and the first chapters will appear in THE FARMER next week, December 6. We urge every member of our big family to begin this story at the very outset. Don't depend upon a synopsis later on, for no synopsis can lay the foundation for the remarkable developments of "The Red Lock" as does the author in his own inimitable style.

Next week!

Growth of Pacific Trade

Back in the year 1850, Asia was selling the United States about one-eleventh of the amount of merchandise we bought in Europe. In the year ended with June, 1920, Asia sold us actually more merchandise than did Europe. In the two immediately preceding years we had imported from Asia more than twice what Europe sent us. Those two last-mentioned years, when Asia doubled Europe's shipments to us, were admittedly abnormal years. But again, as late as the year ended with June, 1922, Oceania and Asia together sold us more than did Europe. In the calendar year 1921 all Europe and Africa sold us less goods than Oceania, Asia and South America, and in the calendar year 1922 the latter group sent more of our imports, by $217,500,000, than did Europe and Africa.

What does this mean to America? Just that we have begun—barely begun—to feel the tremendous thing we did to the world when we cut the mighty gateway at Panama. Long-established coastwise routes of trade are slow to yield to more direct new routes that involve new-sought markets. But, slowly, new trade relations will come, as attests this growth of our imports from Pacific and west Atlantic waters over those from east Atlantic waters.

During that year ended in June, 1920, Japan, alone, sold us more goods than did the United Kingdom; in the calendar year 1921 she again sent us more than, and in 1922 very nearly, the amount we purchased in the United Kingdom. In the year ended with June, 1921, Brazil, alone, sold us almost as much as did France, and in the preceding year half again as much as France had sent; in the fiscal years 1921 and 1922 Brazil sent us more goods than we bought of Germany; Chile, more goods than we bought in The Netherlands; Colombia, more than we bought in Switzerland; Australia, more than we imported from Norway or Sweden. The Philippines sent us, from mid-1920 to mid-1921, more than did Germany. The smallest republic in South America—Uruguay—sent us, between mid-1920 and mid-1921, more merchandise than did Denmark, and in the preceding year nearly four times as much as Denmark did. Moreover, these southern and oriental markets are opening markets, capable of indefinitely greater production. Uruguay has nearly five times the area of Denmark.

Yet there are thousands of people in the United States today who are not aware that the relative commercial weight of our Atlantic and Pacific seaports has been shifting a bit.

Our export trade is still a somewhat different story, to be sure. But with daily growing communications with the southern continent and the orient, both developing industrially very fast, is bound to come heavy demand for our iron and steel goods—already our second largest export product—and, with that demand, new payrolls, new consuming power, at home.

One Reason Why the Freight Rates Are High

Sherman J. Lowell, master of the national grange, went to the heart of one big farm problem when he told the delegates at the annual convention at Pittsburgh last week that "there is a wide demand for lower freight rates on the railroads and, without question, the heaviest tax the farmers of this country are paying is through the medium of high freight rates."

That tax is especially heavy on the farm producers of the Pacific coast and mountain states, for their surplus products must be carried long distances to the eastern markets.

The railroads of the United States are doing a record-breaking business. Since July 14 last their loadings of revenue freight have averaged more than 1,000,000 cars a week. The Chicago, Milwaukee & St. Paul, one of the transcontinental lines serving the Pacific northwest, carried more freight in October than ever before in its history.

But this enormous volume of business is not bringing the large profits to the American railroads that would naturally be expected. There have even been rumors on Wall street of the Chicago, Milwaukee & St. Paul's going into the hands of a receiver. These rumors were emphatically denied by the president of the company, but it is significant that there is even talk of the bankruptcy of a road that is doing the greatest business in its history.

Why are so many railroads squeezing along with lean profits, when freight rates are high and business is booming? The answer is that they are weighted down by the high cost of doing business, just as the wheat-growers and some other farmers are suffering from the high cost of production. The wages of railway employees are high and going higher; prices of coal, locomotives, cars and all supplies are higher than ever. Then, the railroads, like the farmers and all the rest of us, have to pay high taxes.

But the biggest item on the railroads' expense account is the labor bill, and there is no prospect of its coming down. The railway employees are too well organized, too strongly entrenched, and the railway managers, rather than take a chance on a nationwide strike and paralysis of the industries of the country, prefer the alternative of keeping up their revenues by keeping up freight rates.

So, in the last instance, farmers and other producers and consumers are paying the big wage scales of the railroads and their big tax bills. In the end it all comes out of the producers and consumers.

Ownership and Tenancy

Of the Washington farm acreage operated by white farmers 82 per cent in 1920 was under owners' or managers' operation and 18 per cent under tenant operation.

Of the state's farm lands under other than white occupancy 41.5 per cent were under owners' or managers' operation and 58.5 per cent under tenants.

In Washington the average size of the farms under operation by the owner is 175 acres; of farms operated through a management 463 acres, and of tenanted farms 277. The owner-operator averages 86 acres of improved land; the manager, 219.5; the tenant, 188.7.

On the average, in this state, 48.9 per cent of the farms operated by the farm-owner is improved acreage; 47.4 per cent of the acreage operated through a farm-manager, and 68 per cent of the acreage under tenancy. The latter farm is perhaps the more frequently longest developed, having passed to tenancy from a retired farmer.

Size of Washington's Farms

There was a gain in the total acreage of lands in farms in Washington in the last census decade, and a lesser gain in the percentage of improved farm land. The lag in the percentage improved was on the farms under operation by white farmers, for in the improved acreage occupied by other than white farmers there was a gain of over a third, while their total occupied acreage increased less than 1 per cent.

Washington State Gleanings

The Northwest Hay association of Yakima has received orders to ship by ocean freight 200 tons of alfalfa via Seattle to Jersey City and Brooklyn. This will be shipped by boat from Seattle and is considered by Lee M. Lampson, manager for the association, as opening up a new market for valley hay, even when charges of $12.20 a ton are added to the price.

BUYS PUREBRED SHEEP.

E. H. Kimble of Pomeroy bought at Washington State college 50 purebred Hampshire ewes and a ram 7 months old that weighs 168 pounds. Mr. Kimble will range these sheep and expects to increase the number to 500. He says they are valuable for destroying weeds.

FARMERS ORDER CAR OF SODATOL.

County Agent E. E. Hupp reports that tentative orders for one carload of the war salvage explosive, sodatol, have been received from 44 Pend Oreille county farmers. Mr. Hupp believes that local farmers will use three small carloads of the explosive by spring. The orders are being booked at $7.50 a hundred pounds, Newport.

CUTTING CHRISTMAS TREES.

That the sentimental admonition, "Woodman, spare that tree," will be rigidly enforced in so far as it applies to the indiscriminate cutting of Christmas trees in this state, is being brought to the minds of professional cutters through circular letters being sent out by Supervisor of Forestry Fred E. Pape of Olympia.

They are being reminded that the last legislative session passed an act requiring all persons to secure the permission of the owners, in the case of privately-owned land, before any trees are taken for decorative purposes. Cutting will not be allowed on state land.

CLUB BOYS DO GOOD WORK.

Among those from Washington well pleased with the showing of their boys' and girls' club charges at the big show was E. O. Scott, club leader in Yakima county. In addition to the county judging team ranking high in the contest, live stock of various kinds owned by Yakima "club kids" won in several classes. Chester Schlien of Mabton won first on junior Guernsey calf, Gerald Varnum and Harold Holmes of Mabton first and second, respectively, on beef type heifer, Harvey Varnum fourth in a class of fat steers, and Keith Jones seventh in two classes. George King of Mabton won fourth in a boar and third in a sow class of Poland Chinas, and Joseph C. Lumpkin of Cowiche won second prize of $30 for the eastern Washington district in the Portland Union Stock Yards company special feeding contest.

MANY ATTEND AUCTION SALE.

One of the most successful sales ever held in the Big Bend took place November 12, when G. M. Witt, pioneer farmer, ended his wheat farming operations at an auction on the Ochs place, four miles south of Mohler.

Between 300 and 400 automobiles were counted and, although Mr. Witt had prepared lunch for 1000 persons, he ran short of food. People were in attendance from all parts of the Big Bend, Walla Walla, Spokane, Rathdrum and other points.

Fifty horses were sold, the top price being $470 for a team. Two harvesters brought $1250 and $1400 each. Bidding was spirited and everything sold well. Mr. Witt was well pleased. This farm outfit was used in farming 2800 acres, from which Mr. Witt harvested 50,000 bushels of wheat this year.

HUGE WHEAT CROP RAISED.

Wheat receipts at warehouses of the Davenport district up to November 17 totaled 1,000,000 bushels, according to reports of local grain dealers. This total includes wheat received at Davenport, Rocklyn and the Seattle branch lines stations, all of which is handled through Davenport.

Grain dealers estimate that three-fourths of the 1923 crop has been hauled to warehouses and that Davenport receipts will be more than 1,000,000 bushels. Of the amount received, approximately 800,000 bushels are stored.

J. A. Richardson, Northern Pacific railroad agent at Davenport, reports that 320 cars of wheat have been shipped from the district this year, or approximately 416,000 bushels. There were 147 cars shipped from Davenport, 134 from the Seattle branch and 39 from Rocklyn.

Wheat men say this year's crop is from two to two and a half times larger than last year's. They estimate that the 1923 crop will exceed any ever raised in the county.

BOY IS PRIZE PIG RAISER.

Robert Zindell, son of Mr. and Mrs. W. H. Zindell, Finley, Benton county, has been declared the champion pig raiser of the state and awarded the Armour & Co. prize, which entitles him to a trip, with all expenses paid, to the second annual boys and girls' club camp at Chicago December 7 to 8. Announcement of the award was received in a letter from Elmina White, assistant state club leader, to Miss Gertrude Gage, Benton county club leader.

The pig club, of which the boy is chairman, has continued its activities without cessation since its organization. The youth has gone about raising pigs in a business-like manner and his enthusiasm has sustained the interest of other members of the club.

In the competition for the Armour prize the boy submitted a complete cost record from the time he purchased his first pig. He has raised only purebred Poland Chinas and every transaction has shown a profit.

JOINS ENGINEERING DEPARTMENT.

Mayor W. L. Malone, formerly of Spokane and a graduate of the Washington State college in 1907, has been appointed to assist in the civil engineering department at Pullman. He will teach work in reenforced concrete, applied mechanics and plane surveying.

Major Malone was with the Spokane bridge department engineer's office and for a year was in charge of the department. From 1912 until 1914 he was superintendent for the Bates & Rogers Construction company, Chicago, in construction of tunnel linings, snowsheds and bridge foundations.

During the three years following Major Malone was in private practice at Spokane and then joined the army, becoming superintendent of construction at Camp Grant, Rockford, Ill. In 1918 he was commissioned a major and was stationed at Washington, D. C., as supervising construction quartermaster in charge of interior warehouse construction involving the expenditure of $35,000,000 and cantonment construction, for which $25,000,000 were expended.

Stick to Reclamation

Western States Association Still Calls for $250,000,000

Avoiding any expression of approval of the Smith-McNary bill, or any other specific measure, the Western States Reclamation association, at its meeting in Salt Lake City last week, adopted a resolution that congress "be requested to appropriate $250,000,000 or more for expenditure under the reclamation law as promptly as such money can be wisely expended. This was a reaffirmation of the resolution adopted by the association in 1919.

The Western States Reclamation association was made up of men appointed by governors of 11 far western states who understand irrigation and know its benefits.

The convention elected R. E. Shepard of Jerome, Idaho, as president. Mr. Shepard is a practical irrigationist of long experience and a successful business man.

The association took a firm stand against the agitation in some project communities for a further extension of 40 years of the period within which settlers should be required to make their contract payments to the government. Speaker after speaker at the convention declared himself and his state against any semblance of repudiation.

Farm Implements and Buildings

In the Pacific coast states, Washington, Oregon and California, taken together, implements and machinery on the farm average a value of $4.52 per farm acre on land operated by the owner, as against $4.01 per acre on land operated by a tenant, and but $2.33 on land under a manager.

Buildings, where the owner operates, have a worth of $10.36 to the acre, as against $6.61 under tenancy. But live stock is worth slightly more to the acre on the tenant's farm at $7.43, as against $7.34 on the owner's and but $6.19 on farms under a manager.

Owner and Tenant

Resident ownership in the United States remains highest in proportion to farm acreage, and to number of farms as well, in the state of Maine, where 94 per cent of the number of farms, or 93.7 per cent of the improved farm land, is operated by the owners. At the other extreme stands Georgia, where owners operate but 32.9 per cent of the number of farms, or 39.1 per cent of the improved farm acreage.

Operation through managers is at its highest proportion to number of farms in Nevada, Massachusetts and Rhode Island; but in Nevada, Arizona and California, as regards the total improved acreage, while Florida, instead of California, has the third largest proportion of all her farm lands under managership. One-third of all Nevada's farm lands are operated through a managership.

Tenant operation is at its highest rate of prevalence in Georgia and Mississippi, as regards number of farms; in Georgia and South Carolina, as regards improved acreage; in Delaware, Illinois and Georgia, as regards total acreage in farms.

Per Acre Value of Farms

The United States census shows that the average per acre value of farms under 20 acres in size is $282.31 per acre, while the average value of farms of between 500 and 999 acres in size is $54.80 per acre, and of farms of over 1000 acres, $25.37 per acre.

Between these extremes the value varies somewhat irregularly, in the averages, inversely with the size of the property.

In Washington and Idaho the average farm is of 199 acres, with 107.4 acres improved; in Oregon farms average 270 acres, with 98 acres improved; in Montana 608 acres, with 191 improved.

SPELLING EFFICIENCY.

Ohio Farmer: Last winter we attended a farmers' institute in northern Ohio where there were fully 200 in attendance, a large portion of them high school students, and a list of 50 farm words was given in a spelling contest. All but four were of quite common usage on the average farm. Yet of that list the best speller in the room missed 16 words—68 per cent efficiency.

COMMODITY MARKETING.

St. Paul Farmer: Minnesota farmers will serve their own best interests by quickly putting over the potato marketing organization. Once that is accomplished, our first experiment in the plan of commodity marketing organizations as applied to general crops will be under way.

What the Lord Requires

To Do Justice and to Love Mercy and to Walk Humbly

He hath showed thee, O man, what is good; and what doth the Lord require of thee but to do justly and to love mercy and to walk humbly with thy God?—Micah, 6:8.

The foregoing is the verse which the late Warren G. Harding kissed in the formalities of taking the oath of office as president of the United States. It is a wonderful "constitution" of religion.

People are not able to agree on all the fine points that enter into religious forms. But here are things that we can all agree upon.

Do justly. Injustice finds no favor with a just god.

Love mercy. Loving kindness is one of the basic attributes of God as the Christian world understands him. "The mercies of the Lord endureth forever," said the psalmist. God has no mansion reserved for the unmerciful man.

Walk humbly. Humility is fundamental. It was an outstanding element in the character of the man of Galilee. Pride is the twin of selfishness and selfishness is the millstone about the neck of mankind. Humility evidences the absence of selfishness and the presence of a willingness to serve God through service to one's fellow men.

It is well that theologians should search for all the facts about God. But he who is content to do justly, to love mercy and to walk humbly is far along the pathway toward a knowledge of him whom to know "is life eternal."

USE OF SKIM MILK.

Orange Judd Farmer: A new idea has been brought out by E. V. McCollom, one of the most prominent educators who has conducted researches on vitamines in food. In a speech before the American Bakers' association recently McCollom suggested to them that in order to make a loaf of white bread, so popular in America, more nearly a balanced food they ought to use skimmed milk in it. This would not only make better bread, but would develop a tremendous outlet for skimmed milk. Some of the bakers are already making use of milk and find it one of their strong selling points. It will be better for everybody when all make it a part of their regular formula.

FARM BUSINESS AND MARKETS OUTLOOK

INDUSTRIAL production is not on a depression level," is the negative way of saying that in spite of moderate contraction in operation in the last seven months industrial output remains relatively high compared with anything but boom times. In some directions men are being dropped from payrolls, but increases are being made elsewhere and there are few out of work except the usual floaters. Public consuming capacity is but little impaired. No feverish buying is taking place to anticipate price advances but the movement of goods from retailers' shelves for immediate use is well maintained. Car loadings in the week ending November 3 passed the million car level for the 20th time this year, an unprecedented occurrence. This is an index of current distribution of goods.

Business developments last week mostly favored the view that expansion will be resumed in the early future rather than that further contraction will take place.

Foreign political conditions have been changing for the worse apparently, hence the extreme weakness in European exchanges, with sterling down to the lowest point since early in 1922 and francs the lowest on record. Crisis after crisis in foreign affairs has been passed in the last year, so that this one is not yet regarded with extreme concern.

Cattle Receipts Shrinking.

Receipts of cattle have started a seasonal decline in numbers, but are heavy still and the falling off has been chiefly in westerns and undesirable natives. Well-finished yearlings and handyweights were in stout demand at Chicago last week and values moved up 25 to 40 cents to the highest point in a month, reaching a top of $12.65. Big steers on the short-fed order are still mean sellers at no better prices than a week ago. Western she stock was abundant and sold at the lowest level since prewar days. It is probably a case of a "last run of shad," these cows indicating that liquidation of the range industry, which started in 1919, is going through its last gasp. A weak hide market is a contributing factor in low prices. Calves suffered another decline, but are probably close to a stable winter level. Heavy calves will be less numerous inside of 30 days.

The rush to dispose of short-feds means that a sizable fraction of the potential supply for the next three months has already gone to the shambles. The movement from the leading stockyards to the country during the last two months has fallen slightly behind that of last year, which is another symptom of a fairly healthy market later on. It is quite possible that quotations on mature steers will gain on yearlings, as the visible supply to the farmer undoubtedly is reducing rapidly and the country is partial to lightweights in its current purchases of feeders. Westerns will probably improve slightly in price as they decline in numbers.

Sharp Rally in Hogs.

Heavy receipts, a weak fresh pork market, low prices at eastern ponts and a deluge of light hogs and pigs, which make numbers look extremely high without contributing proportionately to the supply of pork and lard, caused a sharp break in the hog market early last week. Prices reached the low point of last June, but an equally sharp rally has occurred in the last few days, when the supply became lighter and shipping orders larger. The action of the market is quite encouraging, indicating that all buyers want hogs below $7 at Chicago and that prices probably are near bottom for the season, if indeed the low point has not already been passed in the break of last week.

Disease outbreaks as well as discouragement with prices are playing a part in the flood of light hogs. The department of agriculture reports that cholera is becoming more prevalent this fall than in any year since the decline of the last extensive outbreak, which reached its height in the fall of 1914. The disease is reported in communities which have been free from it for 25 years.

Receipts of hogs at the leading markets in the last two and a half months have been so much heavier than at the corresponding time a year ago that a large part of the increase in stocks of hogs on farms may have already gone to market. In the next three or four weeks it would be no surprise to find the supply begin to run at about the same level as last year instead of far above that level, as it has done, throughout the year. This is especially true if cholera losses are severe.

In spite of the high rate of slaughter, hog product is going promptly into distributing channels. Stocks of both hog meats and lard at Chicago declined during the first half of November and lard holdings are extremely low. Packing sows are becoming more popular because of their lard-yielding capacity. Clearances for export continue on a fairly generous scale.

Lamb Market Disappointing.

Under the lightest receipts of lambs with one exception since last June prices advanced, but a larger run was attracted and values were swatted immediately. Dressed lamb prices are depressed by the abundance of cheap pork loins, veal and poultry and have not responded to the lighter run, although the decline in the latter is due primarily to fewer range lambs, most of which at this season are in feeder flesh. Fed lambs are coming back and show a profit where well finished, but many in amateur hands must make a second trip to the country for another course at the feed bunk and are bringing less than first cost. Demand for thin lambs has fallen off decisively, especially in the corn belt, but Colorado is still in the filling-up process.

Wool Market Stronger.

The wool market has been steadily strengthening during the last month, especially in the last two weeks, in which time clothing wools have advanced about 10 per cent.

Weak Tone in Wheat.

Wheat prices have changed but little in the last 10 days, but the undertone is weak. The large volume in commercial channels compared with the current demand from mills and for export makes the burden increasingly difficult to carry. That some form of governmental help may be extended looms up in the background as a sentimental influence, but it is gradually losing its effect. The possibility of overexporting from east of the Rockies is not forgotten, but it has been talked of so much that the old rule that "what everybody expects doesn't happen" may apply.

The visible supply of wheat at terminal points now stands at 73,379,000 bushels, an amount exceeded only in 1918 and 1919, when a fixed price removed any incentive for holding on the farm and more than twice as much as last year. In addition, more Canadian wheat is being held in bond in this country than last year and some Canadian wheat is being bought by mills, despite the 30-cent duty. Mills also are picking up the choice domestic wheat, but are said to be fairly well supplied. Flour production is lower than usual at this season of the year and the demand is dull, although consumers are believed to be carrying less than normal stocks.

Counting shipments from exporting countries since August 1 and changes in amounts on ocean passage, disappearance of export wheat in importing countries has been about 187,000,000 bushels, compared with 200,000,000 bushels last year and 221,000,000 bushels two years ago. The United States has exported about 35,000,000 bushels less and Canada 12,000,000 bushels less than last year, but exports from Argentina, Australia, India, Russia and the Danube have been larger in the last three months than in the same period last year. Canadian clearances will fall off to some extent when lake navigation closes early next month and the movement will be limited by the amount which can be shipped overland from western Canada during the winter and by the accumulations at Montreal. This may throw a little more of the export trade upon the United States until next March, when wheat from the new crops now making favorable progress in Argentina and Australia can reach Europe.

Corn Movement Increasing.

Primary receipts of corn have increased slightly and country offerings have expanded a great deal in the last few days. Cash prices have declined, low prices for hogs exerting a sympathetic influence.

Receipts of oats have become quite small; the visible supply is beginning to shrink, and farm consumption has been stimulated by low prices compared with corn, so that the market displays stability.

Rye is fluctuating within narrow limits with wheat. Export sales of rye flour increased last week. A better export outlet is the chief need of the rye market. The visible supply is 17,452,000 bushels, against 9,194,000 bushels last year.

Cash Grain Markets.

The range of cash grain prices for the week ended November 21 was as follows:

Chicago—Wheat—No. 2 hard, $1.04@1.04 1-2. Corn—No. 4 mixed, 78@@81c; No. 5, 75@77c; No. 2 yellow, 88@98c; No. 3 82 1-2@88c; No. 4, 77@84c; No. 4, white, 77@82 1-2c; No. 5, 74@79c. Oats—No. 2 white, 43@44 1-2c; No. 3, 42@44c. Rye—70@71 1-2c. Barley—53@72c.

Water vs. Food Plants and Food Production

By E. C. McCLELLAN

Ever since the western part of the United States came into the Union and irrigation commenced attempts have been made to arrive at some kind of an understanding regarding the quantity of water that should be used to secure the best returns from the limited water supply available.

Utah was the first state that started a comprehensive system of experiments to enable any kind of a determination, and its example has been followed by the other states in the semi-arid regions.

Unfortunately the men who were honestly endeavoring to reach a right determination of what should be done had been raised and educated in places where irrigation was an unknown factor in crop production, and went upon the theory that what they wanted to find out was the amount in bushels or tons or pounds of plant crops that could be secured from a certain area of land, and it did not seem to occur to them that the problem requiring a solution was the amount of food products that could be secured with a certain quantity of water available.

Realizing that plants had to receive a greater quantity of water than was being supplied by precipitation, their experiments were carried on upon the theory that land measurement must be the basis for their calculations and that if a little water was good, more must be better, and tried to find out how much in bulk crops could be secured per acre of land by placing different quantities of water upon a certain area of land.

Another mistake was made in selecting for their experiments a location where the precipitation and water supply for irrigation was the greatest, and then with this greatest precipitation in that section adding to it the increasing applications of water by irrigation, and in most cases making the smallest irrigation supply bring up the total water supply in the ground to a greater quantity than the plants have been receiving at this period by precipitation, and had adapted their growth and food production to that smaller supply.

The reports of the results of these experiments are very interesting, however, and show graphically the evolution of the plants for quite a period back—measured by millions of years without doubt.

The accompanying diagram illustrates the plant life as measured by water supply for five of our principal food plants.

In the diagram given herewith the right-hand side represents a depth of 10 inches of water supply—as that is about the average quantity of water supplied by precipitation in our semi-arid sections—and the left-hand side represents a depth of 80 inches.

The first diagram at the top shows the results of three experiments in raising alfalfa by applying different quantities of water upon several different tracts of land.

The circles are at the points showing the quantities of water each tract of land received during the time the experiments were carried on, as measured from right to left, and also the average number of tons of hay per acre of land cut from each tract annually.

The average annual precipitation during the 10 years the experiments were carried on in Utah was 15.48 inches in depth, and the circles marked with the figure "1" shows the depth in inches of water each tract received and tons of hay cut.

At the left the quality of water received by the tract was 65.48 inches in depth and the return in tons of hay 5.41 tons per acre of land.

The next tract received 45.48 inches in depth and the returns were 4.42 tons per acre of land.

The next received a less quantity of water and returned a greater amount of hay, the records showing 40.48 inches of water in depth and 4.68 tons of hay per acre of land.

The next shows a decrease in both water supply and hay cut—being 35.48 inches in depth of water and 4.55 tons of hay per acre of land.

The next one shows a remarkable drop in crop return, with only a slight decrease in water supply, the water supply of 30.48 inches depth only securing a return of 3.77 tons of hay per acre of land.

The next surprise is shown in the next tract, where a supply of 25.48 inches in depth of water returned 4.94 tons of hay per acre of land.

The next decrease in water supply gives a further great reduction of 3.59 tons of hay per acre of land for 20.48 inches of water.

The last is the amount of 2.74 tons per acre of land with the natural supply of water furnished by precipitation.

Now, if these results were of only one set of experiments carried on in one year, the crop returns could be considered as not worth anything, for the variation is so remarkable and so different from the general idea (that if a little water is good, more must be better) they could be relegated to the waste basket; but when it is considered that they are the results of seven years' careful experiment, placing the same quantity of water each year upon the same tract of land for seven years, the results prove that the plants have been growing along some definite line of evolution that they were living under at some stage in their life as measured by the water supply furnished them.

This set of experiments might also be looked upon as nothing more than interesting had not others in similar experiments along the same line brought out the same facts.

In 1903 Professor Fortier carried along experiments in Montana in the same way, and his results are shown by the circles and lines marked "2." Climatic conditions being different from that in Utah and the natural precipitation supply also less, the returns in tons of hay per acre of land were a trifle different, but the total shows the same result in the line of plant growth.

The precipitation was 14 inches in depth. A total of 38 inches in depth of water returned 6.4 tons per acre (far above the Utah returns for a greater water supply).

A reduction of only six inches irrigation (32 inches of water) gave a return of only 3.5 tons of alfalfa hay per acre of land.

A further reduction of six inches—or a total of 26 inches in depth of water— and the returns increased to 4.4 tons of hay per acre of land.

Another six-inch reduction—or total of 20 inches in depth—and the returns are still greater—or 4.5 tons per acre of land.

With the natural water supply by precipitation of 14 inches, the return was 1.9 tons of alfalfa per acre of land.

Note the closeness of this one year's experiment with the lines shown in the Utah seven years' experiments.

Ten years afterward (in 1913) another set of experiments were carried on in Montana. In this case instead of taking one set of tracts for the experiments, 15 tracts were selected, within reasonable distance of each other, varying in size from one acre to 8.50 acres in area and covering a total area of 79.4 acres.

The irrigation was carried on by the farmers—the only difference being that a man kept the measurements of the quantities of water used in each irrigation—and at the end of the season the total quantity of water used upon each tract was added together, the number of tons in each tract measured, and the average number of tons per acre calculated.

From the published report of this set of experiments the results are shown by the circles connected by dotted lines and marked with the figure "3."

A water supply of 48.08 inches in depth resulted in a crop return of5.00 tons per acre per acre of land.

A water supply of 40.04 inches in depth resulted in a crop return fo 5.00 tons per acre of land.

A water supply of 30.17 inches in depth resulted in a crop return of 3.68 tons of alfalfa per acre of land.

A water supply of 26 inches in depth resulted in a crop return of 4.50 tons of alfalfa per acre of land.

Unfortunateiy, no report of the crop return per acre was published when the natural precipitation alone was used.

Now look at that diagram and you have a pretty accurate history of the evolution of that one plant from some remote period in the past to the present time in its relation to the water supply furnished it.

Remember that all plants originally lived in water for millions of years and then migrated to the land after many of the elements they required for their food had left the water and the air and located in the ground.

At that remote period, and for a long time after they migrated to the land the water supply was so great that it was an easy matter for them to secure it, and very likely their methods were very simple for doing it—by opening their mouths and drinking in all they wanted when they wanted it—and as it was the substance of greatest supply they used the water principally in their structural growth, and are doing it today.

Then after they had migrated to land the water supply by precipitation kept getting less and less, and, of course, their size dwindled also.

This decreased water supply and decreased structural growth continued until the time came when the water as it fell to the ground and entered down into it, instead of remaining there in its liquid form, changed to a vapor and mixed with the air there—exactly as it does when it is evaporated above the ground and mixes in the air above.

When that period arrived the plant not only reached the period of its smallest size, but was forced to invent some way to secure the water in its new form instead of by drinking it.

Apparently the alfalfa plant evolved some method for securing water as a liquid when it was getting scarce, but still remaining a liquid, and responded to this method by an increase in its size; and then the water supply continuing to decrease it had another fall in size to its smallest. Then it either invented another method or perfected the one it was using and the result is shown in the second raise.

Just compare the three sets of experiments as shown upon this diagram and see how closely they coincide in crops returned with equal quantities of water supply.

The next set of lines in the diagram shows the results of four sets of experiments with potatoes carried on in different sections and at different times.

Those in Utah lead in length of time the experiments were carried on and also in quantities of water used and number of tracts used for the experiments.

They are shown by the figures "1" at the circles and lines connecting the circles.

With the greatest quantity of water supply, of an average of 75.48 inches in depth annually the average return was 233.76 bushels of potatoes per acre of land.

This amount decreased with the water supply down to 45.48 inches in depth of water, returning 194.73 bushels per acre of land.

Then came the increase following a decreased water supply, 35.48 inches in depth, returning 215.23 bushels per acre of land.

After that increased peak in plant growth the return gradually goes down to a yield of 97 bushels per acre of land with the natural precipitation of 15.48 inches in depth.

In the case of the two years' experiment in Idaho the greatest water supply, of 39.12 inches in depth, resulted in a return of 241 bushels of potatoes per acre of land.

A supply of 32.15 inches brought only 215 bushels per acre of land.

A further reduction down to 30.84 inches of water supply, and the return increased up to 241 bushels per acre of land—being exactly the same as with the 8.28 inches greater water supply.

With 26.37 inches of water supply the returns were 155 bushels per acre of land and the natural precipitation of 9.73 inches returned 94 bushels per acre of land.

In the four years' experiment (shown by circles marked with the figure "3") a water supply of 43.70 inches in depth returned 223 bushels of potatoes per acre of land; a reduction to 30.42 inches of water supply furnished an increase in the crop of 226 bushels per acre of land; while a further reduction to 17.93 inches in depth of water supply resulted in a return of 105 bushels per acre of land.

The Montana experiment shows a radical difference from the others, but having been carried on by a man noted for his ability in such work should not be overlooked. That is shown by the circles and dotted lines marked by the figure "4."

The crop production is the lowest with the greatest water supply furnished, exactly as in case of all the others, being 145 bushels of potatoes per acre of land with a water supply of 44 inches in depth, and again greater when the water supply decreases to the same quantity that was secured by other cases, at about 32 inches in depth; and then decreasing again to a return of 162.50 bushels at a water supply of 26 inches in depth.

From that point there is a great departure from the other experiments, there being another increase in returns as the water supply decreases until at the natural precipitation of 14 inches in depth, the return of 186.00 bushels of potatoes per acre is almost as much as at the highest peak in production, where the 32 inches water supply secured 187.50 bushels of potatoes per acre of land.

A close examination of these results shows the same remarkable curve in the life of the plant as in case of the alfalfa plant—there being only two minor differences.

The first difference is that, while the alfalfa plant had two revivals in its growth while the water supply was decreasing, the potato plant had only one.

The next is that, while the alfalfa plant reached its second peak in size when the water supply it was receiving by precipitation was between 20 and 25 inches in

(Continued on page twelve.)

LIVESTOCK AND DAIRY

Feed for Dairy Cows

By E. V. ELLINGTON, Head Department of Dairy Husbandry, Washington State College.

Would like a balanced ration for a herd of Guernsey cows. Have oats and pea ensilagt and native hay, alsike clover, timothy, June grass, ox-eyed daisies and some Canadian thistle. G. M. S.
Deming, Wash.

A good grain ration for dairy cows to supplement native or mixed hay consists of rolled barley, 450 pounds; mill run, 450 pounds, and linseed oil meal, 100 pounds, or two parts rolled barley, corn or wheat, two parts mill run and one part oil meal. Such a mixture at prevailing prices would cost approximately $33 per ton. Such a ration for Guernseys should be fed at the rate of one pound to every three pounds of milk produced daily.

I am going to milk four head of cows this winter and have for roughage good oat and pea hay with possibly 5 per cent alsike clover in it. With this I expect to feed such roots as carrots, mangels and potatoes. I will have to feed all three, since I have not enough of any one to last through the winter. I have wheat which I can have ground or rolled. Please balance a grain ration for me, using wheat if it is cheaptr and as good as bran.
Deer Park, Wash. A. W. L.

Ordinarily wheat, which is the chief cereal used in America for human consumption, is so high priced in comparison to other feed grains that are used for milk production that it is rarely used. When the grain is slightly damaged or discolored so that it does not command the highest market price, it can well be used for dairy cattle feeding. It has practically the same feeding value as barley or corn, and performs the same function in animal nutrition. Wheat should be cracked or ground and should never be fed alone. If it is not mixed with some bulky foods it will form a pasty mass of the same consistency as dough in the digestive tract and may cause the cow to go off feed.

Either of the following grain mixtures can be satisfactorily used for dairy cows: Four parts by weight of mill run, two parts bran, two parts wheat and one part linseed oil meal; or two parts mill run or bran, one part wheat and one part ground oats. Either of these grain rations should be fed at the rate of one pound of the mixture for every four pounds of milk produced daily.

Feed the cows all the hay they will eat up clean and from 30 to 40 pounds of the roots you have. Inasmuch as you do not have enough of any of the three root crops at hand to last you through the winter, a good plan would be to mix the carrots, mangels and potatoes together. A cow is an animal of rather fixed habits and any changes from one kind of feed to another may interfere with her regular flow of milk. By mixing the roots together you will have a standard root mixture for the entire winter.

Will you please inform me what value ground rye would be in a dairy ration and in what quantity should it be fed? Also, has rye hay any feeding value for dairy stock? B. S. G.
Nespelem, Wash.

Rye is a satisfactory feed for dairy cows and has much the same feeding value as corn or barley. Although rye is not as palatable as corn, the cows will take it readily when mixed with other feeds. The Pennsylvania experiment station conducted feeding tests with rye, substituting it for corn in the dairy cows' ration. They fed up to 3 1-2 pounds per day per animal and found that the cows thus fed produced 4 per cent less milk than when fed an equal amount of corn. This indicates that it is slightly inferior to corn. When fed in too large quantities it will also tend to injure the quality of the fat, producing a hard, dry butter.

From 2 1-2 to 3 1-2 pounds of rye mixed with such feeds as mill run and oats should be fed to each cow per day. A satisfactory mixture can be obtained by using two parts by weight of mill run, one part ground rye and one part oats.

Rye hay may be successfully fed to dairy cows. When rye is to be used as hay, it should be cut in the early milk stage and before the awns harden.

LIFE PRESERVERS FOR LIVESTOCK

By DR. E. E. WEGNER, W. S. C.

ANTHRAX.

A few of these diseases which are transmissible from animals to man are of a serious nature, while most of them are not. The diseases previously discussed, tuberculosis and glanders, are very serious indeed and certain others are quite as bad. Anthrax is another that causes great anxiety to the human when it is prevalent in animals. This disease may also infect persons who are not exposed to the anmals themselves, but to the animal products, wool, hides, etc. It is commonly known as "wool sorters' diseases," "rag pickers' disease," "malignant carbuncle," which names indicate something of its nature and its origin.

This disease is infectious and the organism that causes it is very resistant to our common antiseptics when it is in the resting or spore stage. It will live in the ground for years and infect animals that frequent that spot years after. It lives in the animal products, hides and wool for a long time and not infrequently lives with these products through the process of manufacture and appears in the manufactured goods, sometimes being shipped from one country to another in this way.

Not long ago my attention was called to the case of a man who suffered from a very intense swelling of the face, apparently caused by an infection in a scratch caused by the razor. A bacteriological examination of this would revealed the fact that it was a case of anthrax. The man died a few days later. Investigation seemed to justify the conclusion that the shaving brush was the infection carrier, since the man was using a new shaving brush, the bristles of which had come from Russia, where anthrax is common.

People who work at sorting hides or wool, picking rags or working about upholstering establishments and places of that kind are most liable to contract this disease because the materials with which they work are occasionally infected. A good friend of mine lost his life after performing an autopsy on an animal dead of anthrax; whether he did not recognize the disease or became accidentaliy infected I do not know, but this disease is readily transmissible from animals to man.

Cattle Suffer Most.

Anthrax infects most of our domestic animals, but cattle are the greatest sufferers, sheep and hogs come next. The mortality is high in animals, averaging probably 70 per cent; in man the disease may be of a generalized nature and in such cases the death rate is close to 100 per cent in untreated cases, many instances this disease is of a local nature and takes the form of so-called malignant pustule; these cases are not so serious and a considerable percentage recover.

Certain localities are more generally

Potato Show

(Continued from page three.)

that where potato strains were found disease-free it was a matter of their escaping sources of contamination rather than resisting it. Our exceptionally good strains, he said, had originated generally in comparative isolation from weak stocks, and much of the highly recommended stock shipped in for seed from potato-growing centers had brought with it our potato ills, freer strains being produced at home remote in our backwoods. "Perhaps the solution is to be that seed will have to be produced where we can isolate it," he declared. "We may have to have a seed grower for the seed grower." At Bozeman they had suspected the raspberry mosiac of taking kindly to the potato. C. W. Hungerford, pathologist at Moscow, Idaho, thought it more likely that some wild host plant might harbor the potato mosaic diseases.

C. Tice of British Columbia, a potato specialist, explained the relative isolation of some of the province's seed-growing districts, commercial potatoes being cultivated only in the southern and eastern parts of the British Columbia potato district.

"We are going to close up our work at Pullman on rhizoctonia and devote more time to the more destructive mosaics," announced Professor Dana of Washington State college. This invidious disease is apparently on the increase in the state, it was said.

C. W. Hungerford reported on potato diseases for Idaho. Mosaic, there, was less severe on Netted Gem than on Bliss Triumph, Early Ohio and Peachblow, he said, but the Gem suffered more through leaf-roll. The pink and green rose aphis had been found to carry mosaic infection, and both winter on the rose.

Thursday President Cannon fired a broadside he had hoped, he said, to direct toward a larger attendance of those who most needed it. The potato industry depends upon a stable and high-grade seed supply, and the man who grows it must, therefore, get a price for it. There are plenty of the wrong kind of fellows both buying seed potatoes and producing them, declared Mr. Cannon. "We seed growers must give the market a seed such that farmers will be able to increase their incomes reliably by growing potatoes. That," he added, "can't be done when merchants deliberately pound down the market." He threw out the suggestion that there should be trade councils of grower, broker, retailer and consumer.

D. H. Anderson of the Anderson Commission company, Spokane, urged the use of better containers, recommending the crating of potatoes or, at any rate, the use of clean, sound sacks, and the more careful grading of the potato. "The apple industry has its residue of culls. Why don't we see the cull pile after the potatoes are sacked and shipped?" he demanded. "Unquestionably the potato-grower raises culls."

R. C. McCroskey, Jr., asked him from the floor whether he thought the grower, at the prices of last year, could have afforded to use crates or to buy new sacks, if he had others on hand. It was the opinion of Mr. Anderson, corroborated by C. L. Smith, A. A. Kelly and W. L. McEachran, that the farmer would be able to pass on the price of the better container. "Farmer" (C. L.) Smith declared that he would make more on the latter than on his potatoes. A. A. Kelly testified to having got 50 per cent more for onions in Bermuda crates than sacked, though they were onions of identical varieties.

"The farmer pays for the grading, whether he knows it or not, and whether he does it or not," stated Mr. McEachran, who is secretary-treasurer for Burgan & Sons, Spokane. "The retailer has to allow for the shrinkage. He can't arbitrarily decide what quality he demands; he is the purchasing agent for the consumer, merely. The retailer," he said, "does not like to handle waste." He thought the grower who put up a good article in good manner would be paid for it, and need not wait for concerted policy in that practice to get his price. "Though," he added, "the cost to the consumer undoubtedly affects the amount he will use. We can sell perhaps 10 boxes of apples at $1 to one at $1.50." Boxes ran into money pretty fast, and he thought the clean sack might get the potato trade.

The evil practice of the grower who disposes of his culls at any price, to a buyer who will put them on the market, injuring the price of his better article, was deplored. E. R. Bennett, secretary, mentioned a German process by which powdered skim milk and buttermilk are being mixed with a product from cull potatoes and selling as a stock food.

L. Wheeler of the Portland Seed company observed that those who today are sincerely meeting the demand for the seed potato can sell all they raise. At first in a quite accidental way, but latterly in response to a resultant demand, he stated, a few Yakima potatoes extra well graded and put up had appeared on the Portland market, where the fancy quality of the article had created a sudden enthusiasm for Yakima potatoes.

R. G. Newton of Nebraska presented a study in the disease known as spindling tuber. In Nebraska, while dry land potatoes had been formerly considered the best seed, the reason therefor had not until recently been recognized, he stated. Now, the fact that dry land potatoes outyielded others as seed was accounted for by spindling tuber, under which, when the dry potato was brought into the irrigated district and cultivated there for successive years of experiment, the yield went down, the first year 10 per cent, the second 23, the third from 50 to 75 per cent and still more abruptly in the fourth year. Since the susceptibility was more than usual among the potatoes brought down from the high altitudes of dry cultivation to the low levels of irrigation, the dry land seed potato has been rejected by the best practice in irrigated districts, he said. The disease is recognized in elongation of the tuber and shallowness of the eyes.

J. F. Curry of Olympia, Wash., showed with effective statistics the wide prevalence of so-called masked mosaic, not

(Continued on page nineteen.)

Life Preservers

(Continued from preceding page.)

affected than others, that is, where the seed has been sown the crop is more abundant and once the ground becomes generally infected there is little chance to rid it of the infection; as a result the disease continues year after year. Certain areas have been kept clean, due to the vigilance of the veterinary inspectors whose duty it is to suppress the spread of infectious diseases, and it is their aim to keep these areas free if possible, but because this infection can be carried in so many different ways it spread is very hard to control.

The northwest has been free from this disease so far, but we are in constant danger of an outbreak. Careful policing by our veterinary inspectors and the suppression of this disease among animals gives the greatest safety to the human family. This work is being energetically carried on now under the supervision of the United States bureau of animal industry, and since all local veterinarians are interested in its suppression this group of professional men are using their greatest efforts to protect the human family and their efforts are quite successful judging from the way they have been able to prevent its spread.

The Red Lock

By DAVID ANDERSON.

This is the new serial story which will begin in The Washington Farmer December 6. It is a rattling good story. The following table of contents, giving the chapter title, will give you hints what it is all about:

CHAPTER.
I The Bound Boy.
II Curse of Colin.
III East Meets West.
IV Whispering Spring.
V Three Candles.
VI The Room Was Deadly Still.
VII Arrows of the River Gods.
VIII Hermit House-Boat.
IX Mettle of the Minister.
X Fancies and Fence Rails.
XI The Fairy's Secret.
XII Lady Slipper Day.
XIII Bats and Beetles.
XIV Warning of the Frogs.
XV Knives of the Night.
XVI The Open Trail.
XVII Ashes of the Past.
XVIII A Face at the Smudged Window.
XIX The Scrape of a Match.
XX A Cry in the Night.
XXI Six-Gun Persuasion.
XXII Tears of the Mountain Girl.
XXIII Spurs and Flying Sand.
XXIV Brickbat Alley.
XXV Scar of the Gangplank.
XXVI In the Dead Night.
XXVII Core of the Target.
XXVIII The Sprawled Figure on the Broken Floor.
XXIX Search of the Languid Eyes.
XXX Heart of the Flatwoods.

Remember the "Red Lock" will begin next week.

NEW LAMP BURNS 94 PER CENT AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 95% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 161 Union Ave., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

In writing advertisers, be sure to say you saw their advertisement in The Washington Farmer.

Why Blame the Esch-Cummins Transportation Act?

THE statement is often made that the famous "Section 15-A" of this law requires the Interstate Commerce Commission to make and keep rates high enough to enable the railways at all times to earn a net return of 5¾ or a per cent on their valuation. It is said the necessity of letting the railways earn these so-called "guaranteed profits" is what keeps rates up. **This is all untrue. The Transportation Act is not in the slightest degree responsible for the fact that railway rates are higher now than before the war.**

Railway Profits Reduced Under Transportation Act

In the two years, 1916 and 1917, the net return earned by the railways averaged $2,800,000 per day. The Transportation Act was passed in 1920, and the war-time "guarantees" to the railways were withdrawn on September 1, 1920. In the three years ended August 31, 1923, **under the Transportation Act,** the net return of the railways averaged only 4 per cent on their valuation and was but $2,100,000 a day.

How can it be said the Transportation Act has kept up rates by "guaranteeing" the railways large profits when the net return actually earned and received by the railways since the Transportation Act was passed has been $700,000 a day less than it was before?

Increase of Expenses Under Government Operation

Main Cause of Present Rates

The principal cause of present rates is the increase in railway operating expenses which was largely due to the war, and which **occurred under the government operation of the railways.**

The government seized the railways and began operating them at the end of December, 1917. In that month their operating expenses were $8,106,000 a day.

The government quit operating the railways in February, 1920. In that month their operating expenses were $14,310,000 a day.

Therefore, the increase in expenses under government operation was ..... $6,204,000 a day.

What has occurred since then? In the first eight months of 1923 the operating expenses of the railways were only ..... $13,528,000 a day.

Therefore, the reduction of expenses since government operation ended has been ..... $782,000 a day.

To sum up: **In a little more than two years of government operation the operating expenses of the railways increased $6,204,000 a day. Since the Transportation Act was passed and the railways were returned to private operation they have been reduced $782,000 a day.**

Why blame the Transportation Act for present rates when the facts show that the main reason why present rates are necessary is that there still remains $5,422,000 a day of the increase in expenses that occurred under government operation. **Why not blame the war—or government operation?**

Another Reason—Taxes!

There is another reason for present rates. This is—taxes! In 1917 the taxes of the railways were $501,000 a day. In February, 1920, the last month of government operation, they were $609,000 a day. In August, 1923, they were $952,000 a day—or $451,000 a day more than in 1917.

While the managements of the railways, operating under the Transportation Act, have been reducing operating expenses $782,000 a day, the federal and state taxing authorities have been increasing railway taxes about $343,000 a day.

These are the things that keep rates up, yet there are still people who want the railways so regulated as to force them back under **government management!**

Reduction of Rates Under the Transportation Act

Rates had to be advanced in 1920 principally because of increases in railway expenses under government operation. Since then, freight rates have been reduced in the entire country an average of 13 per cent or about $700,000,000 on the basis of this year's business. This reduction in western territory alone has averaged 16 per cent, or about $300,000,000 on the basis of this year's business.

Why blame the Transportation Act, and private management of railways, for advances in rates made necessary mainly by increases in railway expenses due to the World War and government operation, and give no credit for reductions of rates that have been made under private management of the railways since the Transportation Act was passed?

What the Transportation Act "Guarantees"

The Transportation Act does not "guarantee" the railways anything. It says the Interstate Commerce Commission must so fix rates as to let the railways earn a "fair return" upon a fair valuation. There is nothing new in that. The Constitution already required it.

But the Transportation Act does give a new "guaranty" **to the public.** It says that the Interstate Commerce Commission, in deciding what will be a "fair return" for the railways to earn, shall "give due consideration among other things to the transportation needs of the country, and the necessity, under honest, efficient and economical management of the existing transportation facilities, of enlarging such facilities **in order to provide the people of the United States with adequate transportation."**

Is it wrong for Congress to instruct the Interstate Commerce Commission in regulating rates to consider **the need of the people of the United States for adequate transportation?**

The only "guaranty" that repeal of the Transportation Act would destroy is this guaranty to **the public** that the railways will be so regulated as to enable them to provide **the public** with enough transportation.

No farmer or business man who realizes the country's need for a great increase of its facilities of transportation wants that guaranty withdrawn.

This is one of a series of advertisements published to give the farmer authentic information about railroad matters. Any questions that you would like to ask will be cheerfully answered. Address:

POULTRY AND RABBITS

Winter Egg Basket

Fill It by Careful Feeding, Good Management and Housing

By JOHN S. CARVER, Head Poultry Department, Washington State College.

The market reports read "Eggs are going up." Have our pullets reached a 60 per cent lay? November, December and January are our months of highest prices. To make our poultry profitable we must secure high egg production in the winter time. If we wish to fill our winter egg basket we must pay particular attention to the following important factors:

1. Conditioning the pullets for laying.
2. Our winter feeding schedule.
3. Proper house manageemnt.

Conditioning Pullets for Laying.

We depend on the pullets for the bulk of our fall and winter egg production, and if we are to secure results from them they must be well cared for and properly conditioned. This means that before they are ready to go into heavy winter egg production they must have: Good size, for the breed; flesh in good amount, and a generous reserve of body fat.

Pullets must have a certain foundation of flesh, size and fat if they are to stand up under the feeding and management that will result in high winter egg production. Without it they can not possibly become economical producers. These essential characteristics are obtained by continuous and vigorous growth throughout the summer and by conditions as laying maturity approaches.

Pullets should be conditioned when they are about 20 weeks old, or just about the time their combs start to develop. We add 100 pounds of corn meal to the growing mash and feed them three times a day morning, noon and 6 in the evening, all of the conditioning scratch grain they will clean up in half an hour. This scratch grain should be mixed as follows: 200 pounds of cracked corn and 100 pounds of wheat. One hundred pullets should eat about 14 pounds of this scratch grain a day. Feeding this way for about one month or until the pullets are 6 months old will insure a good storage of reserve fat and maximum growth when housed for the winter. They should be housed, if Leghorns, when they weigh three and one-fourth pounds or more. You will notice the conditioning ration is high in carbohydrate, but low in protein; the low protein content retarding the development of the egg-producing organs while the pullets are taking on their weight.

Our Winter Feeding Schedule.

We must now consider our winter feeding plan after having placed our conditioned pullets in their winter laying quarters, which previously have been thoroughly cleaned and disinfected, and the floors covered with five or six inches of fresh wheat straw. The pullets are now ready to go on their laying mash, which is high in protein and egg-building foods.

Washington State college laying mash: Two hundred pounds wheat bran, 100 pounds wheat middlings, 100 pounds corn meal, 75 pounds meat scrap, 25 pounds bone meal, five pounds salt.

This mash is placed before the pullets in self-feeding hoppers, enabling them to obtain it at any time.

Washington State college scratch grain: Two hundred pounds wheat, 100 pounds cracked corn, 50 pounds oats.

This scratch grain is fed three times a day, 7 a. m., 2 p. m. and as the "evening lunch," 9 to 10 p. m., under artificial lights. Three pounds are fed at 7 a. m. in straw litter; four pounds are fed at 2 p. m. in litter and seven pounds are fed in troughs and in litter at 9 or 10 p. m. Our aim is to keep our production in the winter at 55 or 60 per cent and to regulate the production by the amount of scratch grain fed. If our production runs up over 60 per cent we increase the amount of scratch grain fed, which automatically reduces the amount of mash the pullets will consume and lowers the per cent egg production.

Milk is fed at 10 a. m. in the form of skim milk, buttermilk or semi-solid buttermilk. They should have milk before them at least one hour a day. If you feed semi-solid buttermilk, feed one-half pound to 100 pounds of live weight.

Feed at noon green food in the form of cabbage, cut kale or alfalfa, what the birds will clean up in a couple of hours. Keep grit shell, charcoal and plenty of clean fresh water before the birds at all times.

Proper House Management.

It is equally important in securing high winter egg production that our pullets be housed under the best of conditions. The house must have plenty of sunlight, have good ventilation and be dry at all times, with no draughts striking on the birds.

We have found that a straw loft in any poultry house aids in giving us ideal conditions of ventilation and dryness. With the straw loft house it is almost impossible to find the litter wet at any time. This is a most important factor, as there is nothing that lowers the egg production more rapidly in the winter than damp litter. Never permit strong winds to blow through the front of your house directly onto your birds. Shut your curtain on windy days and depend on indirect ventilation, through partially opened windows, shutters, etc.

Keep your litter clean, fresh and dry in the winter if you expect to maintain high production. Never let dirty litter remain in houses, as it is a source of disease; roup, colds and cankers are caused by damp, dirty litter. Keep it clean. Wheat straw is our cheapest litter.

Fill your winter egg basket by careful feeding and better management and housing.

Treatment for Chickenpox

By W. D. BUCHANAN, Extension Poultry Specialist, State College of Washington.

A short time ago one of my young cockerels became blind in one eye and I put him in a separate place to keep the other chickens from bothering him, but in a short time I noticed a pullet had something wrong with her eye. I found small lumps similar to warts all over one side of its face and nostrils. What can this be and what is a cure for it? A. S. Seattle, Wash.

The trouble which you describe is chickenpox. It is an infectious disease and sometimes spreads to the entire flock. The best method of control is through chickenpox vaccine. If the attack is not very severe, you can control it by separating all affected birds from the flock. Thoroughly disinfect the house with a 2 per cent solution of cresol or a 5 per cent solution of zenoleum. Then paint all affected parts of birds showing pox with tincture of iodine. At the same time remove the canker from their throats and mouths and paint the spot with the iodine.

PROVIDING GREEN FEED.

Where hens are penned up it is advisable to have two yards and keep a green crop growing in one of them, such as oats, wheat, rye or dwarf Essex rape. Green crops should be sown very thick, and the following quantities will be found satisfactory for a yard 25 by 30 feet: Wheat, 2 3-4 pounds; oats, 1 1-2 pounds; rye, 3 1-4 pounds; rape, 5 ounces. When the growing stuff reaches a height of two or three inches the hens can be turned upon it and the other yard similarly sown.

AVERAGE SIZE OF FARM.

The average size of farm in the United States was in 1920 148.2 acres, of which improved land averaged 78 acres. The land alone averaged $57.36 in value, but the value of farm property, on the average, including buildings, machinery and live stock, was $81.52 per acre. This average included the unimproved land—nearly half of what is held in farms.

UNION CARBIDE
ALWAYS HIGHEST GRADE—ALWAYS UNIFORM

UNION CARBIDE
World's Best Quality
Highest Gas Yield
Standard Throughout the World for More Than a Quarter Century
Keeps Indefinitely if Protected From Air and Moisture
Greatest Gas Value
Purest Gas

Artificial Sunlight at small cost
increases egg production in winter months when eggs bring best prices!

Many progressive farmers, with an eye to easily increasing the family income, are installing artificial sunlight—Union Carbide Gas—in their henhouses, lengthening the hens' winter day to 14 hours for added feeding and exercising, securing greatly increased egg production at small cost when more eggs mean much more money.

Union Carbide, discovered 31 years ago, has made artificial sunlight easily and cheaply available everywhere. Today the scores of uses for Union Carbide Gas are responsible for an abundance of comfort, happiness, and economy for millions of people the world over.

More than 398,000 farms were equipped during past years to avail of the full measure of satisfaction which can be realized from Union Carbide Gas lighting and cooking plants. Each year more such plants are being installed than during any preceding year.

It is a simple proposition.

A little Union Carbide, in a simple apparatus that automatically feeds it into common water, makes Union Carbide Gas for lighting and cooking as needed. Concealed without disfiguring walls, floors, or ceilings, small iron pipe conducts the gas to rooms where its cheerfulness and comfort are enjoyed; to the kitchen for cooking, ironing, and heating water; to the barn for light and safety; to the henhouses for increasing egg production in winter.

The more than 398,000 farmers who have installed Union Carbide Gas lighting and cooking plants in past years, can easily have their gas piping systems extended to their poultry buildings, and thus avail of artificial sunlight and increased egg money during winter months.

We supply Union Carbide in generator sizes direct to consumer at factory prices through 150 Union Carbide Warehouses. There is one near you.

Vita Gland Tablets Start Hens Laying in Twenty-four Hours

Hens have glands just like humans and also require vitamines. Because they directly stimulate the organs involved in egg production the mysterious newly discovered VITA GLAND Tablets, crushed into hens' drinking water, turn winter loafers into busy layers almost over night. Science has discovered how to control egg production with essential vitamines, and gland extract that works directly on the OVARIAN or EGG producing gland of the hen. The wonderful effect of gland stimulation is shown by a simple test. Government experiment stations report that hens properly fed vitamines, etc., lay 300 eggs as against the sixty of the average hen. "Leg weakness of baby chicks due to insufficient Vitamine B," says The Official Bulletin. Also says: "Hens start laying at an average age of 139 days when fed vitamines."

ONE FREE BOX.

EGGS, EGGS, EGGS and fine healthy chicks, prosperous flocks without fuss or bother or drugs or expensive feeds can be had. Just drop these tablets into drinking water. So simple to double your profits. Chickens now full of pep and life. Nests full of eggs. Summer production at winter prices. So confident are the Alexander Laboratories, the manufacturer of the original and genuine VITA GLAND tablets, that you will be amazed at results that they offer to send a free box for your own use. This is how. Send no money, just name. They will mail two boxes, each regular one dollar size, a generous supply. When they arrive deposit only a few cents postage and one dollar with postman. When your neighbor sees the wonderful increase of eggs in your nests let him have one box for a dollar and thus your box has cost you nothing. $5000 in big Kansas City bank guarantees your satisfaction or money back without question, so write today and get dozens of extra eggs this simple easy way. Write ALEXANDER LABORATORIES, 9037 Gateway Station, Kansas City, Mo.

ORCHARD AND GARDEN

Surpass 1923 Goal

By B. A. SLOCUM.

A year ago a committee of 25 beekeepers of the various bee counties of the state met and discussed ways and means of developing the beekeeping industry of the state. Statistics bearing upon the industry presented and then goals were set for the year 1923, as well as for a five-year period, 1923-1928.

The goal for 1923 was: To reduce the bee diseases, which, by the way, have no effect upon the human anatomy, 20 per cent; to reduce the number of box hives 25 per cent; to introduce 1362 purebred Italian queens into black colonies; to organize three associations; to take a survey of existing conditions in nine counties; to organize one boys and girls' bee club and promote existing clubs.

Disease was decreased 15.2 per cent during the current year. This represents 53.7 per cent of the colonies that were diseased, consequently the year's goal was passed by 17.3 per cent.

The percentage of box hives was reduced 5.8 per cent. This is 42.3 per cent of the colonies that were in box hives, consequently the goal for the year was pessed by 17.3 per cent.

One beekeepers' association was organized in Skagit county and another, the state association, is in the process of organization. This was the only goal which was not passed. It would have been met if one county, which was considered at the time the goal was made, had been ready for an association. There are 12 associations in the following counties: Grays Harbor, Mason, Pierce, Thurston, Spokane, King, Snohomish, Whatcom, Yakima, Walla Walla and Skagit. The Peninsular association, which comprises six counties, is the largest association in the state.

Three boys and girls' bee clubs were organized this year. Since the goal for the year was one, it will be seen that this goal was passed. The following counties have clubs: Pierce, Thurston, Benton, Grays Harbor, Walla Walla and Stevens.

There were 1922 queens imported this year to replace scrub stock. This passes the goal for the year by 560 queens. Mason county reports that 90 per cent of the colonies within the county were requeened with Italian stock.

The beekeepers are to be greatly commended upon this excellent piece of work. It shows what can be done when beekeepers cooperate and make a united effort toward a specific goal.

Vinegar Making

By O. M. MORRIS,

Head Department of Horticulture, State College of Washington.

Does treacle make a mother for vinegar if put with brown sugar? MRS. J.
Waukon, Wash.

The treacle or any other form of sirup of high sugar content is often used to increase first the alcohol content in the manufacture of vinegar from fruit juices. The higher the alcohol content in the first process of fermentation, the higher will be the acid content of the vinegar when the fermentation is completed.

The first process of fermentation will ordinarily start without any artificial inoculation. Best progress will be made in the fermentation if the material is kept at a temperature not below 80 degrees. At that temperature, with the material in barrels or large receptacles, two to three weeks will be required for the alcohol fermentation to be completed.

After the first fermentation has ceased its most rapid activity, which can be determined by the development of foam on the top of the liquid, mother of vinegar can be placed in the fermented liquid. This will start the actual vinegar-making process. It will be completed in a few weeks if the temperature is kept about as stated above. If the temperature runs low it will require many weeks, sometimes months, to complete the process of fermentation. Barrels of liquid set in a cellar where the temperature will run down as low as 40 degrees will ordinarily make vinegar, but it requires a longer time to accomplish the work.

AGENTS WANTED—A corporation of national reputation and high standing, manufacturing a complete line of standard high grade machinery and supplies very essential to the best success in horticultural production, desires to secure reputable sales agents throughout Oregon, Washington and the western part of Idaho. Only men permanently located, of good character, personal reputation, financial standing and having a working knowledge of local horticultural conditions and practices will be considered. State your case in your letter. How long a resident in present locality? Property owner? Financial standing, knowledge of horticulture, sales experience and equipment, and such other information as you consider pertinent. Address MANUFACTURER, care Washington Farmer, Spokane, Wn.

Thistle Eradication

By E. G. SCHAEFER,

Department of Farm Crops, W. S. C.

Can you give me a sure and speedy way to get rid of Canadian thistle? T. W. H.
Vancouver, Wash.

The Canadian thistle is a perennial and very difficult to eradicate. It has an extensive root development including horizontal root stalks. They grow for considerable distance in practically every direction. These root stalks when removed from the main plant by tillage implements and carried to other parts of the field may start new plants and new areas of infestation. A small amount of tillage which is insufficient for complete eradication may, therefore, serve only to spread the thistle infested area.

One of the most successful ways of eradicating this pest is that of clean cultivation. If this method is to succeed, however, it will be necessary to cultivate at frequent intervals throughout the season. This method involves the actual starvation of the plant by preventing it from manufacturing food, which process is carried on in the leaves. In its attempt to grow, the energy stored in the roots will finally be expended if no green portion is allowed to appear above the ground.

The cultivation should be at a depth of two or three inches, since cultivation at this depth need not be as frequent as if it were at the very surface of the ground. It must be remembered that even though the weed be allowed to produce leaves for two or three days during the growing season, much of the energy expended during clean cultivation will be restored and the period for final eradication will be increased.

Topping Strawberries

By O. M. Morris, Department of Horticulture, State College of Washington.

I wish you would explain to me how to top strawberries. When is the proper time of year? R. S. R.
Bellingham, Wash.

The process of topping strawberries is often spoken of as mowing them. The most common method is to use a field mowing machine for large patches and a scythe for small ones. The tops are cut the same as a hay crop would be.

The purpose in view ordinarily is to cause the foliage to dry quickly so that it can be burned. This is usually done in midsummer or shortly after, sometimes as soon as the crop is harvested. The purpose of the work is to destroy fungus diseases and insects that are preying on foliage. Sometimes it is used for the purpose of checking growth and causing the plants to ripen and more definitely prepare for winter conditions. Its value for this purpose is generally overestimated, but it is often effective in destroying certain insects and fungus diseases without materially damaging the plants.

RESPONSIBLE FOR EXCESS SPRAY.

Fruit shipping associations in Colorado require growers to sign invoices bearing a guaranty making them responsible for excess spray material left on fruit, according to reports to the bureau of chemistry, United States department of agriculture, which has made investigations of this problem. Such a requirement seems to have a good effect, as an investigation this year in one of the principal fruit-growing centers of that state showed little spray residue on the fruit ready for shipment. Heavy rains helped somewhat in cleaning the residue from the fruit.

FARM MACHINERY.

The value of farm implements and machinery distributed on acre of improved farm lands runs highest in Massachusetts, averaging over $20 per acre for the improved farm lands of the state. Then follow other states of the north Atlantic group and Wisconsin. In Washington, Oregon and Idaho the value per acre of farm machinery runs between $7.50 and $10; in Montana it runs between $5 and $7.50; in North Dakota and some of the southern states under $5 to the improved farm acre.

HOME FRUIT GARDEN.

A more general culture of fruits in gardens and in home orchards would contribute substantially to the health and pleasure of the average family, besides furnishing a supply of valuable food products at a relatively small outlay of money.

ATKINS
SILVER STEEL SEGMENT GROUND
CROSS CUT SAWS

Cut Your Share of $394,000,000

NEARLY four hundred million dollars' worth of timber will be cut on farms this year. Right now YOU should be getting YOUR share of this money.

Genuine ATKINS Cross Cut Saws are **guaranteed** to cut faster and easier and hold their edge longer. They save time, money and labor. Only ATKINS Saws are made of "Silver Steel" and are "Segment Ground," which means fast cutting and easy running. Your hardware dealer should have them in stock with two or four cutting teeth to each raker.

This Saw Book FREE

Get your copy of "Atkins Saws on the Farm," today. It gives valuable facts about cutting timber, how to choose and care for saws, gives measures and tables and tells how to make useful farm appliances, shows and describes ATKINS Saws for wood and metal cutting, circular saws, hand saws, hack saws, buck saws, pruning saws, and better saws for every purpose. Your copy is ready NOW! Just send your name and address, today, to

Plant and Food Products

(Continued from page six.)

depth, the peak with the potato plant was reached at about 32 inches in depth of water supply.

This average peak of 32 inches is determined by combining all the returns and striking the average of them all. As potatoes are a very important food plant, and it is important to learn all we can about its life and habits as related to the water supply, I have placed upon the diagram the composite line showing the changes that have taken place in the past as compared with the water supply. That is shown by the triple circles and double ruled lines connecting them.

The next set covers the experiments in wheat growing in Utah during the same 10-year period as the alfalfa and potato experiments, and also in Idaho.

In this diagram the circles designated by the figure "1" shows the returns in bushels of wheat, and the circles marked with the figure "2" shows the returns in pounds of straw in Utah, and the circles marked by the figure "3" shows the bushels of grain in Idaho.

In the first two diagrams the food plant and the food products go together; but in this diagram we see the food plant, as represented by the straw, and the food product the plant secures, as represented by the grain.

The fourth diagram shows the returns of oats in plant size, shown by the straw and the food production, shown by the grain, as secured by different quantities of water supply.

The fifth and last diagram shows the same returns of corn in food production as secured by kernels of corn, and the size as measured in terms of the stover.

In each of these three plants is shown the fact that food production and plant size are two separate and distinct items in plant life, and in many ways have no connection with each other.

The interesting thing about these plants is that they never appeared to require change in their methods for securing water as it changed from a liquid to a vapor in the ground until the quantity supplied by precipitation had decreased entirely to the vapor condition.

Then in case of wheat the plant reaches its apex in both size and food production at about 15 inches water supply annually.

With the oat plant, the minimum sized plant was reached with a water supply of 25 inches of water annually, but the food production continued, so that when the plant reached its new increased size at 20 inches the food products had continued to decrease, and reaches its lowest point there, and only increases as the water supply decreases.

With corn the same lack of connection between the plant and the food products it secures is shown. From a 70-inch water supply down to a 45-inch water supply annually there was very great difference in the size of the plant as measured by the stover. Then there was a slight raise in size with a drop of five inches in water supply, followed by a gradual decrease in size down to 30 inches water supply, and after that a very decided decrease in size down to the natural water supply by precipitation of 15.48 inches.

There is, however, a very great difference between the plant size and the food products secured by the plant. The two run along together very closely for some time, but the lowest point in food production before the raise is shown when the water supply is 25 inches in depth. Then, although the plant is decreasing rapidly in size, the food production increases with a water supply of 22 inches.

The fact that these returns are not the result of one year's experiment, but were carried along for a term of years, takes them out of the realm of improbabilities and is proof of the most important thing our farmers should know—that they must recognize there is a great difference between the food plants they raise and the food products those plants secure and store, and for which the plants are cultivated.

Food production does not go along with plant growth at all, but is entirely separate and distinct from it. This can not be seen with alfalfa and potatoes, as the two are woven together in the returns as shown by the potato tubers and the whole plant harvested; but in case of the grains and corn the returns reported prove this to be true.

In irrigating, therefore, the vital thing to keep in mind is not the size of the plants irrigated and cultivated, but the quantity of food products the plant will secure and store for the farmers' benefit.

New Grange Master

(Continued from page three.)

grange and its sensible way of considering farm problems and presenting farm needs have given it a position of influence in the nation and have led those in positions of responsibility to listen to the views of the grange with consideration and respect."

Opening his message, President Coolidge extended to the grange his congratulations upon "its success and steady growth," and in closing asked Secretary Wallace to present "my very best wishes to both officers and members wherever they may be."

Secretary Wallace spoke of the scientific and practical work of the department of agriculture, going into some detail as to its efforts to assist in marketing agricultural products, and in aiding the work of cooperative marketing organizations. "The improvement in agricultural conditions," he said, "is apparent, but it is far from sufficient to make up for the unfavorable situation which farmers have been in for the past three years."

Thursday evening the Pennsylvania State grange, and three Pomona granges of that state furnished a program of pageantry, the first depicting the historical events in the growth of the state, the second, the history of the National grange in tableaux form, and the third a study of the work and accomplishments of the grange in its own field of better home making, better education, better schools, better churches and religious life, better agriculture, and better business conditions for farmers.

Friday's entire day was given up to the seventh degree work. All this work is in charge of Charles M. Gardiner of Springfield, high priest of the Court of Demeter, the guardian of the ritualistic work of the grange. Presiding as the Goddess Ceres, the patron of this degree was Mrs. Bertha M. King, of Banner, Oklahoma. Saturday was taken up with a meeting of the priests of Demeter, to which all seventh degree members are admitted, and no others. One change in the officers of this assembly was made when C. E. Spence of Oregon declined re-election as Priest Annalist, and his place was taken by the election of Harry L. Caton of Fresno, Ohio, master of the Ohio state granges.

One of the most difficult positions in the country is that occupied by the press representative of a national organization like the grange, whose meetings are largely held within closed doors. The National grange is certainly to be congratulated in having the services of A. M. Loomis, its regular Washington representative, as press representative. Mr. Loomis knows what is news, how to write it and how to get it out in a manner which finds a welcome by the press at large.

FARMERS' WANT ADS

NURSERY STOCK—PRUNES, WALNUTS, FILberts, fruit trees of all kinds, gooseberry and small fruits. Buy direct and save 50 per cent. Brooks Nursery, Lafayette, Ore.

TREES—CHERRY, PEAR, PRUNE, APPLE, walnut, filbert. Mazzard cherry seedlings. Prices based on production costs only. Homer R. Brixey, McMinnville, Ore.

NURSERY STOCK SOLD DIRECT TO PLANTers; apple trees a specialty; no agents employed; can save you money. Write for prices. Lawson Nursery, Gates, Ore.

FILBERT AND WALNUT TREES, THE BEST paying crops for the northwest. Write for prices on the different grades. Villa Nurseries, Route 1, Portland, Ore.

STRAWBERRY PLANTS—SIXTEEN VARIEties. Asparagus and Munger black caps. Prices low. Brigg's Fruit Ranch, Olympia, Wn.

FARM LANDS FOR SALE 651

PROFITABLE FARMING — FERTILE SOIL, ample moisture, favorable crop growing climate, convenient market, low priced land are conditions that make profitable farming possible. These conditions are found in the Lethbridge northern irrigation district in Sunny Southern Alberta, Canada, where the bringing of 105,000 acres of rich land under irrigation in a well settled district is providing opportunities for double the number of people now there to own paying farms. Water available this year, low prices and favorable terms make starting easy. Investigate this first. Write for descriptive booklet to the Irrigation Council of Alberta, 12 Provincial building, Lethbridge, Alberta, Canada.

5000 ACRES, SMALL TRACTS; NEWAUKUM river valley lands; easy terms; employment. Big mill and timber companies are selling their large holdings in this well known and fertile valley, at Chehalis, Washington, on most advantageous terms and conditions, where settlers are assured steady employment, good wages and live at home. Positively all high type agricultural land; level bench and valley. No gravel. No mountains. No irrigation required. Already well settled community; good schools and markets. 20 acres or more, $15 to $50. Terms to suit purchaser. Graham Land Company, 1008 American Bank bldg., Seattle.

WILL SACRIFICE FINE 600-ACRE RANCH at Yelm, Washington; 280 under irrigation; land adjoining selling up to $100 per acre; all stock, machinery and equipment included; house, barn, goat shed, 2 large chicken houses and other outbuildings; worth at least $36,000; will take $20,000; retiring, reason for selling; don't fail to at least investigate. C. W. Boost, owner, 606 Grand ave., Portland.

20 ACRES CULTIVATED VALLEY LAND; 3½ acres berries, small house, large chicken house, all outbuildings; a real berry and poultry ranch; $1600; terms. 80 acres fine land; 45 cultivated, balance pastured; 8-room modern house, all outbuildings; plenty fruit; 8 cows, some young stock; fine team, all machinery. A real farm; $7800; terms. Chas. D. Edwards Co., Centralia, Wash.

WE HAVE 160 ACRES IN THE YAKIMA valley; 60 acres in alfalfa; a fine stock and dairy ranch. Price $150 per acre; a small payment down will handle. This land is under the government ditch and very productive. Water rent $1 per acre per year. Lincoln Trust Company, Spokane, Wash.

BIG LUMBER COMPANY LAND SALE—IN Skagit county; 40-acre tracts, $1400; $200 cash, balance easy. Lots work for the settler. Splendid district, roads, schools, towns. Information free. H. C. Peters, 726 3d ave., Seattle.

FARM LANDS FOR SALE (Continued) 651

CUTOVER LANDS, EASY TO CLEAR; $8 TO $20 per acre; 25 miles north of Spokane; on hard surfaced highway; Great Northern and Milwaukee railways; excellent opportunity for dairying and stock raising with Spokane markets and creamery near at hand. Will help the man who will live upon the land and agree to clear a part each year by giving lumber to help start his buildings, and a purebred Jersey bull to groups of farmers. Interest and payments low. Write Milan Farms Development company, Dept. T, Old National Bank bldg., Spokane, Wash.

CLEARED MEADOW LAND; FINE FOR POtatoes, poultry, berries; few feet to paved highway; near several thriving towns; half mile to railroad, store, sawmill, schools; $100 per acre in 5, 10 and 20 acre tracts. Easy down payment, balance long time, 6 per cent. The finest land in Western Washington at the price. Full information from Carter, MacDonald & Miller, 208 Columbia st., Seattle, Wash.

HARRINGTON DISTRICT — 540 ACRES good wheat land; 100 acres pasture; creek; good buildings; macadamized road; two miles from Harrington; main line Great Northern; good schools, churches, stores; small payment will handle, balance easy terms; bargain; no trades. Owner, W. E. Shrader, Harrington, Wn.

319-ACRE WHEAT RANCH FOR SALE—ALL in cultivation; one-half summer fallow; in winter wheat; fenced and cross-fenced; hog-tight; good seven-room plastered house and good outbuildings. This is a real farm. Price $90 per acre; best of terms. Albert Reiha, Reardan, Wash., owner.

FOR SALE—9 1-3 ACRES, INCLUDING 7 acres raspberries, family orchard, 6-room house, barn, chicken house, garage, city water, gas, telephone; ½ mile to graded school; located 1 mile east of Portland city limits. J. F. Jaeger, Route 1, Box 70, Portland, Ore., owner.

BIG OPENING SALE OF YAKIMA VALLEY farm land, under an assessed state and government approved irrigation project; best, deep soil; close to town and good roads. Price $25 per acre and up. Very easy terms. Western Lands, Inc., owners, 918 Green bldg., Seattle.

WE HAVE 204 ACRES, 3½ MILES N. E. OF Cheney; very fine land; we will sell on small payment down, long time on balance. The price is $75 per acre. It is convenient to town, good schools, good roads and a good place to live. Lincoln Trust Co., Spokane, Wash.

ROGUE RIVER VALLEY PEARS WIN OUT again this year; fine return. We have some good orchards. Write for data. Rogue River Land Company, Medford, Ore.

SELL YOUR PROPERTY QUICKLY FOR cash; no matter where located. Particulars free. Real Estate Salesman company, 501 Brownell, Lincoln, Neb.

1280 ACRES WHEAT LAND; GOOD BUILDings; ample water; for $58,000; good terms; write for particulars. Bessie Gross, Rural 6, Walla Walla, Wash.

LINCOLN CO. WHEAT LANDS, $20 ACRE; 1-10 cash, long time on balance; will consider crop payments. Chas. V. Wadham, W2404 2d ave., Spokane.

FAILING HEALTH COMPELS ME TO SELL 5-acre poultry ranch; fully equipped; modern improvements. C. Dimmick, Gig Harbor, Wash.

BARGAINS IN YAKIMA VALLEY LANDS. A. B. Capps, Grandview, Wash.

FARM LANDS—Wanted 654

NO COMMISSION — SELL YOUR FARM through Washington Farm Bureau Exchange, represented in 45 states. Lists of farms for sale by owners mailed free. 312 Lindelle bldg., Spokane, Wash.

HAVE INQUIRIES FOR NORTHWESTERN farms, spring delivery. Describe fully, state lowest price. R. A. McNown, 310 Wilkinson bldg., Omaha, Neb.

IDAHO, WASHINGTON AND OREGON LANDS bought, sold and exchanged. Describe fully, stating price. David P. Weir, Spirit Lake, Idaho.

WANT TO HEAR FROM OWNERS HAVING farm for sale; give particulars and lowest price. John J. Black, Chippewa Falls, Wis.

WE HAVE BUYERS FOR SEVERAL FAIR priced farms and ranches. Central Land Bureau, New Franklin, Mo.

FARM WANTED FROM OWNER ONLY—SEND full particulars. Ray Smith, Maplewood, Mo.

FARM LANDS—Wanted to Rent 660

WANTED—TO RENT, LEASE OR WORK ON a salary, a farm with implements and horses and seed; term of year. L. M. Boyer, Crabtree, Ore.

IRRIGATED LANDS—For Sale 663

OPENING OF THE NEW WHITESTONE IRrigation district—8000 acres of irrigable land. This project was constructed under the direction of the Department of Observation and Development of the State of Washington. Adapted for diversified farming, livestock, dairying, poultry and fruit growing. A picturesque location in the foothills of the Cascade range, Okanogan county, Washington. Write for free picture folder, giving full details. E. C. Leedy, general agricultural development agent, Great Northern railway, Dept. 109, St. Paul, Minn.

FARMERS AND STOCK MEN—THE COLUMbia irrigation district has several tracts of irrigated lands of various sizes, in the famous Kennewick valley, with plentiful water supply. The district wishes to get these tracts into the hands of good farmers who will put them to work, and will make very low prices and long terms to such men. No speculators need apply. One tract 580 acres, especialy suitable for stock or dairy ranch. Write the secretary, Columbia Irrigation District, Kennewick, Wash.

THIS FARM IS SHOWING A GOOD PROFIT—$7000 income this year; 131 acres; close to Yakima; good water rights; excellent buildings; well equipped; good dairy herd. Good terms. Western Lands, Inc., Owners, 918 Green building, Seattle.

72-ACRE IRRIGATED FARM; YAKIMA VALley; ½ mile from Outlook; paved highway, schools, churches; thirty acres alfalfa, rest general farming; fine fruit land; $175 acre; terms. W. C. Wright, Outlook, Wash.

FIVE ACRES, UNDER IRRIGATION; JUST outside city limits; equipped for poultry; fine for alfalfa, clover or berries; on main road; daily mail. Geo. A. Barden, Grants Pass, Ore.

FOR SALE OR EXCHANGE 702

OKLAHOMA, GARVIN COUNTY, 220-A. FARM; improvements, 7-room house, two large barns, cribs, double garage, two wells, two large ponds; crops, alfalfa, corn, cotton; 4 mi. nearest town; good roads, schools, neighbors; rural mail, phone; value $16,000, will sell or trade for equal value, Washington or Oregon. Frank Darst, Wynnewood, Okla.

DANDY LITTLE FRUIT, DAIRY AND CHICKen farm; 9 miles from Spokane; equipped and making money. Poor health compels me to sell or trade Berrydale Farm, Marshall Wn.

Arms and the Floweret--*By Julia M. Martin*

TWICE, at bidding of mighty Canonicus, a Narragansett Indian runner had sped northward and, fleet and noiseless, had crept close to the tiny Pilgrim settlement at Patuxet. That was the Indian name for the spot we now call Plymouth.

Once he had been sent there when, through an excited Pocasset, the red men around Narragansett bay first learned that another ship was lying off Patuxet.

"These children of other skies, O brave Canonicus," had said the Pocasset warrior, "come not like those who have been there in ships before. These, when they go upon the land, wear not coverings of fur, but somber garments and strange, tall hats. They worship the life-giving soil, for I have seen them bow knee to the ground and murmur in unison. They linger strangely long upon the coast. And, yet more wondrous, O chief, they are not all males, as were the race who came before, but bring with them women and little ones. On the tall trees at Patuxet they have cut down more than the previous men cut, who stood one upright on their ship. Several of these latter men have stayed all night on the shore. Our people think, O chief, they mean not soon to depart."

"You will see," said grim Canonicus, smiling. "These pale men we have seen ere now. They are not children of the land, but dwell in their great, winged ships, and linger never long in any spot."

Nevertheless, Canonicus had straightway sent his runner to the shores on the eastward. And the Indian had returned with a strange tale.

"It is even as the Pocasset said, O chief. They who have come by the sea will remain, for out of the ship they have brought their goods, which are strange and wonderful; and, while I watched, the ship unfolded its great wings and departed. On the shore, methought, remained more than 50 of the pale people. Also I marked that none of the women departed. There were those among them who wept as the ship too wings. I counted nine dwellings, cunningly contrived, which they who remain have built for themselves. Surely, O chief, the Pocasset spoke truth. These men will bide in the land."

"The pale-faced people," replied Canonicus, "are of a flitting nature. If, as the Pocasset said, there was pestilence on the ship, 'tis likely they take refuge but for a season on shore. The spring will see them embark and sail away."

But, late in the colony's first spring at Plymouth, Narragansett braves had encountered another Pocasset, bursting with news. The pale people still lingered at Patuxet. And Canonicus again had sent his runner.

The man returned next day. "They have planted corn, O Canonicus, and yet other seeds that we know not of, for sprouting green I saw that was like none other. Also they have taken among themselves the one surviving Patuxet, the man Squanto, that once voyaged over the big east waters with such white men as these; and Squanto shows them the arts of our race, as where the game is to be had, and when to plant, and how to enrich the soil with herring fish. The white men are of a strange nature, truly, for they busy themselves not only at planting time, or when there is game or fish to be had, but at all seasons. And—I had need to laugh mightily, O chief, for not the women, but men, toiled in the corn field."

Greatly Canonicus marveled over these things, but more when, at the coming of winter, a Wampanoag told him, "There came yet another ship there, and departed; yet they went not away." The Narragansett's brow blackened at that, and grew darker still as the Wampanoag continued, "Ninety of our chiefest men have met with them around the board and feasted." And when, in the spring, Canonicus' warriors began to believe the white strangers men of the land indeed, he felt they must be frightened off the coast, lest Narragansett men should say, "Our chieftain prophecies foolishly."

And so, once more calling the runner, he bade him take from his lodgepole a rattlesnake skin that hung there. This, when the man had brought it, Canonicus filled with quivers and returned to him.

"Take that," he said, "to the sojourning folk at Patuxet and leave it before their chief."

And again the runner sped. This time he carried back to the Narragansets a sign from the pale chief. They saw it in his hand, as he returned. What would it be? A token of anxious, peaceable men? For how beside could a handful of pale-faced men, clumsy in woodland travel, answer the Narragansett and his 2000 warriors?

But, when the token lay before Canonicus, he saw that it was the rattlesnake skin, returned to him. Curious, though, were its new contents. From a respectful distance, Canonicus examined the black pebbles it held, pebbles that were round with the perfection of things magic.

"What saw you the pale-faces doing with such as these?" he demanded.

"Sire, they are the food of the loud-speaking firestick."

Blanching, Canonicus backed away from the bullet-crammed snakeskin. From the Pocassets, from the Wampanoags, he had heard tales of the firestick, at whose very speaking things of the wild fell dead.

"Let it not stay here, then—it is thing of evil. Hasten and bear it back to the lord of the firestick!"

For a time the Narragansett chief had little more to say concerning the men at Patuxet. Then came word that the pale-faces were building around their field, their houses and even the hill behind the field, a good, strong stockade. That news affected very differently Canonicus and his warriors. "They are men of deep counsels," said the braves. "It is best we live at peace with them." But Canonicus heard with a grim satisfaction of that stockade. "They fear us, then," he said. Also it waked in him a strong impulse to defy them. And, though he said naught then to his awed warriors, he laid deep plans within himself, resolving he would make true his prediction, and white men should not dwell on the Massachusetts shore.

"Let them trade with our brothers by the eastern shore, if they will," he said, "but let them not wall any lands about, as if they would say, 'These are ours.' Let them beware!"

And he resolved to closely watch the white men on the east. Also, day by day, thoughts of carnage grew more vivid in his savage mind. Steadily he advanced his tribe in warlike arts, looking toward extinction of the white man.

It was early in the second September of the Pilgrim folk on the Massachusetts coast that Canonicus had his next report of progress at Patuxet. No vital change had been, it appeared, in the settlers' condition. "I marked," said the fleet Narragansett, "that many were lean, and toiled as if they were feeble, both men and women."

The eyes of Canonicus gleamed.

"Stranger and stranger appear the ways of these people," went on the runner. "As the sunshine wanes, the women go often into the woods to harvest herbs, even as do our own. There they take of the sassafras bark, but also of roots, and many that have no virtue, either as food or in healing. I could not but laugh, that they should pass by so many herbs that are food and pause to gather those that are neither food nor balm. They stooped often to dig for the arbutus, the violet and for roots of climbing vines that bear no fruits for man, but spend themselves in sterile bloom. I met Squanto, their Patuxet man—for from their clearing—and he told me the white women search for the roots of these things, to plant them about their dwellings. I asked of him what powers lurk in such herbs, but he made reply, 'I know not. Solely they do it because they love such herbs.' I said nothing, yet thought, 'Ha, Squanto, a Narragansett looks deeper than you!' And when he had gone his way I returned to their tall stockade, even before the sun rose. By the stream—so there would be no tracks—I crept upon their walled-in lands at the side where stand their dwellings. Boldly, O chief, did I peep over the stout, high fences that hem their houses about, each in little space. And there I saw after what manner they toil, these pale-faced women."

He laughed.

"Some had taken many of such flowering herbs and had set them around their houses in cunning device. I marked the tall-growing honeysuckle, begininng to run upon thongs by their doorways; the purple thistle, the goldenrod and the yellow-eyed white daisy were full in bloom. Even the trailing arbutus they had brought, to grow reluctant within their palings; and violet leaves I saw in tidy rows beneath their eaves, newly planted. 'Surely,' I said, 'there are virtues in these herbs that white man knows of, and by knowledge more than ours he is strong. I will wait and see what I shall see.'"

The runner paused for a deliberate drink from the stream, and the warriors waited, thinking a tale would follow.

"As the sun came up, and smoke began to ascend from the cunning smoke-vents over their houses, I dropped behind the palings and watched at a knothole. Presently came forth the lord of the dwelling where I lurked, and began to cleave firewood. Three children came also and sprang about at mysterious games, and one stooped and plucked of the late-flowered daisy. And now I thought I should see whereunto they use these herbs.

"But the child only held it beneath the eyes of the other, till he smiled, and then tossed it away. Ere long came the woman to the doorway, and she, too, when they held up the small white flower, smiled—made laughter with the face only, not with the voice—and spake with them. At that the eldest child went within, and returned with a fair, bright bowl, strange in design. Then the woman and her young filled it with blossoms, both purple and white. This the woman bore before her lord. And lo! he ceased to cleave the wood and made, with the rest, the laughter of the face. Then they bore the bowl within. But whereunto they use the flowers I know not, nor why they plant the violet, the arbutus, the honeysuckle."

Canonicus called his newly-taken squaw, and she came to him with eager eyes. He stooped and plucked a white daisy and placed it in her hand. What he would have asked her then the tall chieftain nearly forgot, for before he spoke his lovely Daugher of Daybreak also smiled.

No, she knew of no subtle virtue in the common weed, she told him—"save that when my husband breaks a flower and places it in my hand he makes me happy."

Her voice was low, and his warriors had not heard. Canonicus turned to them, standing proudly with the young girl at his side.

"The woman teaches me that there is a virtue in the weed," he said, his voice ringing vibrant. "It may be this white people have a wisdom it is good to seek. Let us suffer them to abide in peace on the eastern shore, my people."

Bits of Fun for Everyone

The Best Ever.

Walker—He made the best after-dinner speech I ever heard.

Wilkinson—What did he say?

Walker—Waiter, give me the check.—Exchange.

Accident to a Shirt.

Husband (looking up from the paper which he has been reading): "I see Thompson's shirt store has been burned out."

Wife (slightly deaf): "Whose?"

Husband: "Thompson's shirt store."

Wife: "Dear me, who tore it?"—Blighty (London).

Perfectly Reproduced.

Up at our boarding house there are two children, a boy and a girl. The boy is the living photograph of his father, and the girl is the very phonograph of her mother. —Ohio Sun Dial.

The Other Fellow.

Pat arrived home looking the worse for wear. One eye closed, nose broken, face bruised and several other decorations.

"May the blessed Saints preserve us!" said Bridget, his wife.

"Thot Dutchman Schwartzheimer," said Pat; "'Twas him that did it."

"Shame on you," said Bridget. "A big spalpheen loike you to let a little Dutchman the size of him to bate you up! Why——"

"Whist, Bridget," said Pat. "And don't you be speakin' disrespectfully of the dead."—Selected.

As Usual.

Two very pretty girls met on the street and kissed each other rapturously. Two young men watched the meeting. "There's another of those things that are so unfair," said one.

"What is that?" said his friend.

He pointed to the scene: "Women doing men's work!"—Selected.

Just Like Sister's Feller.

"What time shall I come over to the house, Mary?"

"Oh, I don't know, come after dinner."

"Well, that's what I was comin' after."—Brown Jug.

Plying His Trade.

Cop: "What is your business?"

Prisoner: "I am a locksmith."

Cop: "Well, what were you doing in that gambling house we just raided?"

Prisoner: "When you came in I was making a bolt for the door."—Punch Bowl.

Purple.

Miss Graham: "I'm worried about my complexion, doctor. Look at my face."

Doctor Pills: "My dear young lady, you'll have to diet."

Miss Graham: "Oh! I never thought of that! What color do you think yould suit me best?"—Exchange.

It Was.

She: "Do you remember when you were first struck by my beauty?"

He: "I think so. Wasn't it at the masked ball?"—Boll Weevil.

A Straight Face.

Father—I never smoked when I was your age. Will you be able to say that to your son when you grow up?"

Willie—Not with such a straight face as you do, father. You beat me there.—Good Hardware.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

To my mind one of the most important individuals in America is the school teacher. She stands in place of the parent. She represents the state. She visualizes the spirit of America.

Dr. Copeland.

For the parent she guards the health, drills the mind, instructs in manners, and has much to do with inculcating high ideals. For the state she teaches knowledge of and respect for law. For our country she teaches loyalty and love.

All in all, outside the home itself, the teacher is the most powerful factor in all the molding influences of our lives. She is the ally and exemplar of the teachings of the church. For the sake of home and church and state we must pray that the teacher may live up to the tremendous responsibilities resting upon her. I have firm faith that she will not disappoint us. It is the teacher who first discovers the nervous and mental defects of her pupil. It is important that she should be observant of the actions and disposition of the child, especially if these are different from the usual conduct.

There are many things to be observed. Nervousness may be indicated by twitching of the face, sudden and spasmodic movements of the limbs, hands, feet and fingers. The child has difficulty in buttoning his clothing. Writing and drawing may be increasingly difficult. He may drop his books and spill the ink. Extreme restlessness, weeping, irritable temper and loss of attention are the symptoms of nervousness.

Whenever a child who has been attentive, studious and intelligent, becomes listless, dull and stupid, there should be an immediate report to the parent. In schools where medical inspection is practiced, the school doctor will advise. If there is no school doctor, the family doctor should be consulted at once.

A change of this sort in the demeanor of the child is a sign of some physical disturbance. It may be a trifling and easily removed trouble, but, no matter what its nature may be, it is a condition which should be removed at once. Any nervous or mental trouble, founded on a removable cause, should be dealt with at once or permanent loss of efficiency will be suffered.

There are simple causes for much backwardness and nervousness. Poor vision, or eyestrain unassociated with lowered sight, may be productive of all sorts of unpleasant nervous and mental disturbances.

Unhappiness or mistreatment at home may affect the mind and health of the child. The tactful teacher may be helpful in these rare but miserable cases.

The lack of parental oversight as regards sleep, proper food and ventilation may have much to do with the nervousness and mental lagging of the child.

I am sure the teacher will do her duty and make note of all the things having to do with the welfare of the pupil. She is the eye of society. She stands on the watch-tower. The social and physical well-being of these children is in her hands.

MANUFACTURE OF CORN STARCH.

The manufacture of corn starch has grown to such proportions in the United States that the industry now consumes about 50,000,000 bushels of America's great crop each year. From each bushel of corn the average manufacturer makes 33 pounds of corn starch, and in 1921 the 10 largest concerns made nearly 1,650,000,000 pounds of this product, which was more than 90 per cent of the total produced that year. This industry, which began in the United States in 1844, has been increasing greatly in recent years. By 1880 the factories had reached a productive capacity of 230,000,000 pounds and practically all of it was consumed here. By 1921 there were nearly 50 plants and $6,000,000 worth of the output was exported. These figures are from a report recently made by the department of agriculture as a result of an investigation.

SEED GROWING.

Seed growing is an industry in itself.

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

Dear Family Circle: It seems fitting that I should send you a Thanksgiving message this year of 1923. It is the time of year "When the frost is on the pumpkin and the fodder's in the shock," and as the evenings grow longer you will gather with your families around the evening lamp. There will be time to exercise the imagination and direct the mind back to that first Thanksgiving day celebrated in November 304 years ago.

It requires a good bit of imagination to picture the landing of those Pilgrims in Plymouth harbor on the 16th of November, 1620. Mrs. Hemans pictures the scene quite clearly as she tells of the landing in her poem long ago. Here are a few verses:

The breaking waves dashed high
On a stern and rock-bound coast,
And the woods against a stormy sky
Their giant branches tossed.

And the heavy night hung dark
The hills and waters o'er,
When a band of exiles moored their bark,
On the wild New England shore.

Amidst the storm they sang,
And the stars heard, and the sea;
And the sounding aisles of the dim woods rang
To the anthem of the free.

Ay, call it holy ground,
The soil where first they trod;
They left unstained what there they found—
Freedom to worship God.

They were accustomed to the mild climate of England and Holland and were unprepared for the bleak New England winter.

It is hard to imagine such a condition as they faced. They had no shelter of any sort on shore and they all must live on the crowded Mayflower until some sort of place could be built. For over two months they had been sailing on rough seas, 103 of them on that small ship of only 189 tons burden.

Many of the men who made up the party knew nothing of woodcraft, but within a week after they landed every one who was physically able took his ax and began to cut down the trees with which to make houses.

In order that as few houses need to be built as possible the company were divided into 19 families. Some of the men were unmarried.

It was very poor houses they were able to build with few tools and unskilled hands and they really were little more than shelters.

Edwin Markham, in his fascinating story of "The Real American," says: "Although they had the untaxed wilderness to draw from for fuel, yet were the Pilgrims cold, because their houses furnished such poor shelter. Terrible illness followed and almost daily death visited their little settlement; at one time there were but seven men who could move about for the care of the sick; the stricken died miserably, unwatched and unattended. Four families, comprising 12 persons, were wiped out absolutely. Of 18 wives who came over but four remained."

But notwithstanding all this, when the Mayflower returned to England in the spring, after that terrible winter, not a man, woman or child would return with it.

The year that followed was also full of privation and it was a great struggle to raise enough to take them through the second winter. It seemed at times as if the crops would fail, but when the harvest was finally in they were so grateful that things were as well as they found them, that their governor, William Bradford, appointed a day for Thanksgiving and praise and he has the distinction of making the first Thanksgiving proclamation of the day we have celebrated ever since.

We take everything that we enjoy so easily in this wonderful country; we slip along with a sort of feeling that because we are so great nothing very desperate can possibly happen to us; we have a sort of unexpressed conviction that God will look out for us, come what may, and we needn't take much of anything that happens so very seriously.

I wonder if we are not somewhat too indifferent concerning questions of vital importance to the welfare of our country?

A week or two ago I head a lecture by a man prominent on the lecture platform and he spoke for an hour at the State Federation of Women's Clubs of Wisconsin on the importance of respect for the laws of this or any country. The central thought of the lecture was the indifference of a part of the citizens of the United States to the 18th amendment to our Constitution. He quoted from one of the notable speeches of the great Lincoln as follows:

"I believe this government can not endure permanently half slave and half free. 'A house divided against itself can not stand.' I do not expect the Union to be dissolved—I do not expect the house to fall—but I do expect it will cease to be divided. It will become all one thing or all the other." Then the speaker went on to say that "no government can endure permanently where part of the people are law-abiding and part are not law-abiding. When the time comes in the life of any government when some of the citizens rise up and say "we will not obey the law as it is laid down in the Constitution," and continue to act unrestrained according to this declaration, it is proof that the government is weakening and its death knell has sounded."

He continued: "I have no quarrel with those who do not like the Constitution as it now stands; each one has a perfect right to his opinion, but if he wants a law changed there is a perfectly legitimate way to have it changed. This is a democracy and every adult now has a voice in making the laws. If a change is desired let those desiring such a change go about it in the proper way.

"But so long as a law is written into our Constitution it is the duty of every loyal American not only to obey the laws, but also to lend his influence to comple every other one to obey them."

The question of this indifference to our laws and the riding with a high and mighty style over the 18th amendment is occupying the attention of all the great magazines. They are sending their own correspondents here and there to settle down and live in places where the law breakers are the boldest, till they can make sure beyond any doubt of the true condition of things.

I know there are those among our readers who do believe that we should have light wine and beer because they have written and so expressed themselves. The question is being handled without gloves by so many of the magazines whose circulation is in the millions that if people continue to remain ignorant it isn't the fault of the press.

Thanksgiving is a good time to take account of our blessings and to examine our conduct to discover if we are living day by day as true Americans should. As we sit down on Thanksgiving day in our comfortable homes, and at our dinner tables loaded with every sort of good thing to eat, let us not forget through what danders and hardships this land of plenty was secured for us. Surely it is the business and the duty of every one of us to maintain the standards of honor and righteousness that were the very foundation stones of this republic.

I wish for you all a happy day. Your friend,

ALICE W. BARLAND.

BRIGHTEN IT UP.

Any one who realizes how largely dark and gloomy walls are responsible for dark and gloomy thoughts will be very careful to make the kitchen workshop as bright and cheerful as possible.

On This Day of Thanksgiving

look through your Kodak films. You will find many which are worthy of enlargement — many which will make excellent Xmas gifts, and thus give an individuality, a real close personal touch, to your gift.

Then send for our price list of **Art Proofs** and **Old Master Art Proofs**—the perfect forms of enlarged Kodak prints.

Now specially priced for the holidays, **Art Proofs** are the most beautiful form of finished enlargements, and either hand colored in oils, or in plain black or Sepia, are worthy of a place on the walls of any home.

Send name and address—price list will be sent by return mail.

Abraham Fur Co.
256 Main Street — 46 YEARS IN BUSINESS — St. Louis

LET US TAN YOUR HIDE.

Horse or Cow hide, Calf or other skins with hair fur on, and make them into coats (for men and women), robes, rugs or gloves when so ordered: or we can make your hides into Oak Tanned Harness Slaughter Sole or Full Leather; your calfskins into Shoe Leather. Colors, Gun Metal, Mahogany, Russet or lighter shade. Calfskins tanned in the lighter shades of shoe leather, also make elegant and covers; great for birthday, wedding and holiday gifts.

LET US FIX YOUR WORN FURS

freshen, repair and reshape them needed, Furs are very light weight, therefore it would cost but little to send them in to by Parcel Post and get our estimate of cost; then will hold them aside awaiting your decision. If you say "go ahead," very well; we will do and hold them free of storage until you want them. If you say "no," we will return them post-paid.

Our illustrated catalog style combined gives a lot of useful information. It tells how to take off and care for hides. About our safe dyeing process on cow and horse hides, calf and fur skins. About dressing fine fur skins and making them into neckpieces, muffs and garments. About taxidermy and Head Mounting.

High Points in News of the Week

When congress convenes early next month it will receive from President Coolidge what is expected to be one of the shortest presidential messages ever delivered by a new president at the opening of a new session of congress. The president has been working on this message for several weeks, but has given no definite information as to its recommendations.

The new congress will face a large number of important problems when it convenes, notable among which is that of tax reduction. Foreign relations, including the matter of participation in the world court as recommended by the late President Harding, is a matter involving numerous difficulties. Prohibition enforcement, tariff legislation, the soldiers' bonus, agricultural legislation, the proposed constitutional amendment for equal rights for women and so on are other matters that will demand attention.

* * *

A statement from Washington says that President Coolidge feels that the Muscle Shoals nitrate project should be developed either by the government or by private enterprise as a means of guaranteeing the supply of nitrates in time of war and of fertilizer in time of peace. He is reported to have said that rather than permit the plants to lie idle the government should operate them even at a loss unless congress sees fit to lease them to a private concern. He has made no public recommendation with reference to congressional acceptance of Henry Ford's offer to lease the project.

* * *

Chairman Campbell of the special advisory committee of the department of the interior, in reviewing the investigation of the reclamation service, declares that in his opinion the government must adopt a new policy in its reclamation program and grant a new start to probably one-third of the settlers on reclamation projects. He bases this conclusion on the ground that too short a time has been granted settlers for the making of their payments, that in some cases worthless land has been included in projects and that on some projects the construction costs have been excessive.

* * *

The federal farm loan board has announced the sale of $10,000,000 worth of bonds of the international credit banks, the object being to raise that much money to complete the financing of this year's crops. This makes a total of $30,000,000 obtained by the credit banks through the sale of its securities. The bonds bear 4 1-2 per cent interest and mature in six months. The agricultural credits act appropriated $60,000,000 as the bank's original capital. So far loans to farmers through farm organizations or otherwise have totaled about $32,000,000.

* * *

Dr. Heinreich F. Albert, who was minister of the treasury under Chancellor Cuno, has accepted President Ebert's invitation to form a new cabinet.

Dr. Heinreich F. Albert, the new German chancellor, gained notoriety in the United States in the early part of the World war. In 1915 he was commercial attache of the German embassy in Washington and during that period and later was charged with engaging in extensive propaganda in behalf of Germany. Among his assistants were Captain Von Pappen and Captain Boy-ed.

* * *

Former Governor Walton was indicted last week by the Oklahoma grand jury on seven counts charging diversion of public funds, intimidating an officer and preventing the assembling of the lower house of the legislature. Six of these alleged acts constitute felony if Walton is found guilty. Governor Walton was recently impeached by the Oklahoma senate and removed from office.

* * *

A delegation of Filipinos has arrived in this country for the purpose of presenting to President Coolidge an appeal for the independence of the Philippine Islands and the setting up of a separate government. The delegation urges the removal of Governor General Leonard Wood, the main ground of the application being that Governor Wood represents the militarist element.

* * *

The German cabinet, headed by Dr. Stresemann, resigned last week following the failure of the reichstag to give it a vote of confidence. President Ebert nas accepted the resignation and will ask another leader to form a new cabinet.

* * *

Senator Gooding of Idaho announces that when congress convenes he will reintroduce his bill for a government price guarantee of $1.75 a bushel for wheat.

* * *

Former Premiers Lloyd George and Herbert Asquith of Great Britain, who have been political enemies though both members of the liberal party, have settled their differences and are working together in the preelection campaign now being waged in England between the liberals and the party supporting Premier Baldwin in his foreign policy.

* * *

After several weeks' negotiations officers of the mine owners' organization in the Ruhr district of Germany have signed an agreement with the French authorities occupying that region under which the Germans will resume mining and delivering coal to France, as provided in the treaty of peace. This is considered one of the most important acts since the government authorized cessation of the program of passive resistance to the French.

* * *

The tension between Great Britain and France has been greatly increased of late owing to the absolute refusal of the French government, headed by Premier Poincare, to alter its policy in compelling Germany to meet its reparation payments. England has maintained its attitude that the French policy is too severe and is leading to the utter collapse of Germany and her total inability to meet her obligations. France, on the other hand, insists that nothing but physical compulsion will secure results from Germany. For a time recently it seemed almost certain that the alliance between England, France and Italy would be terminated, leaving France standing alone, with the other nations giving moral support to Germany in her fight for more liberal terms of settlement. At a meeting of the council of ambassadors, however, an agreement was reached by means of which the break has been averted. Nevertheless, Great Britain and France are as far apart on the policies toward Germany as ever. That Premier Poincare is not standing alone in his attitude is indicated by the fact that the French chamber of deputies last week voted confidence in him and his policy by a vote of 505 to 70.

Recently the ex-crown prince of Germany, Frederick William, returned from his exile in Holland to Berlin. It was reported that the former emperor was also contemplating a return and this led to the belief that a definite movement was on foot to restore the Germany monarcny with the Hohenzollerns again on the throne. International agreements, however, are reported to have been reached making the return of the former kaiser quite improbable. A report also says that the former crown prince has issued a public statement renouncing his right to the German throne, and upon the basis of that renunciation the allied governments have agreed to permit him to remain in Germany.

SMALLER FARMS IN NEVADA.

The most striking decrease in average size of farm in the United States between 1910 and 1920 took place in Nevada, where farms decreased from an average size of over 1000 acres to about 750 acres in size. Strange to say, in near-by Arizona and New Mexico occurred a still more striking counter-trend toward larger farm units the size of the average New Mexico farm jumping from slightly over 300 to slightly over 800 acres and Arizona from less than 150 to nearly 600 acres. Nevada's farms had averaged in 1910 the largest acreages held in the United States. In 1920 the average improved acreage per farm in that state was much greater, explaining the trend there toward breaking up of the large farm holdings.

Farm Business and Markets Outlook

(Continued from page five.)

Seed and Feed.

The clover seed market has been irregular, the principal influence being large purchases of foreign seed, which are already beginning to arrive. Since foreign seed does not thrive so well as domestic, the latter should command a big premium. Growers of clover seed are selling more slowly than last year.

Wheat feeds were weak in eastern markets, but western points are not pressing offerings, so that quotations have held.

Hay Markets Higher.

The better grades of hay are in good demand, while receipts are light and prices advanced last week. Lower grades are moving sluggishly. The alfalfa hay crop was further reduced by wet weather and frosts during the final cutting in the southwest.

Prices per ton in carlots: Chicago—No. 1 timothy, $27@28; No. 2, $24@26; No. 1 light clover mixed, $25@27; No. 1 clover, $23@25; No. 2 clover, $18@20; No. 1 alfalfa, $20@30; upland prairie, $18@21; rye straw, $14@15; oat and wheat straw, $12@13.

Fresh Eggs Higher.

Receipts of fresh eggs are steadily declining, as is usual during November and December, the low months in production, and prices advanced last week. Consumption has been sustained, although higher prices may curtail it to some extent, and the market appears in a firm position. With fresh eggs higher up the price ladder, storage eggs are proving more desirable and are moving into distributive channels at a more rapid rate. During the first half of the month the movement out of storage at the four leading cities was greater than during the same period last year, which shows a decided improvement.

Poultry prices are lower, as receipts are in excess of consumptive demand, with the flush season of receipts still to be encountered. Storage holdings for the entire United States on November 1 were more than 20 per cent heavier than at the same time last year.

Latest quotations: Chicago—Eggs—miscellaneous, 45@50c; dirties, 24@26c; checks, 20@23c; fresh firsts, 48@52c; ordinary firsts, 35@42c; live poultry—Hens, 18c; springers, 17 1-2c; roosters, 13c; ducks, 19c; geese, 17c; turkeys, 28c.

Butter and Cheese.

Butter prices were practically unchanged last week, with top scores slightly higher, receipts of the better scores were light and the tone of the market was firm.

Trading in cheese was quiet last week, with few buyers willing to take on additional stocks in spite of unchanged to lower prices and the willingness of many dealers to make concessions.

Fruits and Vegetables.

Receipts of potatoes at the leading consuming markets remain liberal and shipments from producing sections increased slightly last week. Prices declined, especially on northern round whites, which are quoted at range of 85 cents to $1.10 per 100 pounds for sacked and bulk United States No. 1 at Chicago. Idaho Russets are quoted at $1.85@1.95.

Apple markets were practically steady last week, with middle western A 2 1-4-inch Jonathans and Northern Spies quoted at $5.50 to $6 per barrel in consuming markets. Washington medium to large extra fancy Jonathans are quoted at $2 to $2.25 a box at Chicago, fancy at $1.75 to $2, extra fancy Delicious at $2.85 to $3.15, fancy $2.50 to $2.75, extra fancy Romes at $2.25 to $2.50 and fancy at $2 to $2.25. Shipments of apples from producing sections are falling off rapidly.

Stocks of apples in storage on November 1 comprised 4,121,000 barrels, 5,358,000 boxes and 1,101,000 bushel baskets, compared with 4,138,000 barrels and 4,164,000 boxes last year. Holdings in the Pacific coast states are 64 per cent greater than a year ago. Most of the increase is said to be in the Yakima district.

LATEST QUOTATIONS

The Live Stock Market.

Just Folks

The chief obstacles to successful co-operative farming are human ignorance and human selfishness. So said a man to me who has had wide opportunities for observation and is a pretty shrewd observer of current farming conditions.

One might say that this man's conclusions are equally applicable to every line of progress among men. That does not, however, prevent its immediate and particular application to cooperative marketing. Of course, human selfishness is partly due to ignorance,

It is a far cry to the old precept, "And whosoever will be chief among you, let him be your servant"; and yet it might be interesting to search out to what extent the sentiments of this old precept are blended into all successful cooperative marketing enterprises.

Cooperative discussion among us is making strangely familiar certain fundamentals which have been more or less in the discard. We have neglected and largely forgotten the fundamental that there is more happiness in common weal than in individual distinction; that the welfare of the many is better than riches and honor and preferment for the individual.

Family life has been amiss in this respect. The precocious child has been pampered. Premature brillancy in one has caused the undue neglect of the other children. If Johnny shows signs that he may one day be president of the United States he must be given opportunities in education which will deprive his brothers and sisters of a fair share of the family attention.

So far as the individual ambition is directed to community welfare, so far as he who would be chief makes himself the servant of all, so will the cooperative idea become permanently engrafted upon our marketing methods. E A S

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4326. Boy's Coat. Cut in 5 sizes: 8, 10, 12, 14 and 16 years. A 12 year size requires 3 1-8 yards of 44-inch material. Price 10c.

THE YOUTH'S COMPANION, BOSTON, MASS.

Why you should
WEAR Knit UNDERWEAR

Knit Underwear Protects Your Health

BECAUSE, being *knitted of soft-spun* yarns, it is porous and keeps a thin layer of warm air next your body, so protects you from sudden chilling.

Because you can select a weight that suits your needs—medium for early fall—heavy for winter. And when you do perspire, the moisture is quickly absorbed and evaporated; your body stays dry and you are less likely to catch cold.

Knit Underwear is Comfortable

It is elastic, "gives" freely, never binds—fits well and your outer garments fit better over its snug surface.

There's a style, a weight, a fabric that's just right for your comfort and health this fall and winter.

Made in every style and every weight for every member of the family.

Send for booklet, "First Principles of Underwear and Health". It's free. Address ROY A. CHENEY, Sec'y, 65 Fifth Avenue, New York, N. Y.

ASSOCIATED KNIT UNDERWEAR MANUFACTURERS OF AMERICA

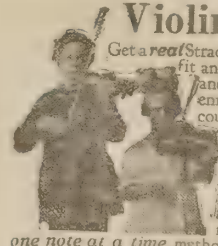
Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade and Costs Really Nothing. Read!

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade to bring you top prices. "Dandelion Butter Color" costs nothing because each ounce used adds ounce of weight to butter. Large bottles cost only 35 cents at drug or grocery stores. Purely vegetable, harmless, meets all state and national food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless.
Wells & Richardson Co., Burlington, Vt.

Violin Free with lessons



Get a *real* Stradivarius model violin outfit and *famous* Imperial note and tuning chart *free*, by enrolling for our complete course of written and *illustrated* violin lessons. **Save time & money.** If you can read *plain* English you can learn to play *standard note music* quickly by this interesting *new short one note at a time* method. *Simple* as *A B C. Lessons only cost. Easy terms.* Successful pupils 8 to 70. Number of free violins limited. Write *today.*

When you write to advertisers be sure to state that you saw their ad-

Aunt Nellie received a nice letter from another Washington girl. Her name is Ellen Olson. Ellen says that for some time she has been going to write to the Corner. Welcome to the Corner, Ellen. This new cousin is in the seventh grade. She has two sisters. They have rabbits, cats, goats and a dog for pets.

Dear Aunt Nellie: I received The Junior Farmer about a week ago and I thank you very much. I certainly do enjoy it. I am in the sixth grade and am 11 years old. My birthday is June 18.—Audell Wilson, King county, Wash.

Aunt Nellie was glad to hear from Hilda Wagner, a little cousin who lives in Adams county, Wash. Hilda has a dog called Bowser for a pet.

Birthday Greetings

THURSDAY, November 29—Aline Owings, 11 years old; Anna Rainbolt, 10.

FRIDAY, November 30—Cora E. Brown, 9 years old; Thelma Miller, 9; Virginia Vollmer, 11.

SATURDAY, December 1—Josie Peretti, 10 years old.

SUNDAY, December 2—Mildred Meyers, 9 years old; Frances Worth, 11.

MONDAY, December 3—Louise Ross, 10 years old.

TUESDAY, December 4—Marjorie Fike, 11 years old; Paul Reed.

WEDNESDAY, December 5—Viola Johnson, 10 years old; Saddie Mize, 11; Rosemary Van Amburg, 9; Jessie Mikkelson, 8.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer.

Edla Kynsi, Terence Redd, Hulda E. Giese, Harriet Cook, Mary Neiland, Leonard Cook, Valma Stevens, Alvin Stevens, Angeline Peplinski, Luella Eaton, Helen Cyran, Margaret Moe, Arthur Moe, Mary Rench, Florence Geiger, Alice Alberta Hammond, Mary Louise Roser, Lois Owens, Florence Stenson, Aili Kynsi.

BEDTIME STORIES

By THORNTON W. BURGESS.

PETER DOES A LITTLE BOASTING.

Pray never boast; it doesn't pay.
You're bound to come to grief some day.

Peter Rabbit ought to have known that. Peter has lived long enough and has seen enough of the great world to have learned that boasting is a most foolish habit. But Peter is just like a lot of people who never learn by experience. Boasting is a habit, and, like most bad habits, is very apt to stick. The funny thing is that most boasters have no real reason for boasting. They do something fairly well, and then they boast about it. Sooner or later they find that some one can do that thing much

"Who can jump better?" demanded Peter again.

better and that their boasting has only made them look foolish in the eyes of their neighbors. The people who can do things best never boast. There is Jimmy Skunk. Jimmy isn't afraid of anybody, but he never boasts that he isn't afraid. He can make great big Buster Bear step out of his path, something that none of the other little people of the green forest can do, but Jimmy never brags about it. And there is Flitter the Bat, who is the only animal who can fly, but he never boasts of that.

It is quite right to feel an honest pride in what you can do, but it is best to keep that pride to yourself. Old Mr. Toad can sing beautifully, but it was a long, long time before his neighbors found it out. You see, he never mentioned it himself. When his neighbors did find it out they thought a great deal more of him than they would have if he had gone about bragging of what he could do. But Peter Rabbit hadn't learned this important lesson. I don't know that he has yet. You know Peter is a very good jumper. His long hind legs were given him for jumping. One day he was practicing jumping just to see how far he could jump. Jimmy Skunk happened along and stopped to watch him. Peter made the longest jump he had yet made, and Jimmy cried, "Good jump, Peter!"

"Yes," said Peter, "that was a very fair jump. Let's see you beat it."

"Me beat you jumping? Stop your joking Peter," laughed Jimmy. "Jumping doesn't run in my family the way it does in yours. I believe all the rabbit family are good jumpers."

"The best in the world!" replied Peter proudly.

Jimmy chuckled. "Peter, you're bragging and you ought to know better. Yes, sir, you ought to know better," he declared.

"Who is there can jump any better than my cousin, Jumper the hare?" demanded Peter hotly. "It is because he can jump so well that he got his name."

Jimmy chuckled again. It was a good-natured chuckle, but it provoked Peter. He felt that he was being laughed at, and no one likes to be laughed at.

"He's a good jumper," admitted Jimmy, "but I wouldn't call him the best jumper in the world if I were you, Peter, because you are likely to be laughed at."

"Who can jump any better?" demanded Peter again.

"Think a minute, Peter. Think a minute," replied Jimmy.

"There isn't anybody," declared Peter, who was too excited to think. "My cousin Jumper is the greatest jumper in all the green forest or on the green meadows. I know it!"

"I tell you what," said Jimmy, "you have Jumper the hare over by the tall pine tree on the edge of the green forest at sundown tonight and we'll have a jumping match there. You can be the judge, and then you can not complain of unfairness."

"Who are you going to invite to jump?" asked Peter suspiciously.

"Never mind, Peter, never mind. I'll have some jumpers there," retorted Jimmy. "Of course, it doesn't make any difference to you as long as you are sure that Jumper the hare is the best jumper in the world."

Of course, Peter couldn't say a word after that and so he agreed to get his cousin, Jumper the hare, and be on hand at the tall pine as soon as jolly, round Mr. Sun should go to bed behind the purple hills.

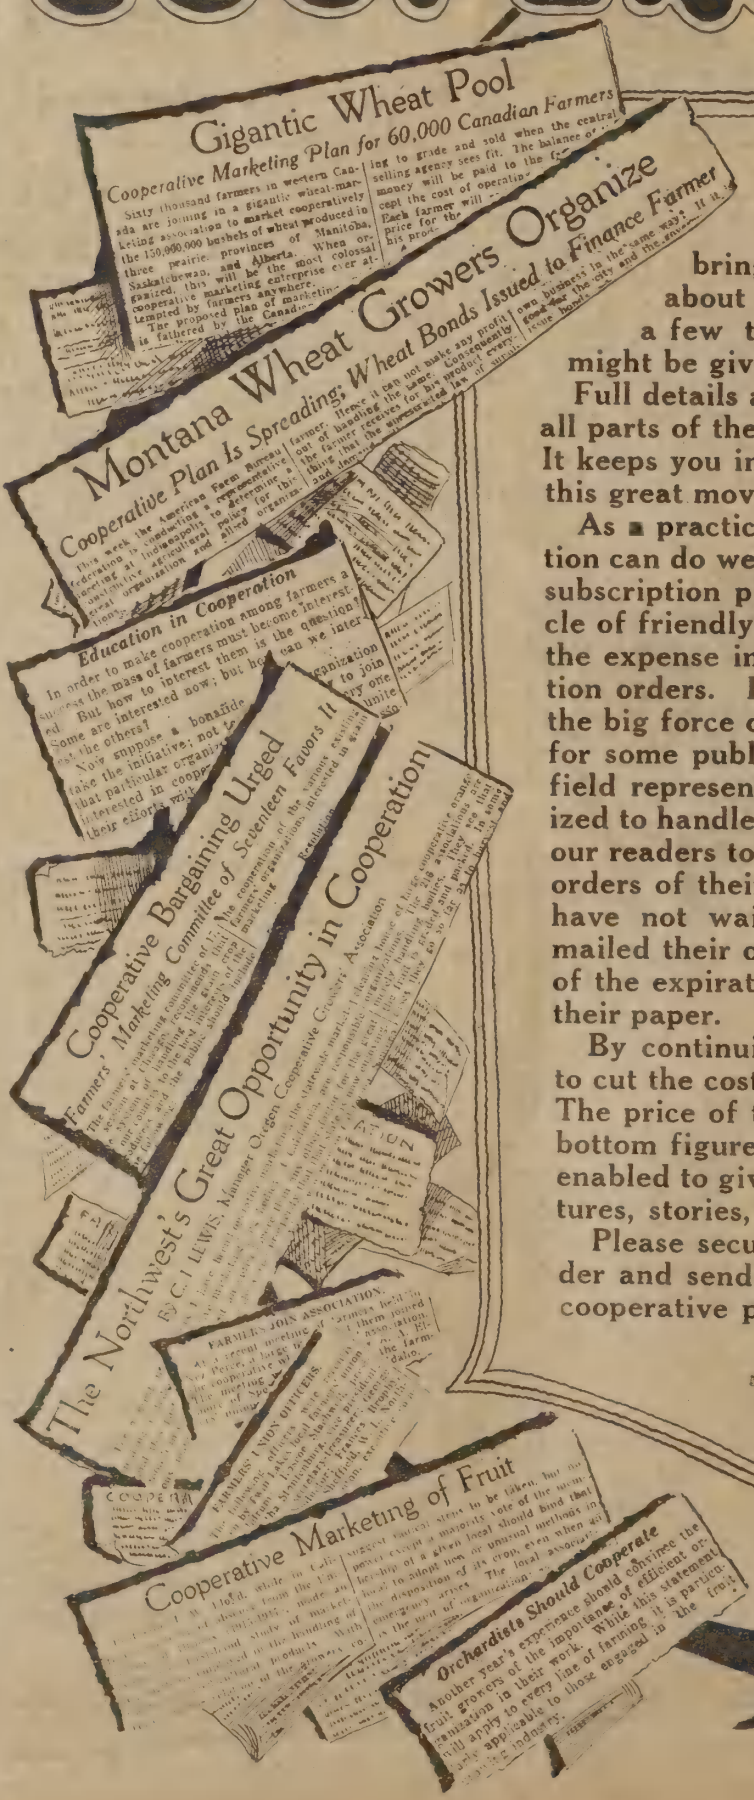
ALL ABOUT COOPERATION



One of the highly important services which The Washington Farmer renders to its readers is bringing you the latest news each week about COOPERATION. As examples, a few typical headlines from scores that might be given are reproduced herewith.

Full details about Cooperative plans adopted in all parts of the state are given in this magazine. It keeps you in complete and accurate touch with this great movement.

As a practical demonstration of what cooperation can do we point with pride to our cooperative subscription plan. With the help of our big circle of friendly readers we have cut away much of the expense in securing and renewing subscription orders. For example, we have eliminated the big force of subscription agents which travel for some publications, only retaining the regular field representatives, who are, of course, authorized to handle subscription orders. We depend on our readers to send in their own renewals and the orders of their neighbors with their own. Many have not waited for a notification, but have mailed their orders at least sixty days in advance of the expiration date on the address label of their paper.

By continuing such cooperation you enable us to cut the cost of subscription-getting to the bone. The price of this magazine is kept at the rock-bottom figure of $1 for five years; and we are enabled to give you big value in news, special features, stories, illustrations and departments.

Please secure at least one new subscription order and send it to us as your contribution to our cooperative plan.

COOPERATIVE RATES FOR THE WASHINGTON FARMER.

If your subscription is already paid in advance it will be extended from the date to which it is paid.

News for Breeders

NEW HERD SIRE.

Matador Segis Walker Gerben, Carnation stock farms' herd sire that takes the place of the head Segis Walker Matador, is a 5-year-old son of Matador Segis Walker, senior sire, out of Gerben Colantha Parthenea, the higher yearly record daughter of Dutchland Governor Sir Colantha. The latter, a bull that was once in service at Carnation and that is now in the herd of R. H. Tuttle of Walla Walla, Wash., is by Colantha Johanna Lad and out of a daughter of Hengerveld De Kol, she in turn out of a daughter of Sir Skylark Ormsby Hengerveld. Breeding daughters of "Dutch" to Matador Segis Walker has produced some of the finest animals in the Carnation herd, hence the same cross was selected with which to carry on this line.

BUYS JUNIOR BULL CALF.

During the week of the Pacific International show Otto Hoyer of Castle Rock, Wash., bought from O P. Dosland of Grays River, Wash., the Jersey junior bull calf, Pauline's Fern Lad, that stood ninth in a class of 28, paying $225 for him. The calf is by Pilot's Model Fern Lad, for which Mr. Dosland paid $100. The dam is a daughter of Pauline's Peer, the bull that has brought both type and production to the Grays River region, and she has a record of 508 pounds of fat in 308 days, with ordinary herd care, and is a beautiful cow. Mr. Hoyer saw the dam as well as the calf at the Pacific International and that was enough to close the bargain.

SELECT HERD NAME.

"Dondairy" is the herd name by which Holsteins bred on the farm of E. A. Donaldson of Chehalis, Wash., will be known, this prefix having been reserved for the Lewis county breeder by the national association. "River Park" has been reserved for James L. Bruce of Gold Bar, Wash., and "Alderdale" for U. F. Neiderhiser of Salem, Ore.

CURTIS' EXHIBITS AT CHICAGO.

F. M. Curtis of Fruitland, Wash., has shipped his purebred Berkshire boar Rivals Ideal to Chicago for exhibition at the International Live Stock show next month. Rivals Ideal was the grand junior champion boar at the Spokane Interstate fair this year.

A Thousand Eyes!

"A man strolling carelessly through the woods would be surprised to know how many eyes are on him, how many creatures screech in the covers and wait for him to pass. He might even imagine from the silence that he is alone. The tree woodsman knows that he is never alone, that his slightest move is watched by a thousand eyes. The stillness does not deceive him.

"But let something happen—a stick snap, or some creature break cover in sudden panic—and instantly all is commotion. The still woods wake to the call of voices, the beat of wings, the clatter of scampering feet."

(From chapter 15 of our new story, "The Red Lock," which begins next week, December 6.)

Potato Show

(Continued from page nine.)

easily recognized in its symptoms but fatal to yield.

The awards in the potato exhibit were as follows:

First prize, to Idaho, for both commercial and certified seed, went to Netted Gems Idaho Rurals and Bliss Triumphs, as did first in miscellaneous commercial varieties. Burbanks drew the first award in the Oregon display. Irish Cobblers in Montana's, early Ohios in Washington. Miscellaneous varieties, in British Columbia's exhibit, won in certified stock classes. The commercial classes won as follows:

Amazing new farm offer!

PAYMENTS SO SMALL YOU WILL HAVE A SURPLUS FOR COMFORTABLE LIVING

The Canadian Pacific Railway now offers you a Farm Home in Western Canada on a New Long-Term Plan of Easy Payments that is Extraordinary. The plan makes it possible to own a farm home without taking all profits to meet land payments and leaves a surplus for the comforts and enjoyments of life.

PAYMENTS EXTENDED OVER 34 YEARS —FIRST YEAR FREE USE OF LAND

Under this plan all the settler pays down is 7% of the purchase price—One year's free use of the land without any interest chargeable whatsoever. The balance of principal and interest will be amortized on an easy payment plan of 34 equal annual payments which makes the second payment fall due two years after the purchase of the land, which is figured on the basis of 7% (including principal and interest) of the balance of the cost of the land. For example, on a purchase of 160 acres costing say, $3,000, the down payment will be $210 and the annual payments, commencing at the end of the second year, will be $195.30. After 35 years the settler will get clear title to the land—unless, of course, he wishes to pay sooner, which is his privilege.

CANADA'S 1923 CROPS BEAT ALL RECORDS

In 1923 the wheat crop of Canada exceeded the 1922 crop by almost 100,000,000 bushels. In Alberta, the average yield was 26.5 bushels per acre and there were many individual cases where yields of 50, 60, 75 and 80 bushels were returned. Other crops showed a corresponding increase over previous years with equally high yields. These enormous yields on moderate priced land even at average prices for farm products have placed many farmers on the road to success.

NO TAXES ON IMPROVEMENTS

Taxes are moderate and there are no taxes on livestock, buildings, improvements, implements or personal effects. Good markets, modern schools, roads, churches, amusements make farm life in Western Canada desirable and attractive.

IRRIGATED FARM LANDS

In sunny Alberta—a district that is especially adapted to mixed farming and where irrigation has been proved beneficial—a vast irrigation system with an unfailing supply of water administered under the direction of the Government, has been constructed.

Irrigation in Southern Alberta—insures you a crop every year—increases your crops each year—makes you independent of weather conditions—produces great quantities of coarse grains, pastures, alfalfa, roots, etc., thus developing the livestock industry which is safer and ultimately more profitable than wheat farming—tends toward closer development, well-cultivated farms, good neighbors.

These lands are also for sale upon the same amortization terms as our other farm lands. Full details on application.

YOU CANNOT BUY UNTIL YOU INVESTIGATE

You must inspect the land before buying in order to judge of its fertility. Special inspection trips from points Chicago and West will leave on the first and third Tuesdays each month. Single fare plus $2.00 for the round trip. Let us arrange details. Send this coupon now. It will give you without obligation complete information on the new and amazing plan. These terms are as easy that you can own your own farm home—instead of renting.

EXPERIMENT STATION
URBANA ILL

The "U. S." Walrus. Its all-rubber surface gives you complete protection.

Don't track the barnyard into the house

The "U. S." Walrus slips on over your shoes— and stands muck and water like a boat

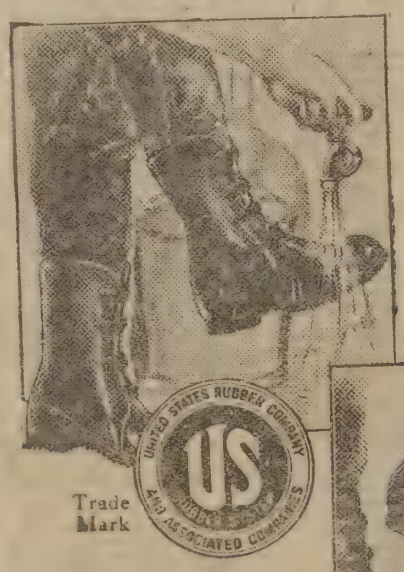
Slush — mud — barnyard mire — the "U. S." Walrus gives you complete protection from them — and keeps the kitchen floor clean in the bargain!

These tough, rugged, all-rubber overshoes can be slipped on or off quickly over your regular shoes. They are as watertight as any boot. And on the days when the mercury hugs zero their fleece lining keeps your feet warm and comfortable.

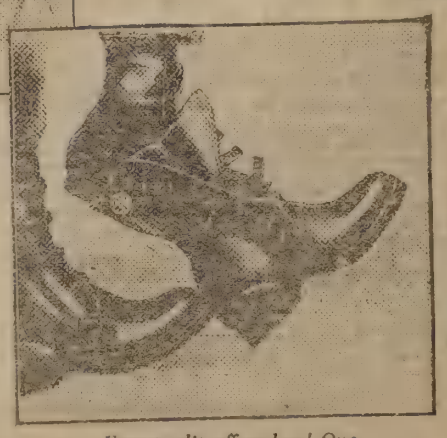
What's more—a good douse under the faucet washes the hardest caked mud off clean. Dirt can't stick to that smooth rubber surface!

When you're in and out of the house a lot you'll find the "U. S." Walrus the greatest footwear convenience you've ever known. It gives you perfect protection at a minute's notice—keeps your feet dry and the house free from outside dirt.

The "U. S." Walrus can be washed clean instantly. Its surface is as smooth and waterproof as a boot.



Trade Mark



Easy to slip off and on! One of the big convenient features of the "U. S." Walrus.

Other "U. S." footwear—all built for long, hard wear

"U. S." Boots, built so rugged they're famous wherever boots are worn—Rubbers and Arctics for the whole family—"U. S." Bootees, the all-rubber lace shoe to be worn over your socks—every kind of rubber footwear is included in the big "U. S." line.

Every single one is backed by 75 years of skilled experience. It will pay you to look for the "U. S." trade mark—the honor mark of the largest rubber organization in the world.

Let "Personal Service" Do Your Toy Shopping in "The Christmas Tree Store"

Personal Service

is eager to help you with any of your Christmas shopping. They have at their fingers' tips hundreds of interesting, new, inexpensive gifts, and you may be assured of expert advice—with that understanding touch—and of quick, efficient attention when you write to The Personal Service Bureau of The Bon Marche.

THE BON MARCHE'S TOY SHOP is a veritable Fairyland of toys—collected from all over the world. Hundreds and hundreds of new and old friends, from the jolly Noah's arks to the roguish new French dolls, who bob their hair and wear sophisticated frocks.

If you come into town, bring the children to meet Santa Claus—he has a toy for every boy and girl!

And if you want to choose your toys early while stocks are still full, and haven't time to come in, write to "Personal Service," and they will shop for you gladly.

12x30-Inch Ace Auto $7.95

With tilted seat, knuckle-joint steering gear, front axle underslung, rubber-tired wheels 10x3⅜ inches, and equipped with motor meter.

Lithographed Drums $1.00

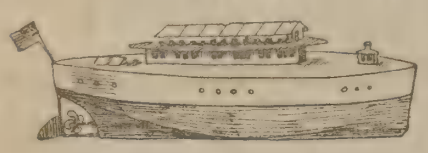
With black hoops and white cords—assorted designs. Hardwood drumsticks.

Balancing Clown Performers, $1.25.

Steel Dump Truck $6.45

Pressed steel frame, heavy steel body, fenders and running board, finished in black and red enamel, with hoisting device. 23 inches long.

Mechanical Boats $2.00



Trim boats to delight any seafaring chap. The boat is 9 inches long, 4 high and the propeller winds with a key.

"Junior" Drawing Master Half Price, $2.50

Contains eraser, 1 box paints, 1 box crayons and chalk and 1 sheet of drawing paper. Entertaining and instructive. Teaches children to draw. Size 16½x16½.

Drumming Bears $1.00

Cunning little bears, with drums slung about their necks, and drum sticks in their paws. Standing 10 in.

"Pirate and "Traveler's" Board $1.50

With 4 travelers, one spinner and score card.

Roly Polys $1.50

With moving head and jointed neck—are 15 in. high, 24 inches in circumference. Happy Hooligan, Policemen and Clowns in various comical postures.

Games at 25c

Included are Authors, Lotto, Tiddledy Winks, Old Maid, Peter Cuddle's Trip to New York, Swing Cards, Snap, Fish Pond, Lost Heir, Pitch-Em-Winks.

Games at 50c

Included are Paper Dolls, Magic Dots, Dominoes, Checkers, Fortune Teller Cards, Picture Puzzles, Number Frame, Bubble Outfits, Kindergarten Beads, Stencil Sets, Crayon Sets.

Games at $1.00

Parcheesi, Polyanna, Ring Toss, A B C Blocks, Bringing Up Father, U. S. Puzzle Maps, Embroidery Sets, Chess Men, Baseball and Checkers, Indian and Checkers.

Checker Sets $1.00

Of wood, these black and red men have fancy turned tops, 30 in the set.

Domino Sets $1.00

1x2-inch ebony finished, square corners, counter-sunk white dots, embossed back. In leatherette box.

Tracing and Stencil Outfit $1.00

Priscilla crayon coloring, tracing and stencil, consisting of a painting book, 3 dozen colored crayons and stencils.

Dressed Dolls $1.95

Fully jointed dolls with bisque heads, wig and moving eyes. Dressed in dainty frocks, shoes and stockings. Neatly packed for gift giving.

Doll Beds $1.95

Well made, finished in white, pink and blue, upholstered with juvenile pattern cretonne. 18 inches long.

Walking and Talking Dolls $4.50

Mamma dolls with painted hair and painted eyes—dressed in filmy little organdie frock, trimmed with lace. Stands 15 inches high.

Mamma Dolls at $5.00

16 inches high—have real hair wig, painted eyes, dressed in figured frock, shoes and stockings.

China Tea Sets $2.50

Six cups, saucers and plates, sugar and creamer, and tea pot with nursery pictures.

Aluminum Cooking Set, consisting of 8 pieces, **$1.50.**

Rock-a-By Baby $1.00

A most demure little doll in a white enameled rocking chair. Nicely dressed. Rocks for a long time, easily wound up.

Nested Blocks $1.00

The largest block is 5 inches square with eight nested inside boxes, decorated with pictures. Made of wood and covered with lithographed pictures.

"Parcheesi" Boards $1.00

Size 18½ inches square, a heavy binders board, with 4 bone dice, colored discs and 4 leatherette cups. An interesting game for both children and adults.

American Flyer Trains 95c

The "Hummer" engine, tender and one car, with four pieces of curved track.

Author of *The Blue Moon*

CHAPTER I
The Bound Boy

A GIRL came out of the back yard of a red-roofed cottage at the upstream edge of Buckeye, passed around a rather tastefully built barn, with its flanking cribs and pens, crossed the fallow pasture lot in a corner of which it stood, climbed the fence and picked her way up the face of the cliffs that roughly walled the village on three sides, until she stood at last among the jagged and broken pinnacles at the top of Black Rock, a lighter speck against the gray-green background of the Flatwoods.

Away beyond the bend where the placid Wabash lost itself among the hills the sun crawled toward the rim of the west. Pendent above the distant timber line its round splendor, burnished bright by the wonder of May, turned a lingering glance back at the serene world. The bronze glory of that glance streaked across a broad curve of the river and found the girl upon the rock—scintillated up from a dancing riffle, glanced off the face of an upstanding pinnacle of sandstone at her side and tried to match the brown of her eyes; kindled little spots of flame in her hair, glossing alive in the breeze that evening always awakes at the top of Black Rock, the bold headland at the corner of the seamed and craggy wall where Eagle Run had gnawed its narrow side valley through into the main valley of the Wabash.

But the girl was not watching the sunset. The splendor of the wide-spread landscape at her feet was lost on her. The river, slipping along at the far edge of the level bottoms and winking across at her through every chance opening between its fringe of willows and cottonwoods, hardly received a glance. She forgot to imagine that the foothills notching the horizon away across on the plains to the south, as they receded in the waning day, were gallant knights faring forth on dangerous quests. She failed to watch the mouth of Eagle Hollow, as the shadows gathered between its huge jaws, transform itself into the cave of the dragon.

Crawling out from under the sunset, halving the village and winding away up the river between cliff and bottom, ran the River Road, the one slim artery that connected Buckeye with the great world outside the Flatwoods.

The girl's eyes were on the road. Far up the river—20 miles of gravel and gray sand—it led to the city. On clear days she had sometimes made out the hazy whiteness of its roofs and spires—the gateway of another world—a world that the errant fancies of girlhood peopled with many a wonder.

She traced out every turn of the brown ribbon of track until it blurred into the shadows lurking under the edge of the east. Seven years ago to a day she had stood there and watched the Milford stage carry her brother away to the end of that road—through the dim spired gateway and out into the great world beyond. The east—it swallows up many a man of the west. It had swallowed her brother up. It never gave him back.

The eyes, grown pensive, turned slowly to the upstanding pinnacle of sandstone, polished smooth by a thousand winds, alive in the bronze glow that struck up from the distant riffle. Three names had been rudely carved there, one above the other, so long ago that storm and frost had begun to obliterate them. Lichens, the humble plodders that hide earth's scars, were already creeping into the creases.

The girl picked up a piece of ragged shale and with a sharp corner scraped clean each knife stroke, till the three names stood out clear as the day they were first carved there:

KEN
TEXIE
JACK

She dropped the piece of shale; thoughtfully passed her fingers over the names and glanced down at the foot of the upstanding pinnacle. In a sheltered pocket of the great rock, where only the tempered rays of the sun could strike it, lay a tiny bed of leaf mold set with clumps of yellow orchids not yet abloom—"lady slippers," in the quaint and expressive vernacular of the Wabash country—that had doubtless been transplanted from the deep woods.

A strange wild place for an orchid—yet a place ideal in its appointments of soil and shade, that could have been selected only by one well acquainted with the habits and habitat of that modest and self-sequestering flower.

The girl stooped above the tiny flower bed—a friendly spot in its setting of stern rocks; plucked away an obstrusive weed or two; let her sobered eyes stray back to the red-roofed cottage, across a [illegible] that lay spread at her feet, and out over the rather pretentious farmstead to which the orchard belonged.

Pretentious—just that; a promise of comfort and affluence never fulfilled. There was every evidence that the farmstead had been laid out on a scale much more elaborate than was usual in the Flatwoods, but nothing had been finished—an attempt that failed; a dream that never came true.

Outlined among the weeds and encroaching brambles lay the extensive foundation of the farmhouse, but it had been carried little beyond the foundation. A few sills—huge squarred logs, cut and hewed in the upland woods—had been laid. Of the few timbers of the superstructure, some had fallen entirely, others had fallen at one end and hung straining, while even the firmest canted far out of plumb.

Back of this creaking skeleton of time-blackened timbers, and nearer the cliff, stood a mite of a log cabin, rudely constructed, where doubtless a man had housed while dreaming his unfinished dream of house and barns and happy homestead. Rooted beside the door and almost completely covering the cabin, a crimson rambler of many years' growth—a far wanderer that no surroundings can degrade—offered a fragrant suggestion that a woman had shared the dreams of the man.

A space cleared of weeds about the door gave evidence that the cabin had at least an occasional tenant. From this open space a path led past the corner of the unfinished farmhouse and crossed the orchard to the red-roofed cottage; another led to the barn lot; another led back under the cliff where a spring gushed out from beneath the outcropping ledges, fretted down the sulphur-stained gutter it had worn in the gravel and shale, crossed the corner of the fallow yard and zigzagged away through the barn lot.

Three horses grazed in the barn lot down near a big elm that stood at the road gate; some geese squatted along the diminutive rivulet leading from the spring; out in the feed lot lolled a bunch of cattle, fine and thrifty as could have been seen the length of the Wabash.

The eyes of the girl suddenly waked from brooding; darted to a point a short distance up the cliff; livened. The slouch hat and drab corduroy hunting blouse of a tall, young woodsman with an immense spread of shoulder had flitted past a break in the bushes as he sprang down the steep and rugged path that picked its way among the rocks from the uplands. She was just in time to see him reach up, put his hand on the top rail of the fence and vault over into the barn lot. The girl missed a breath. Few men in the Flatwoods could have made that leap.

Down by the big elm at the road gate one of the horses, a powerful gelding, glossy back save for one white lock in his foretop, raised his head; came trotting up the lot. The big woodsman put his arm about the arched neck; laid his face against the glossy mane and stroked the soft nose.

"Good ol' Graylock!" he muttered—"bound 'r free, t' you a man's a man——"

A shadow subdued the bold frankness of his face, as a chance cloud draws across a fair field; he gazed hard at the wind-staggered skeleton of the unfinished farmhouse.

The soft nose of the horse, fumbling the pocket of the man's blouse, roused him. He took off his hat; knocked back a mop of tousled yellow hair with his hand and gazed about him.

His roving eye, following the glow of approaching sunset, found the girl upon the rock, her pliant body softly outlined against the silver-green background of the woods.

"Texie—w'y—!"

In another moment he was racing up the cliff. The girl was waiting for him by the upstanding pinnacle of sandstone, a half sadness in her eyes that gradually subdued the eagerness in his. He laid his big hand on her shoulder; slid it down her arm and gathered her fingers in his great palm. There was not even a twitch of response. He dropped the fingers, backed away a step and stood studying her.

"Jack—? Do y'u know what day this is?"

He puzzled to find the answer she doubtless had in mind; finally ventured the only one he could think of.

"Tuesday, May 10, 1849."

She flared around at him. "You know that ain't what I mean."

He had taken off his hat. He crumpled it between his hands and looked down at the tops of the orchard trees.

He gathered her fingers in his great palm.

The girl pointed to the carved names on the monolith of sandstone. He followed the motion; stepped past her and ran his hand over the three names, lingering an instant over the middle one.

"Pore Ken," he muttered, "he could 'a' be'n anything he wanted to, a'most."

The girl's eyes flinched and turned back to the dim, frayed end of the road; the man stood silent.

"Seven years ago t'day," she mused, "you and me stood up here on Black rock and watched the Milford stage haul 'im away off yonder to the city and out in the big world t' college, and then we—cut them names——"

She paused. He seemed to feel that an answer was expected of him, but made none.

"Two years we got letters—wonderful ones at first. I 'low you ain't f'rgot how we use' t' come up here—you and me—and read 'em." She spoke more to herself than to him. "Then the letters got fewer and farther b'tween, till fin'ly they got s' triflin' ther' wasn't no satisfaction in gittin' 'em.

"Then, y'u know, that terrible one come from the president of the college, tellin' how awful Ken was carryin' on, and advisin' father t' take 'im home. But he never come, and a little while afterwards the president writ another letter tellin' how—Ken had—killed a man and run away from school, leavin' all them debts. That was five years ago—and the last we ever hear'd——"

CHAPTER II
Curse of Colin

IT is curious and interesting how some of the greatest names of the Anglo-Saxon race have lodged, like river drift, along the byways and waterways of what was once the great American woods.

Ken, Texie, Jack—the first two Colins; the third a Warhope—names that have been spread wide on English history. And of the two ancient families, probably no purer strain existed than the far-flung thread that had found lodgement here in this out-of-the-way corner of the earth—the great Flatwoods that 70 years ago stretched for many an unbroken mile along the north bank of the upper Wabash.

The man swept a hand toward the distant end of the road. The girl glanced at him.

"Ten more days"—there was a strained firmness in his voice, as if what he was about to say came hard to him—"and I'm ridin' out yonder m'self."

"Jack!"

He felt her eyes upon him.

"Ten more," he went on. "This is the 10th of May. When it's the 20th I'll be 21—and free. Ten more—I be'n countin' 'em."

A deep seriousness clouded his face; he stared down at the warped skeleton of the unfinished farmhouse. The girl fumbled the bit of ribbon at her waist.

"My father dreamed that dream," he went on. "B'fore it could come true, the Seminoles bolted their reservation and he dropped everything and rushed away to the head of the rangers. You know how he—fell at Okeechobee." He paused a moment; gripped his hat and went on. "Mother never saw a well day no more. You know how she lingered along down there under the rose vine till I was 12. When she—died, it was found out Pap Simon had a mor'gage on everything. He foreclosed; had me—bound out to 'im: and——"

The girl stole a look at his face. It was so hard and bitter that she dared not venture a word. And what word could alter the stern fact that he was a bound boy bound out to her own father.

She glanced away along the distant windings of the road.

"When men of the woods ride out—yonder, they don't come back. Ken—didn't."

The man's eyes searched her face for some hidden meaning in her words; apparently did not find it.

"I ain't aimin' t' let the big world out yonder swaller me up like it did—Ken. Some flatboatmen told me yesterd'y there's a wagon train makin' up in the city for the gold diggin's in California. Y'u know, when a bound boy's time's out, the man he's bound to most gener'ly starts 'im off with a hoss and saddle and bridle. Pap Simon said he fig'r'd on givin' me Graylock."

He tossed his hand toward the barnlot where the splendid black horse with the one lock of white in his foretop grazed near the foot of the cliff.

"I 'low we'll jine that wagon train Graylock and me. And when we find gold we're—comin' back."

He stole a shy look at her. She dropped her eyes.

"You'll f'get the Flatwoods when you've found—gold."

He seemed to search her words again for some meaning that he wished much to find. But her face was very thoughful and turned aside.

"F'get the Flatwoods! Where else in the world is there a sight like that? The minute I've got money enough I'm comin' back. I'll buy the homestead back f'rom Pap Simon; finish the house; and then—"

An arm unconsciously reached toward her. The movement brought the red-roofed cottage into his line of vision—the red-roofed cottage, where lay a paper that bound him to servitude. He drew his arm back; crushed his hat rim in his powerful fingers.

A wisp of snipe flashed white as they skimmed the plowed ground over in the bottom; a solitary wild duck fanned his way down the river into the red west; a robin among the top twigs of the big elm flung out an occasional random note of his vesper song.

Down by the rivulet in the barn lot the geese honked and clapped their wings. The sound aroused the man from the half bitter mood and he glanced at his companion, to find her eyes upon him.

"Jack——" she hesitated; "do y'u s'pose it could be the red lock that made Ken act like 'e did?"

The question was so at variance with the man's trend of thought that he was a long time considering it.

"It ain't the red lock," he finally answered in his slow way, "it's the drop of

(Continued on page eight.)

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Skagit Fertilizer Tests

Skagit county has been trying out fertilizer demonstrations. Plots were established through the county agent's office. Checking these up it is reported that an increased yield of from five to 10 sacks of oats were secured. As a result a carload of superphosphate has been ordered by a group of farmers.

Cooperative Progress

Here is another cooperative venture that has proved a success through a series of years.

Organized 15 years ago and with a record of steady growth during all that time, the Winlock Cooperative creamery is now occupying a new concrete building 50x90 feet in size and a model of manufacturing efficiency. With its modern equipment, the plant is valued at $20,000 and is capable of turning out 100,000 pounds of butter monthly. The present output, directed by Manager Frank Mahncke, is about 35,000 pounds.

Poultry Interest in Thurston

The organization of the Accredited Hatchery association has served to stimulate interest in poultry raising throughout Thurston county. Scores of pedigreed White Leghorn cockerels have been taken into Thurston county for members of the hatchery association. These birds are from around 300-egg dams, some of them as high as 310-egg dams. A total of 1450 hens have been signed up for the accredited hatchery, which will begin active operations in the spring. At present Miss Ruth Huggett of Olympia is the only accredited trapnester in the county.

The Governor Is Pleased

If efficiency means getting there, Governor Louis Hart's pet herd of Holstein cows at the Western Washington hospital at Fort Steilacoom is making good. A late official statement says that Steilacoom Inka Posch, a four-year-old Holstein cow, has the highest milk record ever made by a cow after 10 months' calving for the one-week test. The seven-day record is 646.1 pounds of milk, 26.22 pounds of butter. This cow's yearly production record is 30,310.9 pounds of milk, 1133.60 pounds of butter. She ranks very close to the leader in this class of milk production.

It goes without saying that the governor is pleased.

Can Not Guarantee Against Change

It is more often than not thrown in your face that a wheat farmer will never deign to milk cows. However prevalent may be the sentiment, the notorious wheat producing county of Adams is increasing the number of cows on its farms.

A few years ago not a can of milk was shipped from Ritzville, the county seat, and every farmer leaving town for home was stocked up with canned goods including canned milk, butter, eggs, vegetables and so on.

Now it is recorded that farmers can be seen bringing their milk to the railway station at Ritzville daily. Moreover, a rancher in Crab Creek is delivering chopped alfalfa to farmers for feed. He has the first chopper of the kind in the county. By this means the cattle eat the entire cutting and it makes a cheap feed.

What folks say is not always what they do. The wheat farmer can not be guaranteed against change any more than the banker or the merchant.

Balancing Rations Important

Balancing rations is an important step in reduction of dairying costs, and as a result of doing so many Washington dairymen are producing the maximum amount of butterfat from their herds.

Considerable work along this line is being done in Whatcom county, County Agent H. B. Carroll Jr. having assisted 50 dairymen in one month.

Pacific County Agent E. C. Durdle reports considerable interest in the problem in that county also.

Five farmers began the use of balanced rations on a total of 63 cows. A new testing circle has been started in Pacific county with 77 cows enrolled, and it is expected that fully 100 will be on test within another month.

Bringing Up the Standard

Often an owner of a grade herd who keeps a registered bull finds that he is getting outstanding results in the breeding up of the herd. This is partly due, of course, to the fact that the grade cows will produce calves that are better than they are due to the high producing blood lines of the sire.

The same rate of improvement will not always be seen in a purebred herd and in some cases the bull is blamed for not being prepotent enough to build up the production of the heifers. When buying a new herd bull it should be remembered that the improvement of the young stock will depend on how much better the bull's breeding is than that of the average of the herd. In other words, the better the herd the more need for a still higher class bull to bring the standard above what it is at the present time.

This is why the dairyman is advised to purchase the best bull he can obtain and not pay too much attention to the price asked.

Picking and Storing for Quality

In connection with recent berry growing experiments at the Western Washington experiment station at Puyallup, H. D. Locklin, the horticulturist, tried out a test as to the value of picking the fruit at its proper stage of ripeness. When the ripe fruit was picked and delivered to the cannery within four or five hours it was given the highest grade when put into the cans. The second grade was given to the slightly overripe fruit, which was held 24 hours before delivering. Fruit that was picked after a rain and was slightly soft when delivered to the cannery after 48 hours scored the lowest grade and was marked for the lowest price by the receiving department. The fruit which was picked immediately had a brighter color, the berries were all firm and the mouths open even after being processed and sealed. The second class berries had a poor color, and 10 per cent of them were mushed and a few mouths open. The third class had a very poor color and the fruit was all broken up or mushed.

A further test indicated that the kind of storage had much to do with the quality of the fruit when canned. The best quality of berry is where no storage is used, but the fruit delivered immediately to the cannery. Cold storage was considered second best since the color was next to that delivered immediately, and the berries were in a fair condition. The poorest class of storage, which was considered undesirable in almost all cases, was where the berries were kept in open sheds, or a basement which had no cold storage facilities.

All of these factors have a direct bearing on the price of the fruit as paid by the cannery, and it is worth while for every grower to take them into consideration.

Washington State Gleanings

Walter Gibbons sold his horses, mules and farm implements yesterday at a public sale eight miles north of Ephrata, where he has been operating leased land four years. He will move with his family to Wenatchee.

STRAWBERRIES IN NOVEMBER.

Charles Hail of Wind river valley late in November delivered several crates of strawberries that he picked from his field to his customers in Stevenson. The berries were about the size of 50-cent pieces and no different from those that were marketed in the early fall. He received $2.50 a crate. The berries are the Marshall variety.

PURCHASES CHICKEN FARM.

J. N. Livingston, Yakima retired capitalist, has purchased the Carl Mathews chicken ranch six miles southeast of Kennewick, for $5500.

The ranch consists of 10 acres well improved, with a modern five-room cottage, good outbuildings and modern chicken house for 2000 chickens. It has its own electric light and water system. The deal included 1000 laying hens, producing nearly two cases daily.

TO JUDGE POTATO SHOW.

George J. Cannon, the well-known potato grower of Spokane county, has accepted an invitation to judge the potato show in connection with the Nebraska Potato Improvement association, which will be held at Chadron, Neb., December 5, 6 and 7. Hitherto this association, which is one of the most prominent potato organizations in the country, has had an eastern college man to judge its potatoes.

BUILDING UP HOLSTEIN HERD.

One of the men much interested in following the judging of Holstein bulls at the Pacific International was Robert Prior of Benton City, Wash., who owns Model De Kol Abbekerk Pontiac, dam of the first prize senior yearling and junior champion, a son of Matador Segis Walker. Prior is better known as a sheep breeder, but he is getting together a small herd of purebred Holsteins on his lower Yakima valley ranch. Among them are several cows with good production records and a bull closely related to Segis Pietertje Prospect.

SELTICE FARM BUREAU.

The Seltice farm bureau, near Farmington, was organized recently and will work along the line of live stock and diversified farming in cooperation with the farm bureau office at Colfax. Several school districts are going together and meetings will be held monthly, the schools putting on the next program and the farm bureau, in connection with the Washington State college, taking charge of the program at the following meeting. Mrs. H. E. Riggins and Mrs. Mary Gallagher were elected to head a committee to furnish food. W. E. Thompson, former county commissioner, is president of the Seltice farm bureau.

SELLS SEEDS FOR FORESTS.

Clark Westover and W. H. McCord of Wauconda are conducting an infant industry that gives promise of considerable development in Okanogan county. They are buying pine and fir cones, extracting the seeds and selling them for reforestation. Many of the seeds are sold to rehabilitate the forests destroyed in the war in France and Belgium.

Settlers in the Wauconda district are paid $1 a sack for pine cones and $2 a sack for the smaller fir cones. The cones are thoroughly dried and Westover and McCord have perfected a method of threshing or separating the seed from the cones.

RED CLOVER AT CHEHALIS.

H. Walter, whose farm adjoins Chehalis to the northwest, is another red clover seed grower who is pleased with the outlook for that line of farm crop. This season Mr. Walter had eight acres of red clover from which he harvested 98 bushels of seed at 60 pounds to the bushel. From his first crop he got three tons of fine hay to the acre. Mr. Walter will probably sow an additional 40 acres of red clover the coming spring.

In addition to his venture in the growing of red clover for feed and seed purposes, Mr. Walter has also experimented successfully with alfalfa with highly satisfactory results. He will probably also increase his acreage of this crop, which he finds does well on his place.

WILL PASTURE PACK HORSES.

Colfax citizens witnessed an unusual scene recently when a long pack train of forest service animals from the St. Joe and Coeur d'Alene National forests passed through, going to winter pasture grounds in the Snake River district in southern Idaho. There were 122 horses in the train. The horses were in prime condition after a season of packing supplies to the fire fighters in the national forests.

Ranger J. Z. Williams, in charge of the train, said that several thousand trees had been planted in the fire-burned district of Clear creek, a tributary of the St. Joe. Tree planting was under the direct supervision of Ranger Parker, a regularly employed forest service man.

The long line of horses recalled to the pioneer of Whitman county the days when the prairie schooner, the freight wagon and the pack animal were the only means of transportation into this region.

PLAN DAIRY SCHOOL.

The Whatcom county dairy school is announced by County Agent H. B. Carroll Jr., to be held January 21 to February 2, 1924, inclusive, at the G. A. R. hall, Lynden.

The purpose of the school is to give the dairymen of Whatcom county an opportunity of getting first-hand information relative to every phase of the dairy industry without expense. In fact, says Mr. Carroll, it offers them an opportunity of going to a school for two weeks without interfering with their dairy work on the farm.

The school will open each day at 10 a. m. and close at 3 p. m. The location was chosen because of its nearness to every dairy center, Mr. Carroll said.

The program offers subjects of interest to every dairyman in the county. Subjects pertaining to breeding, feeding, management and disease problems will be taken up at the school. Each day's program will be different, so that the dairyman may select the days he wishes to attend the school. It is desired to have as many attend every day as is possible.

There are only five such schools to be carried on in western Washington. Mr. Carroll says the county is fortunate in being allotted one of this number.

Bad for Dairy Industry

Particularly Bad for Children and Bad for General Business

If the American people would quit eating inferior dairy substitutes they would be better in mind and body, millions of children would be better nurtured, and the dairy industry would grow, not only to the prosperity of the dairyman, but to the benefit of all other classes.

The people of the United States are consuming yearly hundreds of millions of pounds of butter substitutes. The yearly consumption of oleomargarine alone is more than 200,000,000 pounds, and that is a comparatively small item as against the greater consumption of vegetable fats from Asia and the islands of the Pacific.

E. V. Ellington, head of the department of dairy husbandry of Washington State college, discussed this menace in a frank address before the Kiwanis club of Pullman last week. "The interests of dairy farmers of Washington," said Professor Ellington, "representing an investment of about $100,000,000, are jeopardized through the activities of South Sea islanders whose only equipment is a strap for gathering coconuts."

The National City bank of New York, an excellent statistical authority, estimates the value of the coconuts and coconut products imported into the United States since the beginning of the World war at $300,000,000. Coconut and coconut products, used extensively in the manufacture of substitute dairy products, come to the United States in four distinct forms—the nut in its natural form; the shredded meat of the nut; as copra, the broken and dried meat of the nut in convenient form for manufacture into oil, and as the oil itself, which forms 70 per cent of the meat of the coconut and which is turned out in enormous quantities in factories in the Philippine islands. Importations of copra in 1921 totaled 190,000,000 pounds. Shredded coconut imported that year totaled 35,000,000 pounds, most of which came from the Dutch East Indies.

Heavy importations of soya beans from China and Manchuria also helped to displace American dairy products, all of which is bad for the dairy industry, bad for the people, particularly the children, and bad for general business conditions.

Sells $275,000 Live Stock in Month

H. Stanley Coffin of Yakima, one of the biggest factors in the live stock industry of that valley, who, with his son, H. Stanley Jr., attended the Pacific International at Portland, reported sales of live stock by his firm totaling $275,000 in one month recently. Nearly half of this amount came from sales of 13,000 lambs at an average of $9 per head. Six thousand yearling ewes obtained in eastern Oregon were sold to replenish Yakima bands at an average of $13.50 for a total of $81,000; aged ewes brought a total of $20,000, and 500 bucks at $35 each brought the total for sheep almost to the quarter million mark. The remainder was realized from the sale of 400 head of fat cattle to a Seattle packer.

H. Stanley Coffin.

Farm Ownership and Tenancy

In Washington, Idaho, Oregon and Montana statistics reveal that the acreage improved on the tenant-operated farm is both actually and relatively larger, on the average, than that on farms operated either by the owner or through a manager.

No doubt the tenant-operated farm represents an average of more years of development, belonging, as it often does, to a retired farmer.

In Idaho and Montana the average total acreage, improved and unimproved, that is in the hands of owner-operators is larger than that under tenancy; in Oregon and Washington the tenant farmer is in charge, on the average, of the larger total farm area.

BETTER DAIRY HERDS AT LOW COST.

Cooperative bull associations are helping hundreds of farmers to improve the production of their dairy cows at a low cost, according to the United States department of agriculture. Last year these associations in the country increased 15 per cent in number, showing that they are making steady progress. In Idaho the number increased from 9 in 1922 to 29 in 1923.

Power or Impotence?

Shall Courage or Hopelessness Rule Our Daily Lives?

A merry heart doeth good like a medicine, but a broken spirit drieth the bones.—Proverbs 17:22.

The familiar saying, "Laugh, and the world laughs with you; weep, and you weep alone," is only half true. The former half is true; the latter is false. Rejoice, and the world rejoices with you. Mourn, and the world mourns with you—not necessarily in sympathy with you, but in self-pity and commiseration.

Like always begets like. Melancholy is just as contagious as good cheer, though we would that it were not. Have you never listened to the rantings of a pessimist, a destructionist, an obstructionist? Have you not, as he drew the word picture of failure and wrong and misery, felt your own courage go down, felt your own happiness desert you, felt your own power for doing constructive things diminish?

On the other hand, have you not, in an hour when your courage, happiness and power were at a low ebb, listened to the words of hope, cheer and courage of an optimist and gone away with increased enthusiasm and increased power to be a man, to do something worthwhile, to do that which is right and profitable in the sight of God and your fellowman, as well as measuring up to the standards of your own better self?

Optimism opens the windows of one's own soul and reveals to him his own possibilities and his own virtues. Pessimism closes the windows and pulls down the blinds, concealing the things that are good in one's nature.

Optimism fires the engine of life; pessimism pours water upon the fuel.

Optimism says a thing can be done; pessimism says it can not. Which shall we believe? It is vitally important, for belief in the possibility or the impossibility of accomplishment largely determines what one attempts and what one accomplishes.

The merry heart is the child of optimism. A broken spirit is of pessimistic parentage. The world needs today more courage, more good cheer, more hopefulness, more confidence, more merry hearts.

FARM BUSINESS AND MARKETS OUTLOOK

CATTLE arrivals have diminished progressively since the middle of October and were the smallest last week for the corresponding period with one exception since 1915. A smart recovery in prices has been the result. One sale at $13 was made at Chicago, but as a sort from show steers and did not furnish a criterion of the general market. Butcher cows and heifers were not quite so numerous as they have been and moved at slightly higher prices, while cutters and canners were steady in spite of another drop in the hide market. A sluggish dressed beef trade was explained by the record quantity of pork available at low prices and by the largest supply of poultry ever known. Otherwise the cattle market has responded even more briskly.

Conditions appear to be shaping up for a better cattle market. The western range season is about over, although straggling shipments will continue up to the middle of December.

Stocker and feeder values advanced strongly last week. The lower trend of corn prices has stimulated demand for thin steers and the lighter supply of westerns and thin natives makes orders harder to fill. Values on such cattle appear to be on a reasonably safe basis for the buyer and are below the cost of production in most cases.

Another Avalanche of Hogs.

After a week of light receipts of hogs and a sharp advance in prices, the country cut loose with the heaviest supply of the year, breaking values back practically to the low point of the season. The market has already had a strong comeback, showing that prices are down close to bed rock, receipts usually do not increase much in December and January over the November level and as the belief spreads that prices are around the low point for the fall and winter, more gradual marketing and less sacrificing of light hogs will be encouraged.

Domestic consumption of hog meats and lard in the first nine months of 1923 was 23.5 per cent greater than the corresponding period of 1922, while exports were 37 per cent greater. According to official reports, retail prices of porkchops in the principal cities of the United States have averaged about 7 per cent lower this year than last, ham about 7 per cent lower, lard about 4 per cent higher and bacon about the same as in 1922.

Lamb Market Stronger.

The supply of lambs contracted again in the last few days and prices are about $1 higher than a week ago. Dressed trade has not responded to the lighter supply during the last few weeks, indicating that lamb is suffering from competition from other meats and with poultry. It still remains on a high price level, however. Strength in wool is reflected in big discounts on sheared lambs.

Few western feeder lambs are available, come-backs from corn fields furnishing most of the supply of thin lambs. Demand is light, however. Shipments of feeder lambs and sheep from 12 leading markets have dropped perpendicularly to 80,416 head in the week ending November 16, compared with 231,188 head two weeks previously.

After a month of growing activity, in which prices gained about 10 per cent, the wool market at seaboard has slackened, with manufacturers resisting the advance. The activity, however, has been transferred to the southwest, where fall shorn wools are on sale. Foreign markets also are strong and the advances abroad have kept values above an importing basis, although the difference is smaller than a few weeks ago and American buying is becoming fairly active in Australia. That world consumption has been outrunning production is indicated by the fact that the final holdings of the British Australian Wool Realization association, which amounted to about 2,708,554 bales of 330 pounds on August 31, 1920, will be cleaned up in the coming January.

Wheat Shows Resistance.

While the future of the wheat market during the rest of the crop year remains much in doubt, it continues to resist what appears to be a rather formidable battery of bearish forces. Domestic conditions, including declining rate of movement from farms, the amount of wheat in sight at terminal markets, and a shrinking balance available for export should gradually contribute strength. These changes may be the cue to the action of the market in the next six months.

Already our prices are ruling enough higher than Canada to bring in more or less wheat from Canada, some of it wheat "moonshiners" or smugglers. European buyers are taking mostly Manitoba wheats. But our exports from week to week are large enough to dispose of our surplus, with clearances especially satisfactory from Pacific ports, where the bulk of our exportable surplus is believed to be located. Flour exports are large also, although the belief persists that these include much Canadian wheat milled in bond.

The world market is governed more by the big supply in Canada yet to be exported and the huge surpluses in Argentina and Australia, where the crops have passed the point of greatest danger.

During the last few days, the domestic milling demand for wheat has improved at a number of markets, but in general mills are believed to be fairly well stocked up and flour trade is rather slow. Deliveries of wheat on December contracts promise to be smaller than expected during recent weeks, as elevators wish to obtain carrying charges.

Corn Market More Stable.

Primary receipts of corn have continued to expand, so that slight accumulation at the terminals has taken place during the last three weeks. Demand from feeders, from shippers to the eastern dairy districts or to the southeast and from corn industries has fallen off. As a result of these influences, prices have declined around 40 cents a bushel in the last five or six weeks. It is evident, however, that the market is near bottom and prices have become relatively stable during the last few days.

The visible supply of oats has declined about 10 per cent during the last month. Primary receipts are light and demand is gaining in strength. Partial closing of the wide gap between corn and oat prices seems likely to take place during the next six or eight months.

Cash Grain Prices.

The range of cash grain prices for the week ending November 28 was as follows:

CHICAGO—Wheat—No. 1 hard, $1.06 1-2@1.07 1-2; No. 2 hard, $1.05@1.05 3-4; No. 3 hard, $1.02 1-2@1.03 1-2. Corn—No. 2 mixed, 74 1-2@76c; No. 3 mixed, 69@72 1-2c; No. 4 mixed, 68@71 1-2c; No. 5 mixed, 65 1-2@69 1-2c; No. 2 yellow, 82@85c; No. 3 yellow, 74@81c; No. 4 yellow, 68@72c; No. 5 yellow, 65 1-2@70c; No. 2 white, 79c; No. 3 yellow, 71@72 1-2c; No. 4 yellow, 69@70 1-2c; No. 5 yellow, 67@69c. Oats—No. 2 white, 44 3-4@46c; No. 3 white, 43@45 1-4c; No. 4 white, 41@44c. Rye—70@73c. Barley—58@73c.

Foreign Clover Seed Arriving.

During the first half of November 182,600 pounds of red clover seed, representing the first important shipment of what is reported to be a rather large quantity bought for import, arrived in this country. France and Italy are the chief sources, with some shipments from Ireland and Chile. The recent weakness in French exchange stimulated further sales to this country.

Feed markets are quiet, with consuming demand rather light and distributors not pressing offerings on declines. Flour mill operations have fallen off, but the output of wheat feeds remains fairly high because of the large percentage of low grade wheat being milled. Shipments of wheat feeds from milling centers have been maintained at a fairly high rate and stocks on hand are less burdensome than a month ago.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $28; standard middlings, $28; flour middlings, $32; cottonseed meal, 36 per cent, $49; 43 per cent, $55; hominy feed, 42; glutten feed, $44; old process oil meal, $51; tankage, $65.

Hay Markets Firm.

Hay markets continue firm under a good demand for the better grades and rather light receipts. Alfalfa is finding an excellent outlet at central western markets.

Prices per ton in carlots: Chicago—No. 1 timothy, $27@28; No. 2, $24@26; No. 1 light clover mixed, $25@27; No. 1 clover, $23@@25; No. 2 clover, $18@20; No. 1 to choice alfalfa, 20@@30; upland prairie, $18@21; rye straw, $13@14; oat and wheat straw, $11@12.

Eggs, Butter and Cheese.

Egg prices remained steady last week, as receipts were light, but an unsettled undertone is apparent. Higher prices have caused a slowing up in consumption, efforts to start a boycott have been partially successful in Chicago, and the recent mild weather, which is favorable to egg production, is expected to result in increased shipments, so that moderate price declines are not improbable in the next month. Storage eggs are moving at a better rate, although holdings will still show a large surplus on December 1, as compared with a year ago.

Poultry prices were the lowest of the season last week, due to heavy receipts, the majority of which were of poor quality. The supplies of turkeys for the holiday demand were large and prices the lowest they have been for several years

After a moderate decline the butter market has steadied itself, but the undertone is unsettled. Consumption showed an apparent easing up under the high level of prices, which has prevailed during the last few weeks, production reports indicate that the low point, which usually occurs sometime in late November or early December, had been reached, and the movement of storage butter at the four leading markets showed up materially. Heavy imports of 250 casks of Holland butter, 612 boxes of Irish, 1311 boxes Siberian, 5567 casks Danish and 312,867 pounds of Canadian butter arriving during the week were an additional weakening factor in the domestic market.

Although cheese prices in distributing markets were unchanged last week and trading continued dull and unsatisfactory on the whole, some dealers believe that the end of the downward price trend, which began early in October, is not far off. Receipts show a slight falling off and country markets were higher last week.

Fruits and Vegetables.

Potato markets declined slightly last week. Receipts at the leading markets are rather heavy and carlot sho

Water vs. Food Plants and Food Production

By E. C. McCLELLAN

WHEAT.

In a previous article I showed the relation between a plant and the food products the plant secured and stored as not being in proportion to each other.

This is due to the fact that the plant itself (its structural growth) is composed of nearly 90 per cent water, while the food products are composed of only about 10 per cent water.

In that article I showed the relation of water supply to plant growth and the law of nature, providing that in application of water by irrigation the plant went back upon the same line of evolution on which it had come down.

I also outlined the law that food values decrease as the water supply increases.

There is another law I now want to prove, and that is that:

The production of food by plants is not in proportion to the quantity of water supplied for the plants' uses, but in proportion to the area of land irrigated.

Then remember the other law, that:

The food value of the food secured is in inverse ratio to the quantity of water supplied.

Wheat is called the staff of life, as it has been for many ages the principal food of man. It is, therefore, entitled to be first considered, although just as this time there seems to be a little too much staff in this country.

In the accompanying diagram is shown positively the amount of proteins that are secured by the wheat plant, growing upon one acre of land, when several different quantities of water were supplied, commencing with five inches in depth and increasing up to a depth of 50 inches; or from four acre-inches per acre of land up to 50 acre-inches per acre of land.

The first column shows the number of acre-inches of water that were used in irrigating.

The next column shows the acres of land irrigated and the number of acres of land that could be irrigated by that water when used at rate of five acre-inches of water per acre.

To the right of each subdivision is shown in the upper horizontal column the number of pounds of proteins actually secured by the wheat plants raised upon one acre of land and irrigated by the number of acre-inches of water stated in the first perpendicular column, and in the lower column the number of pounds of proteins that would have been secured if that number of acre-inches of water had been used to irrigate land at rate of five acre-inches of water per acre.

Now look at the number of pounds actually secured upon each acre of land as it was irrigated by the different quantities of water used.

In the first is shown the double return at 399 pounds of proteins received by irrigating with five acre-inches of water per acre.

In the next, by irrigating one acre of land with 10 acre-inches of water there were secured 412 pounds of proteins; BUT if that 10 acre-inches of water had been used to irrigate two acres of land there would have been secured 798 pounds of proteins.

In the third, by irrigating one acre of land with 15 acre-inches of water there were secured 422 pounds of proteins; BUT if that 15 acre-inches of water had been used in irrigating three acres of land there would have been secured 1197 pounds of proteins.

In the fourth, by irrigating one acre of land with 20 acre-inches of water there were secured 420 pounds of proteins; BUT, by using that 20 acre-inches of water in irrigating four acres of land, there would be a return of 1596 pounds of proteins.

In the fifth column is shown a return of 418 pounds of proteins from irrigation of one acre of land with 25 acre-inches of water; BUT if that 25 acre-inches of water were used in irrigating five acres of land the return would have been 1995 pounds of proteins.

In the sixth column the return from use of 35 acre-inches of water in irrigating one acre of land was 431 pounds of proteins; BUT if that quantity of water had been used in irrigating seven acres of land there would have been secured 2793 pounds of proteins.

In the last column 50 acre-inches of water were used in irrigating one acre of land, and the return was 420 pounds of proteins; BUT if that quantity of water had been used in irrigating 10 acres of land there would have been secured 3990 pounds of proteins.

Now, just glance along the columns and see what was obtained by use of the different quantities of water upon one acre of land.

In the five acre-inch irrigation 399 pounds of proteins were obtained.

In the 10 acre-inch irrigation 13 pounds more were secured.

In the 15-inch irrigation the number of pounds of proteins increased to 422 pounds—an increase of 23 pounds.

In the 20 acre-inch irrigation the return decreased two pounds, being only 420 pounds.

In the 25 acre-inch irrigation there was another decrease of two pounds from the 20 acre-inch irrigation, and only 418 pounds secured.

In the 35 acre-inch irrigation the amount increased again to 431 pounds—a maximum food return of 32 pounds more than at the five acre-inch irrigation.

REMEMBER—That these figures are compiled from a mass of data of chemical analysis of the actual amounts of proteins that were found in wheat grown and harvested when irrigated with the different quantities of water stated, and the work carried on for a long term of years, and are not the result of one, or two, or three years' work.

With the five acre-inch irrigation the returns in bushels of wheat were 37.81, and from the 50 acre-inch irrigation they were 49.38 bushels. That is, the 45 acre-inches of water increase gave a return of 11.57 bushels of wheat more than with the five acre-inch irrigation, but only 31 pounds more of proteins.

Is not this showing proof of the law I have laid down: That the food production is in proportion to the area of land the plant is grown upon, and not in proportion to the quantity of water used in irrigation?

Now, regarding the other law: That the value of proteins is in inverse ratio to the quantity of water used in irrigation.

All we are after in cultivating plants is to secure the different kinds of food those plants secure and store away in the cells they create for that purpose.

The principal food products they secure are called proteins; but there are a number of different kinds of proteins, that are all manufactured in nature's laboratory in the ground, and are combinations of several kinds of original elements out of the total 10 kinds that are used. I have never heard of all 10 of those elements being used in manufacture of any one kind of protein, but as one of the elements is found in every one, the proteins are often called nitrogenous substances from the fact that nitrogen is always found in every protein.

There are a vast number of these proteins, or rather a vast number of changes in any one kind, depending upon the different volume of each element found in touch with each other when the protein is being manufactured, or brought together.

Each plant has a standard protein, combining the certain elements it wants and in a certain proportion with each other. When that proportionate amount of each element is close enough together to make this standard protein, then that plant is able to secure and store such standard protein—or food product.

If, however, there is a bad ratio or proportion between the several elements in the ground the plant is growing in, there will be a kind of protein manufactured, but it will not be the standard kind, and its value for food will be inferior to that standard.

This is very positively shown with wheat. The best kind of wheat, having the proteins of the highest food value, are grown on what is called the "dry farm lands," where the water supply is the smallest.

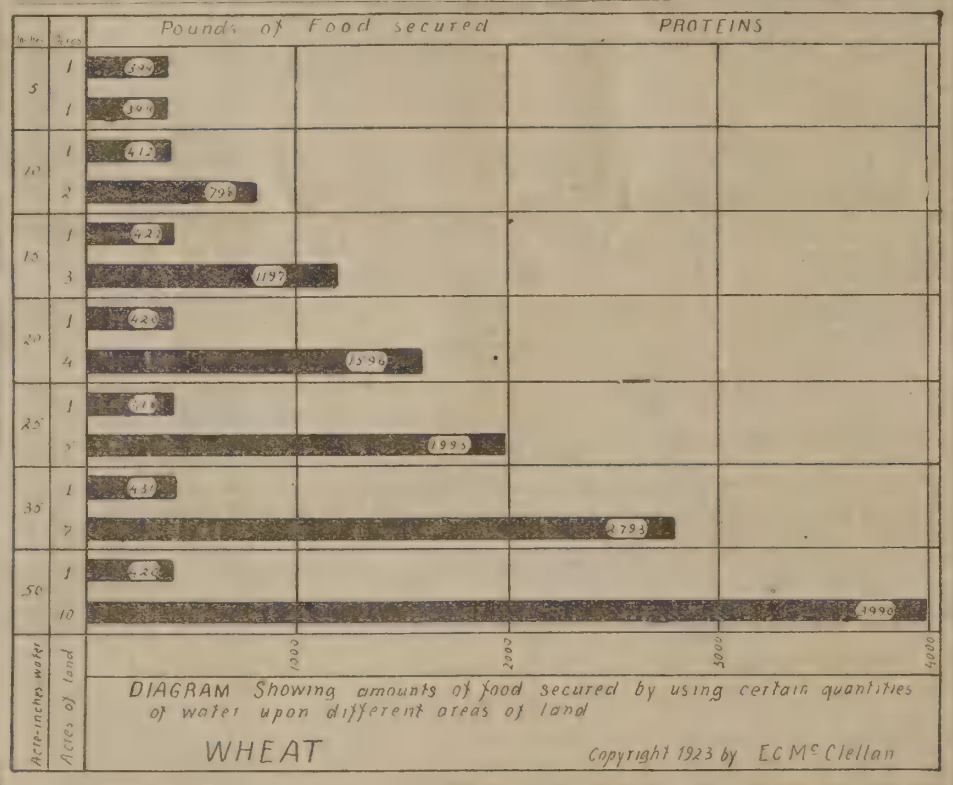
Then as the water supply is increased, either by precipitation or irrigation, that standard protein decreases in food values, until a point is reached where the protein has a very low food value.

Mr. Irrigation Farmer, what are you doing? Are you piling into your land and raising a large number of bushels of wheat that contains very little more actual food in quantity than a far less number of bushels produce, and receiving for your waste of water an inferior quality of water, that you can not sell, or has very little food value when fed to your stock?

Now look again at the diagram and see what you can do with your water supply if you use it for the actual purpose that you are cultivating your farm—the food you are after. I do not know what your water supply is, but whatever it may be, a study of this diagram and use of it when you go ahead next year will repay you well.

Remember, you will get a greater bulk crop of any kind of food plant by piling a lot of water into the ground, for the plant is composed mainly of water, but that means that your plant will secure for you an inferior kind of protein, that will have a very poor food value.

You can take the same number of acres of land you are cultivating and irrigating for wheat, and use far less water and secure a return of nearly the same amount of actual food products, and a kind that you will either be able to sell at a good price, or that in feeding your stock will be far more valuable than the inferior products you have been raising. (Copyright, 1923, by E. C. McClellan.)



Favor Export Commission

This and Other Solutions to Farm Problem Are Considered

As The Washington Farmer goes to press the committee authorized by the conference of wheat growers, bankers and business men at Colfax, Whitman county, several weeks ago is meeting in Spokane in an effort to work out a plan for the improved marketing of wheat. This committee was selected by State Senator F. J. Wilmer of Rosalia, a banker and a wheat grower. It includes 19 persons, representing growers, bankers, business men, farm organizations and the state college and state department of agriculture.

The committee will consider every plan which any one has to suggest, including the fixing of a price by the government, increased tariff, cooperative marketing, control of the exportable surplus, limitation of production, etc. It is evident that sentiment is increasing in favor of the creation of a government export commission to market not only the exportable surplus of wheat, but that of other staple crops. The theory back of this proposal is that the government should market the exportable surplus in foreign countries at foreign market prices and that the commission or other agency should then tax all wheat a sufficient amount to make up any loss incurred in marketing the surplus.

Johnson Favors Commission.

One of the latest converts to this plan is Dean E. C. Johnson of the college of agriculture of the state college. In a letter to Chairman Wilmer of the committee that is now in session in Spokane Dean Johnson says:

"The more I have thought of the agricultural situation and the need for marketing surpluses on world markets, not only of wheat, but of pork products, beef and cotton, the more I have veered over to the point of view of the plan for a federal export commission to handle surpluses on world markets, coupled with tariffs sufficiently high to restore the purchasing power of farm products recommended to the administration by the Ninth federal reserve district.

"This would not throw agriculture out of balance, as the fact that each agricultural commodity would be taxed for any losses in export markets would act as a natural check against overexpansion of any one crop or product.

"The plan, too, is eminently fair to the farmer, and no more in the nature of class legislation than our present tariff. The chief objection, it seems to me, is that the government would be active in this business, but as this activity would decrease from year to year as our surpluses would decrease and the purchasing power approach normal, this objection is in part removed."

As Robinson Sees It.

Manager Walter J. Robinson of the Washington Wheat Growers' association is among those who have been vigorously advocating this plan for some time, declaring that even cooperative marketing of anything short of an amount that would fully control the American price could not hope to solve the problem without some such agency to handle the surplus.

In a letter to Chairman Wilmer, Mr. Robinson says that an adjustment of production to domestic requirements would be the surest and most logical relief measure, but intimates his belief that such adjustment is impractical in time to prevent wholesale bankruptcy among wheat farmers. Reduction in the cost of production and improved methods of distribution are two other points which Mr. Robinson emphasizes. In his letter to Mr. Wilmer, he says in part:

"Should you find costs can not be materially reduced and control of production impracticable, you will of course center your efforts on the third problem—methods of distribution. You will, no doubt, investigate the relative merits of competitive selling on a speculative market and orderly marketing under cooperatively controlled distribution. You may find that neither system can bring back the purchasing power of wheat so long as uncontrolled exporting is necessary.

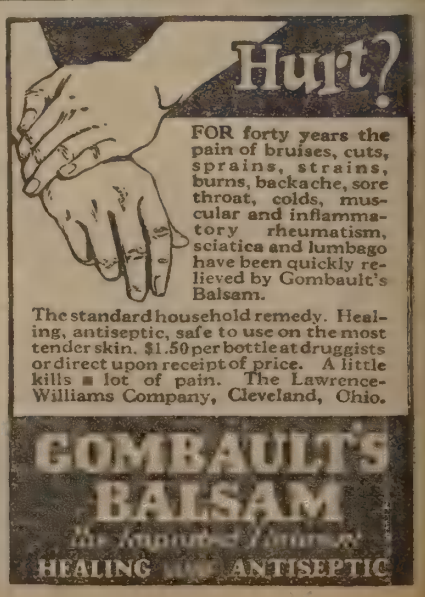
"It may develop that the necessary relief can not be had unless the surplus is taken care of in such a way that the price for wheat that goes into domestic consumption will no longer be controlled by the foreign price on the surplus.

"If you find it is possible to raise the price of wheat to a level with other commodities, you might investigate and make known the probable result of such a move on general business conditions and incidentally on the price of a loaf of bread.

"You also owe to our Pacific northwest wheat growers a thorough investigation of the arbitrary schedule of discounts under which their wheat is being sold, and you should also investigate the application of federal grades to our wheats."

FROM APPLES TO ALFALFA.

S. G. Blackburn(orchardist of the Pleasant Hill district in Yakima, has cleared 10 acres of bearing Jonathan and Spitzenburg trees this fall and expects to grow alfalfa hay there instead. It is his opinion that too many Jonathans are produced in the northwest; at least, they have not proved profitable with him.



Fordson

"To put the farmer on a par with the city manufacturer. To put his produce factory—for that is what a farm is—on an efficient production basis."

Spurred by this ideal, Henry Ford brought the Fordson Tractor into being.

Himself a farm boy, who had followed the plow for many a weary mile, no one knew better the need for quicker and easier farm power.

Producers in other fields were harnessing steam, gas and water power to drive wonderful machines which multiplied many fold the day's work of the individual.

But the farm was at a disadvantage. This power machinery which brought such rewards in the form of bigger profits and better working conditions in the cities was lacking. A smaller income was returned in proportion to the work done.

That the Fordson should never falter in making possible a better day on the farm, a score of years of patient work preceded it. Today on hundreds of thousands of farms it increases the daily work done, adds to the farm income and allows a more pleasant farm life.

The Red Lock—*The New Serial*

(Continued from page three.)

blood that come along with it. F'r that matter, though, every man gits a bad drop 'r two out of the past. But them bad drops can be overcome, if a man bucks ag'in 'em. The trouble with Ken was it didn't 'pear like he wanted t' buck ag'in' his."

"The 'curse of Colin,'" was the girl's musing comment. "F'r hundreds of years—ever sence the days of 'Red Colin,' the old sea pirate—it's be'n breakin' out in the family every few generations. It alw'ys worried Ken that it broke out on him. I've sometimes thought it would 'a' be'n better if he'd never 'a' found out the meanin' of that red lock—that it was the 'curse of Colin'——"

"That's it," he commented. "I 'low Ken fig'r'd the curse had 'im anyhow, and so it wasn't wo'th while t' buck ag'in' it."

"Mother kep' the lock cut off, y'u know, till Ken was big enough t' notice it himself. After that he alw'ys kep' it combed under so's it didn't show. I don't reckon anybody in the Flatwoods but you and me and father know'd 'e had it."

"Yes," the woodsman interrupted, "ol' Uncle Nick Wiffles knows. But that's as good as sayin' it's dead and buried. Nothin' ever gits a-past Uncle Nick's jaw."

He grinned, pushed up the mop of tousled hair that fell over his brow and pointed to a scar.

"That's where Ken struck me with 'is whip han'le the day I found out 'e had it."

The girl ran her slim fingers over the scar.

"And he cut me with the whip b'cause I flew at 'im when 'e done it."

"And then I hit 'im with a rock b'cause 'e cut you."

The girl shivered.

"I thought he'd kill y'u that day," she said. "His hat fell off, his hair was mussed, and y'u know how awful it made 'im look when that red lock worked out and fell down over 'is eyes—wild and savage and terrible; like ol' 'Red Colin' must 'a' looked. He jerked y'u up and drawed the butt of 'is whip—mercy! It makes me shiver t' think about it. But he only laughed—hard and wild—and let y'u go."

A smile crawled across the bold features of the woodsman, narrowed his eyes and pinched out two queer little wisps of friendly frankness.

"Them was the good days," he said, "with him big brother to us both! That is," he added, as an afterthought, "when he was 'imself. I don't reckon there's one tree down there in the orch'id we ain't clubbed 'r clum, you and him and me, less'n it might be that ol' sour apple tree yonder in the fur corner."

"And I use t' git mad be'cause y'u wouldn't lift me."

The smile broadened on the man's face. "I would—now."

The girl threw up her head and laughed—a laugh like distant music across still water.

"I don't need to be lifted now."

The man studied her quizzically out of the puckered corners of his eyes.

"This ain't Fourth o' July, n'r Christmas, n'r nobody's weddin'. How come the scenery?" He reached out his big hand and touched the smart bow of ribbon at her waist.

"W'y, didn't y'u know, the new preacher's a-comin' on the Milford stage this evenin', and we're all goin' t' meet 'im—you, too."

The twinkle at the corners of the man's eyes deepened.

"Am I?"

The sly note in his voice did not escape her. She flashed around at him a queer little twist of her face.

"Wasn't it lucky—father got a letter from 'im the very next week after ol' preacher Mason died. He answered it right off, and yesterd'y got another from 'im sayin' he'd be here this evenin'. It's the head trusfee's place t' 'ten' t' things like that, you know."

It did not occur to the woodsman that this explanation implied that he didn't know much about church matters. As a matter of fact, he didn't.

"Father's already fixed it f'r 'im t' have the use ol' preacher Mason's study at the parsonage—Mis' Mason's terrible lonesome sence the ol' preacher died, and he'll be company. He'll do 'is writin' and makin' up 'is sermons there. He'll board with us—he ain't married, y'u know."

She paused and laid a hand on the man's arm. He covered it with his great palm; looked hard at her, with suddenly sobered eyes.

"He was a classmate of—Ken's," she went on, "and he's now one of the teachers and preachers in the very college where Ken went."

The man's eyes widened. She drew her hand from under his palm.

"I 'low that's why father was s' quick t' hire 'im; and mebbe that's why he was s' willin' t' come. He ain't none too well, his letter said, bein' nigh broke down with teachin' and preachin', and he 'lowed this would be a good place t' rest up in."

Her eyes swept the serene landscape; the man watched the sunset play upon her hair.

Suddenly she raised an arm and pointed to the blurred end of the road. His eyes followed the direction of her rigid finger. The Milford stage was just crawling out of the bronze shadows and coming into view. The next moment she had seized his hand and was dragging him, half unwilling, down the cliff.

CHAPTER III

East Meets West

OF the four stages that passed through Buckeye each day—the evening stage from up the river—from the city 20 miles above—was by far the most important. Its arrival was the one big event of the day. Half the village was usually gathered about the broken porch of Zeke Polick's general store to see it come in.

The Buckeye postoffice shifted back and forth across the River Road about as often as the nation changed presidents. Zeke Polick was a whig, and the man in the White House in far-off Washington happened to be a whig. That's why the postoffice was in a store on the north side

(Cintinued on page eighteen.)

$7.50 After 30 Days Free Trial

The Belgium Melotte Separator—with the wonderful Self-Balancing Bowl. No other like it.

First-class power delivered to a long list of belt jobs

Invest in a McCormick-Deering Tractor

for Plowing and Belt Work

The remarkable new warranty covering the crankshaft and the crankshaft ball bearings in McCormick-Deering Tractors may well prove the deciding factor in *your own investment.* The ironclad agreement, printed below, provides you with a lasting security covering these important parts of the tractor. It is evidence of quality in the entire tractor. It is an indicator of practical design, accurate assembly, generous size of parts, and long life.

Do your plowing speedily and well with a McCormick-Deering and fit your tractor to fall and winter work. McCormick-Deering Tractors are designed to handle belt jobs as you want them handled. And McCormick-Deering machines are made to work right with tractors. The combination can't be beat.

Stop at the McCormick-Deering dealer's and go over the construction and the features of these tractors. Study the value of replaceable wearing parts, the unit main frame, ball and roller bearings at 28 points, etc. And remember this important fact: When you buy a McCormick-Deering Tractor you get all necessary equipment—throttle governor, belt pulley, platform, fenders, brake, etc. No extras to pay for.

Make your power investment safe by placing an order for a McCormick-Deering 15-30 or 10-20 Tractor.

SPECIAL WARRANTY
given every purchaser

The seller agrees to replace free the Two-Bearing Crankshaft in any 10-20 or 15-30 McCormick-Deering tractor, should it break during the life of the tractor, provided the broken parts are promptly returned to the factory or one of the branch houses.

Further, the seller agrees to replace free any Crankshaft Ball Bearing in the 10-20 or 15-30 McCormick-Deering tractor, which may break, wear out, or burn out during the life of the tractor, provided that the defective ball bearing is promptly returned to the factory or one of the branch houses.

Bring $2250

Sorensen Sells 15 Head of Jerseys

A total of $2250 was received for 15 head of purebred Jersey cattle at the N. C. Sorensen dispersal sale held November 26 at the Southwest Washington fairgrounds. Colonel J. W. Hughes of Forest Grove, Ore., was auctioneer, assisted by Messrs. Scanlon & Rowswell. There was a fair-sized crowd in attendance, some of the buyers being from Grays Harbor, Thurston and Clarke counties. Prices for the 15 head averaged $170 each, this including two baby heifer calves. However, those who bought got their cattle cheap, considering the splendid line of breeding that Mr. Sorensen had to offer and the fact that he had official test records on some of the cows and very near relatives of some of the yearling and 2-year-old heifers sold.

The twice gold medal cow, Dahlia Forest Girl, sold for $270, E. Munn & Son of Olympia being the buyers. However, this splendid animal's age was against her, date of her birth being August 17, 1914.

Offerings and the buyers were as follows:

Firwood St. Mawes, bull, dropped August 10, 1922; to Mrs. John P. Winkler, Chehalis, $155.

Firwood Noble St. Mawes, bull, dropped August 10, 1922; Edward and Frank Yates, R. F. D. 2, Chehalis, $120.

St. Mawes Anna, dropped August 26, 1917, $135; bought by W. A. McEwen, R. F. D. 1, Winlock.

Firwood Queen, dropped October 15, 1922, $125, and Firwood St. Mawes Holly, dropped July 15, 1921, $180, went to Claude Anderson, La Center, Wash. Mr. Anderson was formerly Lewis county cow tester.

Firwood Dahlia's Fern, dropped September 15, 1922 $135; Eugene C. Williams, Oakville.

Firwood Holly's Pride, dropped August 18, 1922, $140; John J. McEwen, R. F. D. 1, Winlock.

Firwood Holly's Pet, dropped August 28, 1923 $100; Robert E. Munn, Olympia.

Firwood St. Mawes Primrose, dropped May 15, 1922, $205, Fred Blechschmidt, Oakville.

Firwood St. Mawes Dahlia, dropped June 26, 1921, $130; Eugene Williams Oakville.

Dahlia of Primrose Ranch, dropped February 18, 1909, $125; F. Moony, Elma, R. F. D. 1.

BABCOCK SELLS TWO CALVES.

O. H. Babcock of Port Angeles, Clallam county, has filled two orders from eastern Washington for calves with cow testing association records on their dams and out of bulls backed by production records of more than 600 pounds butterfat.

You'll Like the Way Fenner Does Business

"Home building made easy" defines the Fenner method exactly. On request we will send portfolios of plans and pictures of beautiful, practical Fenner homes—more than 250 designs to choose from. Select the home of your choice and we quote you the exact price on all lumber cut to fit and ready to erect, all doors, windows, frames, building paper, nails, hardware, paint, stains, varnish, eave gutters and down spouts, and material for scaffolding.

Thus you know exactly what you are going to get and what it will cost. That is the Fenner way of doing business. It gives you better materials, a better constructed home and saves you time, money and worry.

LIVESTOCK AND DAIRY

Dairy School

Two-Weeks' Course at Enumclaw

The two-week dairy school put on by the state college extension service at Enumclaw was brought to a fitting climax by a banquet in the Presbyterian church at noon, November 23. The Enumclaw Commercial club members suggested the dinner and brought the members of the school in as their guests. There were 100 who attended and listened to talks by club members, Superintendent of Schools C. E. Beach, Dr. S. B. Nelson, director of extension at the state college; Soren Sorenson, president of the Washington state farm bureau; J. A. Scollard, president of the United Dairy association of Washington. Otto Tamm, president of the Enumclaw Cooperative Creamery company, spoke for the farmers.

Arthur McKinnon, state representative for this district, emphasized the value of having farmers come in as members or as visitors to any of the commercial club meetings.

The trend of the speakers' themes was toward a greater cooperation between the farmers of the community and the business men of Enumclaw. The farmers were complimented for their splendid success in working together, both in their creamery and with their fire insurance organization, both of which has gained renown in cooperative circles.

The dairy school, which was originated by the extension service through the help of W. W. Henry, the county agent, was well attended and it covered many vital dairy subjects.

This is the first of four similar schools that are to be held in different counties about the state during the next few months.

DIE OF HOG CHOLERA.

Approximately 4 per cent of the hogs on farms in the United States died of hog cholera last year. This estimate is made by the United States department of agriculture for the fiscal year ending June 30. Losses were heaviest in Iowa, Nebraska, Indiana, Missouri, Illinois, Ohio, Georgia, Minnesota and South Dakota, in the order named. Each of these states lost more than 100,000 head of swine from the disease during the year.

GENERAL ADVERTISING.

Swedish Inventor Has New Oil Light

Claims Whiter and Much Cheaper Light Than Electric or Gas.

Edison enabled us to enjoy the benefits of electric light, Count Welsbach's mantle made it possible to have the incandescent gas light, but it remained for a Swedish engineer named Johnson, now living in Chicago, to devise a lamp that would burn ordinary, every day kerosene oil and produce a light said by the many scientists who have seen it to be whiter than electric. The lamp is as simple to operate as the old style oil lamp, burns without odor, smoke or noise and is proving a sensation where oil light is needed.

Mr. Johnson offers to send a lamp on ten days' free trial and will even give one to the first user in each locality who will help introduce it. A letter addressed to W. R. Johnson, 31 N. Fifth St., Portland, Ore., will bring full particulars about this wonderful new lamp. He has an interesting agency to offer, too.—Adv.

Hamilton Sale

The complete dispersal sale of the A. L. Hamilton herd of registered Holsteins on the old Phelps farm, near Centralia, November 16, resulted in the entire 25 head changing hands. The average for the 16 cows in milk was $139. The total sale brought $3025, a figure which was slightly below their estimated value. The reason for the slow bidding was due, perhaps, to the fact that Lewis county is already fairly well stocked up with dairy cattle.

Mr. Hamilton had spent much time and capital in getting this herd started and the local dairymen appreciated this fact and kept the greater part of the animals in the county. The dispersal of the herd was deemed necessary after the sale of the farm lease had been made. Mr. Hamilton, however, intends to remain in the county. A few of the farm implements, a splendid work team and four grade milk cows were also sold at auction.

Mrs. V. L. Bevington of Chehalis paid $315, the top price of the sale for C. K. K. S. V. Marie, a daughter of Chimacum King Corndyke Sadie Vale and out of Cascade Marie. The dam has a record of 1107 pounds of butter and is one of the four 1000-pound daughters of Sir Johanna Ruth Fayne. The sire has six daughters that have produced over seven pounds of butter in seven days and six 700 to 900 pound butter records as 2-year-olds. All of the dams of the heifer in question have good A. R. O. records.

A list of the animals, their selling price and the buyers follows:

Lady Pontiac Idske Marie, $125, Mrs. V. L. Bevington, Chehallis; Newaukum K. C. Jewel, $100, Fred Deitchler, Chehalis; Newaukum Lunde Cornucopia, $290, B. P. Conine, Yelm; Chimacum Lutske Burke, $200, Bevington; Frame Farm Aralia Fancy, $185, C. A. Ives, Centralia; Newaukum K. C. Elnora Hengerveld, $125, Deitchler; unnamed bull calf, $100, R. McDaniel, Auburn; Newaukum K. C. Veeman Hengerveld, $175, Deitchler; C. K. K. S. V. Marie, $315, Mrs. Bevington; Aggie Nena Cornucopia 2d, $135, Thomas Nisbet, Chehalis; Lady Olga Fayne Korndyke, $130, Conine, Yelm; Newaukum K. C. Pauline Jewel, $150, Deitchler; De Kol Nellie Korndyke, $125, H. R. Shoultes, Chehalis; Carnation Edith Aggie, $100, Deitcher; Newaukum Burke De Kol, $90, Mrs. W. A. Root, Chehalis; Newaukum Palmyra Segis 2d, $80, F. A. Bennett, Oakville; Newaukum K. C. Segis Belle, $90, A. O. Hamilton, Chehalis; Blossom Pontiac Segis Beets, $70, O. Blechschmick, Oakville; Newaukum Lunde Burke 2d, $50, Deitchler; unnamed heifer calf, $75, Blechschmick; Miss Selah Deer Banks, $55, Blechschmick; unnamed bull calf, $45, Boone; unnamed bull calf out of Chimacum Lutske Burke, $25, Babe Kain, Chehalis; unnamed bull calf out of Frame Farm Aralia Fancy, $15, Bone; Galvin Lutske Boone Wayne, $75, Blechschmick.

Perpetual Pasture

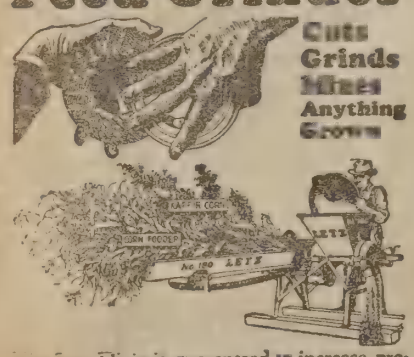
It is just as essential that dairy cows have succulent feed in the summer as in the winter, though dairymen frequently think of artificial succulence as necessary only for the winter months when the pastures are stagnant or impracticable because of winter weather. Spring and fall can usually take care of themselves so far as green feeds are concerned, but both winter and summer need forethought on the part of the dairy farmer.

"The silo provides an efficient means of preserving the succulent feeds of the growing seasons for use during that portion of the year when green pasturage is not available. The farmer with a good supply of silage knows that he can carry his dairy cows or beef stock through a long dry spell with practically no loss in milk flow or falling off in the condition of his stock. If you want to increase your herd don't buy more land; buy a good silo," says the DeLavel Pacific company in its dairy equipment booklet which it is now distributing to those who desire it. The advice is worth considering. The last sentence is especially meaningful. It suggests soil efficiency rather than large area. There are not many farms that could not easily be made to produce more feeds and foods than they do, and the use of a good silo aids materially in the process of increased production and minimum cost of production.

SLAUGHTER 4,000,000 HOGS IN JULY.

Nearly 4,000,000 hogs were slaughtered during July of this year in establishments operating under federal meat inspection, breaking all previous records for hog slaughter during that month. The exact number slaughtered and inspected, according to the records of the bureau of animal industry, was 3,983,435.

Feed Grinder



The Letz Dixie is guaranteed to increase production 15 to 30% and cut feeding costs 25 to 50%. *Send for valuable feeding booklet.*

you can double dairy profits

The net profit from your cows can be ***doubled*** by increasing your total milk production only 10%! Eminent dairy experts are authority for the correctness of this surprising fact.

10% More Milk—
Doesn't it seem possible?

Let us suppose your profit last month from your cows was $100. If by a little more intensive methods you can get even 10% more milk this month, your net profit would be at least $200!

Surely such a result is worth trying for. It is the poor milkers in the herd that eat up the profit made by the good producers. Usually they are poor milkers because of some impaired condition of the genital functions—the milk producing organs.

The medicinal properties of Kow-Kare affect just these organs. Its toning, stimulating action is quickly apparent. Sluggish cows have improved appetites and assimilation and better milk flow is sure to follow.

In the treatment or prevention of Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite, Kow-Kare has a reputation founded on successful use for over twenty-five years. You, too, can realize greater profits from dairying through the judicious use of Kow-Kare. Try it.

Kow-Kare, large package, $1.25; medium size, 65c—at feed dealers, general stores and druggists. If your dealer is not supplied, we will send postpaid on receipt of remittance.

DAIRY ASSOCIATION CO., Inc., Lyndonville, Vt.
Makers of Bag Balm, Grange Garget Remedy, Horse Comfort, American Horse Tonic.

How to use KOW-KARE

Our free book, "The Home Cow Doctor," tells how to use Kow-Kare in treating various cow diseases. It also tells of its use as a disease-preventive and stimulant to greater milk-flow.

The usual method is to feed one tablespoonful twice a day one week out of each month Costs only a cent a day per cow

LIFE PRESERVERS FOR LIVESTOCK

By DR. E. E. WEGNER, W. S. C.

COWPOX.

This disease is not generally considered in this class, since the case reports are few. Occasionally, however, we get evidence that this infection can infect both man and animals, being transmitted from man to animals and back again. Recently I was advised of a case where certain members of a family were vaccinated for smallpox, one of the boys that was so treated milked the cow night and morning. The place of vaccination was not covered and the boy rubbed the place and scratched it while it was healing, because of the itching there. A few days later the cow contracted sores on the teats similar to cowpox.

The father helped with the milking and some days after the cows showed evidence of the cowpox he developed poxlike lesions on the thumbs of his hands where he had small breaks in the skin. He also developed similar, though smaller, lesions on the arms and body. The father was accustomed to meeting a baby son on returning with the milk and usually took the child by the arm as they walked along. The child developed poxlike lesions on the arms and body, though appeared to suffer very little.

The mother developed extensive poxlike lesions on the face after a night of chills and fever and it is believed that she contracted the infection from the child, with which she slept, since the child was accustomed to sleep with its arm around its mother's neck, and its hand on her face.

From the above it seems certain that it is possible for animals to contract the poxlike diseases from man and for the man to take them again from the animals. It is likely that when such cases occur that it is due to a particularly virulent strain of bacteria having been used, as we do not consider that this ordinarily happens. No serious illness occurred and there is no cause for alarm, but it is interesting to know that such transmission is possible, and that, while one may care for animals immediately after vaccination, it is wise to keep the vaccinated area covered until healing is quite complete, as there is danger of susceptible animals becoming exposed. Likewise there is some danger of people contracting a poxlike disease from animals with cowpox.

Ringworm.

This skin infection so commonly seen in young animals is the same as that observed in children and it may be transmitted from the young puppies or kittens to the children who play with their infected pets.

In puppies the ringworm appears like a small roughened area of skin from which the hair is removed or only a few broken hairy stumps left. Later this becomes larger and the area appears rough and scaly, the hair disappearing almost completely. The outer area is reddened and shows a tendency to widen more and more, as, in fact, the diseased area becomes larger and larger.

These areas sometimes appear to itch and irritate the animal which scratches or gnaws the part.

Children who play with their pets are apt to contract this disease when the pets have them. The cause is a fungus that grows in the skin and causes the above diseases. This fungus will grow on the skins of other animals as well and when the part is rubbed or when the hand of the child is passed over that area some of the fungus may be transmitted to the hands. Lesions may then appear on the hands or on other parts of the body where the lesions appear.

The lesions are not dangerous, though they are not to be invited and it is well to have the animal treated as soon as the condition is noticed. If this is done there is little danger of it being transmitted to the human family because it can be killed quickly and does not become a menace to the whole family. Painting the roughened area and the outer part particularly well with tincture of iodine is very good to keep the infection from spreading by killing it before it gets a good start.

Better Sanitary Methods

Better sanitary methods which will help to prevent the spread of infection, such as segregating any infected animals, and the frequent thorough disinfection of the barns, will help to prevent contagious abortion, according to Dr. E. E. Wegner of the school of veterinary science at Washington State college at Pullman. It is also a good plan to adopt better feeding methods, such as will supply the necessary minerals and other body building substances in order to give the cows more resistance in fighting off the disease.

Investigations are being held through the efforts of the school of veterinary science, and it is hoped that more definite information can be secured in the near future regarding this disease.

The "U. S." Walrus can be washed clean instantly. Its surface is as smooth and waterproof as a boot

In the mire one minute—in the kitchen the next!

But your feet are dry and the house is clean when you wear a pair of "U. S." Walrus

Out to the barn a dozen times a day—through muck and mire you don't want to track into the house!

That is when you'll appreciate the convenience of the "U. S." Walrus. Waterproof as a boot—and you can slide them on and off over your leather shoes as easily as you slip into an overcoat!

And afterwards—it makes no difference how thick they're plastered with muck. One good douse under the faucet—and their smooth rubber surface is clean!

Cleanliness—convenience—protection—all these together make the "U. S." Walrus ideal for the farm.

Easy to slip on and off! One of the big convenient features of the "U. S." Walrus

Other "U. S." Footwear—all built for long, hard wear

"U. S." Boots, built so tough and rugged they're famous wherever boots are worn—Rubbers and Arctics, all styles and sizes for the whole family—"U. S." Bootees, the all-rubber lace shoe, for spring and fall use—every kind of rubber footwear you could possibly need is included in the big "U. S." line.

Every single one is backed by 75 years of skilled experience. It will pay you to look for the "U. S." Trademark—the honor mark of the largest rubber organization in the world.

POULTRY AND RABBITS

Roup in Fowls

Control Dependent on Early Recognition of Disease

"Roup or colds are common fall and winter diseases which affect poultry and in some cases the trouble occurs at other times during the year, when conditions are favorable for their development. While not as frequently found, or as serious as many others," says Dr. W. T. Johnson of the Western Washington Experiment station, "these diseases often produce perplexing problems to the poultryman.

"The symptoms and diagnosis of colds and roup are largely familiar to experienced poultrymen, but to the beginner they are not so well known and in such cases the diseases may obtain a considerable start before the situation is fully appreciated. Proper control is dependent in a great measure upon early recognition.

"With colds there is an increased amount of secretion formed by the membrane which lines the breathing passageways of the head. At first this is not apparent externally, but as it increases in severity more secretions are formed, filling the nasal passageways and resulting in a discharge from the nostrils which has a tendency to dry and close these openings. When this discharge persists for some time the fowl wipes it off on the neck feathers and also on the wing, particularly on the back of the wing and where the wing joins the body.

"Since the nasal passageways are directly conected by a tube-like structure with each eye cavity and a cavity located below and in front of each eye, known as a sius (suborbital), it is only natural for the secretions of these cavities, as well as from the nasal passageways, to collect in these places and cause enlargements of the head when the nostrils become closed. It is when this stage is reached that a serious condition exists. If the collected secretion is not removed within a very few days it becomes cheese-like in consistency and can not be removed except with difficulty. In very severe cases the various passageways become filled with the hardened secretion and it is impossible to remove it.

"In those cases where the eye region becomes involved and particularly when there is a marked odor from this region the condition is most commonly regarded as roup. Whether we call it roup or an advanced stage of a cold makes no material difference, the important point being the understanding of the fundamental factors in the case.

"Fowls affected with simple colds show no particular detrimental effect. When the disease proceeds to swellings of the face and eye regions, droopiness and lack of appetite is noted. When affected with the disease in the early stage egg production is not seriously diminished, but the later stages are associated with a decided slump.

How to Detect Cold.

"In diagnosing a cold before a discharge has been noted at the nostrils it is necessary to apply pressure to the nasal passages and force out the collected secretion. It is always possible to detect a cold by this means. Some times a watery substance which has come up from the crop may be forced out. The secretion found with a cold is thickened and not watery.

"Chicken pox as found in connection with the eyelids may be confused with roup. In this connection one must bear in mind that roup is always preceded by a cold and in case of roup one should be able to detect increased formation of nasal secretion by its discharge through the nostril.

"With colds and roup it is not at all uncommon to find yellow, cheese-like spots (canker) in various parts of the mouth and it is advisable when handling such cases to take note of this condition should it be present.

Common Causes.

"Any factor which subjects the fowls to exposure or sudden and marked changes in temperature will tend to produce colds, which may later advance to roup. Some of the factors which may be expected to lead to colds and roup are: Shipping fowls so that they are subjected to exposure; connection with the roosting region; insufficient ventilation; improper regulation of the open front curtain, and leaving the rear windows open during stormy weather.

"Whether or not many of our poultry houses are sufficiently ventilated, particularly in the roosting closet, is an unsettled question. This is the place where the greatest precaution should be taken to provide proper circulation of air, but a glance at the common poultry house will show that the customary arrangement of this part of the house makes it the least ventilated of any part of the house. The long poultry house, especially one with a large open front, with no cross walls outside of the end walls and the roosting closet partitions to break the wind, demands that close attention during inclement weather be given to the open front curtain. This is especially true where the house is faced in such a direction that the prevailing winter winds strike it obliquely.

"It some times happens that the housing facilities are ample, but that the fowls crowd certain sections of the roosting quarters, resulting in the development of colds. Congestion in part of the roosting quarters and abundance of room in other parts is at times brought about by feeding practices such as feeding in a given place and inducing the fowls to gather more at these points or permitting them to enter the house from an opening at one end or the other of the house.

"There is a popular impression that roup and colds are due primarily to infection. While this may be true the evidence at hand to support this view is not convincing and it would be well to consider housing and management factors first in attempting to locate the cause.

"The idea that roup and chicken pox are the same disease is erroneous. Chicken pox is a germ disease which has been conclusively proved as such and may or may not be associated with the occurrence of roup.

Control of the Disease.

"The logical procedure in considering the control of colds and roup in an affected flock is at first determine the number of fowls and then if serious locate the cause and remove it. Some times the cause has been automatically removed as in the case of leaving the open front curtain up too much during a brief period of stormy weather. Since fowls are very susceptible to colds it should be no cause

Poultry Expert Tells How to Make Hens Lay

Getting More Eggs From the Flock Will Solve a Financial Problem for Many Housewives—An Egg a Day Per Hen Possible.

The director of an agricultural experiment station is responsible for the statement that it may be possible to breed chickens which will lay an egg a day, every day in the year. And R. A. Lynn, whose advice has been followed by thousands of poultry raisers with striking success, says, "I believe that any poultry raiser can at least double and probably increase his poultry profits five times, simply by getting more eggs in the winter, when prices are high."

Healthy, Vigorous Hens Should Lay 250 to 300 Eggs a Year.

"I have given years of study to the subject and am convinced that hens loaf in the winter and after the moult because certain elements are missing in the feed which are needed to keep the generative organs in a healthy laying condition. Furthermore I demonstrated that these missing elements could be easily supplied by adding certain mineral elements to the drinking water, thus insuring a plentiful supply of eggs at highest prices."

Thousands of poultry raisers praise the work that I am doing, and letters pour in to me every day. For instance, T. E. Asher of Naylor, Mo., writes: "Before using my secret I was getting only one egg a day, the next week I got 194 eggs."

I am glad to help any poultry raiser and will send full instructions regarding my system and two regular $1 packages of my wonderful mineral compound on free trial to any reader of this paper who will write me. If after trying the system 10 days your flock is not healthier in every way, and laying many times as many eggs, it will not cost you a cent.

Don't send any money, but just your name and pay the postmaster only one dollar and postage when he delivers the two one-dollar packages. You can sell one package with instructions to a neighbor and thus get your own package free. Not only that, if you say so (and you are the judge), your money will be returned, as I fully guarantee this offer. **R. A. Lynn, 139 Gateway Station, Kansas City, Mo.**—Adv.

Get Winter Eggs!

See to it that there is song and cackle, scratch and action, going on in your poultry yard.

That's when the eggs come.

Feed

Dr. Hess Poultry

PAN-A-CE-A

See them get busy. It gives hens pep.

Nux Vomica is what does it—that greatest of all nerve tonics. A Pan-a-ce-a hen can't hold still. It's her good feeling that makes her hop around.

Pan-a-ce-a has Quassia in it to make hens hungry. Great combination! One makes them eat—the other helps them digest what they eat.

No dormant egg organs when that combination gets to work on a hen's system. You just get eggs—eggs.

A Pan-a-ce-a hen is always a hungry hen—an industrious hen. She gets off the roost winter mornings, ready to scratch for her breakfast.

Tell your dealer how many hens you have. There's a right-size package for every flock.

100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

GUARANTEED

I spent 30 years in perfecting Pan-a-ce-a.

ORCHARD AND GARDEN

Pruning Season

Is Formally Opened in Stevens

The 1924-1925 pruning season of the orchardists of Stevens county was formally opened November 24, by M. D. Armstrong, horticultural specialist of the extension service of the Washington State college, who demonstrated pruning at the Abe Heidegger orchard at Rice and the J. W. Bradbury orchard of Kettle Falls. The entire day's work was done in a steady downpour of rain, which restricted attendance.

The following points relative to the correct way to prune were emphasized. Heading back is not the correct way to prune. It is supposed to limit size of trees and induce stockiness in the branches and it accomplishes neither. It is detrimental, as it dwarfs the tree, retards production of fruit and makes the annual job of pruning much more burdensome. The only time this method is needed is when the trees are very young, to enable the grower to form the tree by inducing branches to grow where needed and to eliminate them where this is desirable.

The thinning out method is now known to be the correct one. It opens the trees and admits sunlight which is necessary to the production of fruit. Sunlight is the power and the leaf is the factory which makes the food which forms the fruit. Hence the necessity of sunlight.

Mr. Armstrong stated that when the northwest orchards were set out much faulty information was given out relative to distances to plant. Much trouble is arising from this at the present time and it is found necessary in some orchards to even pull out some of the trees. A method has been worked out whereby this may be done with a minimum of inconvenience.

As regards time of pruning, Mr. Armstrong stated that summer pruning was never advisable except the removal of water sprouts and suckers. The proper time to prune is as soon as the leaves fall, carrying it on throughout the winter as weather permits.

The following Stevens county growers witnessed the demonstrations: Abe and Raymond Heidegger, Louise Schnegge, W. L. and Jesse Alldredge, Ed. Curry, Joe Robinson and J. W. Bradbury. Incessant rain prevented large attendance.

The Bees in Winter

The question is repeatedly asked how to care for and protect the bees in winter. In answer to this inquiry, we print an article that appeared some time ago in THE FARMER, written by George W. York, one of the prominent bee authorities in the northwest.

It seems natural to put off doing some needful things until the very last minute or day, and so it comes that some beekeepers either forget or simply neglect to see that their bees are prepared for safe wintering until it is almost too late to do the work properly.

The very first and altogether the most important part of winter preparation is the matter of food stores. It frequently occurs that owing to drought or other unfavorable conditions the bees have not been able to store sufficient honey to carry them through the winter, or until they can again gather from natural sources the following spring. Under such circumstances the only thing to do is to feed the bees.

If the beekeeper has money on hand or can get some that he is positive is entirely free from disease germs perhaps it is best to feed that, but if short of good honey, the next best thing to feed the bees is sugar sirup. Exclusive of the weight of the hive, the winter stores should weigh around 40 pounds.

The sirup is prepared by dissolving, say, two pounds or two pints of cane sugar in one pint of boiling water. These should be thoroughly stirred until the granulated sugar is completely dissolved.

Now as to the best way to give the sirup to the bees. I prefer to use a bee-feeder placed diagonally across and on top of the brood frames in an empty super. Across the top of this feeder, place four or five short wooden sticks about six or eight inches long and about one inch thick. These should be placed, say, four inches apart, then fill the feeder with the warm sirup. On top of the short sticks put a burlap cover. This may be a gunnysack, folded so as to cover the whole of the inside of the super.

The short sticks will hold the burlap above the feeder so the bees can come up from below and get under the burlap to the sirup. The burlap will help to keep all the heat of the bees around the feeder and sirup, thus causing them to carry the sirup down in the brood combs very rapidly.

This way of feeding is much better than any outside feeding, as there is practically no danger of robbing, especially if the feed is put in just before dark in the evening.

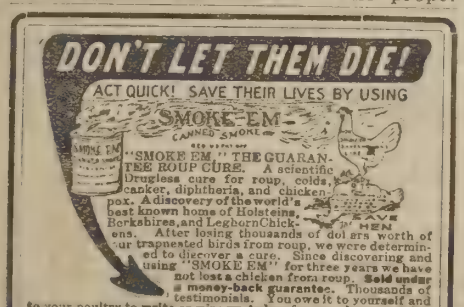
The bee-feeder is made of a solid block of wood about 20 inches long, two and a half or three inches thick and four inches wide. On one side it is sawed out, leaving three or four partitions of the wood, so the bees will not be drowned in the sirup. The block of wood is sawed almost through. This makes a fine feeder.

Of course, if this feeding has been neglected until midwinter, then the best way is to make thin cakes of sugar that can be laid on top of the brood frames and under the packing, when the bees will come up and get it.

The hive entrance should be reduced down to about two inches in length and three-quarters or one-half inch high while feeding, or entirely closed, so no other bees can get in to help themselves. When there is no outside nectar from flowers to be had, bees from strong and well- supplied colonies are apt to go snooping around to see what they can find for themselves, even if they do not need it. Bees are quite different from people, as they (the bees) seem to have been born busy.

SHORTAGE IN THE CELLAR.

Now is a good time to make a careful inventory of the winter vegetables that are in the cellar. What is lacking? Are the onions, beets, squashes missing? If so, it is probably because you were careless in planning last spring's garden. One of the great advantages of the farm home is the possibility of having a generous supply of good, home-grown things to eat at every season of the year. If some of these things are absent from the cellar this winter it is a good time to make a note of it and figure out a place for these particular things in the garden that will be planted next spring. Do not wait till March or April to begin "making garden." Make it on paper this winter.



Read what Mr. H. J. Schuette, Box 47, Evansport, Ohio, says: **"SMOKE 'EM"** is a wonderful roup cure. It certainly does the work. Dealers, we have a good proposition.

Vita Gland Tablets Start Hens Laying in Twenty-four Hours

Hens have glands just like humans and also require vitamines. Because they directly stimulate the organs involved in egg production the mysterious newly discovered VITA GLAND Tablets, crushed into hens' drinking water, turn winter loafers into busy layers almost over night. Science has discovered how to control egg production with essential vitamines, and gland extract that works directly on the OVARIAN or EGG producing gland of the hen. The wonderful effect of gland stimulation is shown by a simple test. Government experiment stations report that hens properly fed vitamines, etc., lay 300 eggs as against the sixty of the average hen. "Leg weakness of baby chicks due to insufficient Vitamine B," says The Official Bulletin. Also says: "Hens start laying at an average age of 139 days when fed vitamines."

Get One Box Free

EGGS, EGGS, EGGS and fine healthy chicks, prosperous flocks without fuss or bother or drugs or expensive feeds can be had. Just drop these tablets into drinking water. So simple to double your profits. Chickens now full of pep and life. Nests full of eggs. Summer production at winter prices. So confident are the Alexander Laboratories, the manufacturer of the original and genuine VITA GLAND tablets, that you will be amazed at results that they offer to send a free box for your own use. This is how. Send no money, just name. They will mail two boxes, each regular one dollar size, a generous supply. When they arrive deposit only a few cents postage and one dollar with postman. When your neighbor sees the wonderful increase of eggs in your nests let him have one box for a dollar and thus your box has cost you nothing. $5000 in big Kansas City bank guarantees your satisfaction or money back without question, so write today and get dozens of extra eggs this simple easy way. Write **ALEXANDER LABORATORIES, 9037 Gateway Station, Kansas City, Mo.**

What's the Verdict?

THE test of a mealtime drink is not alone how it tastes, but also what it does. Many a coffee-user finds wakefulness and restlessness after drinking coffee with the evening meal—and other health-disturbances follow on.

There's double pleasure and benefit in Postum; delightful taste, complete satisfaction, and agreeable friendship with nerves and health.

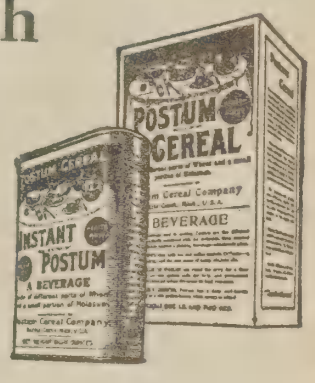
There's charm without harm in Postum.

Let a ten-days' trial of Postum instead of coffee show you the marked improvement in health and comfort which so many others have found.

Sold by grocers everywhere!

Postum for Health

"There's a Reason"



Your grocer sells Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer the flavor brought out by boiling fully 20 minutes. The cost of either form is about one-half cent a cup.

Made by Postum Cereal Co., Inc.,
Battle Creek, Mich.

It is not alone the superior workmanship, materials and design but its all-around fitness to the tractor user's every requirement that makes the Two-Ton Caterpillar Tractor (T35) the supreme small tractor.

Nitrate of Soda

Michigan Agricultural Experiment Station reports a gain of 7.47 bushels of wheat per acre from top-dressing in the spring with 100 lbs. of Nitrate of Soda. Virginia Station Bulletin number 221 says, "On wheat crops needing nitrogen an increased yield of 5 bushels per acre can be expected from each 100 lbs. of Nitrate of Soda applied per acre." Demonstrations in Pennsylvania have shown an average gain of 7½ bushels of wheat per acre and 37% increase in the straw.

Wheat

Potatoes New Jersey Experiment Station shows that the largest yields of potatoes are obtained when Nitrate of Soda is used as the sole source of Nitrogen. What is true of potatoes is true of other vegetables.

Early Vegetables They come earlier and main crops become better and more prolific when Nitrate of Soda is used. This is why Market Gardeners use such large quantities.

Tobacco Ohio and Virginia Experiment Stations report wonderfully profitable gains from the use of Nitrate of Soda on tobacco. My own demonstrations in Pennsylvania prove that 200 lbs. of Nitrate of Soda used at planting time will add 100 lbs. or more tobacco to the acre.

Apples Practically all the Experiment Stations in the apple districts now recommend Nitrate of Soda as necessary and are recommending its use in the spring before blossom time. This applies equally well to Peaches, Pears, Cherries and other fruits.

Why not try it on your crops?

My Free BULLETIN SERVICE, covering the use of Nitrate of Soda on all kinds of crops, is issued for your information and explains how to use it, where to use it, when to use it. If you want it send me your address, name the crops you grow and to identify this advertisement add the number 3432

Mail-O-Grams

By State College Specialists

A. B. Crane, Agricultural Engineering: Trim out all weeds and brush along your open ditches and burn the trash.

B. A. Slocum, Apiculture: Plan your next year's work. If you need queens or package bees in the spring, place your order now for early delivery.

E. Belle Alger, Clothing: To freshen up a velvet hat, hold it over the spout of a teakettle in which the water is boiling.

Don G. Magruder, Dairy: Use vaseline on chapped teats. If very bad, wash well with warm water and apply glycerate of tannin or equal parts of spermaceti and oil of sweet almonds.

Leonard Hegnauer, Farm Crops: Pull up and burn all weeds which may have gone to seed.

R. N. Miller, Farm Management: House and grease all farm machinery for the winter.

M. D. Armstrong, Horticulture: Pick up the scattered apple harvesting equipment and get it under shelter.

C. M. Hubbard, Live Stock: Be prepared for early farrowing or else have your sows farrow later.

George L. Zundel, Plant Diseases: Potatoes, if stored in cellars where the temperature is too high or too low, develop a bundle browning similar to the symptoms often found in fusarium blighted tubers.

W. D. Buchanan, Poultry: Green feed in winter is the result of planning. Plan now for this winter's supply. Mangels and alfalfa leaves and blossoms may be substituted for fresh greens.

Pacific International

For the first time in several years that a show string from his Firerest farm herd of Guernseys has been on the circuit, Dr. A. Macrea Smith, the well-known physician of Bellingham, Wash., was able to be at the ringside. He saw them win 11 blues and junior, senior and grand championship on females, also the Staples trophy for best calf herd and the Lady Oregonian trophy, a magnificent silver chryanthemum vase, offered by the late F. S. Peer for best group of four Guernsey felames. This was won in 1921 by Appletree Point farms of Burlington, Vt., but last year and this year was taken by a Smith group. First aged cow (senior and grand champion), first junior yearling heifer and first senior heifer calf (junior champion) were included in the quartet that won it this fall. When La France of Bralee was defeated for the championship last fall by Jewel of Rose City, Mrs. Smith thought she would not show the animal again. She changed her mind, however, and this fall saw her placed over River Banks farm's Imp. River Banks Valuentine, that defeated Jewel at the Oregon State fair.

Kenneth Hinshaw and Earl Selle, youthful Berkshire breeders from Goldendale, Wash., encountered the stiffest competition that they had run into since their swine left home in August and started the round of the northwest fair circuit. They had to be content with a fifth and a sixth in the open classes and a third and two sixths in club classes, but they have 33 blue ribbons and 10 purple from other shows to add to their collection of over 300 which they have made in eight years of club work.

One of the most welcome easterners at the show was Karl B. Musser, formerly extension dairy specialist in Washington and now secretary of the American Guernsey Cattle club, with headquarters at Peterborough, N. H. Musser was selected something over two years ago to be one of several Guernsey field men, and worked for a time in New York state. He was presently called into the office, however, soon became assistant secretary, and upon the retirement of W. H. Caldwell was made secretary. He was an interested spectator of the Guernsey judging and was the principal speaker at the Guernsey banquet.

M. S. Prescott of Lacona, N. Y., editor of the Holstein-Friesian World; Earl Cooper of Chicago, junior extension leader for the Holstein-Friesian Association of America; A. C. Oosterhuis of Oconomowoc, Wis.; and Judge R. E. Haeger of Algonquin, Ill., were the black-and-white breed's most distinguished eastern guests. Prescott has been out at least twice before; Cooper saw the show last fall and visited the northwest again this summer, on club work; but Haeger had never seen the Pacific International, though he judged at the Washington State fair about 1908. He is as well known an auctioneer as he is judge, and his success as an exhibitor has never been approached. He said he had never seen a better 3-year-old than John L. Smith's reserve champion, and the line-up of females he pronounced by far the best of the season—and he has judged a score of shows from coast to coast. In the absence of W. A. Moserip of St. Elmo, Minn., who was expected but who was unable to come, Haeger conducted the Holstein judging school, and was assisted by Oosterhuis, who worked with him on the national committee which developed the "true type" Holstein.

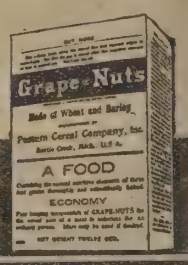
The Winter Breakfast

which includes Grape-Nuts with cream or good milk, will have one dish that has both engaging flavor and true nourishment.

Grape-Nuts is more than "something good to eat." It is a building food in most digestible form; rich in proteins, carbohydrates, mineral elements and vitamin B—all vitally essential to the daily rebuilding of every part of the body.

It pays to keep oneself in the highest physical condition, for with the strength and vigor that go with health you can "do things" and be happy.

There's a way—and *"There's a Reason"*



for **Grape-Nuts**

Secretary Hoover Says:

In an address delivered at New York City November 13, 1923, referring to the electrical industry—

"It is fitting that I should make some remark upon the remarkable progress and ability shown by the whole electrical industry since the days of Mr. Edison's initial genius. They have come to have a large vision of co-operation and service and have in very large measure realized their responsibilities to the public.

"One great mark of their progress is that despite the greatly increased cost of labor, coal and other materials, there is but little if any increase in the cost of light and power to the consumer today over prewar prices.

"From an annual utility production of 4,000,000,000 kilowatt hours twenty years ago we have increased to 50,000,000,000 today, with an increase in consumption from 60 to 500 kilowatt hours per capita.

"It is a magnificent achievement of the initiative and ingenuity of these industries, and that it has attained such a growth under public regulation is itself proof of the ability and co-operation of our public officials."

Avoid Motor Oils

containing paraffin, asphalt or any other non-lubricating substance. Aristo Oil is refined by the most advanced processes, designed to remove everything in the crude which has no lubricating value.

A section of the interior of this building showing one of the many laboratories.

The Research Laboratory of the Union Oil Company of California at Wilmington, devoted to research work to insure superiority in Union Non-Detonating Gasoline, Aristo Motor Oil and other products.

Seek More

in motor oil than simply perfection as a *lubricating film*

In Aristo Motor Oil there is every lubricating quality that the best oil can possess.

A staff of chemical experts produce it, backed by "Union Oil" facilities permitting of the most exhaustive research and conclusive tests.

A durable, fine film results, penetrating to and protecting the motor's every moving part.

Every drop is as near to perfection as a lubricating film as modern science can make motor oil.

But there is more to look for in your oil.

Two "Carbons" —one is Flinty, *Hard*

All motor oils, as all oil makers know, deposit some carbonaceous residue.

One kind is gritty, flinty, hard—hard enough to score cylinders and scratch rings, pistons, valves and bearings. It has a tendency to cling. It acts as an abrasive, causing wear. It becomes incandescent, pre-ignition following. It coats spark plugs, short-circuiting the spark.

Lost compression results from its accumulation around valve heads and seats.

The Other Kind

The residue from Aristo Oil is fluffy, soft. Because of its non-clinging tendency, most of it blows out with the exhaust.

It is softer than the metal it touches, so can't cause wear. It is deposited in smaller quantities than the other kind.

Cars run thousands of miles farther and tractors months longer without pre-ignition, short-circuiting, or loss of power through impaired compression.

Hence four motor troubles are eliminated by it in addition to its service as a perfect lubricant.

There's a deal more satisfaction in such oil. For sale at all first-class garages and service stations.

Union Oil Company of California

ARISTO Motor Oil

Roup in Fowls

(Continued from page twelve.)

for alarm if a few affected fowls are found in a commercial flock.

"After removing the cause the question arises as to what should be done with the flock. It does not seem practical to separate the affected from the well birds except in the case of those seriously affected and showing swellings of the face and eye regions. These should be removed from the flock and if one has the facilities and time, many that would die without treatment could be saved by masscaging the head parts so as to force the collected secretion out of the nostrils, the cleft in the roof of the mouth and out between the eyelids. This should be rather vigorously done and before the secretion has become firm. With the cause removed the simple cases of colds in the flock can be left to recover themselves. Many mildly affected fowls will continue to lay if left in the flock under the above circumstances, but if removed for treatment frequently will stop laying. Where the mild cases are left in the flock it is well to keep a close watch for fowls affected with swellings of the head, so as to detect them as early as possible. Upon recovery these fowls may be turned back in the laying pens again.

"Vaccination has been recommended by some during recent years to lessen the severity of the lesions of roup. In the present state of our knowledge regarding this phase of control the writer prefers to resort to other means such as proper housing and management to control the disease. It is well to remember that the vaccine sent out by this station is not for the control of roup, but for chicken pox only.

"A number of drugs have frequently been used in the past with the thought of lessening the severity of colds and roup by this means. Most prominent among these drugs has been permanganate of potash. This has been added to the drinking water in such amount as to give it a rather deep wine color. No experimental data are available which definitely establishes the value of this drug in controlling colds and roup. Its use is only based on popular conception which does not necessarily determine its value."

Yellow Blossom Alfalfa

Recent correspondence from one of our eastern Washington readers referred to a yellow-blossomed alfalfa as being able to grow under conditions such as are found in our dry land sections when inadequate moisture handicaps common alfalfa. Asked his opinion of the variety, Professor E. G. Schafer, head of the department of farm crops at the state college at Pullman, says:

"There are many varieties of alfalfa and they vary in their hardiness against cold and drought. The yellow-blossomed alfalfa referred to is no doubt suited for growing under adverse conditions. It has been grown in northern Europe for a long time before being introduced into the United States. It was perhaps noted more for its hardiness against cold than drought in its native home. Objections to it are that it has a tendency to grow close to the ground and it produces a smaller amount of forage. It is also said that the stems early become woody.

"We have grown this variety in small plots here at Pullman, where we have had opportunity to observe its character of growth. Our opinion is that it is more hardy for extreme conditions than various other varieties, but that its yield is much less. I am uncertain whether it will have any marked superiority over some of the common varieties for dry land conditions. It is possible that some selection of this variety might prove more valuable than this variety as ordinarily grown. At the present time I do not believe that it has any great advantage over the other varieties."

The Red Lock

(Continued from page eight.)

of the road in the year of grace 1849, instead of in a store on the south side.

The River Road was a bigger institution than the town. It not only halved the town; it well-nigh halved its political faith. From the Warhope farmstead at the east edge to the schoolhouse at the west edge it formed, in political years, a sort of "devil's lane" between the north siders and the south siders. The farmstead and the red-roofed cottage—which is to say Jack Warhope and the Colins—were both on the north side of the road.

Simon Colin had once been Zeke Polick's partner, but had dissolved the partnership years before to follow the more lucrative business of lending money and collecting rents—mostly his own. A banker without a bank, so shrewd was his judgment and so hard the bargains he drove, that half the Flatwoods was under mortgage to him.

He still kept a sort of office in the store—a corner at the front closed off by a low fence of ordinary garden palings, with a sagging gate of the same material, that, in the many years it had been dragged open and shut, had grooved a deep half-circle upon the floor. Within was a desk by the dusty window; a narrow shelf nailed along the tops of the palings at the longer side; a chair; a table against the wall, on it three or four law books that were never opened. There was no safe. That was at the red-roofed cottage.

Not a very imposing office—but the commerce of the Flatwoods passed across those time-faded, unpainted palings. Even Zeke Polick, Simon's closest business associate, would have been astonished to know the actual wealth that journeyed in

"The Reverend Caleb Hopkins, I 'low?"

an old satchel back and forth every day between house and store.

Dangerous?—twice the attempt had been made to see inside that satchel, and a man had died each time. The old banker carried a huge double-barreled horse pistol, loaded half to the muzzle with buck shot, and he knew the way to its light trigger as the weasel knows the way to its den.

And the safe at home—a cracksman from the city tried that one night. The old man blew a hole in his ribs the size of an open hand with a sawed-off shotgun he always kept near his bed.

The old banker had just closed his desk, picked up the rusty satchel, scraped open the sagging gate, scraped it shut, and come out on the porch of the store when his daughter and the big woodsman joined the crowd around the postoffice—a crowd doubly large, gathered for the doubly auspicious occasion.

The girl ran to her father and slipped an arm about his waist—about the waist of his coat, to be exact, for the tall figure was mostly coat—a frock coat that had once been black, but which time had bleached to an uncertain reddish-brown. He looked down at her and grunted. It was the only sign he gave that he knew she was there.

Up beyond the Warhope farmstead there came a prodigious rattle of wheels, a clatter of iron-shod hoofs, and the Milford stage dashed into sight; roared across the wooden bridge where the River Road crossed Eagle Run; rumbled past the church into the village and pulled up in front of the postoffice.

The crowd flocked around it. The guard threw off the mail sack. Zeke Polick picked it up and carried it in. The driver sprang down from the box; ran around the double team; patted the noses of the leaders; looked at the harness, the wheels; remounted the box; gathered up the reins; cracked his whiplash, and the lumbering stage rattled away down the river.

One passenger had alighted, a tall young man wearing a full beard, neatly cropped and pointed—the new preacher, without a doubt—quite the oddest array of satchels and umbrella, patent leather boots and high hat, stiff neck stock and enormous spectacles, that had ever invaded the Flatwoods.

The natives winked at one another and grinned—on the off side. Jack Warhope was possibly the only one to notice that the young preacher beneath the odd trappings of his calling, carried what looked to be a very capable body, tall and strong.

He seemed nervous as he stood at the side of the road peering through his enormous spectacles, slightly amber tinted, upon the crowd.

The old banker, with his daughter a step behind him, advanced, touched his faded black hat and extended his hand.

"The Reverend Caleb Hopkins, I 'low?"

The eyes behind the huge spectacles lighted. The young preacher dropped one of his satchels and met the outstretched hand.

"Ah—Mr.—Colin, I take it?"

"All but the mister. I'm just plain Sime Colin."

The old man grinned, as broadly as the pinched shrewdness of his dry face would allow. The man of books studied him as a scientist might study some new and interesting specimen. The banker talked on.

"I want y'u t' meet my daughter." He half turned; jerked his thumb toward the girl; jerked it back toward the preacher. "Texie, Mr. Hopkins."

The young preacher touched his tall hat; dropped his other satchel, grasped the girl's hand in both his own and pressed it closer than the occasion could possibly warrant.

It may have been merely the expression of a genial nature touched with the fervency of his profession—the outflowing of a benevolence that embraced all humanity—but even so, it brought a quick flush to the girl's face, and drove her eyes to the ground.

The old banker had turned to the crowd.

"Step up, step up," he called, "and shake hands with the new parson. The way y'u hang back, he'll think he's drapped off amongst a pack o' publicans and sinners."

He seemed to think the remark topped the occasion with particular nicety, for his dry face crinkled up into a splintered grin and he rubbed his bony hands together like a man very well satisfied with himself.

The crowd had evidently been waiting for just such an invitation. Many a man wiped a grimy hand on his blouse; many a woman's hand stole under her apron—it was against Buckeye etiquette ever to offer a hand to the preacher without first wiping it. Stolid faces raveled into grins, and the quaint vernacular of the Flatwoods had an airing. Odd bits of philosophy, ancient jokes, that nobody would have dared to spring on his neighbor, were freely sprung on the hapless and helpless sojourner from the polite east.

Phrases that had done de[illegible]milar occasions were brushed up an[illegible]h another fling. Hanner Polick made the same speech that she was known to have made six times before. Aunt Liza Wiffles "'lowed" he was "middlin' young f'r a preacher," and pursed up her lips and hitched them around toward the right ear in a way that dared anybody to dispute it.

The informal reception was over and most of the crowd gone when Texie noticed

Mother's Rules of Cleanliness were simple and successful

Let experience tell you the *important* things about housekeeping

Your mother would never think of using soap and water without 20 Mule Team Borax. It was the Borax with the soap and water that kept her clothes so white and her house so clean.

20 Mule Team Borax has proven itself through the years to be Nature's Greatest Water Softener and Cleanser. It prevents woolens from shrinking and colors from fading. It is a solvent and an antiseptic, and it should be used always when soap is used.

20 Mule Team Borax is as valuable an addition to soap as soap is to water, and any grocer you buy soap from has 20 Mule Team Borax—Ask Him.

THE MAGIC CRYSTAL BOOKLET describes a hundred important housekeeping uses for 20 Mule Team Borax—and gives necessary valuable suggestions for successful methods of household hygiene.

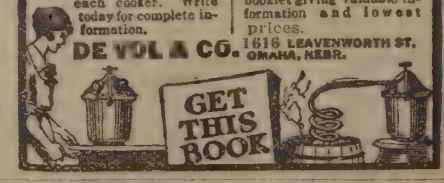
DE VOL & CO. 1616 LEAVENWORTH ST. OMAHA, NEBR.



The department editors of this paper are anxious to be of service to you. Do not fail to write to us if they can be of help to you.

Jack Warhope still leaning against the porch post where she had left him. She ran back, caught his arm and dragged him forward.

"Mr. Hopkins, meet Ja— Mr. Warhope."

"Glad to meet you, Mr. Warhope."

The young preacher stretched forth his hand; the other grasped it. The peering eyes behind the heavy glasses studied him with curious intentness, but the woodsman, only mildly interested, missed the inquisitive look.

The old banker had taken a step up the road.

"Well," he said, "I 'low that jist about winds up the how-d'-y'-doin'. Texie, run in and git the mail, and we'll be moseyin'."

He half turned and glanced over his shoulder at the preacher.

"I've dickered the use of our ol' preacher's study f'r y'u at the parsonage. Sister Mason—the widder, y'u know—she 'lows she'll be right glad t' have y'u come over and use the study, she's that lonesome sence the parson died. We'll stop as we go a-past and you can take a look at the study and meet Sister Mason. But, as I writ y'u, I'm aimin' f'r y'u t' put up with me, at least f'r a few days"—the brisk, raspy voice softened—"I'm honein' t' have a talk with y'u about—the boy."

He glared down at the road; the preacher studied him curiously.

So long had the old money lender been accustomed to dominate everybody about him that it did not once occur to him to inquire what the preacher's wishes might be. He strode another step or two up the road, remembered that his daughter had gone in after the mail, stopped and frowned half impatiently toward the store door. The preacher picked up his two handbags and waited. Jack Warhope had gone back to the porch and was again lounging against a post.

At that moment Texie came out with half a dozen letters in her hand, saw the big woodsman, and, with a tiny wisp of roguishness in her eyes, stopped on the edge of the porch.

"Mercy! but you're a hard man t' herd. Don't y'u know you're goin' along home with us t' supper?"

"First I hear'd of it," the woodsman drawled, shifting his shoulder against the post.

The girl glanced at the preacher standing at the edge of the road, jerked her head ever so slightly toward him—a motion so elusive that it would have escaped anybody else but Jack Warhope—and lowered her voice to a whisper:

"We'll git 'im t' tell us about —Ken."

She turned away. The shoulders left the porch post and the man followed.

The old banker was holding out his hand for the letters. He glanced them over, grunted, thrust them unopened into the pocket of his faded coat; muttered a word, drew them forth again, sorted out one, stared hard at the address and postmark; and then, with a half petulant grimace, knocked the bunch of letters together, crammed them back into his pocket again and, followed by the others, trudged away up the road.

(To be continued.)

To Trap a Skunk

By GUY E. POWELL.

Trapping is the best method of taking a skunk. Shooting generally results in defilement of the surroundings. If no trapping were done skunks in some places might become noxious because of their abundance.

Being neither suspicious nor cunning, skunks are easily trapped. They are often caught in unbaited traps placed in the paths they travel, yet the head of a fowl, a sparrow or a dead mouse makes an excellent bait.

Trappers use a medium sized trap—No. 1—and try to take advantage of the peculiar habits and haunts of the animals, placing the trap in such places as the paths they travel to obtain water or near the openings to their dens.

The trap should be set lightly, the trigger filed down to fit the notch loosely, and a little trash—leaves or grass—may be scattered over it with advantage. The bait may be placed on the pan, or a little beyond the trap, or between two traps. The path may be narrowed artificially by setting upright sticks in two converging rows along it and the trap set in the narrow place.

Scent is not often discharged by skunks when trapped, but care is needed to remove them. With caution one may approach near enough to strike the animal a quick blow across the back, paralyzing the hind parts and preventing the discharge. Some trappers use a ware noose attached to a pole. The noose is cautiously lowered over the head of the skunk, and by a quick jerk the animal is lifted and strangled.

Many trappers use a tight box trap for taking skunks. When one is caught the box is carefully lifted and carried to water deep enough to cover it. If no water is available to drown the animal, it may be killed in the box by carbon bisulphid or chloroform.

Automobile Costs

For the year 1922 the average cost per mile of all the cars reported by the county agents in Minnesota was slightly over 8 cents per mile, according to the agricultural extension service of the University of Minnesota. It cost one man 17 cents per mile in 1922 when all his costs were averaged for the season.

The cost has varied from year to year since these records were started five years ago. In 1921 it cost about 9 1-4 cents per mile to operate; in 1920 it cost 11 1-2 cents per mile; in 1919, 10 1-4 cents and in 1918, 8 1-4 cents. These records were kept in the same manner each year and by approximately the same persons so it may be considered a fairly good comparison of the change in costs during that time.

Of the average cost of operation in 1922, about 8 cents, the largest single item was depreciation, about 2 1-2 cents per mile; repairs stood next, 1 3-4 cents per mile; gas was practically the same. These three items were almost three-fourths of the total charge. New tires were about three-fourths of a cent, garage rent about one-half cent, interest about one-third of a cent and oil about one-third of a cent.

Given in percentages the cost per mile of the different items of expense are as follows: Gas, 21.3 per cent; oil, 3.7 per cent; tires, 8.8 per cent; repairs, 21.7 per cent; garage rent, 6.5 per cent; depreciation, 30.7 per cent; interest, 4.7 per cent; insurance, 1 per cent; miscellaneous, 1.6 per cent; making a total of 100 per cent. These figures are based on an average mileage of 8164 miles. On the average the cars made 15 miles per gallon of gas.

Before taking the Adcox course I was a ranch hand—worked long hours at $80 per month—now I work short hours — have pleasant work and make over $80 per week — ADCOX TRAINING DID IT.

Julius Winters

Before attending THE ADCOX SCHOOL I was an ordinary railroad section hand at $2.50 per day—now I am an auto electrician and make $10 per day.

Clyde Ruegg

I came all the way from Texas AND PASSED UP TWO OF THE LARGEST SCHOOLS IN THE U. S. TO GET ADCOX TRAINING — AND I AM GLAD I DID. Now I am an auto electrician in one of Portland's big garages.

Frank Shaw

Adcox training increased my earning capacity 30 per cent—I now have a fine position as auto electrician in Portland's leading auto electrical shop — THANKS TO ADCOX TRAINING.

Harry Bryant

With only $400 capital and ADCOX TRAINING I started a business that pays me more than $400 profit each month.

O. D. Palmer

These Men Make $10 to $20 Each Per Day

ADCOX TRAINING DID IT! They have businesses of their own or are in BIG PAY JOBS. They don't have to worry along on a few dollars a day—they are independent. THEY ARE MAKING REAL MONEY.

Not Enough Good Auto Mechanics

You may think there are too many auto mechanics in the U. S.—and you are right. There are too many of the kind THAT DO THINGS BY GUESS-WORK. But there is a crying demand for experts. We make experts. **Adcox graduates** don't have to compete with "ordinary mechanics" who learned their trade by the "I-picked-up-what-I-know" method. Adcox graduates get the jobs that the "ordinary mechanics" can't hold down.

TRAINING MAKES THE DIFFERENCE

The ordinary mechanic finds it difficult to get a job at low pay, while the **Adcox graduate is in demand at big pay.** The difference is TRAINING. Calls are pouring into our employment department faster than we can fill them. Automobiles are increasing so fast that before long the "common mechanic" will also be in demand.

Million New Jobs Open

At present there are almost 14,000,000 automobiles in the U. S., including trucks—and less than 100,000 garages—or an average of less than 2000 garages per state.

There are about **3,000,000 people employed** in the auto industry and its allied lines—or more than one person to every 5 cars—in other words every time 5 cars are manufactured there is a new job created for some one.

It is estimated there will be over 5,000,000 cars manufactured in 1924—which means 1,000,000 new jobs.

AUTO PROSPERITY UNPRECEDENTED.

At the end of 1924 we will have approximately 20,000,000 autos in the U. S. and figured on the basis of 100 cars per garage, we will need 200,000 garages to take care of these cars—an average of 4000 garages per state—think of it—**1,000,000 new jobs in one year** and 2000 new garages needed in each state—it's almost unbelievable—but these figures are taken from the National Automobile association statistics—and are reliable. All the automobile trade knows this, AND PREPARATIONS ARE AFOOT FOR A BIGGER WAVE OF AUTOMOBILE PROSPERITY THAN THE WORLD HAS EVER KNOWN.

Adcox Not Ordinary Auto School

The Adcox school is not ONE OF THOSE SCHOOLS THAT GUARANTEES TO TEACH YOU THE BUSINESS IN SIX OR EIGHT WEEKS—we offer no FREE TOOLS—FREE RAILROAD FARES—FREE ROOM AND BOARD—etc. If you are looking for a short, cheap course or something free and would be satisfied with an "ordinary auto mechanic's" wages then don't answer this ad, but if you are keen to realize the value of thorough training—**want to forge ahead** in this world—then I want to teach you the finer points of auto repairing and I will assist you to a position paying from $150 to $500 per month.

YOU DON'T NEED HIGH SCHOOL OR COLLEGE EDUCATION.

Lack of education is no drawback. Some of our most successful graduates didn't even finish grammar school. If you have two hands—two ears—two eyes—common sense—and come here with the **determination to succeed**—you will. I can't tell you all about it in the short space of this ad—so I am offering to send you free of charge my large 112-page catalog. This book is a complete index to auto training—it shows the different departments of the Adcox school—tells you why **the Adcox school is different** from the average auto school—it fully explains our method of teaching—length of courses—prices—etc. The letters from Winters—Palmer—Bryant—Ruegg—Shaw and scores of other successful Adcox graduates are in this book—you'll like it—I promise you that—it's yours for the asking—fill in the coupon and mail it now for your free copy.

In our big 112-page catalog you will find the complete story from those boys—together with the letters and pictures of scores of other successful graduates—get your copy now—use coupon.

COUPON.

L. L. ADCOX, President.
Adcox Auto and Aviation School,
Portland, Oregon.

Please send me FREE the story of these and many other graduates, and your large 112-page catalog No. 3—the largest, most complete and explanatory catalog published by any auto school in the U. S. I promise to read it through.

Experience Letters

Somebody said it couldn't be done,
But he, with a chuckle, replied
That maybe it couldn't, but he would be one
Who wouldn't say so till he tried.
So he buckled right in, with the trace of a grin
On his face; if he worried he hid it.
He started to sing as he tackled the thing
That couldn't be done—and he did it.

Somebody scoffed: "Oh, you'll never do that—
At least, no one has ever done it."
But he took off his coat and took off his hat,
And the first thing we knew he'd begun it.
With the lift of his chin and a bit of a grin,
Without any doubting or quiddit,
He started to sing as he tackled the thing
That couldn't be done—and he did it.

There are thousands to tell you it cannot be done;
There are thousands to prophesy failure;
There are thousands to point out to you, one by one,
The dangers that wait to assail you.
But just buckle in with a bit of a grin,
Then take off your coat and go to it;
Just start in to sing as you tackle the thing
That cannot be done—and you'll do it."

—Selected.

Dear Young People of the Circle: After reading the description I gave you of my own home life where we spent our evenings around the reading table or took part in country amusements, I imagine I hear you say: "but things are different now." Yes, of course they are. I am not one to talk about "the good old days" as if they were better than these days in this period. This is the very best age that ever has been. There are more interesting things to go to, to read about, and it is easier to go to places where we can be instructed or amused or both, than ever before.

I have no fault to find with the automobiles when they are driven by careful people and I do not bewail the fact that there are movies. But the restlessness in the air and the constant desire of young, and ofttimes middle aged, to be constantly going somewhere, so that an evening at home seems a great bore, is, I maintain, very deplorable.

I also believe that it is a great mistake for people to turn the Sabbath day into a time given over to riding about the country, taking the place of church attendance. And I am not alone in this belief. All the greatest minds of the day seem to agree that the restlessness noticeable among the young people and the lack of proper restraint by their parents and slackness in attendance at Sunday school is eating at the roots of our national home life. The home is now and always has been the place where young people should receive impressions of, and practice in, self-government, and when so little time is spent by them in their homes they show the lack of self-restraint in a very marked manner.

My dear girls and boys, I wouldn't have you think that I begrudge you your happy youth, your joyous young life, or that I would have you always at home and in bed by nine o'clock. Even that wouldn't hurt you, the being in bed by nine I mean, but this I would try to impress upon your minds: that we are living in an age where it is even more essential that we should maintain a proper balance of mind than was necessary during the period when things did not move along so rapidly. I know from experience how infectious the restlessness can become. I, too, was young once, you will remember. And I am still so closely associated with young people that I have a very good understanding of them.

You may have the "going" disease quite firmly fastened upon you, but every one of you has that within you which, if exercised, would throttle and put down that restless desire to run away to dances, to movies, to rides every night in the year. Physically, mentally or morally no one can carry on such a program, as many of you have written me that you do, without weakening in about all these ways. It is up to you, dear young folk, to become something or nothing or only a small per cent of what you might be.

Very many boys and girls have written to tell me that they have thought over a lot of things since these letters have been coming out from week to week, and many have changed their views for the better. This is most gratifying to me, I assure you. I love this country and I thank God every time I lay down a daily paper that I live here instead of across the water, and that this is my country, with all its blessings and its privileges. It is is up to all of us, my young people, to keep this the grandest country on the globe. We have no right to do anything which shall tend to weaken us as citizens or blind us to our responsibilities.

I heard a public speaker say a few days ago that we Americans had a sort of faith, perhaps unexpressed but none the less existing, that nothing very bad could really happen to us here in America; that someway, somehow God would take care of that, and that we should always jog along in a very comfortable manner. He went on to say that though we were the greatest and most fortunate nation today it was not outside a possibility that we might go down as other republics have gone, if we should become a nation where the home fires were neglected and part of us remained law abiding and part unlawabiding. You know who are the unlawabiding. They are the ones who go about with a bottle in hip pocket and the sneaking bootleggers and moonshiners. Again and again this speaker spoke a truth namely, that we must stand together for the enforcement of law or fall ultimately. Your friend,

ALICE W. BARLAND.

Dear Mrs. Barland: I have read with a great deal of interest a letter in the October issue of The Farmer signed "Mrs. C. E. B., Wash." I am proud and glad that there is at least one woman who is honest enough to state conditions as she finds them in a farming community in this great state of Washington. Shake lands, Mrs. C. E. B., whoever you are, I congratulate you!

We live on a 160-acre diversified farm 20 miles from the city of Spokane, and as I look around I see conditions exactly as Mrs. C. E. B. has stated them to be. Within the last three months we have attended three auction sales in our immediate neighborhood where the farmers were being sold out for debts.

Those poor people had worked early and late and tried in every possible way to make ends meet, but on account of low prices for all farm produce the struggle was too great and so they are all going down and out, one by one.

The first family to go "broke" had seven children, the next two and the third nine. When asked where they were going they said they didn't know. The taxes are so high that the men who do hold onto their farms have to go out and work in the lumber camps to earn enough to pay them. The wife and children stay home and do the chores and whatever farm work they can. While the people who toil (?) in steam heated, comfortable offices and receive large salaries, grumble because eggs are 45 cents a dozen and potatoes $1.25 a cwt. Let them try farming for a while and they will find what a snap they have. I have tried both and speak from experience. MRS. L. R., Wash.

The price of cheapness is always too high

76th Year

ALL really good articles, all works of taste and merit must bear a price in proportion to the skill, time, material and expense attending their invention and manufacture.

In the construction of an article which is put to such hard use as a cooking or heating apparatus, it is particularly necessary to use only the best and plenty of it.

This we do.

Those things called dear are, when justly estimated, the cheapest. A composition for cheapness and not for excellence is the most frequent and certain cause of dissatisfaction and waste.

Good, attractive and lasting articles are not made by chance, nor can they ever, in any material, be made at small expense. Only the very rich can afford to buy "cheap" articles—for they can stand the loss resulting from so doing.

The price is high, no matter what you pay, when you buy a shoddy article of any kind.

The price is low when you pay a reasonable figure for a good, honest article.

Reasonably Priced

The most reliable dealers sell them.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Just now I attended a very remarkable function. It was the dedication of a park, to be used by convalescent patients, the doctors and the nurses of a great hospital. It was a gift to the hospital public, presented by the father and mother of a son who died a few years ago. God has prospered the father since and, while he is not a rich man, he has accumulated enough to feel justified in erecting a monument to the memory of the beloved child.

Dr. Copeland.

The mother had thought it all out—she wanted no marble monument in a cemetery—she wanted something beautiful but useful. The gift of the park is the result. Those of us who have the benefits and the joys of the country little appreciate what multitudes never step upon the grass. A good many times I have told you about the crowded tenements in New York. There is one square mile where live a half million persons. Nowhere else on earth is there such a crowded place.

Sickness and accident are all too common in such congested sections. The overcrowded families have no place to care for the sick. The hospital is a godsend to the dwellers in these caves.

What a blessing it will be to those who are sent from such homes in sickness to this hospital, to have an open place, with grass and trees and flowers, with fountains and birds and music. This wise monument will bless the memory of the youth for whom the park is named and for the generous and humane parents who gave it.

Few animals can live without air and sunshine. Even the blind will not live if placed in a house without windows. It was attempted once and the experiment failed.

Every animal God has made to live on the earth demands air and sunshine. The more of these blessings a man has the longer he will live. The more he has his feet on the springy earth and the softness of the turf, the better will be his health.

Sometimes I pass a house, as I did the other day, where some forlorn person sits behind a closed window, gazing out upon the passing world. This is no way to live—you might as well be looking up through the glass opening of your casket. It isn't daylight alone you want. You must have the direct sunlight, the breezes which stimulate your nerves as they strike the body, and the exercise which you are glad to take in attractive surroundings. You need the inspiration of beauty to set your pulses beating. In short, everybody needs what a park or some natural beauty spot can give.

Just Folks

Reason is control.

Gentleness is gentility.

Thrift demands strength.

Pity is the very last refuge.

New conquests cure past defeats.

Quantity is bigness; quality is detail.

Take your last glimpse of life from the mountain top.

Some know, others think they know, while still others don't care.

It is either you or the other fellow who steps ahead.

To think out a problem is to make it easy to understand.

In doubtful matters publicity may wreck what semi-publicity has built up.

There is consummate art in finished flattery. E A S

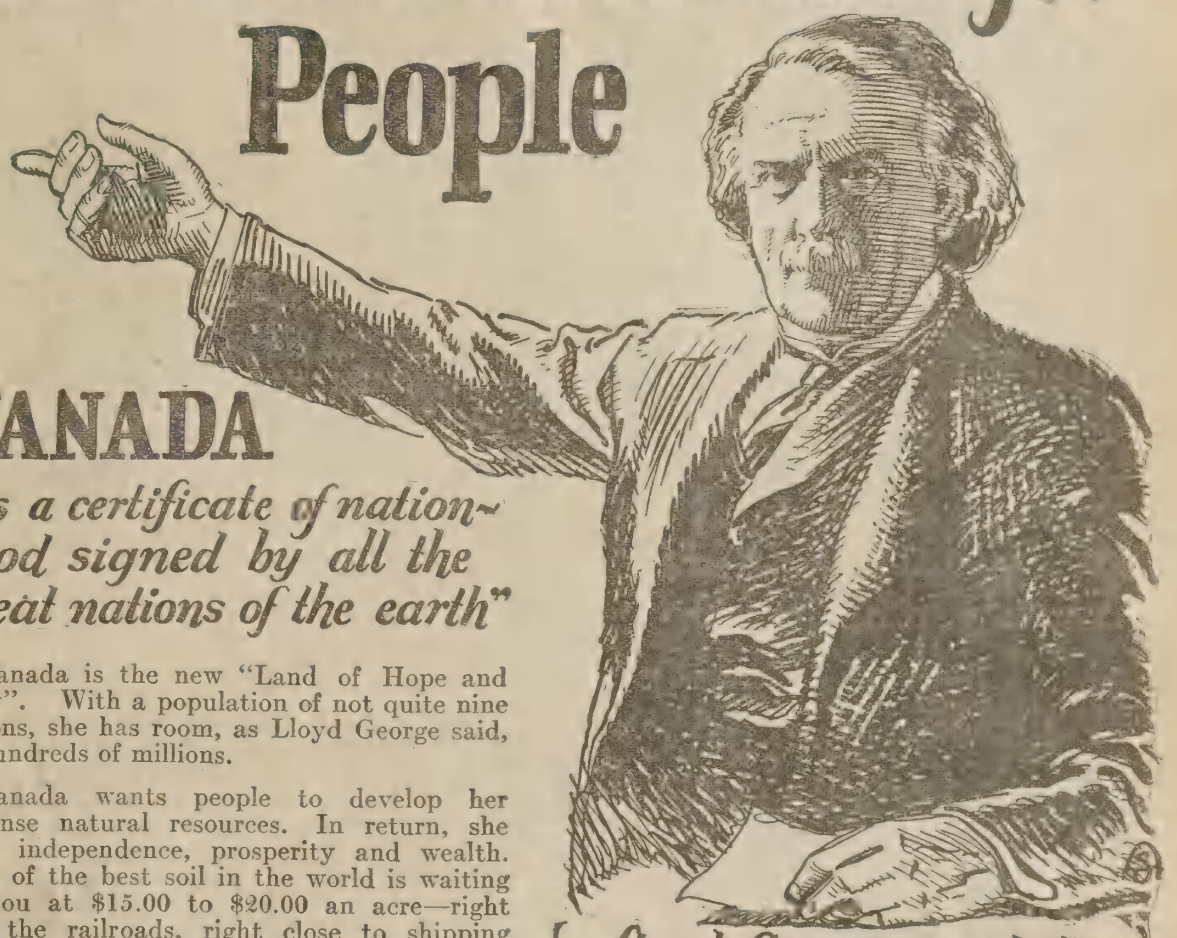
SMALL WANT AD IN RIGHT MEDIUM GETS VERY SATISFACTORY RETURNS

A New Nation Calls for People



"CANADA has a certificate of nationhood signed by all the great nations of the earth"

Canada is the new "Land of Hope and Glory". With a population of not quite nine millions, she has room, as Lloyd George said, for hundreds of millions.

Canada wants people to develop her immense natural resources. In return, she offers independence, prosperity and wealth. Some of the best soil in the world is waiting for you at $15.00 to $20.00 an acre—right near the railroads, right close to shipping points and handy to towns, stores, schools and churches. Further back, it is possible to obtain Free Homesteads.

Phenomenal Growth
Dairying—Live Stock—Crops

You would like to hear all about the wonderful opportunities for men and women on Canadian farms. Remember, Canada is a nation now and a young giant of a nation. Since 1900, the value of Canada's dairy industry has increased by $164,000,000. Live Stock, which is the basis of successful farming in any country, has increased in the same period by, approximately, $500,000,000. Canada produced 470,000,000 bushels of wheat this Fall—the largest crop in the world, after the United States, an increase of 415,000,000 bushels in twenty years. You'd do well in Canada.

Send us your name and address. Write a letter or post card right now and receive free booklets and full information about Canadian grain growing, cattle ranching, dairying, diversified farming, etc., and how to get a farm in Canada at low cost or as a Free Homestead.

Our extensive organization—salaried officials of the Government of Canada—is at your service to assist you in moving and getting suitably located. Write now.

Lloyd George said it:

"In fighting for the independence of another nation, Canada established her own nationhood forever on the registers of the nations of the earth."

Bits of Fun for Everyone

Just in Time.

A certain sportsman went out for a day's rough shooting. He was not a particularly good shot, and so he got nothing; but, since he was rather ashamed to return empty-handed, he bought a rabbit in the town on his way home.

He presented the rabbit to his wife, who, after responding with the usual congratulations, thoughtfully remarked:

"Do you know, it was a good thing you shot that rabbit when you did, John; it wouldn't have kept another day."—Youth's Companion.

Said the Dentist.

We like very much the story of the dentist who went fishing and was disgusted at landing a large and rotund catfish. He seized the beast firmly round its waist and began to work the hook out. Quite automatically and with his usual air of courteous firmness he bespoke the fish: "Open wide," he said.—New York Evening Post.

The New Member.

Visitor (at private hospital): "Can I see Lieutenant Barker, please?"

Matron: "We do not allow ordinary visits. May I ask if you are a relative?"

Visitor (boldly): "Oh, yes, I'm his sister."

Matron: "Well, well, I'm very glad to meet you. I'm his mother."—Selected.

Worth It.

"Why did you tip the boy so handsomely when he gave you your coat?"

"Look at the coat he gave me!"—Record.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4550. Misses' Dress. Cut in 3 sizes: 16, 18 and 20 years. An 18 year size requires 5 5-8 yards of 40-inch material. For collar and cuffs of contrasting material 5-8 yard is required. The width at the foot with plaits extended is about 3 yards. Price 10c.

Horticultural Meet

At Yakima December 10-12

The third annual convention of the Washington State Horticultural association will be held at the armory at Yakima on December 10, 11 and 12. A well-balanced program has been drawn up, which includes many authorities on horticulture from the agricultural colleges as well as men who have had wide experience in the local fields.

The railroads have agreed to cooperate and give special rates of fare and a half, provided there are 150 who come out. Charles L. Robinson, secretary of the association, reports that there is every indication of a large attendance at the convention.

Officers and directors for 1923 are: Paul H. Weyrauch, Walla Walla, president; R. T. Ried, Bellevue, first vice president; M. L. Dean, Boise, second vice president; Charles L. Robinson, Olympia, secretary-treasurer; directors for one, two and three year terms are: H. L. Douglass, Wenatchee; C. M. Lockwood, Opportunity; J. H. Wright, Yakima; F. A. Wiggins, Toppenish; O. M. Morris, Pullman; J. L. Dumas, Dayton.

Young Farmers

Here are pictures of half a dozen or so coming young farmers of the state. At the right in this picture are Kenton and Dayton Hood, sons of Mr. and Mrs. Y. T. Hood of Spring Valley. They are showing their registered Holstein calves, Nug-

get De Kol Fayne and Eden Valdessa De Kol. These boys are members of the Spring Valley calf club, which secured its calves from one of the dairying sections of Oregon. At the left in the picture are shown Margaret Janson, Tommy Janson, Wesley McNee and the two Hood boys. They are enjoying the prize winning Shetland pony, Midget. At the extreme left stands Mr. Hood.

Exchange Christmas Ideas

A very unique plan of exchanging ideas for making Christmas presents was carried out by the women of Thurston county through the help of Miss Belle A. Shelton, the county home demonstration agent. A total of 11 communities were represented in the exhibit, which was held in Olympia. Fully 30 women attended the demonstration and gathered ideas for making Christmas presents for their own families.

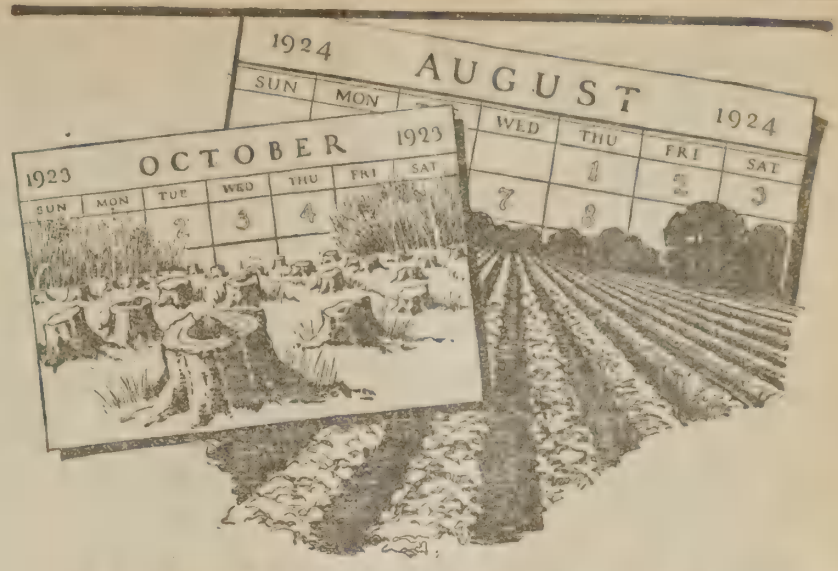
Such articles as could be made at home with small expense were featured, among which were: Handbags from discarded inner tubes, sweaters made by darning fish net curtain material, novel aprons, dresser runners, candles, hand lotions, baskets, rugs and pillow covers.

Special features were a demonstration in the forenoon by the home demonstration agent, decorating candles, candlesticks and vases, with bronze and silver powders and sealing wax. In the afternoon Mrs. M. F. Pugsley showed how to make trays, using a patterned floor matting for the bottom of the tray and the raveled matting with raffia for the sides.

Wins Trip to Chicago

Robert Zindel, a club boy of Kennewick, has been awarded the Armour prize of a free trip to the International Live Stock exposition at Chicago this month. Robert won this award with his splendid pig club work under the direction of Miss Gertrude M. Gage, county club leader, and R. Mitchell, the local pig club leader. Robert raised four Poland China pigs and fattened them with a gain of 3.1 pounds per day during the fattening period. The dam of the pigs is a registered Poland China sow, Miss Long Chief. Robert is only 13 years old, but takes a great interest in pig club work, and needless to say will make good use of his time at the International.

The contest was judged on the greatest average daily gain on pigs fed, the least cost per pound of gain and completeness of the record book kept, and the story of how the year's work was done.



Looking Ahead for Bigger Crops

LAND-CLEARING this fall means bigger crops and bigger profits next year. These fall months offer a fine time for this off-season work.

Pacific Stumping will clear your land for much less than it used to cost. This new du Pont explosive shoots stick for stick with any standard stumping powder yet leaves no larger hole in the ground than a 20%. Ask your dealer how you can get ½ more sticks per dollar with Pacific Stumping. And it won't freeze.

Write for free booklet, "Clearing Logged-off Lands," describing the latest methods of land-clearing, ditching and tree-planting.

High Points in News of the Week

As THE FARMER goes to press, a new congress of the United States is convening in Washington. Problems of organization will occupy the opening days of the session, together with receiving the message of President Coolidge. Next week we shall give a comprehensive digest of President Coolidge's recommendations and a report of the organization of the new congress.

* * *

Following the resignation of the cabinet headed by Chancellor Stresemann of Germany, two weeks ago, when it was denied a vote of confidence by the German legislative body, President Ebert has spent some time endeavoring to find a new chancellor who could form a cabinet satisfactory to that body. He finally secured the organization of a new cabinet, headed by Dr. Wilhelm Marx. The cabinet is the result of a sort of three-party compromise, membership being made up of representatives of the clerical, people's and democratic parties, Dr. Marx being the clerical leader. Other than the chancellor, all members of the cabinet were members under the deposed Chancellor Stresemann.

* * *

Diplomats of this country and England are working upon a treaty which will, if adopted, give the United States a right to search British vessels for illicit liquor supplies beyond the three-mile limit. It will also permit English vessels to bring into American ports, under seal, sufficient alcoholic beverages to serve passengers and crew on the return trip to Europe. The treaty must first be approved by the department of state and later by congress.

* * *

Secretary of War Weeks, in his annual report to congress, urges that, instead of further retrenchment in army appropriations, sufficient increase be given to increase the strength of the regular army. Secretary Weeks says that the present strength is inadequate for the ordinary national defense. The present limit to the regular army is 125,000 men and he urges that the limit be raised at once to 150,000.

* * *

Announcement from Washington says that the department of agriculture, through its bureau of federal grain supervision, is planning an investigation of wheat grades in the Pacific northwest. This investigation is the result of complaints made by northwestern wheat growers through their representatives in congress.

* * *

John R. Quinn, national commander of the American legion, conferred with President Coolidge recently on the matter of the soldiers' bonus bill. Commander Quinn says he expects congress to take early and favorable action on the bonus.

* * *

Measures are being prepared by the department of agriculture, under the supervision of Secretary Wallace, for presentation to congress in a hope that under one or another of them development of the Muscle Shoals project may be brought about. The first bill to be introduced provides for certain modifications in the Henry Ford offer for the project. If this fails, the second bill, providing for government operation of the project, will be introduced.

* * *

Thursday of this week a national election of unusual importance is being held in England. It is an election of members of parliament, but it practically means the election of a premier and a cabinet as well. If the new parliament is made up of protectionists and friends of Premier Baldwin's foreign policies, Mr. Baldwin will remain as premier with his present cabinet. If free-traders win, the new parliament likely will cast a vote of lack of confidence in the Baldwin ministry, whereupon he and his cabinet will resign and the king ask somebody else to form a cabinet in sympathy with the free-trade parliament. That "somebody," under those circumstances, would certainly be either former Premier Asquith or David Lloyd George, both of whom are campaigning together for election to parliament on a free-trade platform. Free-traders, however, are reported to be badly divided as between liberals and laborites.

* * *

A report from London indicates that the British government is disturbed over reports from Germany that the recruiting of the German army and the military training of private citizens are being carried on far in excess of the limit set by the treaty of peace. The British observers do not believe that Germany is now able to equip and put into the field an army in excess of that permitted under the treaty, but foresee a time when it might be financially able to do so and would be able to do so quickly because of the training of men at the present time. It is apparent that something of this nature is one of the points which has led France to take her unswerving position in the point of compelling Germany to live up to the treaty both in letter and in spirit.

* * *

The Great Northern Railway company has announced plans for the expenditure of over $60,000,000 during the next five years in improvements. The Northern Pacific has announced plans for the expenditure of $56,000,000 over a three-year period.

* * *

In a grain rate hearing at Minneapolis recently President Finley of the Chicago Great Western railway desired that within the next 10 years the railroads operating in the northern tier of states from Chicago to the Pacific coast would have to spend nearly $2,000,000,000 if they kept pace with the development of the industries of this region.

* * *

While a delegation of Filipinos is in Washington to urge upon the authorities there that this country grant the Philippine islands their independence, the republican central committee of the Philippines at Manila has adopted a resolution urging congress to amend the original Philippine act so as to provide for permanent control of the islands by the United States.

* * *

The federal reserve board has issued a report showing that the production of basic commodities increased 3 per cent during the month of October and the first half of November. Much of this increase was due to the resumption in mining of anthracite coal.

Farm Business and Markets Outlook

(Continued from page five.)

ments from producing sections are fully up to normal, although they have declined more than 50 per cent in the last six weeks.

Apple markets were nearly steady last week, with midwestern Jonathans quoted at $5 to $6 in Chicago and Kansas City and medium to large fancy Washington Delicious at $2.85 to $3.15 per box, fancy at $2.50 to $2.75, extra fancy Jonathans at $2 to $2.25 and fancy at $1.75 to $2. The carlot movement from producing sections is gradually falling off, but sponding season of the year. Total shipments remains the highest on record for the corre- for the season up to November 17 from Washington, Oregon, Idaho, Michigan and Kansas show decided gains over last year. From New York, however, the movement has been less than half of that in 1922. The boxed apple states have shipped a total of 37,573 cars, compared with 23,350 cars last year, while the barrel apple states have shipped 15,811 cars, against 18,376 cars in 1922.

SUNDAY, December 9—Doris Hale, 10 years old; Donald Naff, 10.

TUESDAY, December 11—Bertha Holmes, 9 years old.

WEDNESDAY, December 12—Bennie Kirkman, 9 years old.

BEDTIME STORIES

By THORNTON W. BURGESS.

JIMMY SENDS OUT INVITATIONS.

Watch your tongue and guard it well,
Lest things not so it chance to tell.

A tongue, you know, is very careless. It says a great many things just for the sake of saying them—things which get its owner into trouble. Take Peter Rabbit, for instance. When Peter boasted to Jimmy Skunk that Jumper the hare, who is Peter's cousin, is the greatest jumper of all the little people of the green forest and the green meadows, he spoke without first stopping to think. He really believed it was so, but he would have been better off if he hadn't stuck to it when Jimmy Skunk insisted that there were better jumpers than Jumper the hare. But he stuck to it, and now he had to prove it by getting his cousin Jumper to enter a jumping match that very night. For the life of him Peter couldn't think of any who could jump further than Jumper, but still he felt uneasy as he started out to hunt for his cousin.

Meanwhile Jimmy Skunk was inviting everybody to a grand jumping match that evening. It was to be held by the tall pine on the edge of the green forest as soon as jolly, round Mr. Sun had gone to bed behind the purple hills. Jimmy got

"Who is going to jump against me?" asked Jumper.

the merry little breezes, the children of Old Mother West Wind, to take his invitation around for him, and he charged them to overlook no one. Everybody was to be invited. He himself had something else to do. He had to get the two jumpers he had in mind to promise to be there and jump against Jumper the hare.

The merry little breezes danced away across the green meadows and through the old orchard and the green forest, telling all the little people who lived there to be sure to be on hand by the tall pine that night to see the great jumping match. Of course everybody was greatly interested as soon as they received the invitation and at once began to ask questions. But these the merry little breezes couldn't answer, and so they just laughed and giggled and hurried on. And of course this just made people more curious than ever and all who were not afraid to be out after dark made up their minds that they would certainly be on hand for that jumping match.

Now, Peter didn't know that Jimmy Skunk was going to send out those invitations until the merry little breezes brought him one, and when he got it he was quite upset. He knew then for sure that Jimmy Skunk was positive that he would have some one there who could jump farther than could Jumper the hare, otherwise he never in the world would have sent out invitations. And Peter knew, too, just how foolish he would appear in the eyes of the other little people if Jumper should be beaten. They would laugh at him for having boasted so without stopping to think.

But there was no help for it now. So he hunted up his cousin Jumper and asked him if he would jump that night.

"Who is going to jump against me?" asked Jumper.

"I don't know," confessed Peter. "I said that you were the greatest jumper in the green forest or on the green meadows, and Jimmy Skunk said he knew some other jumpers who could beat you. Do you think there is any one who can?" he asked anxiously.

"Certainly," replied Jumper promptly. "I know at least two who can, and there may be more. However, they are both friends of mine, so I will be on hand. You see, I don't mind at all being beaten by them, and as long as it is all for fun I am perfectly willing to jump."

"You'll jump your very best, won't you?" begged Peter.

Jumper promised that he would, and with this Peter had to be contented, for Jumper wouldn't tell who the two friends were who could beat him jumping.

7 Ways to Profit

You can have these most luscious fruits in your yard and enjoy their luxury fresh and ripe from your own garden. The cost of a few quarts of fruit bought at the store will about equal the first cost of a tree. These choice fruits and hundreds of others can be obtained from our 1000-acre nursery. We pay the freight and guarantee satisfaction and safe arrival.

Scott Rainier Apple Winner Wilder Medal, 1922, the fruit world's highest honor. We consider the Scott Rainier the finest dessert apple (for eating raw) that has ever been produced. A thoroughly proven success—trees bear young and are heavy producers. 3 boxes from one 19-year old tree, and 800 boxes from 21 trees composing this orchard.

Red Gravenstein Apple Possesses all the good qualities of the old Gravenstein in flavor, size, shape and ripening period, to which is added a bright red color that greatly increases its attractiveness and market value. The genuine Washington Nursery Red Gravenstein is a sport from the Old Gravenstein, but comes absolutely true to type when propagated. A red apple has a decided selling advantage over others.

Wright's Red Rome Beauty An improved strain which is the same as the ordinary Rome Beauty in size and shape with the same characteristics of growth, appearance, hardiness, production, early bearing and regularity of crop. But it has a handsome red color, a finer texture, and stands up better in cold storage than the old Rome Beauty. Its bright color makes it a better seller.

Cory's Thornless Blackberry The vines have no thorns and yield large quantities of luscious fruit. The berries are very large, often measuring 3 and three-quarter inches in length, and grow in clusters, making very easy picking. The fact that the vines have absolutely no thorns makes the picking of the berries and the training of the vines much easier.

The Bing Cherry There are few more desirable fruits than cherries. The trees are strong, vigorous growers, with large, glossy leaves and open, spreading heads, making a fine shade. The Bing cherry is one of the leading commercial varieties of the West. Very large, blackish purple, very solid, flavor of the highest quality. The tree is hardy and productive. A fine shipping and market variety.

Standard Prune This is without doubt one of the best fresh shipping prunes ever grown. It is much larger than the Italian, fine flavor, firm flesh, large, beautiful fruit. Blooms with the Italian, ripens with the Tragedy. Is even more resistant to frost than Italian. A prune of such all-around merit that it should be planted everywhere for home use and for market.

J. H. Hale Peach The J. H. Hale is enormously productive, fruit very large—fully one-half larger than Elberta, globular in shape, a deep golden yellow overlaid with bright carmine. It has a smooth, thick skin, and firm, solid flesh that is tender, without grain or stringiness, and a most delicious peachy flavor. The J. H. Hale is practically free from fuzz, making it absolutely distinct in this respect.

Giving the Telephone Life

Wherever your thought goes your voice may go. You can talk across the continent as if face to face. Your telephone is the latch to open for you any door in the land.

There is the web of wires. The many switchboards. The maze of apparatus. The millions of telephones. All are parts of a country-wide mechanism for far-speaking. The equipment has cost over 2 billion dollars, but more than equipment is needed.

There must be the guardians of the wires to keep them vital with speech-carrying electrical currents. There must be those who watch the myriads of tiny switchboard lights and answer your commands. There must be technicians of every sort to construct, repair and operate.

A quarter of a million men and women are united to give nation-wide telephone service. With their brains and hands they make the Bell System live.

Potato Growers

Are Organized in Stevens County

Fourteen potato growers of Stevens county met recently at Chewelah and formed the Stevens County Potato Growers' association. The object of the association is educational with a view to improving the quality of both the seed and commercial stock of that county.

In order to become a member of the new association, a producer must satisfy the membership committee that he grows potatoes of a certain high standard and the committee's judgment must be backed up by a vote of four-fifths of the membership. By this provision it is hoped that the association will be one of real power in the county and not one which might become dominated by indifferent producers of potatoes.

Steps are already being taken looking toward the possibility of a Stevens county potato show next year just before the show and conference of the Northwest Potato Growers' association at Spokane. The chamber of commerce of Chewelah has gone on record as in favor of such show and has pledged its assistance in putting it on.

The organization meeting at Chewelah was attended by County Agent H. J. Plumb and George L. Zundel, field plant pathologist of the state college, both of whom assisted in the formation of the organization and discussed various features of potato production. A. E. Skidmore of Colville was elected president; William Kline, Addy, vice president, and Otto Meyer, Chewelah, secretary. The other charter members of the organization are H. O. Hansen, F. E. Franklin, R. W. Petts and E. A. Harris, all of Colville; Harvey Harris and W. L. Biggar, both of Rice; R. G. Newell and Olaf Rosen, both of Addy; Chris Hageman, Chewelah; F. C. Bradley, Clayton, and Martin W. Lee, Deer Park.

All of the members of the association are producers of quality potatoes and are endeavoring to improve their product year after year. Mr. Skidmore and Mr. Kline are the original producers of certified seed in Stevens county. It is expected that several members of the association will be producing seed for certification next year. Several are producing commercial and seed crops this year from certified seed, but have not applied for certification of their own product.

"Opinion" Awards Announced

The following are the winners in THE FARMER'S recent "opinion" contest:

First prize, Mrs. Elmer Dewald, Sultan, Wash., $5.

Second prize, Carl J. Menz, Ferndale, Wash., $3.

Third prize, Ruth R. Randall, Prescott, Wash., $2.

Widespread interest was displayed by our readers in THE FARMER'S offer to pay $10 in cash for 100-word opinions as to which advertisements in our October issues were most appealing. After carefully considering all entries the entries of those named above were finally decided as being the best.

It must be stated, however, in justice to the many who sent in opinions, that the task of determining the winners was not an easy one, as the contributions were of high order.

The judges are confident that all those who submitted opinions will feel amply repaid for the time spent in considering the various advertisements, since their letters show that our readers regard the advertising columns as one of the most interesting and instructive features of the paper, with a multitude of helpful suggestions for making both farm and home more efficient. The consensus of opinion seems to be that the reader who pays attention to and who acts upon the advertisements in this publication is helped along the road to success.

Inter-Community Banquet

The importance of the potato to the farming interests of the Yakima valley was emphasized at an intercommunity banquet held recently at Toppenish. There were more than 300 people present who represented practically every community in the valley. The banquet was planned by the Toppenish Commercial club.

Baked potatoes were the prominent part of the menu and during the meal one of the local boys recited an original poem. The speakers took for their talks some phase of cooperation and the advisability of growing sugar beets was emphasized.

Talks were made by the following men: Frederick Benz of Toppenish, J. C. Jenkins of Spokane, O. A. Fechter of Yakima, H. C. Lucas of Yakima, Chapin D. Foster of Grandview, Roy Graham of Toppenish on "Reservation Problems and Crop Diversification"; S. I. Anthon of Yakima on "The Values of Publicity"; Dr. J. S. Kloeber of Selah on "Fruit Marketing," and H. B. Miller.

IMPROVED FARM LAND.

In 1920 37.5 per cent of the area of Montana was in farm lands, but only 11.8 per cent of the state was improved farm land; 31 per cent of Washington's area was in farms and 16.7 per cent improved; 22.1 per cent of Oregon, with but 8 per cent of the state improved land, and 15.7 per cent of Idaho in farms, 8.5 per cent improved.

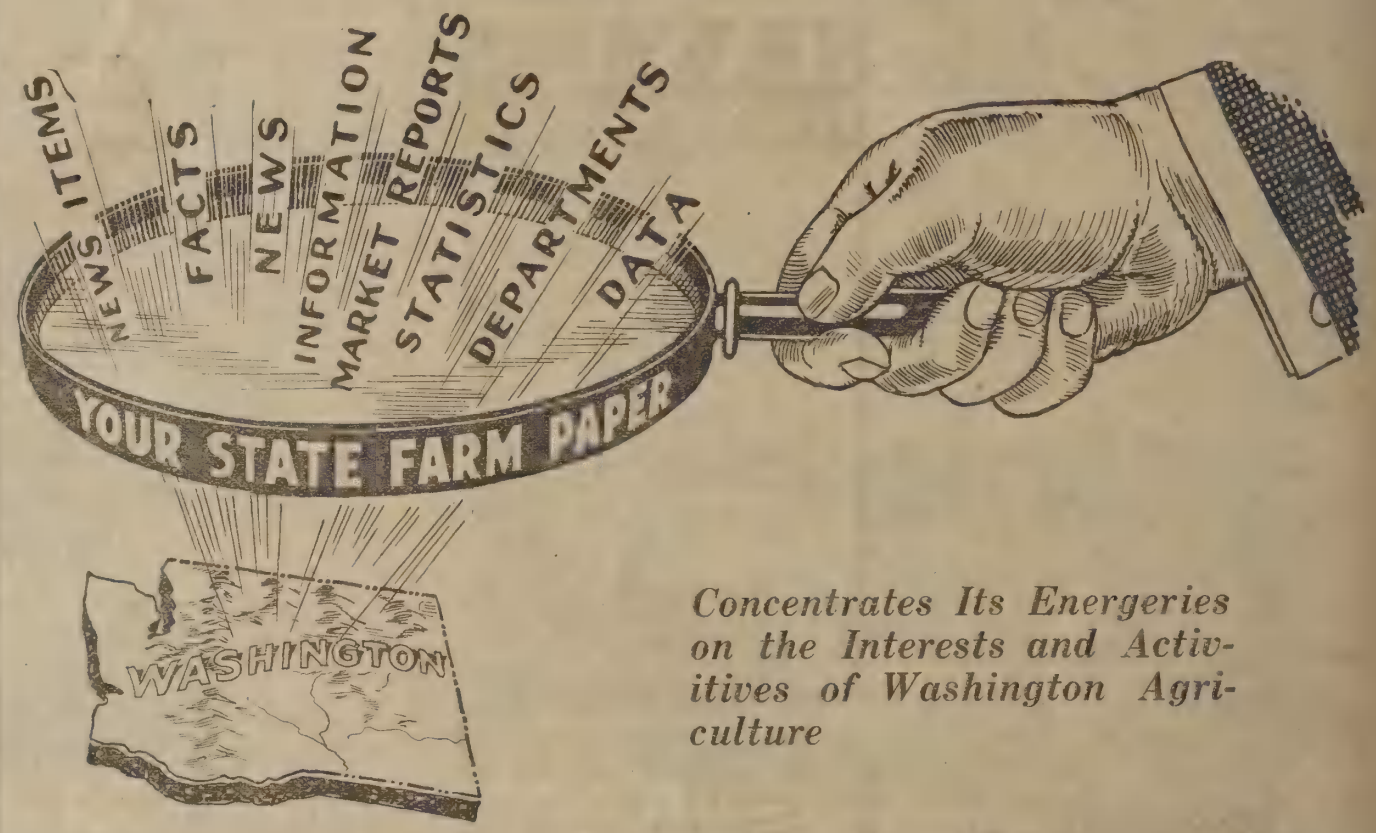
The Washington Farmer Focuses Its Attention on the State in Which You Live



Concentrates Its Energeries on the Interests and Activitives of Washington Agriculture

The state of Washington is big and broad and busy, with a myriad interests and a multitude of activities which belong to this state alone.

The Washington Farmer deals with these interests and activities thoroughly and accurately, leaving other publications to handle the problems of other districts. It brings you the experiences of those who are facing—not the conditions of California or the middle west—but exactly the same conditions and perplexities which confront you. It posts you regarding the events which happen near you. It tells you about the seeds you plant, the soils you cultivate, the markets you sell your produce in.

More than that, it is fighting for the interests of agriculture in this state alone. It is a mouthpiece for the farmers, fruit growers, stock breeders and dairymen of this state. It keeps you informed as to the happenings, the personalities and the public questions in which you are most absorbed. In a word, it is YOUR paper.

By the cooperation of our friends throughout the state, the subscription price has been kept at a rock-bottom level of $1 for 5 years. Cooperation means the elimination of the subscription agent. It means sending in your renewal order at least 60 days in advance of the expiration date on the address label of your own paper, and including your neighbor's order with your own.

News for Breeders

BROWN SWISS MEN ENCOURAGED.

Brown Swiss breeders of the northwest, who presented at the Pacific International this fall an exhibit 50 per cent larger and of considerably better quality than last year's, felt so much encouraged at the development of the breed in this territory and at the interest shown in the cattle exhibited that they organized a western association of Brown Swiss breeders, to cooperate with the national association on all matters of importance to the "Switzer."

Three of this fall's exhibitors were at the show last year, T. Brugger & Son of Gresham, Ore., John Boeckli of Linnton, Ore., and W. O. Bohart of Bozeman, Mont., each bringing about the same sized exhibit. A. Grossen of Linnton, Ore., and Alfred Yaun of Boring, Ore., each exhibited a bull, and Ed Meyersick of La Grande, who has been breeding for about nine years and who exhibited at Salem and at Yakima some years ago, appeared at the Pacific International for the first time with entries in nine classes, including the herd bull he recently bought from Brugger & Sons. His old bull (they traded last summer) was shown by Brugger.

H. M. Hillis of Pawnee farm, Snohomish, Wash., is a new breeder and a new exhibitor. Only three months before the show he bought a herd on Bainbridge island, near Seattle, that originally came from Wisconsin—15 head all told, and he had seven of them at Portland. Unless he found the stock at prices to suit at the exposition he expected to go east in December and acquire some more.

It will be four years next March since Joe Schumacher of Stayton, Ore., bought his first purebred heifers from Brugger & Son, but he showed for the first time at the state fair this fall. In the exhibit were five calves winning two seconds, two firsts and a junior championship. He appeared at Portland with 11 head out of 14 that he now owns, five of them youngsters by Queen's Baby, the 3-year-old bull that he obtained from R. H. Rehder of Waterloo, Iowa. All five were in the money, junior bull calves by Queen's Baby winning first and second, junior yearling heifer first, senior heifer calf third and junior heifer calf seventh. Schumacher's other winnings included first on the bull, two seconds, a third, a fourth and a fifth in individual classes, besides several awards on groups.

HEADS BROWN SWISS HERD.

A new herd of Brown Swiss have been added to a list of dairy herds in Snohomish county. H. M. Hillis of Snohomish is starting out with 13 head, which he recently brought from Victoria, B. C. The herd sire. Velva's St. Patrick, a 3-year-old, whose sire and dam were both imported, was purchased from a breeder on

Bainbridge island. Mr. Hillis believes that this breed will do well in this part of the country, since there are as yet no such herds established in this part of the state. They are good producers of both milk and butterfat and are a sturdy breed that can maintain a good flow of milk and yet stand severe weather if necessary. The accompanying illustration is of the herd bull.

CLALLAM CALF A PRIZE WINNER.

E. A. Schmuck, president of the Clallam County Cow Testing association, has received a letter from a calf club boy in Montana saying that the calf he purchased from Mr. Schmuck last spring won first prize in the show ring. The boy asked for further information about the calf so that a history of his year's work could be written.

DEVELOPED AMAZINGLY.

The first Zeppelin rose in 1900; Wilbur Wright in 1908 remained in the air in an airplane for an hour and 54 minutes. It is a long way, in a short time, from that to the New York to San Diego record, made in 27 hours in 1923.

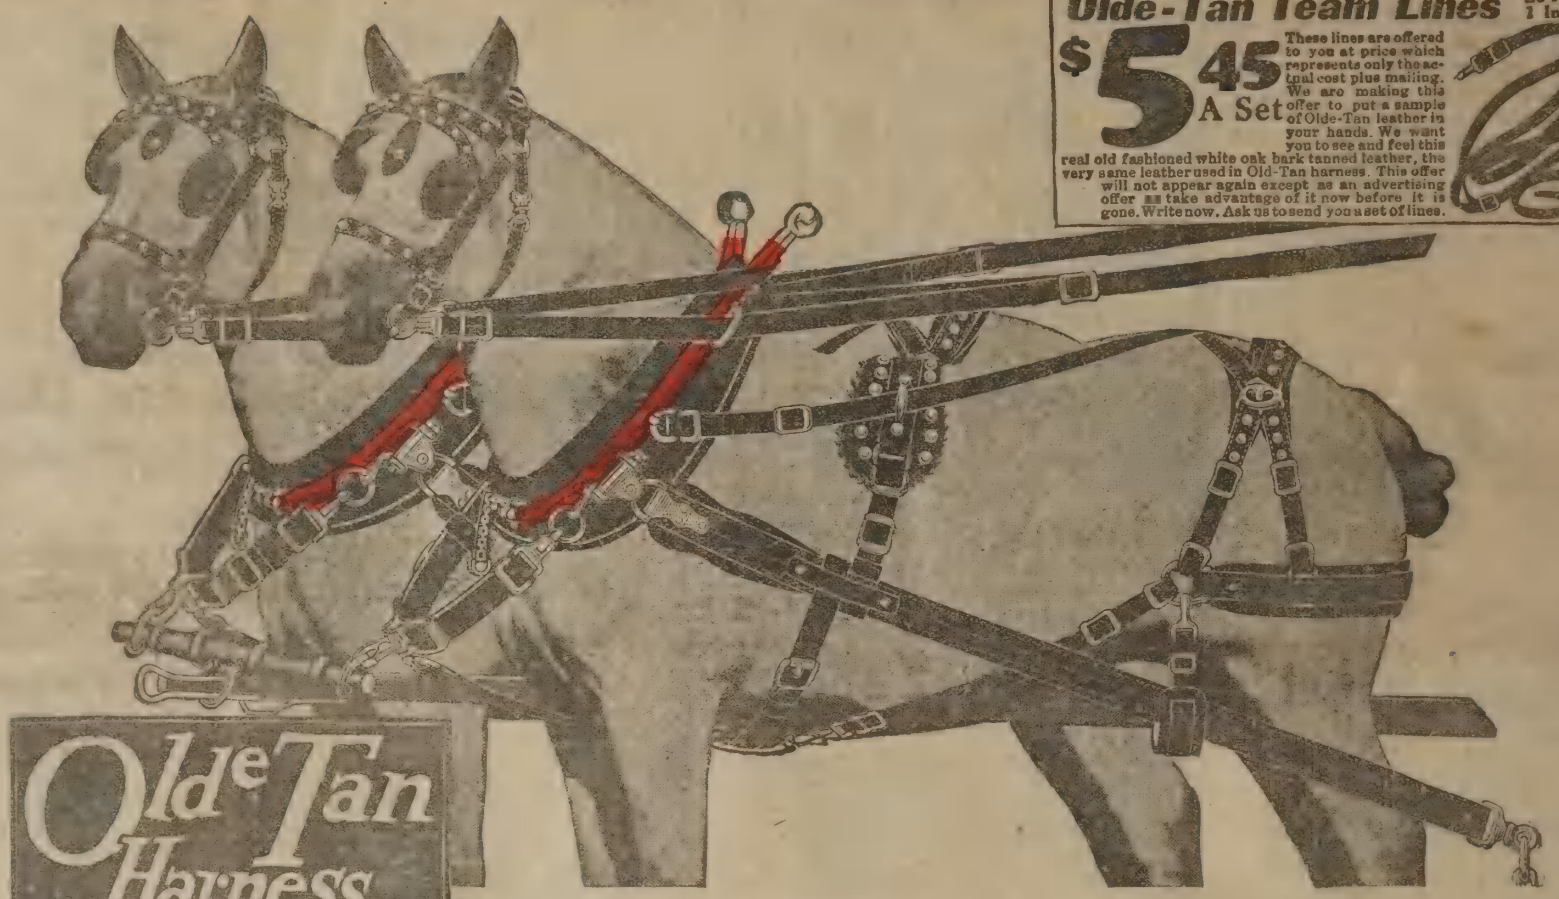
Olde-Tan Team Lines — 20 Feet Long, 1 Inch Wide

$5.45 A Set

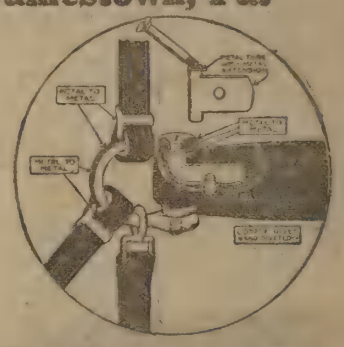
These lines are offered to you at price which represents only the actual cost plus mailing. We are making this offer to put a sample of Olde-Tan leather in your hands. We want you to see and feel this real old fashioned white oak bark tanned leather, the very same leather used in Old-Tan harness. This offer will not appear again except as an advertising offer ■■ take advantage of it now before it is gone. Write now. Ask us to send you a set of lines.



"I Like Metal-to-Metal Better Every Day"

—Fred K. Bates, Jamestown, Pa.

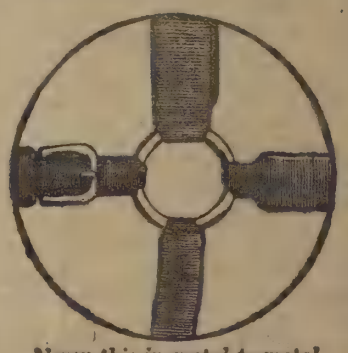
So the letters roll in! Hundreds of them! Metal-to-Metal harness construction, first made by Olde-Tan, has made a great hit. The first real advance in harness-making in half a century. A simple, practical, common-sense advance. No changed harness design. The same sort of a harness you have always had but with the best leather in the world protected by metal. Metal rubbing against metal instead of metal rubbing against leather—that's the idea. Square strap surfaces instead of round rings. Nothing to wear out because there is no place to wear it. Besides Metal-to-Metal construction there is 70 years of tanning skill behind Olde-Tan leather. Harness buyers are amazed at its superb quality.



Metal-to-Metal construction. Metal bushing. Leather held tight without play or friction. Note special riveted metal extension in breeching.

Bid "good-bye" to mending, patching and wearing out of harness. There is many a harness made in the Olde-Tan factory in good shape today that has given service for 25 years. Send the coupon for free harness book.

$7.50 DOWN Puts it on Your Horses!



Never this in metal-to-metal construction. All pull and strain and wear in ■■ metal.

It costs only $7.50 to put Olde-Tan Harness on your horses. If you don't like it, you can send it back. We have made it easy to get an Olde-Tan Metal-to-Metal Harness because we want you to see what Metal-to-Metal construction really is. Be sure to know what Metal-to-Metal Harness is before you buy another set.

THE WASHINGTON FARMER
ESTABLISHED 1894
SPOKANE. SEATTLE.

President Coolidge Addresses Congress

Farm Problems Are Stressed; Tax Reduction Declared Imperative; Big Program Outlined in First Message

President Coolidge delivered his annual message to congress last Thursday. For more than an hour, calmly and in terse phrases the executive addressed a joint session of the house and senate. He frankly informed congress and the country of his position on all of the great problems confronting the nation.

The president prefaced his message with a tribute to President Harding and was given an ovation as he entered and left the chamber and was repeatedly applauded during his address.

Mrs. Coolidge heard the president's address from the front row of the executive gallery.

For the first time in history the voice of a president of the United States delivering his message to congress in Washington was heard on the sidewalks of New York. Clearly and distinctly it came without a break from beginning to end. Thousands grouped on street corners around "loud speakers" heard it as plainly as if they stood within earshot of the capitol.

In a special message delivered later the president dwelt upon the importance of tax reductions and took a firm stand against the bonus for able-bodied ex-service men. The president, however, said the nation should go on with generous care for the disabled men, upon whom $2,000,000,000 has thus far been expended and an additional $500,000,000 is now being spent.

Regarding the league of nations the president said:

"We attend to our own affairs, conserve our own strength, and protect the interests of our own citizens; but we recognize thoroughly our obligation to help others, reserving to the decision of our own judgment the time, the place and the method. We realize the common bond of humanity. We know the inescapable law of service."

The current debt and interest due from foreign governments, exclusive of the British debt of $4,600,000,000, is about $7,200,000,000. "I do not favor the cancellation of the debt, but I see no objection to adjusting it in accordance with the principle adopted for the British debt. The foreign service of our government needs to be reorganized and improved."

Other extracts from the president's message follow:

Whenever there appear works meet for repentance our country ought to be the first to go to the economic and moral rescue of Russia.

I especially commend a decrease on earned incomes, and further abolition of admission, message and nuisance taxes. The amusement and educational value of moving pictures ought not to be taxed. Diminishing charges against moderate incomes from investment will afford immense relief, while a revision of the surtaxes will not only provide additional money for capital investment, thus stimulating industry and employing more labor, but will not greatly reduce the revenue from that source, and may in the future actually increase it.

Being opposed to war taxes in time of peace, I am not in favor of excess-profits taxes.

Another reform which is urgent in our fiscal system is the abolition of the right to issue tax-exempt securities. The existing system not only permits a large amount of the wealth of the nation to escape its just burden but acts as a continual stimulant to municipal extravagance. The time has come to resume in a moderate way the opening of our intracostal waterways.

It has been erroneously assumed that the transportation act undertakes to guarantee railroad earnings. The law requires that rates should be just and reasonable. That has always been the rule under which rates have been fixed. To make a rate that does not yield a fair return results in confiscation, and confiscatory rates are, of course, unconstitutional. Unless the government adheres to the rule of making a rate that will yield a fair return, it must abandon rate making altogether.

The prohibition amendment to the constitution requires the congress and the president to provide adequate laws to prevent its violation. It is my duty to enforce such laws. For that purpose a treaty is being negotiated with Great Britain with respect to the right of search of hovering vessels. To prevent smuggling, the coast guard should be greatly strengthened, and a supply of swift power boats should be provided.

For several years we have been decreasing the personnel of the army and navy and reducing their power to the danger point. Further reductions should not be made.

For purposes of national uniformity we ought to provide, by constitutional amendment and appropriate legislation, for a limitation of child labor, and in all cases under the exclusive jurisdiction of the federal government a minimum wage law for women, which would undoubtedly find sufficient power of enforcement in the influence of public opinion.

America must be kept American. For this purpose it is necessary to continue a policy of restricted immigration.

No more important duty falls on the government of the United States than the adequate care of its veterans. Those suffering disabilities incurred in the service must have sufficient hospital relief and compensation. Their dependents must be supported. Rehabilitation and vocational training must be completed.

All of this service must be clean, must be prompt and effective, and it must be administered in a spirit of the broadest and deepest human sympathy. If investigation reveals any present defects of administration or need of legislation, orders will be given for the immediate correction of administration, and recommendations for legislation should be given the highest preference.

At present there are 9500 vacant beds in government hospitals. I recommend that all hospitals be authorized at once to receive and care for, without hospital pay, the veterans of all wars needing such care, whenever there are vacant beds, and that immediate steps be taken to enlarge and build new hospitals to serve all such cases.

Those who undertake the responsibility of management or employment in this industry do so with the full knowledge that the public interest is paramount, and that to fail through any motive of selfishness in its service is such a betrayal of duty as warrants uncompromising action by the government.

Aided by the sound principles adopted by the government the business of the country has had an extraordinary revival. Looked at as a whole, the nation is in the enjoyment of remarkable prosperity. Industry and commerce are thriving. For the most part agriculture is successful, 11 staples having risen in value from about $5,300,000,000 two years ago to about $7,000,000,000 for the current year.

But range cattle are still low in price, and some sections of the wheat area, notably Minnesota, North Dakota and on west, have many cases of actual distress. With his products not selling on a parity with the products of industry, every sound remedy that can be devised should be applied for the relief of the farmer. He represents a character, a type of citizenship and a public necessity that must be preserved and afforded every facility for regaining prosperity.

The distress is most acute among those wholly dependent upon one crop. Wheat acreage was greatly expanded and has not yet been sufficiently reduced. A large amount is raised for export, which has to meet the competition in the world market of large amounts raised on land much cheaper and much more productive.

No complicated scheme of relief, no plan for government fixing of prices, no resort to the public treasury will be of any permanent value in establishing agriculture. Simple and direct methods put into operation by the farmer himself are the only real sources for restoration.

Indirectly the farmer must be relieved by a reduction of national and local taxation. He must be assisted by the reorganization of the freight rate structure which could reduce charges on his production. To make this fully effective there ought to be railroad consolidations. Cheaper fertilizers must be provided.

He must have organization. His customer with whom he exchanges products of the farm for those of industry is organized, labor is organized, business is organized, and there is no way for agriculture to meet this unless it, too, is organized. The acreage of wheat is too large. Unless we can meet the world market at a profit, we must stop raising for export. Organization

Continued on page ...

Points in President's Message

Favors:

- Speedy tax reduction under so-called Mellon plan.
- Every practical aid to restore farm prosperity.
- Reorganization of freight rate structure.
- Strict enforcement of prohibition laws.
- Constitutional amendment against child labor.
- Continued restriction of immigration.
- Federal board to meet coal emergencies.
- Sale of the Muscle Shoals power project.
- Liberal terms of payment to reclamation settlers.
- Entering world court with reservations.
- Abolition of tax-exempt securities.

Opposes:

- The soldiers' bonus.
- Government price-fixing for farm crops.
- The excess profits tax.
- Repeal of the rate-making clause of the transportation act.
- Revision of the present tariff law.

How's This?---A Million Hens in One Cooperative Association---Page 3

Exide
BATTERIES

You pay no more for an Exide

Now every car-owner can afford an Exide Battery. With the present low Exide prices, the purchase of an unknown battery "at a price" is the poorest kind of bargain.

The long service given by an Exide makes it a decided economy. Exide service means not only long life in months and years, but constant service day in and night out. The Exide spends its time in your car, not in a repair shop.

The rugged Exide built for your automobile is made by the oldest and largest manufacturers of storage batteries in the world. Exide was the pioneer battery, and today it is on more new cars leaving the factories than any other battery.

You will find the right sized Exide, and the right sort of men to deal with, at the nearest Exide Service Station.

Before putting a new battery in your car, get the price of the Exide at the nearest Exide Service Station

A Million Washington Hens Are Cooperating

Their Owners, Also Cooperators, Tickle the Palates of Fastidious New Yorkers With Their Product

If all the hens that are laying eggs for the Washington Cooperative Egg and Poultry association should start out to celebrate the success of that organization they would form a parade extending from Vancouver, B. C., to Vancouver, Wash., and probably farther. There are more than a million of them and between January and October 20, 1923, they produced some 100,000,000 eggs, many of which found their way to the fastidious markets of New York to compete successfully with the best eggs from the other producing sections of the country.

The moral of Russell B. Conwell's well-known chautauqua lecture, "Acres of Diamonds," finds appropriate illustration in the development of the poultry industry of Washington. The humble hen has too often been overlooked as farmers of Washington have searched for something with which to increase their incomes. Six years ago there was no Washington Cooperative Egg and Poultry association. But the value of the hen and the necessity of the scientific marketing of her product were discovered, with the result that the million or more birds working for this accociation will produce a business this year of $4,000,000 or more for 2745 poultrymen who have either gone into the poultry business under the inspiration of the association or who were fighting their own individual battles six years ago.

While this association is a western Washington organization and while west Washington undoubtedly possesses advantages in egg production not enjoyed by every section of the state, the entire state is awakening to the importance of the hen as a factor in its agriculture. With practically the same marketing and membership contract as that which has proved so successful on the West Side, the Farmers' Union Egg and Poultry association, with headquarters at Spokane, last month opened for business with a sign-up of between 30,000 and 40,000 hens. Those in charge of the new association have been in close touch with those in charge of the older and larger one. In fact, they have been schooled in marketing methods by those who have gone through the fires of experience with the West Side association.

Quality Counts.

Those in charge of the latter realized from the start that high quality of produce must be secured and maintained and that the buying public must be told about it in ways that permitted no denial. Therefore, they put into operation a grading system, with a view to establishing standards that could be depended upon by the egg buyers. The New York trade thinks that an egg is no good unless its shell is absolutely white. Hence "Washington extras," the principal grade that is shipped to New York, must be pure white, perfectly clean, uniform in size and never weigh less than 22 ounces per dozen. As an actual fact, they average 24 ounces per dozen. The next grade, "Washington extra firsts," are the same as the above except that they may be packed and shipped in second-hand cases. "Washington firsts" may be of slightly mixed colors and include washed eggs, but they must be clean, uniform in size, and weigh the same as the two higher grades. The standard for the lower grades down to what is called "Washington undersized pullets" are less severe, but when a consumer buys a dozen eggs of any grade, high or low, he may depend upon getting just what he pays for.

The old-fashioned egg crate, with its brown filler made from straw, was a wonderful improvement over the egg basket or bucket which it displaced. But it isn't good enough for the Washington cooperatives. The brown filler tended to give the eggs an undesirable flavor if they were held in storage a while, so a filler made from spruce was developed and put into use. One of the latest tricks in the trade is the use of the blue filler. On the same principle that the use of bluing make clothes appear whiter, the use of the blue emphasizes the whiteness of Washington top-grade eggs, and, since the New York trade is willing to pay good money for egg whiteness, this is an important factor. H. E. Wills, sales manager of the association, is the inventor of the blue filler.

Since uniformity has much to do with the appearance of eggs in cases and cartons, the association puts every egg into the filler with the large end up. This not only gives uniformity of appearance, but exposes more white shell to be contrasted with the blue of the filler, and the egg trade likes it.

To avoid losses through breakage, a patent "flat" is now used between each layer of eggs in the case. This flat, made of papier mache, is molded in such way as to provide a small cup for the end of each egg to rest in, thus giving protection to each individual egg when the case is handled roughtly.

Permits no Fraud.

Eggs intended for the home trade are packed in cartons of one dozen each. Each carton is sealed in such a way that the consumer is assured of getting eggs of the grade indicated and not eggs of doubtful character, with which the cartons might otherwise be refilled by unscrupulous dealers. Colored labels are used to designate the four grades sold in this manner.

The association has developed a method of processing eggs for storage during the season of the year when the production exceeds the immediate demand. This processing consists of giving the eggs a bath of hot oil, the heat sterilizing the eggs to prevent the possibility of incubation starting and the oil filling up the pores of the shell to prevent evaporation and the absorption of unfavorable odors. Processing machines are used in the association plants at Lynden, Bellingham, Everett, Tacoma and Seattle.

(Continued on page ten.)

Herewith are the officers and managers of the Washington Cooperative Egg and Poultry association. From left to right, they are: Top row—Harry J. Beernink, manager of the Lynden plant; J. C. Lawrence, manager of the Winlock plant; S. D. Sanders, president and general manager of the association: George H. Brehm, manager of the canned egg department; D. S. McDole, general accounting manager. Lower row—H. L. McIntyre, general feed buyer; H. G. Smith, manager of the Bellingham plant; H. E. Wills, general sales manager; R. E. Darling, manager of the Tacoma plant; J. H. Guffey, manager of the Everett plant.

Here are typical scenes in and about the poultry association's plants. Top row, left to right—The Lynden plant; a scene in the feed warehouse and a scene in a candling for marketing in the shell, and packing eggs in cartons for room. Lower row—Breaking and testing eggs not suitable the home trade.

This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Important Place in Farm Schemes

Sheep are not numerous in Clarke county—there are only about 1600 on the tax roll—but they have an important place in some farm schemes and a number of purebreds were lambed in the county this year.

Fortunately for an agricultural industry of this kind which is small by comparison with others in the county, there is a market right at home for its output, at the Vancouver Woolen mills, which claims the distinction of being the only commercial wool hosiery manufacturing plant on the Pacific coast.

Started as a branch of the Washougal Woolen mills to manufacture yarn for the Red Cross during the war, the mill today employs 75 people and does an annual business worth $200,000, which is expected to increase to $300,000 within the year. The business is affiliated with the Pendleton (Oregon) and Eureka (California) Woolen mills, and all goods are manufactured under the Pendleton or Evergreen brands. Shifting of the big logging operations of the country from the middle west and south to the Pacific northwest and consequent demand for lumbermen's heavy socks and other garments is said to be in large measure responsible for the prosperity enjoyed by this industry.

Consider Problems of Apple Industry

Looking forward from the Pacific foreign trade council held in Portland in mid-November to the conference which is proposed to be held in Yakima in January to consider problems confronting the apple industry of the northwest, H. M. Gilbert of Yakima, who presided over the fruit section of the Portland meet, is quoted as offering four concrete suggestions for action, which, in his opinion, would put the industry on a much better basis.

These include construction of storage at Wenatchee sufficient to overcome the necessity of heavy shipments early in the fall; rigid agreement between Yakima and Wenatchee shippers not to sell except f. o. b.; establishment of a bulk and basket trade; and replacement of one-third of the Jonathans in the two districts by other varieties.

Two of the biggest problems discussed at Portland, and problems toward the solution of which real progress was made, were those of securing uniform steamship bills of lading, which are now extremely intricate, and those of establishing uniform insurance protection. Indorsing the proposed Yakima conference, the Portland deliberators recommended special effort to regulate the apple exports. It is said that this year three times as many apples were shipped to England as last year. Investigation of the refrigeration service offered fruit shippers by steamship lines running to Europe, with particular reference to its efficiency, was called to the attention of the United States department of agriculture as a desirable field of activity for its men, and protest was made against the sale of the two government refrigerated ships which formerly plied between northwest ports and the eastern coast of South America. Resumption of this service was held to be extremely desirable.

Freer Use of Milk

"There are more ways than one to get children to drink more milk and it should be borne in mind that milk dishes will also add to the number of ways to serve milk," says Mary E. Sutherland, nutrition specialist of the state college extension service. "Whenever possible the mother should use the positive argument and encourage the children to drink it rather than try to coax them.

"If she says that all strong children like milk and mother likes it, too, because it contains more food than tea or coffee, and people drink it because they like it, she will get much further than if she merely takes the defensive coaxing attitude. If the parents don't like milk they can't expect their children to take to it readily.

"If a straw is used and the milk drunk from the bottle the children will take to it easier in many cases than where it is poured into a glass. The theory that milk will help the complexion as a rule will appeal to the girls, as they all want good, rosy complexions. There are also many interesting stories that show the value of milk and help the children to recognize the value of milk as a food rather than something they have to take. Give them a glass with a picture on the bottom and tell them that if they drink the milk they can see the picture. Above all keep the thought of the use of milk a happy one and there will not be such a tendency for the youngsters to refuse milk in any form.

"The farm home generally has plenty of milk for making such dishes as cottage cheese, custards and puddings in which milk is used. They are all very wholesome dishes and as a rule the children relish any of them and it is a splendid way to get them to take more milk products. Custards can be made in so many different ways and any of them can be cooked as cup custards. There is the plain custard, the cheese custard, the fruit custard, the coconut custard and the chocolate custard. Many other forms can be made up with but little effort.

"Milk can easily be mixed as milk shakes and it is a good plan to keep a few fruit sirups handy for flavoring such drinks. A metal shaker can be purchased for a small amount or any fruit jar or milk bottle can be used. The main thought to carry in mind is that milk is essential to rapid development of the child and he should have all he wants, and if he is inclined to dislike it he should have it put before him in some form that he likes."

From the Community Up

A state is made up of counties and counties are made up of communities. A state organization is dependent in large measure for its success upon the formation and success of county or district organizations of similar purpose and it is equally true that county or district organizations are dependent for their prosperity upon the prosperity of community bodies.

The Northwest Potato Growers' association is one of the young farmers' organizations of the Pacific Northwest. One of the handicaps under which it has labored is the lack of vigorous state, county and community potato growers' organizations to support it. It is interesting, therefore, to note the report of the recent organization of the producers of superior potatoes in Stevens county. One of the avowed objects of the new association is the holding of a county potato show just prior to the Northwest show next season. Naturally, the choicest potatoes in the county show will be sent to the Northwest show to compete for larger honors.

This is a movement worthy the consideration of growers of potatoes in every section of this and neighboring states. If every county that is ambitious to make a name for itself in potato production had an organization and a show of its own, competition at the Northwest show would become so keen that winning would be an honor exceedingly worth while. Now is an excellent time for growers to take steps toward uniting their efforts for their individual and their common good.

Washington State Gleanings

The Bell Lumber company has completed negotiations for erection of a large cedar products treating plant at Newport at a cost of $50,000 to $75,000.

ELBERTON TO SHIP PRUNES.

The Allen Evaporating company at Elberton has finished drying the largest amount of prunes it has ever handled. Grading, processing and boxing have begun. The first car will be sent to London, England.

URGES POISONING GOPHERS NOW.

The pocket gopher is the worst rodent to contend with in the Walla Walla valley, according to Lee K. Couch, junior biologist with headquarters at Olympia. Poisoning now will get 90 to 95 per cent of them, he says.

$500,000 PLANT PLANNED.

Land is being cleared adjoining the sawmill of the Walton Lumber company at Everett for a veneer plant costing about $500,000, and to employ two shifts of 120 men each. It will be operated by the Walton Veneer company.

FEWER CRANBERRY SHIPMENTS.

There is a temporary lull in the shipments of cranberries out of the Ilwaco district, according to J. H. McAfee, one of the leading growers of the Ilwaco peninsula. About two-thirds of the crop has moved up to date, the remainder being held for the later Christmas demand.

BEET GROWERS GET $60,000.

Checks for $60,000 were mailed out November 26 by the Utah-Idaho Sugar company of Yakima to growers of beets. This year but 10,000 tons of beets were furnished the factory, as against 28,000 last year, when growers received $229,320. They were paid $6 a ton this year, while last year they got $8.19 a ton. The company will share with growers any advance in the price of sugar.

ORGANIZE FARM BUREAU.

Columbia county has organized a farm bureau, with the following board of directors: Charles Broughton, Clyde Weatherford, Henry Delaney, J. L. Dumas, E. S. Hubbard, George Spalinger, E. M. King and Troy Lindley, says a report from Pomeroy. The board met afterward and elected Troy Lindley president, Charles Broughton secretary-treasurer, E. S. Hubbard campaign manager.

MUST FULFILL CONTRACT.

The Grays Harbor Dairymen's association has been given a decision against Canfield & Engen, a member firm that was sued to compel fulfillment of a contract to deliver milk to the "co-op." In general, the case was like others involving the liability of farmers joining cooperative associations to live up to their agreements, and the decision was based on one in a similar Pierce county case.

BUYS LAND TO REFOREST.

Acting under the authority granted by the last legislature the state forest board will purchase approximately 8000 acres of logged-off land in Clarke and Skamania counties at $1.25 an acre and will combine them with other lands in the same locality in a reforestation project. The lands adjoin the Columbia national forest.

The bonds, which bear an unusually low rate of interest under the state act, are not general obligation bonds against the state, but are secured by the lands themselves. The Northern Pacific Railroad company will buy them.

NORTH BEACH RECEIVES CUP.

The South Bend Commercial club cup was for the third consecutive time presented to the North Beach Cranberrian fair November 27.

At the meeting a drive was launched to put the annual Cranberrian fair on a permanent basis in a permanent building and to provide an adequate community building for the North Beach.

The formal presentation of the cup was made by Secretary H. J. Henderson of the commercial club. Mr. Henderson told something of the history of the club's gift of the cup in furtherance of community fairs.

WENATCHEE APPLE SHIPMENTS.

According to the latest figures at the Wenatchee Traffic association office 3394 cars of apples have been shipped during November up to the 29th. During the same period in 1922 shipments were 1977 and 4207 in 1921. Total apple shipments for the season, including November 29, are 12,223 cars, or 69 per cent of the crop. Last year shipments all this time were 6594 cars of 47 per cent. In 1921 76 per cent was moved by November 29. During the first 15 days of December it is estimated that an average of 85 cars a day will be rushed out provided the weather is favorable. If this is accomplished, total shipments up to December 15 will be nearly 14,000 cars, which will be by far the greatest volume that has ever been moved out of the district during any season to that date, and nearly as much as all of the 1922 shipments.

SHIP OUT YAKIMA APPLES.

Yakima's 1923 apple crop is 2000 cars greater than has been estimated, according to a check made on storage stocks December 1 by E. E. Samson for the Yakima Valley Traffic and Credit association. This brings the total to 15,500 cars, a new high record for production in the Yakima valley orchards. This takes no account of culls or apples sent to by-products plants, but includes shipment to date of 8030 cars and storage aggregating 7475 cars, making the total 15,505 cars, fully 3000 cars more of commercial apples than has ever been produced before in Yakima valley orchards.

Mr. Samson found there were 2,687,830 boxes in cold storage warehouses and 2,963,360 boxes in common storage. This is a total of 5,561,190 boxes or 7475 carloads. This is 2163 more cars than were in storage in the valley when a check was made on December 1, 1922. The 1922 commercial apple crop was only approximately 10,000 cars and the increase has been 50 per cent.

The monthly report of the Yakima Valley Traffic and Credit association issued December 1 shows the shipment of apples from July 1 to December 1 by months as follows: July, 37 cars; August, 55; September, 1212; October, 3782, and November, 2994 cars, making the total 8030.

Yakima's soft fruit crop is shown by the same report to have been 6960 cars, bringing the total of the year's fruit crop to 22,460 cars, being 7000 cars greater than the crop of 1919, which until this time held the record with a total production of 15,309 cars.

Future of Wheat Growing

Production May Settle Down Finally to Domestic Requirements

In seeking a solution of the problem of the American wheat growers, one must keep an eye upon Canadian production. The Canadian crop has become a big factor in the world's crop and prices. Twenty-three years ago Manitoba, Saskatchewan and Alberta produced only 23,000,000 bushels. The crop of these three provinces is estimated this year at about 425,000,000 bushels. Canada has become the second largest grower of wheat in the world, and the next few years may see her take rank as the chief wheat-growing country of the globe. The discovery and perfection of Marquis wheat, an achievement of the last 20 years, a fine, hard, milling wheat yielding bountifully on far northern lands, is the chief cause of the present disturbance of the wheat growing industry of the United States.

Another important factor that must be considered in connection with the future of American agriculture is the policy of foreign countries of stimulating home production by payment of a government bounty or other paternalistic methods. In Great Britain, for instance, Premier Baldwin has been campaigning on a pledge of payment of a bounty or premium of one pound sterling ($4.35 at the present exchange rate) on every acre of arable land cultivated in the British isles, with the sole condition that the farmer claiming the bounty shall pay his agricultural labor not less than 30 shillings a week (equivalent at present exchange to $6.53).

With Great Britain stimulating agriculture in that way, and British farmers having the advantage of cheap labor, and Canada increasing its wheat production tremendously from year to year, it is difficult to foresee the future of the wheat growing industry in the United States. It is not improbable that production will settle down within a few years to domestic requirements. It is not beyond the range of possibilities that it may be found necessary, in order to hold our production up to domestic requirements, to maintain a higher tariff against foreign wheat than the present rate of 30 cents a bushel.

Increase in Farm Tenancy

The number of farms operated by owners in the United States decreased slightly—.6 per cent—between 1910 and 1920, while the number operated by tenants increased 4.3 per cent, and the manager-operated farms 17.8 per cent.

The farms under managers being limited in number, while tenanted acreages are many, the statistics by acreage tell a different story.

The farm acreage operated by owners increased, during the decade, total farm area 6.4 per cent, improved acreage 1.4; the tenanted acreage increased 17 per cent, 12.5 per cent of which was improved; and the manager-operated acreage increased but .7 per cent for total farm area and 7.3 per cent for improved acreage.

During the period the increase in number of farms was only 1.4 per cent, though that in farm acreage was 8.8 and in improved acreage 5.1 per cent.

Truth Is Established

But a Lying Tongue Is But for a Moment, Says Solomon

The lip of truth shall be established forever; but a lying tongue is but for a moment.—Proverbs 12:19.

A lying tongue is a popular device. It often gets by for the moment and the moment may be measured in the terms of days or even years.

The lying tongue ever adopts the guise of truth and that very guise of truth gives it temporary currency.

The most successful lying tongue bases its efficacy on a modicum of truth. It manipulates the truth in a manner to serve its own lying purpose.

The lying tongue is a breeder of trouble. One lie calls for another. It takes up considerable time and uses up considerable vital energy to back up lies.

There are a lot of economics in truth. Truth is established for ever. You need not keep awake nights to back up the truth.

It may be easier, or more pleasant, to lie than to tell the truth, but the ease and pleasure of the lie fade away as time presses. The lie will not suffice for the morrow.

The truth can afford to be remembered. The day arrives when the lie would be forgotten.

The question of lying or telling the truth simmers down to a question of today or tomorrow.

FARM BUSINESS AND MARKETS OUTLOOK

VARIOUS fields of industry and trade are following different trends as they have been doing since last spring and opinions are divided as to their future course, but the optimists seem to have more ground to stand upon than the pessimists.

Volume of production in basic industries in October ranged slightly higher than in September when seasonal variations are taken into account. Reports of current earnings do not bear out the idea that wages are eating up all profits as has been frequently asserted. It may be that the moderate let-down in demand for labor compared with last spring has raised its efficiency. Such barometers of current distribution of goods as bank clearings and car loadings remain at a high level. The latter averaged over one million a week for six months, compared with only one month at that level in 1920, the previous record year, and the seasonal decline in the fall has arrived later than usual.

New developments in the last two weeks have been mostly in the favorable column of the business chronicle. Sentiment in industrial and financial centers was more confident than for several months. Foreign exchange markets have reflected improvement in the political situation abroad. Low prices in pig iron have attracted bargain hunters and the volume of buying assures activity until well along in the first quarter of the new year. October building permits were 25 per cent greater than in September, automobile sales have held up better than expected and automobile companies are planning for a good year in 1924. These prospects of activity in the coming months are already reflected in a moderate advance in building material prices after a four months' sag and in increased inquiries at steel centers.

Crude oil output has declined moderately, suggesting that the overproduction responsible for depression in that industry has reached its climax. Cotton consumers have not yet ceased to buy because of high prices for raw material and cotton mills are reopening faster than they are closing. The wool market has had a smart recovery and tanners are cutting down production to deal with a surplus of leather, although this action is adding temporarily to the depression in hides. Copper shows signs of improvement. These are industries in which the decline in activity since last spring has been most marked, so that the betterment carries considerable significance. Slowly the foundations for resumption of the period of business expansion are being laid.

Sharp Advance in Cattle Market.

Cattle prices are showing fair strength as a result of a moderate supply. Combined receipts at leading markets dropped about 40 per cent, compared with six weeks ago. The decline in shipments of thin cattle to the country has fallen but little in that interval, so that the net supply going to slaughterers has contracted even more drastically than the foregoing figure would indicate.

Grass cattle have practically disappeared from southwestern markets. Northern points are still receiving some western rangers, but in numbers too small to affect the price. Weather is more favorable for beef consumption and the small receipts have already cleared any accumulation from distributive channels. Cheap pork and poultry remain as adverse influences, however. Cows and heifers have been relieved of the competition resulting from the liquidation of range herds, and cutters, canners and bulls are coming out of the gloom caused by the invariable prewinter cleanup. Veal calves have rallied to the highest point in two weeks and seem to have passed the worst for the fall period.

Stocker and feeder cattle prices have advanced owing to the decline in the western range run and increased interest in cattle feeding as a result of lower prices for corn. Plain light steers have gained more than better grades, but all kinds probably have passed the low point for the fall

Stability Shown in Hog Market.

Hog prices advanced last week under receipts which were but little heavier than a year ago. Average prices at Chicago held below $7 for nearly three weeks, but each time they dropped to the $6.50 level a strong rally was staged. Evidently packers can use liberal receipts at that figure. The country is still liquidating old cows, light unfinished hogs and pigs. Eventually this process will be carried too far, so that substantial improvement in the market may take place before winter is over, but there is not much reason for holding back hogs now ready for market. A survey by the Federal Reserve bank at Chicago indicated 1 per cent fewer hogs on farms in its territory on November 1 than on the same date last year. Interpreted in the light of other evidence, it would appear that the fall pig crop is about the same as last year.

Ups and Downs in Lamb Market.

The lamb market has lost some of its recent gains as receipts have increased. Arrivals in the last month have been much lighter than a year ago, but fat lambs are about $1.50 lower and feeder lambs substantially lower than they were last year. Cheap poultry seems to be the outstanding explanation of the sluggish dressed lamb trade and feeders have bought less freely in the last month than in November, 1922, leaving more of the arrivals for slaughter. The corn belt has a large supply of lambs in preparation for the market, which must be sold in the next two months, so that it will be difficult to stage a big advance in prices.

Demand for wool is slightly less active, but continues on a moderate scale and prices are firm, with an upward tendency.

Wheat Position Strengthens.

The position of wheat has strengthened moderately and prices have responded with an advance of 3 to 4 cents in the last week.

Exports of wheat from July 1 to November 30 totaled 90,000,000 bushels. Our estimated surplus was 150,000,000 to 165,000,000 bushels, so that the remainder does not appear burdensome, with seven months in which to dispose of it. Primary receipts have declined about 25 per cent in the last month and the visible supply declined for the first time since early last July. Part of this reduction in the visible may have been due to large shipments from western lake ports which will reappear when they arrive at eastern points.

The most significant feature was the small deliveries to speculative holders of December contracts. The May delivery is enough higher than December to give elevators a profit on carrying wheat and cash wheat disposed of now could not be replaced elsewhere at lower cost. Hence, elevators are disposed to hold their stocks.

Kansas reports a 15.8 per cent reduction in its winter wheat acreage compared with last year, but the condition is 15 per cent better. One unofficial estimate for the country as a whole shows a reduction of 12 per cent in acreage, but a gain of 11.5 per cent in condition, the latter being 4.5 per cent above the 10-year average.

Corn and Oats.

Receipts of corn at primary markets have practically doubled in the last month, but the rate of distribution has been high, so that the accumulation at terminals is insignificant.

Primary receipts of oats have declined each week since the middle of October and withdrawals from the visible supply have been persistent. Larger consumption on farms than expected early in the season is believed to be taking place.

The rye market has been affected by the strength in wheat.

Cash Grain Markets.

The range of cash grain prices for the week ended December 5 was as follows:

CHICAGO—Wheat—No. 2 red, $1.05 1-2; No. 2 hard, $1.04@1.08 1-2; No. 3, $1.02@1.05 1-2. Corn—No. 2 mixed, 72 3-4@76 1-4c; No. 3, 72 1-2@75 1-4c; No.4, 70@73 3-4c; No. 2 yellow, 76@78c; No. 3, 72 1-2@81c; No. 4, 70@74 1-4c; No. 2 white, 74@74 1-2c; No. 3, 72 1-2@75 1-2c; No. 4, 70@73 1-2c. Oats—No. 2 white, 44 1-4@46 1-2c; No. 3, 43@45c; No. 4, 40@44 1-4c. Rye—70 3-4@72 1-4c. Barley—60@79c.

Seed and Feed.

Imports of red clover seed in November totaled 792,800 pounds, compared with 400 pounds a year ago. Since July 1 nearly four times as much was imported as in the same period last year. Alfalfa imports were heavy in November, but for the season to date are but little larger than a year ago.

The feed market is weak, especially in the east, as consumers are not taking hold with vigor even at lower prices.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $27; standard middlings, $26; flour middlings, $28.50; cottonseed meal, 36 per cent, $48; 43 per cent, $56; hominy feed, $42; gluten feed, $44; old process oil meal, 45.50; tankage, $55@60.

Hay Market Higher.

Hay markets were firm last week, with prices 50 cents to $1 higher generally, although Chicago was lower. Lower grades, which form an unusually high percentage of the receipts, are moving sluggishly. Country loadings have increased slightly, since producers are less busy with farm work.

Decline and Advance in Eggs.

Fresh egg prices declined rather sharply last week, but began to recover at the close. Receipts of eggs at the leading markets increased, especially at Chicago, where consumption was curtailed by a boycott engineered by a local newspaper. The movement of storage eggs has been disappointing and the situation was already weak because of the large holdings. Fresh egg prices may rise further during the next two or three weeks if receipts become lighter once more and bad weather holds back the increase in the lay which usually starts by the first of the year.

Receipts of poultry have been extremely heacy. Turkey prices have declined sharply from the pre-Thanksgiving level, but chicken prices are holding up fairly well.

Butter and Cheese.

The butter market became firm at the moderate decline a week ago and advanced to the highest point of the season. Confidence is more general as the supply of fresh available on the market is not larger than is moving promptly into consuming channels.

The cheese market has been dull, as buyers failed to follow the cent advance at country points.

Fruits and Vegetables.

Carlot shipments of potatoes from producing districts declined nearly one-third during the last two weeks. The Chicago market has shown a stronger response to this decline, as it was below the level of markets elsewhere. Round whites United States No. 1 are quoted at $1 to $1.10 per 100 pounds sacked and bulk and Idaho sacked Russets at $1.80 to $1.90 in Chicago.

Apple markets are inactive, as consuming channels have not fully digested the heavy shipments of October and early November. Prices are low enough to furnish a stable foundation and a moderate advance seems likely to occur, as the effect of lighter shipments from producing sections becomes noticeable in receipts at the leading cities. Midwestern Jonathans and Northern Spies are quoted at $5.50 to $6 a barrel on midwestern consuming markets. Washington medium to large extra fancy Delicious are bringing $2.85 to $3.15 a box at Chicago, with fancy at $2.50 to $2.70, extra fancy Jonathans at $2 to $2.25 and fancy at $1.75 to $2.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Ore., Dec. 8.—Cattle—Beef steers, good grade, $6.50@7.50; medium grade, $5.50@6.50; common, $4.25@5.50; beef cows and heifers, good grade, $4.50@5.10; medium, $3.50@4.50; common, $3@3.50; canners and cutters, $1.50@3; bologna and butcher bulls, $2.75@4; feeder steers, $5@5.50.

Calves—Medium to choice 190 pounds down, $9@9.50; 190 to 260 pounds, $6.50@9; 260 pounds up, $4.50@6.50; cull and common, $3.50@4.50.

Hogs—160 to 200 pounds, medium, good and choice, $7.10@7.65; 200 to 260 pounds, $6.50@7.10; 250 pounds up, $6@6.50; packing hogs, smooth, $5@6.50; packing hogs, rough, $4@5; slaughter pigs, $6.50@7.10; feeder pigs, $6@6.75.

Sheep and lambs—Lambs, 84 pounds down, medium, good and choice, $10@11; cull and common, $7.50@10; yearling wethers, medium to choice, all weights, $6@9; wethers, $5.50@8; ewes, medium to choice, $3.50@6.50.

SPOKANE, Dec. 8.—Cattle—Prime steers, $6.75@7.25; good to choice steers, $6.25@6.75; medium to good steers, $5.50@6.25; fair to medium steers, $5@5.50; common to fair steers, $4.25@5; choice cows and heifers, $4.75@5.25; good to choice cows and heifers, $4@4.75; medium to

A Tale of the Flatwoods

THE RED LOCK

By DAVID ANDERSON
Author of *The Blue Moon*

Copyright, 1922, by the Bobbs-Merrill Co.

CHAPTER IV
Whispering Spring

THE venerable widow, like the rest of the village, must have been on the lookout for the new preacher, for she was at the door to meet him as he came up the walk with the others. The old banker presented him.

"So glad to have you come, Brother Hopkins. It has been so dreadfully lonesome since——!"

The mild old eyes floated full of tears. The preacher seemed not to notice.

"I saw your husband's obituary in one of the church papers."

The widow dabbed at her eyes with a black bordered handkerchief; the preacher, in his hesitating, jerky way, went on.

"I immediately wrote to Mr. Colin offering to come on a—ah—sort of vacation trip and serve the congregation until the vacancy could be filled. I was more attracted to the thought of coming because my health had given way under the dual strain of preaching and teaching. And then, too, I had heard much about Buckeye and the Flatwoods from a—ah—classmate of mine while a student in the college in which I now have the honor to hold a professorship."

The banker frowned thoughtfully; Texie glanced at Jack.

Evening shadows were gathering thick in the corners of the room. The old man, becoming aware of them, glanced about him and turned to the widow.

"Well, Sister Mason, if you don't mind, I'll just show Brother Hopkins the study, and then you better g' 'long over with us t' supper."

With the fine courtesy of one trained to the parsonage, she excused herself; the old banker went on:

"I b'lieve you said he was t' have the use of the study?"

The Widow Mason was only too well used to the crisp curt ways of Simon Colin. She turned to the young preacher.

"Brother Hopkins, I don't want you to feel that you are to have merely the study. My home is your home. Please feel free to use all of it or any part of it."

The young preacher bowed very low, and turned to the banker, who led the way up the stairs with as much authority as if he owned the place—which, in reality, he did.

The study, with its writing desk and leather easy chair, with its shelves and shelves of books, showed that its late owner had been a man of studious habits and apparently scholarly attainments. The cozy neatness of it bespoke with equal positiveness the taste and care of the woman who had kept his house in order.

A large double window on the south flooded the study with light and afforded a beautiful view of the yard, the road, the wide bottoms, with the silver fringe of the river rimming the farther edge. An east window added to the cheerfulness.

An immense apple tree grew by the east window, thrusting its stout branches so close as to almost brush the panes. Through its opening blossoms and half sprung leaves enough of the day remained to catch a view of the old banker's two or three acres of park-like orchard that lay between the parsonage and the red-roofed cottage, with the waters of Eagle Run loitering along under the blossoming trees.

The young preacher stood at the window and gazed out over the orchard, aromatic with promise, green with its thick mat of bluegrass, white under the trees where the blossoms snowed down.

The banker slapped him on the shoulder. He must have been deeply absorbed in the spell of the place, with its quiet and repose, for he started and laughed nervously.

"I must have been dreaming."

The old man tossed a hand toward the window.

"Not s' bad, is it?"

"It is very beautiful—the trees and grass, with that little branch loitering along and rafting the apple blossoms away to the river."

"I 'lowed y'u'd like it." The old man rubbed his long bony hands together in a sort of grim satisfaction. "My daughter fools away hours and hours in that seat yonder under the big maple by the spring. I 'low ther' ain't a bird comes by she can't mock."

The preacher looked at him curiously, half sternly.

"Took a right smart pile t' fix it up like that. Money wasted, I tell 'er. We'll go across that way t' the house, if y'u like."

"It would please me greatly."

The momentary sternness had left the eyes behind the spectacles, the jerky precise voice had resumed its effusive drawl.

When they came down, Texie and Jack had already gone out into the yard. Mrs. Mason was standing in the door, talking to them.

The gray-haired gentlewoman turned to the preacher.

"Brother Hopkins, won't you please run over a few minutes after supper? I have so longed to talk with a minister since—since—"

"It is a minister's duty to go where his people call him," he said, in a voice pitched to reach the ears of the others, as it might have seemed. "I shall be very pleased to come."

He bowed himself out and joined the half impatient banker on the door step.

"Come on," the old man called to the others down the walk, "we're goin' across the orch'id, Brother Hopkins 'lows he'd like to."

The girl turned back, with barely a perceptible nod to the woodsman; a nod that was almost as much a part of her as her dimples—a nod so tiny that it seemed hardly to get beyond her eyes, yet it could have set Jack Warhope to a journey around the world. He turned and followed her.

There was no gate between the banker's park-like orchard and the parsonage yard. The fence had to be climbed. When they reached it the preacher offered his hand to the girl, who, to the amazement of the woodsman, took it and allowed him to lift her down—a concession that meant much to the Flatwoods.

It was the very thing they had talked about—laughed about—on Black Rock barely half an hour before. The thought drew his eyes up to the commanding battlements of the headland. Enough of the afterglow of sunset fell from the west to bathe its stark pinnacles in a giant blush of dull bronze.

The ways of a woman! The man brought his eyes back to the grass at his feet and absently tramped along with the others.

At the bridge over Eagle Run—merely a huge foot log broad-axed flat along the top—the girl allowed the preacher to assist her again, and the woodsman was treated to his second surprise. He had seen her, hundreds of times, skip across that log as sure-footed as a squirrel.

The path beyond led past the big maple with the rustic seat beneath the shelter of its far-flung branches. At its roots a spring gushed up, lapping the white pebbles of the tiny gutter it had worn for itself on its way to Eagle Run. The girl ran on ahead to the spring, the others gathered around her and stood listening to the purr of the water washing against the pebbles.

"Whispering Spring," she said simply, raising her eyes to the preacher. "Jack named it that. He can think of s' many names f'r things. He's a poet, I guess."

The woodsman fidgeted. The preacher glanced toward him, but made no comment.

"My brother, Ken, use' t' tell me the fairies come down out of the cliffs at night t' dance around Whispering Spring, and I b'lieved him—I b'lieved everything he told me them days—and I use' t' watch f'r the fairies."

She looked up at the preacher; then back into the spring.

"Do you b'lieve in fairies?" She asked the question as if she hoped he did believe in them.

He glanced down at the reflected face in the water.

"Yes; there's a fairy peeping into the spring right now."

The old banker grunted; the woodsman turned to the face behind the huge spectacles. It was the first thing the preacher had said that caught his interest.

The girl was so entirely an unspoiled creature of the woods that she let the preacher see how much the neat compliment pleased her. With the color tingling over her face, she sprang over the gnarled roots of the great maple and ran a few steps up the path to the edge of the yard, paused and then hurried on. The preacher looked after her in his peering way, while the woodsman strode up the path and overtook her at the kitchen door.

"I'll run over and do the chores, and then come back," he said.

He walked on a little way and then came slowly back. The girl, just going into the kitchen, seemed to know that he had turned—seemed to know that he would turn back. With her hand on the door

(Continued on page fourteen.)

SYNOPSIS.

"Ken, Texie, Jack." These three names, carved one above the other, appear high on a pinnacle of sandstone at the tip of Black Rock, among the cliffs that wall three sides of the little village of Buckeye, in the Flatwoods valley of the Wabash. In a secluded pocket of the rock is a tiny bed of yellow orchids, not yet in bloom, planted by Jack Warhope for his girl chum, Texie Colin. Below lies a farmstead, that had been laid out on a scale much more elaborate than was usual in the Flatwoods, but nothing had been finished. Outlined among the weeds and brambles lies the extensive foundation of the farmhouse. Back of this stands a mite of a log cabin, where doubtless a man had housed while dreaming his unfinished dream of house and barns and happy homestead. At the very beginning of the fulfillment of those dreams, the man, Jack Warhope's father, fell in a battle with the Seminoles, and, when Jack was 12 years old, the mother died. Then it was found that Simon Colin, a hard-headed, domineering old man, Texie's father, held a mortgage on all the Warhope property. He foreclosed and had Jack "bound out" in service to him until he should become of age.

The names on the sandstone had been written seven years before, the day Kenneth Colin, Texie's brother, left for college. For two years after his departure he wrote regularly. Then, suddenly, the letters ceased. Later from the president of the college the boy attended came news of how Ken had killed a man and run away from school, leaving many debts. That was five years ago and no word has been received since.

It is May time and Jack and Texie have met at the tiny flower garden among the rocks. It lacks but 10 days of Jack's 21st birthday, when he will be free. Jack is happy in the prospect, but together he and Texie are thinking of Kenneth and his waywardness.

"Jack——" she hesitated; "do y'u s'pose it could be the red lock that made Ken act like 'e did?"

The question was so at variance with the man's trend of thought that he was a long time considering it.

"It ain't the red lock," he finally answered in his slow way, "it's the drop of blood that come along with it. F'r that matter, though, every man gits a bad drop 'r two out of the past. But them bad drops can be overcome, if a man bucks ag'in 'em. The trouble with Ken was it didn't 'pear like he wanted t' buck ag'in' his."

"The 'curse of Colin,'" was the girl's musing comment. "F'r hundreds of years—ever sence the days of 'Red Colin,' the old sea pirate—it's be'n breakin' out in the family every few generations. It alw'ys worried Ken that it broke out on him. I've sometimes thought it would 'a' be'n better if he'd never 'a' found out the meanin' of that red lock—that it was the 'curse of Colin'——"

Half the village was usually gathered about the broken porch of Zeke Polick's general store to see the stage come in. Simon Colin had once been Zeke Polick's partner, but now followed the business of lending money and collecting rents. Half the Flatwoods was under mortgage to him. His office was in the store building and he carried his wealth back and forth every day between his cottage, where he kept his safe, and the store.

On the evening of this particular day in May the crowd was even larger than usual, for the new preacher was expected. He had been a classmate of Ken's and was now one of the teachers and preachers in the very college where Ken went.

The stage drew up and one passenger alighted, a tall young man wearing a full beard, neatly cropped—the new preacher, the Reverend Caleb Hopkins, without a doubt—quite the oddest array of satchels and umbrella, patent leather boots and high hat, stiff neck stock and enormous spectacles, that had ever invaded the Flatwoods.

He appeared nervous and peered this way and that through his heavy, amber-tinted glasses. Only Jack Warhope noticed that beneath all the paraphernalia the young preacher was possessed of a very capable body, tall and strong. He was warmly greeted by the villagers.

The reception over, Texie urged Jack to accompany them home to supper, whispering: "We'll get him to tell us about Ken."

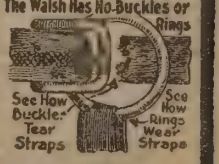
The NEW IMPROVED Walsh No-Buckle Harness
NO BUCKLES TO TEAR - NO RINGS TO WEAR

$5 After 30 Days Free Trial - Send No Money
Made in all styles: Breechingless, Side Backer, Express, etc.
I send you my Walsh No-Buckle Harness to use on your own team on your own farm thirty days free. See for yourself why this harness with no buckles to tear, no rings to wear, no buckle holes to weaken straps, is three times stronger, better looking, better fitting, handier in every way than any other. Amazing success—thousands used in every state for over 9 years. You can get complete interesting facts by sending for new, big, free book.
WALSH "SPECIAL TEST" LEATHER
Buckles weaken and tear straps. Ordinary harness has 68 buckles and 270 places where ring friction wears straps in two. Walsh has no buckles, no rings—besides it is made of Northern Steer Hide Leather, tanned by special six-month's bark-tan process. Actual test in steel testing machine shows Walsh Leather to be twice as strong as ordinary harness leather. Free book tells about this remarkable test.
Saves Repair Expense
The money spent repairing old harness will make first few monthly payments toward a Walsh—the world's strongest harness. No frequent breakdowns to consume valuable time. The Walsh is easier to put on and take off. No stubborn buckles to bother when winter cold bites the fingers and straps are stiff. Easily adjusted to fit any horse. All I ask is, test it thoroughly at my risk and expense.
$5.00 After Thirty Days Free Trial
Balance easy monthly payments, or cash after trial if you wish. Sold direct to you. No middleman's profit. Write today for my big, new, free book, prices, easy payments and 30 day trial offer, also how to make money showing Walsh Harness to your neighbors.
James M. Walsh, Pres., WALSH HARNESS CO.
Keefe Ave., Milwaukee, Wis.
The Walsh Has No Buckles or Rings


See How Buckles Tear Straps
See How Rings Wear Straps
Used and endorsed by Agricultural Colleges, Government Experiment Stations, leading Horsemen and thousands of Farmers in every state.

Farmers' Union Meets

The annual convention of the Washington Farmers' union is being held in Spokane this week. A feature of the convention is the presentation of the plan of the organization to market the wheat of its members under a cooperative contract and to sign up a large acreage that is not now being marketed cooperatively.

Among other matters on the program are the annual address of State President J. Q. Adams and the presentation of a report on the recent national convention by State Secretary A. D. Cross, who was a delegate to the national meeting.

On the evening of December 11 members of the Farmers' Union Egg and Poultry association met for a general consideration of the work and future program of this new organization. D. F. Mitchell, president of the association, presided at the meeting.

A meeting of the board of directors of the Washington Wheat Growers' association is being held also this week at Spokane in order that producers who are members of both the farmers' union and the wheat growers may meet with the board and consider matters of administration that affect them.

Reports of these meetings will appear in future issues of The Washington Farmer.

President Addresses Congress

(Continued from page one.)

would help to reduce acreage.

Systems of cooperative marketing created by the farmers themselves, supervised by competent management, without doubt would be of assistance, but they can not wholly solve the problem. Our agricultural schools ought to have thorough courses in the theory of organization and cooperative marketing.

Diversification is necessary. Those farmers who raise their living on their land are not greatly in distress.

By reason of many contributing causes, occupants of our reclamation projects are in financial difficulties, which in some cases are acute. Relief should be granted by definite authority of law empowering the secretary of the interior in his discretion to suspend, readjust and reassess all charges against water users.

This whole question is being considered by experts. You will have the advantage of the facts and conclusions which they may develop. This situation, involving a government investment of more than $135,000,000, and affecting more than 30,000 water users, is serious. While relief which is necessary should be granted, yet contracts with the government which can be met should be met. The established general policy of these projects should not be abandoned for any private control.

Highways and reforestation should continue to have the interest and support of the government. Every one is anxious for good highways. I have made a liberal proposal in the budget for the continuing payment to the states by the federal government of its share for this necessary public improvement. No expenditure of public money contributes so much to the national wealth as for building good roads.

Reforestation has an importance far above the attention it usually secures. A special committee of the senate is investigating this need, and I shall welcome a constructive policy based on their report.

The world has had enough of the curse of hatred and selfishness, of destruction and war. It has had enough of the wrongful use of material power. For the healing of the nations there must be good will and charity, confidence and peace. The time has come for a more practical use of moral power, and more reliance upon the principle that right makes its own might. Our authority among the nations must be represented by justice and mercy.

It is necessary not only to have faith, but to make sacrifices for our faith. The spiritual forces of the world make all its final determinations. It is with these voices that America should speak. Whenever they declare a righteous purpose there need be no doubt that they will be heard. America has taken her place in the world as a republic—free, independent, powerful. The best service that can be rendered to humanity is the assurance that this place will be maintained.

Armour Hearing Is On

A hearing is being conducted this week in Spokane by an examiner of the federal trade commission on the question of whether or not the purchase several years ago of the E. H. Stanton packing plant at Spokane by Armour & Co. constituted a violation of the federal law prohibiting restraint of trade. The commission some months ago ruled that the ownership of the plant by Armour was in violation of this provision and that the plant should be disposed of to a competitive purchaser.

The Stockmen's club of Spokane approves the fullest investigation of the Armour-Stanton deal and expresses confidence that the hearing will demonstrate the coming of Armour's to Spokane has not restricted competition or tended to create a monopoly, believing that any attempt of the federal trade commission to compel Armour & Co. to dispose of their Spokane plant will work an irreparable loss to live stock producers of the Inland Empire by taking away from the city its largest purchaser of live stock and distributor of meat products.

"EAT MORE WHEAT"

CRULLERS! What care they for all the modern-day "inventions" in breakfast breads! Breakfast appetites are just as old-fashioned as ever. And there's nothing that offers the same delicious accompaniment to the morning cup of coffee as Sperry Crullers, done to a crisp, inviting brown, like this:

2 cups Sperry Drifted Snow Flour	1 tablespoon butter
2 teaspoons baking powder	½ cup sugar
½ teaspoon salt	1 egg
¼ teaspoon nutmeg	½ cup milk

[*Note:* All measurements are level and flour is sifted once before measuring. One-half pint measuring cup is used.] Cream butter, add sugar and well-beaten egg. Sift all dry ingredients and add alternately with the milk. Turn on to a floured board, roll out to half an inch thick; cut into inch-wide pieces about eight inches long, then fold in the center and twist. Allow to stand a few minutes to stiffen the dough, then fry in hot fat until a golden brown, turn to cook on the other side, drain on paper. When cold, dredge with powdered sugar mixed with a little cinnamon.

Sperry Cook Book free! Would you like to know the delicious possibilities of flour mixtures—not only for breakfast breads but for a host of other uses? Then send for the Sperry Cook book. Use the coupon—it's free!

LIVESTOCK AND DAIRY

Tankage

A Part of the Growing Hog's Return

Tankage is a valuable addition to the growing hog's ration and when left out the gains will be less rapid and will be more expensive. This fact was clearly brought out in a feeding trial recently completed by J. T. Alexander of Chehalis, who fed out two pens of hogs during the last four months. The experiment, which was completed early in November, was outlined by R. G. Fowler, county agent of Lewis county.

The animals were run on clover pasture during the feeding period and the only difference in the ration was that lot No. 1 received 10 per cent tankage in the barley ration, while lot No. 2 received no tankage. The tankage was cut to 5 per cent during the last month of the feeding period.

Lot No. 1—10 hogs: Barley, 3871 pounds; tankage, 361 pounds; initial weight, 571 pounds; average, 57 pounds; final weight, 2013 pounds; average, 201 pounds; average daily gain, 1.45 pounds; total, 1442 pounds; feed per 100 pounds gain, 293.4 pounds; grain cost per 100 pounds gain, $5.48; pasture per 100 pounds gain, 68 cents; total per 100 pounds gain, $6.16.

Lot No. 2—11 hogs: Barley, 4062 pounds; initial weight, 561 pounds; average, 51 pounds; final weight, 1843 pounds; average, 167 pounds; average daily gain, 1.17 pounds; total, 1282 pounds; feed per 100 pounds gain, 316.8 pounds; grain cost per 100 pounds gain, $5.22; pasture per 100 pounds gain, 68 cents; total per 100 pounds gain, $5.90.

In estimating the feed values, barley was valued at $33 per ton, tankage at $85 per ton, and clover pasture, 1 cent per day per animal.

The results obtained in the experiment vary slightly from other feeding trials inasmuch as the tankage lot might have shown a higher average daily gain. Lot 1 made an average daily gain of 1.45 pounds, while lot No. 2 made only 1.17 pounds per day. At 8 1-2 cents per pound selling price lot No. 1 brought $13.60 more than lot No. 2.

The value of good clover pasture in feeding swine is often lost sight of by feeders. Experiments at different stations have shown that an acre of clover will make 600 to 750 pounds of pork in one season, and this point should not be overlooked in producing pork at present prices.

Mr. Alexander, in discussing this demonstration, states that he is satisfied that tankage is a valuable adjunct to the ration in feeding pigs, but doubts the value of feeding it at the last of the feeding period. He also feels that these two lots would both have made larger gains had they been shut up in a feed lot the last four weeks of the fattening period.

WHITE LIGHT FROM OIL LAMP NOW

Government Tests Prove New Light Beats Electric—Sensational Invention.

A new lamp has recently been invented which burns common kerosene oil and produces a soft, white light said to be even better than electric or gas. Tests by the government and leading universities prove this new light is superior to ten ordinary oil lamps. It burns without odor, smoke or noise, is simple and economical, requires no pumping up and has been approved by the underwriters for insurance.

The inventor, W. T. Johnson, 161 Union ave., Portland, Ore., is offering to send one of these new lamps on ten days' free trial, or even give one to the first user in each locality who will help him introduce it. Write him today for particulars. Also ask him to explain his agency proposition.—Adv.

Squash as Feed

By JERRY SOTOLA,

Department of Animal Husbandry, State College of Washington.

Will you please tell me if raw squash is injurious to any kind of stock and if the squash seed is of any value as feed? Should squash have the rind removed before feeding to animals? L. W.

Grandview, Wash.

The squash is not injurious to live stock, but, on the other hand, may be classed as an excellent succulent feed. It is extremely watery, averaging about 85 per cent moisture. The dry matter of the squash is higher in feeding value than the dry matter of grains, like corn, wheat or barley, and the seeds are free from any injurious effect to animals when they are fed in quantities found in the entire fruit. In foreign countries the seed is often dried, ground and then fed to live stock without injurious effect if fed in moderate quantities. It is their extreme richness in fat that sometimes causes indigestion if the seeds are fed in large quantities. They are rich in both fat and protein, containing slightly over 30 per cent of these nutrients on the moisture-free basis.

Experiments with dairy cows viewed in a conservative way show that five to six pounds of pumpkins or squashes, when cut, will replace one pound of hay and that two and one-half pounds of cut squash replaces one pound of good corn silage.

A cow will consume with relish from 30 to 50 pounds of cut pumpkins or squashes per day, but such a feed should be fed instead of silage rather than with it because it is so bulky and watery.

Chopped pumpkins or squashes can be fed to fattening pigs with success when fed in connection with corn or wheat. Some years ago pigs were fattened successfully at the Oregon experiment station on skim milk, corn meal and pumpkins. It was demonstrated that cooking of pumpkins does not increase their feeding value. Since squashes and pumpkins are so similar in composition the results apply to both feeds with only slight variations. Some Colorado reports tell of cases where pigs were fattened on raw squashes and meat had an undesirable yellow color.

Pumpkins and squashes should be fed in the late fall or early winter, since they do not keep well because of their high moisture content, and growing them in too large quantities can hardly be considered good economy, unless they can be consumed in a short time.

Feed for Dairy Cows

By E. V. ELLINGTON, Head Department of Dairy Husbandry, Washington State College.

Can you give me any information on feeding cull apples to milk cows? How many can be safely fed at a time and what is the food value? B. T.

Walla Walla, Wash.

Experimental work which has been done with apples indicates that they have about 40 per cent of the value of corn silage for milk production. They contain slightly more dry matter than roots, the chief nutritive constituents being the sugars. Apples are very palatable and are relished by cattle. Care must be taken, however, to supplement apples with liberal amounts of richer foods, because the low amount of nutrients contained in apples will not be sufficient to maintain a normal milk flow. In other words, if apples were made the principal food, the cow could not eat enough of them to provide sufficient nutrients necessary to produce a large amount of milk.

Apples occupy the same place in the ration as roots or silage in that they provide succulence, and there is no property in them that will produce injurious results to the cow.

DE LAVAL

Cream Separator

A Better De Laval
For Fewer Pounds of Butter

In 1913 it took 231 lbs. of butter to pay for a popular-size De Laval Cream Separator. In 1923 a De Laval of the same size can be purchased for 206 lbs. of butter, 25 lbs., or 11%, less than in 1913. In addition, the De Laval of today is a very much better machine.

Sold On Easy Terms

You can get a new De Laval on such liberal and easy terms that it will actually pay for itself while you are using it, and pay for itself out of wasted butter-fat.

The De Laval Milker

If you milk ten or more cows, a De Laval Milker will soon pay for itself. Besides saving a great deal of time and drudgery, it produces cleaner milk and by its pleasing, uniform action usually causes cows to give more milk. More than 15,000 users will tell you so. Send coupon for complete information.

More than 100,000 users of this new, year-old De Laval Separator acclaim it as being the best De Laval ever built. It is better than the De Lavals which have satisfied millions of users; which have won more than 1100 prizes; which are endorsed by cow testers, creamerymen, college and dairy authorities, and leading dairymen all over the world; and which have proved to last from 15 to 30 years.

The new model De Laval Separator has all the good features of the old machine, plus:

1. **Self-Centering Bowl** which runs smoothly without vibration and adds to the life of the machine.
2. **Light Running** because its bowl is designed to afford the least possible resistance in being revolved.
3. **All-Around Superiority**—Superior design, workmanship and materials; cleaner skimming; smoother and richer cream.
4. **Greater Convenience** with the new bowl holder attached to the supply can support—and many other improvements and refinements.

Turn Slacker Cows Into Big Milkers

FREE BOOK

The only difference between just breaking even at dairying and making a real profit lies in seeing that there are no slackers in the herd. A poor milker can soon eat up the profit of several productive cows.

Almost always the so-called poor milker is unproductive because of some sluggish condition of the genital or digestive organs. If these functions are impaired the milk flow is quickly reduced.

Kow-Kare helps to make good producers of poor milkers through its direct medicinal action on the milk-making organs. The vital organs of production are made to function with new vigor. Not only does the milk pail benefit, but the cow is able to ward off disease.

Such cow ailments as Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite, etc., find their origin in weakened genital and digestive organs. Kow-Kare is a reliable aid in treating these disorders. Its use and reputation is nation-wide.

By feeding a tablespoonful of Kow-Kare to all of your cows one week out of each month you will keep down expensive disease-loss and add greatly to the volume of milk Dairy experts say that you can double the net profit by increasing the yield only 10%.

Let us mail you free our 32 page book, "The Home Cow Doctor." Your feed dealer, general store or druggist sells Kow-Kare; $1.25 and 65c sizes. If your dealer cannot supply you, remit direct to us and we will send postpaid.

Must Get Rid of the Surplus

Wheat Committee Favors High Tariff, Export Commission

Surplus is one of the things that has always knocked down the price of farm crops. Dairymen, for instance, have figured that if they can take care of their surplus they can secure a fair price, under normal conditions, for that which the current market demands. To solve the problem, dairy organizations have established plants in which to manufacture or process their surplus milk and have created marketing agencies to sell it apart from the immediate home demand.

Come now the wheat growers, bankers and business men of Washington, with the proposition that if the surplus wheat produced in this country can be disposed of separate and apart from the usual market a reasonable price can be obtained for the balance of the crop.

On this ground, the committee, headed by State Senator F. J. Wilmer, banker and farmer of Rosalia, last week at its meeting in Spokane, voted in favor of the creation of a government export commission to market all of this troublesome surplus in foreign countries, taking a loss if necessary and taxing the entire wheat crop of the country enough to pay the loss. A plan somewhat similar has since been recommended to the president by Secretary Wallace of the department of agriculture in his annual report.

Since the adoption of the recommendations of the Wilmer committee there has been discussion among wheat men and even members of the committee as to whether or not the committee's plan would, if adopted, actually result in hard and fast price-fixing. Chairman Wilmer of the committee, in a letter after the adoption of the recommendation, emphasizes that the problem centers around getting rid of the surplus, such disposal to be effected by sale abroad at the foreign price, the loss to be met by a tax on all the wheat produced. "Will it not be well for us all to get behind this idea and leave the details to be worked out in congress?" asks Mr. Wilmer in his letter.

The plan as adopted by the Wilmer committee follows:

The Plan.

Section 1. Tariff schedules to be provided high enough to cover the elevation of the domestic price of wheat and wheat products to its normal, or prewar relationship with other prices.

Section 2. A government export corporation or commission to be created which (a) calculates, using department of labor index, what prices wheat and wheat products should bring to restore the prewar ration, and (b) announces its readiness to buy at that figure.

What fixes prices? Take wheat, for example; the grain trade is willing to buy at any figure which insures its ability to resell at the handler's usual margin of profit. Willingness and ability to buy at the proper price level will establish the domestic price.

Should there be a surplus, such quantities of wheat as may have been bought would be resold on the domestic market. If a surplus over domestic needs exists this would be sold in orderly fashion abroad, at such prices as it will command.

Section 3. Costs and losses: Wheat and wheat products protected in this manner would pay its pro rata share of such costs as are incurred in the operation to sustain the domestic price at its proper ratio with other prices and such losses as occur in sales abroad.

For example: If the sales abroad of 140,000,000 bushels of wheat out of a crop of 700,000,000 bushels that move in trade it is necessary in any one year to sustain the domestic price, and such a sale is at a loss of 50 cents a bushel below the domestic price, the loss would be $70,000,000 to be collected as a tax from the 700,000,000 bushels. That would mean a tax of 10 cents a bushel to finance an operation that lifted the domestic price of wheat 50 cents a bushel over what it would have been had the foreign market been permitted to fix the home price.

If the world price rose so the domestic price would, without assistance, be nearer its proper level place in relation to other commodities, then the margin of protection afforded under the corporation would shrink. The central idea is to put and keep wheat prices in the same relationship with other prices, that they had prior to the war. It is not price fixing; the price would fluctuate along with other commodities, but no longer would wheat prices stand at one low level, while protected industry and labor held general prices at a far higher level.

Section 4. Methods: (a) The corporation or commission would operate with cooperative marketing organizations established dealers and through the usual marketing channels: (b) a revolving fund would need to be provided by appropriation, to be replenished by wheat taxes in one of the two following ways: either a unit tax would be placed at the outset of the season to create a revolving fund to finance the operations, or the corporation or commission would operate on the revolving fund appropriated for an entire season, which would be replenished by a tax on the succeeding year's crop of wheat.

Several other methods of solving the wheat farmer's problem were submitted, either by members of the committee or by others who attended the open sessions. Absolute price-fixing by congress was urged by no one and practically no expressions of favoring this plan were heard. Cooperative marketing took a sort of secondary place in the consideration, though vigorously urged as a means of backing up and making more practical the export commission plan as adopted.

Prominent among the recommendations was one made by C. M. Rader of Walla Walla, who urged the creation of a government corporation to buy and sell sufficient wheat to govern the price of the entire crop.

Another plan was offered by W. V. Moore, a farmer of Quincy. He favored a nationwide agreement among wheat farmers to sell no wheat at a price less than 50 cents a bushel under the November 1 quotation. In order to prevent dumping at such time as this price was reached, under his plan, it would be provided that no farmer should sell more than 10 per cent of his wheat during any one month.

Walter J. Robinson, manager of the Washington Cooperative Wheat Growers' association, who had just returned from Washington, D. C., where he appeared before the recent tariff conference to urge increased tariff on wheat, declared to the committee that no plan could be put through congress without a long, hard campaign, as eastern representatives and senators do not realize the position of the wheat farmer or understand his problems or their relationship to the general industry of the country in which these eastern men are more directly interested. He said they looked upon any assistance to the wheat growers as a subsidy to be paid out of the national treasury rather than to be paid by the wheat farmers themselves. Mr. Robinson declared that, while cooperative associations were essential to the success of any orderly wheat marketing program, in his opinion the proposed export commission is the only hope for relief from the present unfair position in which the wheat grower finds himself.

The committee making the recommendations was authorized at a meeting of farmers, bankers, marketing experts and representatives of farm organizations at Colfax, Whitman county, a few weeks ago. That meeting authorized Senator Wilmer to appoint the committee and serve as its chairman.

THE WALLACE PLAN.

The proposal made by Secretary of Agriculture Wallace to President Coolidge goes further and recommends that the export commission handle surpluses of other farm crops in similar manner. The Washington committee definitely rejected a proposal to have the commission dispose of other crops than wheat. Secretary Wallace would also have a tariff on any American crop of which there was an exportable surplus sufficiently high to equalize the equitable home price and the

POULTRY AND RABBITS

Thurston Hatchery

Twenty-one incubators have been ordered by O. B. Gregory of Olympia for the Thurston county accredited hatchery, which will be ready for operation the coming season. Mr. Gregory, who is to have charge of the hatchery, says that the plant will have a capacity of 13,500 chicks at one filling.

The association members have listed 1450 breeding hens, from which they expect to produce a minimum of 40,000 chicks in the accredited hatchery. Practically all of these chicks will be bought back by the members of the association, and consequently the standard of the breeding stock in the county will be raised when the pullets come to maturity. Orders have already begun coming in to the hatchery, a total of 18,000 chicks having been bargained for. Mr. Gregory stated that he did not expect to be able to supply the demand for chicks next spring.

Practically all of the eggs supplied to the hatchery will be from flocks which will have been inspected by some one authorized to do this work by the state college extension service. One pen from which 700 eggs have been contracted has a yearly record of 280 or better. The males used in this pen are from the experiment station flock at Puyallup, the dam of which produced record-breaking pullets, and the dam of the sire was also a high producer.

The dam of another cockerel in the association has a 309-egg-record, the bird being a straight Tancred bred cockerel. His ancestors for five generations have produced over 300 eggs a year. At present all of the high classed cockerels are from pullets that have produced more than 250 eggs. The standards of the organization require that all breeders must be at least 18 months old and cockerels must come from dams with yearly records of 250 eggs or better. The state rules permitted the use of cockerels from hens of 200 eggs or better.

A Million Hens

(Continued from page three.)

By storing these processed eggs during the season of high production, glutted markets have been avoided and prices maintained much more favorable than before the association was formed. "The association stored 22,000 cases of eggs during the year and, although we do not realize the same profit on them that is usually made on storage eggs, we can well afford to do it, since we can, in this way, help govern the price of fresh eggs," says Sales Manager Wills.

Storage eggs also include what is known as egg meats. This term is applied to eggs which are broken, put into containers and kept at a temperature of some 20 degrees below freezing. Eggs with cracked or dirty shells and oversized or unshapely eggs are broken for storage in this form. They are marketed largely to restaurants and bakeries.

Feeding Stations.

Every poultryman has a problem in disposing of his cull pullets, cockerels and mature birds that have outlived their usefulness as egg producers. The association has solved this problem for its members by establishing feeding stations at five of its plants where these birds are collected for market, fitted, killed, dressed and frozen for market. This fitting could be done at home, but again uniformity is being sought and better results are obtained where the birds are fed the same mixtures and are prepared for market in such way as to permit of proper grading. Much of this dressed poultry is shipped in this frozen condition to the New York market, thus preventing an abnormal supply and consequent low prices on the home market. For the first eight months of this year the returns from the sale of dressed poultry exceeded $148,000.

The association also prepares feeds for its members. These feeds are made in mills operated by the organization, the necessary grain being purchased in carload or even larger lots.

Association Grows.

The Washington Cooperative Egg and Poultry association has grown steadily during the six years of its life in spite of the usual opposition with which cooperative movements have to contend. The year membership contract includes a clause which permits a member to withdraw if notice is given between October 1 and 15 of any year. Comparatively few members have taken advantage of this provision. In fact, during October of this year eight more poultrymen joined the association than withdrew during the 15-day period specified, which necessarily covers all withdrawals for the entire year. Those who withdraw are in most cases located in districts where local conditions make it impractical to market their eggs through the association as satisfactorily as they can handle their own product. Remoteness from the nearest association plant is the principal ground for such withdrawal.

The Washington Cooperative Egg and Poultry association is a member of the Pacific Egg Producers, Inc., usually referred to as the "P. E. P." This organization coordinates what are known as the "Big Five" associations, namely the Washington association, the Southern Poultry Producers of Los Angeles, the Poultry Producers of San Diego, the Central Producers of San Francisco and the Pacific Cooperative Poultry Producers of Portland. The P. E. P. maintains an office in New York, in charge of J. A. Barber, as general sales manager, whose duty is the marketing of the eggs shipped from the associations on the Coast.

CULLS NEIGHBOR'S FLOCK.

L. H. Pomeroy of the Vera community, Spokane county, culled a flock of 225 birds for C. H. Moore of Greenacres. A total of 129 birds were culled out of the 225 and put in a coup by themselves for five days.

At the end of the period it was found that the culled birds had laid no eggs, while the remaining 96 hens had laid their usual number. Mr. Pomeroy was granted a culling certificate by W. D. Buchanan, extension specialist in poultry, as the result of good work accomplished at a culling school. It is the policy of Mr. Buchanan to teach poultrymen how to cull, and when they pass a good examination they are granted certificates.

ORCHARD AND GARDEN

Almond Growing

Requires Warm Climate and a Moderate Winter

By O. M. MORRIS,

Head Department of Horticulture, State College of Washington.

There recently appeared in the Associated Press some articles encouraging the planting of almond trees in Washington. Almond trees have been planted in several different sections and in a few districts have come to fruit and promised well. One of the districts where this was developed on a large scale was practically wiped out in the December freeze of 1919. This experience should cause any one considering the planting of almonds on a commercial scale to hesitate and consider seriously the type of tree and its adaptability to the district.

The almond, like the peach, does best in warm climates of medium winter temperatures. It requires ordinarily for its best development medium high summer temperatures and the plant is not able to endure temperatures much below zero without more or less injury. The blossom buds are more easily winter killed than are those of the peach. Any district where apple or pear trees have shown indication of serious winter kill should not undertake the growing of almonds.

The plant has the peculiar habit of being easily driven into a dormant state by ordinary frost and drough and responidng quickly to mild weather during the winter. During these spells of mild weather in the winter the buds swell rapidly and are killed by the cold following this period of mild temperature. The blossoms appear about the same time that the peach blossoms appear and are usually as easily killed by late spring frosts. Some varieties are more tender to late spring frosts than are the common varieties of peaches. After the blossom has dropped the fruits will often endure distinct frosts without serious harm. Any district that has any need for orchard heating work to protect apple blossoms in the spring or in which apple trees have suffered from winter injury should avoid planting more tender fruits. There are probably a few protected and favored small localities in which almonds might be grown with profit. These districts are usually especially favored situated adjacent to bodies of water or are protected by hill slopes that give them especially favored opportunities.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade Which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores.

Smoke Cloud

Of Small Advantage in Protecting Against Frost

A smoke cloud is of small advantage in retarding radiation of heat in an orchard on frosty nights. This conclusion was reached by the weather bureau of the United States department of agriculture after a series of experiments at Edgewood arsenal, Maryland. Investigations were carried on jointly by the weather bureau and the chemical warfare service of the army to establish, if possible, the feasibility of this method of frost protection.

There seems to be a conviction in the minds of many who have had to do with smoke screens, such as were used during the war to hide the movement of troops, that orchards and tender vegetation could be protected from frost by this means. It has been thought that a chemically produced smoke cloud would furnish a cheaper cleaner and perhaps more effective frost protection than is obtained from burning crude oil or other fuels in small heaters.

In the experiments a field was covered with dense smoke by burning white phosphorus on nights when conditions favored frost. The temperatures were carefully measured under and in the smoke and also in a near-by field free from smoke.

Results showed that while the smoke cloud decreased the rate of cooling about one-half, it had little effect on the air temperature, probably because of an interchange between the air under the smoke and that outside. The cost of maintaining a dense smoke cover over the field by burning white phosphorus, which was the most economical material available, ranged from $125 to $376 per hour for a 40-acre orchard or $3.15 to $9.40 per acre per hour; whereas the average annual cost of protecting lemon trees by the heater method is known to be about $79 per acre with an average of 16 heatings per year, or $5 per acre per night. The phosphorus is difficult to handle safely, as it ignites at 113 degrees Fahrenheit.

The experiments confirm previous conclusions that the most efficient and economical method of frost protection is to heat the lower layers of the air by burning some form of cheap fuel.

Squash Storage

A feeling that squashes are a product difficult to preserve in storage causes many farm families to go without this excellent vegetable throughout the fall and winter season. Squashes are not difficult to keep when a few essential points are observed.

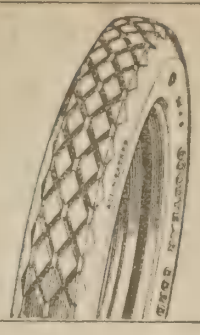
Bruises in one form or another cause more loss of squashes than any other single condition. Extreme care should be taken to avoid breaking the skin or crushing the meat during any part of the process of handling. Only mature squashes are valuable and immature squashes are very difficult to preserve. Some amateur growers make the mistake of breaking the stem from the squash rather than breaking or cutting it from the vine, leaving it all on the squash. When the stem is broken from the squash it leaves exposed meat which readily falls a victim of decay, probably causing the loss of the entire vegetable.

It is not wise to pile squashes up in storage. On the other hand, it is a good plan to arrange shelves for them if inadequate floor space is available so that they may lie in one layer, preferably not touching each other, at least not crowded. It is also a good plan to provide a thin layer of straw or other soft packing upon which they may lie to avoid possible bruising. Storage quarters should be dry.

Many make the mistake of thinking that the squash needs a cold storage room. The truth is that it will survive the winter months better if its quarters are comparatively warm. In fact, some go so far as to recommend that it be placed about the chimney or near the furnace, where the temperature is warmer than in the more distant parts of the cellar or basement. Too much warmth, however, is not good.

FIND IT IN THE DARK.

A place for every tool and every tool in its place is a great saver of time.



You Can Always Rely on This Famous Tread

Whether you are in a mile-long jam on a slippery street, or threading a mile-high road through mountain passes, you ride with more confidence and safety if you ride on the Goodyear All-Weather Tread.

This famous tread has a slipless grip for climbing—and a non-skid power for holding back.

Its high, thick, sharp-edged blocks grip hard, hold fast, and hang on. They wedge tight against every tendency to sideslip or skid.

For years more people have ridden on Goodyear Tires than on any other kind but the improved and more durable rubber now used in the New Goodyear Cord with the beveled All-Weather Tread is giving thousands of extra miles of service to users who have discovered these Goodyear superiorities.

New Crop Book Offers Valuable Information

Results of Years of Study and Experiment to Be Published by Lilly's in Washington Farmer, for Preservation in Book Form—Indispensable as Reference for Farmers and Gardeners

In 1885, the company now known as The Chas. H. Lilly Company was founded in the city of Seattle and during the years of development of the Pacific northwest, it has been closely in touch with the agricultural progress of this region. One of the important departments of its business has been the raising and distribution of seeds, and in connection with this it has maintained extensive testing grounds and carried on a large amount of experimentation in the planting and growing of crops.

A number of years ago, because of the many questions asked of them, particularly by people who came from eastern and middle states, where climatic and cultural conditions were entirely different, the idea occurred to them to issue a publication answering some of these and giving useful information about crops. The first issue of what is known as Lilly's Crop Book resulted from this, but it was only a four-page folder, in which were given answers to some of the most common questions, chiefly about the growing of some of the leading vegetables.

This has grown with each of its ten revisions. New material has been added until it has grown to a volume which is credited by authorities as the most valuable set of instructions available to the Pacific northwest grower of vegetables, grains or flowers.

Now, it is announced all this collection of information, with the results of their most recent experiments has been re-edited by experts, with a view to making it as complete and yet as concise as possible. It contains invaluable information for farmers on the problems of growing vegetables and grains in this region, arranged in such a form as to be convenient and easily consulted.

In order that it may be given wide circulation in this state, and come into the hands of as many farmers as possible, Lilly's have arranged for its publication soon in the Washington Farmer. It will be printed in a regular issue of this paper but in such form that it can be detached and made into a neat, convenient book of 24 pages.

Readers of the Washington Farmer are urged to watch for this issue of Lilly's Crop Book when it appears and to preserve it for reference all through the year.

Must Get Rid of Surplus

(Continued from page nine.)

foreign price so as to prevent importations to counteract the disposal of the American surplus.

Secretary Wallace urges further development of the cooperative movement as a necessary support for any system that may be worked out. He declares absolute government price-fixing would work to the ultimate disadvantage of the producers, since it would lead to increased production with correspondingly increased exportable surplus, thus adding to the farmers' problems.

In part the secretary says in his report:

"The objective to be attained is to secure for wheat and other agricultural products an exchange value approximately equal to what it was before the war. As has been said often, one of the chief causes of the agricultural depression is that farm commodities are relatively far cheaper than before the war. The price of wheat in dollars at terminal markets is not far from prewar prices in dollars, but a bushel of wheat on the farm will buy much less of the things farmers need or desire than before the war. The end sought, therefore, is to put farm products on a price plane comparable with the price plane of other commodities.

"If farmers could control their production as does organized industry, or if they could exact a price for their labor as does organized labor, unusual action by government might not be demanded so urgently. It is just as well to keep in mind that both industry and labor are beneficiaries of government action and that such action during the war and the two years following has added not a little to the farmer's difficulties.

"It is well to remember also that our population is growing rapidly and that before many years there will be a home demand for even more of farm products than we are now producing. If during this period of agricultural distress we permit production to be shrunk to present needs by driving farmers from the land and into the cities, we shall be under the necessity of reclaiming at large expense the productive land which is now being abandoned. And if we should experience one or two years of short crops while this process is going on, the consuming population will find itself compelled to pay prices for farm products which will impose upon it a burden comparable to that under which the farmer has been groaning."

Egg Association Active

D. F. Mitchell, president of the Farmers' Union Cooperative Egg and Poultry association, with headquarters at Spokane, says that the product of over 50,000 hens is now being received by the association for cooperative marketing. He reports that poultrymen are signing up and sending in their contracts voluntarily. One day recently one producer signed up 600 hens and another 500. The association received from its members on one day recently 100 cases of eggs, the largest amount on any day so far. They represented a cash value of over $1200, prices at the time ranging from $12 a case for pullet eggs to about $15 for standards.

The association is marketing the bulk of its product locally, but is shipping some. An effort is being made to establish a market in Wallace and other mining centers of northern Idaho. Some shipments have already been made to that market.

LATE GRAPES UNDESIRABLE.

In the northwestern part of the state it is undesirable, as a rule, to plant the later varieties of grape, as the fruit does not mature every season, unless a gravelly location and other purely local conditions favor early maturity.

The Red Lock—*The New Serial*

(Continued from page six.)

casement she waited for him to speak.

The man glanced out over the orchard; up the side of the cliffs; along the timber line that bearded them; came back to the eyes. The inquisitiveness had lessened; the roguishness deepened.

"You let 'im—lift y'u——!" he muttered.

With an odd, hard little laugh she darted in at the kitchen door.

CHAPTER V
Three Candles

THE last flare of sunset had followed the Wabash out under the rim of the west by the time Jack Warhope had finished his chores. Barely a memory of the day that had gone played up above the forest line far down the river, and the serene night was already beginning to polish up its stars, when he came back along the orchard path to the red-roofed cottage.

From the porch at the front of the house, as he paused at the side gate of the east yard, came the drone of the banker's voice, broken occasionally by the preacher's precise, jerky sentences.

Warhope listened a moment. The money lender was talking about a quarter-section that he had foreclosed on the day before. The woodsman had heard many an hour of that talk. With a shrug of his shoulders, he pushed the gate open and walked around to the kitchen door.

With a step that the woods had made light as a falling leaf he slipped in and stood motionless. The portly, pudgy form of Mrs. Curry, the housekeeper, was bent over the cook stove, busy with the supper—a meal to which she was doubtless giving the highest touches of her art, since the new minister was to be a guest. Mrs. Curry had a reputation to maintain.

The flit of a shadow and the clink of dishes in the adjoining dining room told the grinning intruder that Texie was "settin'" the table. For such an occasion there would be a white cloth, the best silver would be out, and there would be three candles instead of one.

The clink of the dishes ceased and the girl appeared in the doorway between the two rooms, a big apron hiding the bit of ribbon at her belt, her cheeks the redder from the heat of the kitchen. Seeing Jack, she paused, tried to look severe but failed.

"Now look at that!"

Mrs. Curry straightened, and exclaimed: "Big Jack! Mercy, how you can slip up on a body."

"Put 'im t' work, Mis' Curry. We don't 'low no loafers, do we?"

The housekeeper in reply was interrupted by a misbehaving skillet and she turned back to the stove.

The girl was carrying a large water pitcher. She handed it to the man and nodded toward the outdoors. He well understood that nod. It was not the first time that he had been so "invited" to bring the water from the spring.

As he turned to go he glanced back over his shoulder at her; motioned guardedly with his finger; jerked his thumb toward the spring and stepped outside.

The girl glanced toward Mrs. Curry, raised a finger in feigned caution and tiptoed after him. Once out in the yard, she unexpectedly flashed past him and darted toward the spring. He caught her at the roots of the big maple, and coaxed her for a delicious moment down on the rustic seat.

Supper was on the table, and Mrs. Curry had called the two men in off the porch, when that pitcher came back from the spring.

The woodsman set it down by the housekeeper's plate and took his place with the others. The banker dropped his hands in his lap, nodded toward the preacher and bowed his head.

The traditions of the Flatwoods called for a long and sonorous grace—a sort of sermonette—when the preacher was a guest, but the new minister seemed never to have heard of any such tradition. The grace he said was so short, so direct and concise, yet so beautiful in thought and diction that the banker looked at him in pleased surprise when it was over.

But for all the expectation aroused by the beautifully worded grace, it soon became apparent that, unlike most of his brethren of the cloth, the new minister was not a talkative man. Once or twice he spoke of his many travels in a way that caught the wide-eyed attention of the girl across the table from him, but for the most part he sat in dignified silence and listened respectfully to the banker.

For the matter of that, it was about all he could do—listen. The old man had one subject that he talked on—his business. He monopolized the hour with it; filled the preacher full of it; crowded out all other conversation, and mortified his daughter.

Supper over, there fell a moment of silence—the delicious breath of repose that almost always follows the evening meal in quiet country homes. The old money-lender sat marking on the table cloth with his fork, as if mapping out the boundary lines of other quarter-sections that he hoped to have the chance to foreclose on soon.

The girl seized the favorable moment—the first that had come—and leaning forward, said: "Now, Mr. Hopkins, tell us about—my brother—Ken. I've be'n wishin' all evening t' ask y'u."

Her father stopped marking on the table cloth and sat very still; the housekeeper crossed her knife and fork on her plate, as the Christians of Spain used to do in the days of the Moorish domination; the woodsman let his thoughts revel in the faultless profile of the girl's face. The preacher caught the wistful look in her eyes—the subdued eagerness of one who could not resist the desire to ask, yet dreaded the answer. He fumbled his napkin.

"Really, Miss—Colin, there is very little to tell. Your—brother was the—ah—most puzzling psychological problem that I ever tried to solve. He could have been one of the most brilliant scholars the institution ever turned out. He literally drank up everything the college had to give, and that without apparent effort—as the desert drinks the dew. His penmanship; his drawing; his command of English—very remarkable. I was his roommate and classmate, and yet I never saw him apply himself seriously to study. I don't think he did. And that was probably his limitation—learning came too easy to him. It can, you know."

He stopped, as if he had no more to say; stared at his napkin and folded it with careful precision.

"The president's letter said that—that——?"

The girl seemed unable to finish the question, but the preacher guessed what she wanted to know. He again fumbled his napkin, unfolded it, and looked around the table. It was an embarrassing moment.

"With all due respect to you, his family"—he glanced at Mrs. Curry and the woodsman—"and friends, though I would rather not speak of it at all, and should not do so, only that it is my duty as your minister to tell you the truth—Kenwood Colin was a very severe trial to the college authorities. His talent for learning was equaled only by his talent for mischief. Yet, wild as he was known to be, nobody thought that he would ever have forgot his father's name. He was deeply in debt before his very clever forgeries were even suspected, much less detected.

"Then came his sensational killing of a gambler over a card game, and his subsequent escape somewhere into the great underworld of the city. Since that, nothing more seems to have been heard of him."

There was a moment's silence. The girl leaned forward; her lips apart; her eyes wide.

"Pore Ken!" she said softly. "He couldn't he'p bein' what 'e was. It was the—red lock."

The preacher raised his spectacled eyes up from his plate and stared at the girl curiously.

"Red lock——?"

"Didn't you know 'e had it?"

The preacher looked his bewilderment.

"Then please, please, don't mention that you know it! Please, dont' ever! I 'lowed you knowed, bein' his room mate, or I wouldn't 'a' told. He was that 'shamed 'e had it, and alw'ys kep' it combed under so's it didn't show. Nobody in the Flatwoods but us and—Jack, and an ol' hunter we call Uncle Nick, knowed 'e had it."

The banker had been staring at the table cloth. He lifted his face.

"The 'curse of Colin,'" he commented thoughtfully. "He was a sea pirate in the days of Queen Elizabeth. 'Red Colin,' they called 'im. Looks like his blood would 'a' run out b' this time, but it hain't. Every three 'r four generations it shows up, gener'ly one child in a family with a lock o' hair as red as fire. Nobody would think a lock o' hair and a drop o' blood could set a child back hundreds o' generations t' what ol' 'Red Colin' must 'a' be'n, but it does.

"The minute I saw that red lock on Ken, I knowed 'e was doomed. I've licked 'im and reasoned with 'im and prayed over 'im—but I knowed all the time it wouldn't do no good. That's the main reason I sent 'im off t' the kind of a college I did—where ther' ain't nobody much but preachers a-runnin' it. He didn't like t' go t' that kind, but I hoped bein' throwed amongst men like that might head off what I knowed was in 'im."

The preacher leaned back in his chair; dropped his hands in his lap.

"Permit me to say," he observed in his jerky fashion, "that was as grave a mistake as you could possibly have made."

"Mebbe so," the old man answered. "But the devil 'imself couldn't 'a' coped with that boy."

The preacher seemed on the point of making some forceful reply or other; apparently reconsidered it; sat silent.

The old man beat the tines of his fork on the table; gazed absently at a candle, reached over and snuffed it.

"Ain't it strange," he went on, "how the past fangs the present—the past with its sins and blunders and imperfections? Now there's Texie, cradled in the same arms and nursed at the same breast, and she's as different f'om Ken as sunshine is different f'om the wo'st storm that ever wrecked the woods."

He picked up the fork, scraped into a heap some crumbs that lay about his plate; scattered them again.

The money-lender lay sprawled on the floor, in one hand an open letter, in the other an empty envelope.

The preacher put his napkin by. "Heredity plays many a queer trick," he said in a tone of finality.

In the silence that followed the old banker took the bunch of still unopened letters from his pocket, laid it on the table and began to sort them. The preacher looked around the room and, noticing the night at the windows, rose.

"If you will please excuse me, you remember I promised to run over to the parsonage for a few minutes, and Mrs. Mason probably retires early."

The others rose and gathered about him in polite protest, but the preacher insisted. Mrs. Curry picked up a candle and led the way into the sitting room, while Texie brought his tall hat from a rack in the corner. He took out his handkerchief, flicked away a speck of dust from the shiny crown of it, and stood gazing about, peering through the open door to the right into the room where the banker kept his safe and papers; into the bedroom at the left where the old man slept; past the fireplace and through the open door to the parlor, as if impressed—possibly amused—by the novelty of a Flatwoods home.

His eyes, searching the walls, came at last to the portrait of a woman, framed in gilt and hung above the fireplace.

The girl followed his gaze.

"My mother," she said softly. "Seven years ago she left us; the very year—Ken went off t' college."

"She had a serene face," the preacher putting his handkerchief back in his pocket as he turned away. The banker crossed the floor, picked up a key from the mantel and unlocked the door leading from the porch to the parlor.

"I 'lowed I'd better show y'u where y'ur room is b'fore y'u go, so's y'u'll know how t' git in if we're in bed when y'u come back. We Flatwoods folks turn in purty early."

He took the candle that Mrs. Curry was carrying and led the preacher in across the parlor to the spare bedroom opening from it on the east, where the two satchels and umbrella had already been carried.

"I 'low this might be called a preacher's room, purt nigh. Ain't nothin' but preachers slep' in it hardly sence it was built."

The old man chuckled as he led the way back to the porch, closed the parlor door, locked it and handed the key to the preacher.

Before leaving to keep his appointment the young minister turned to the housekeeper and peering into her genial face as if he had to strain his study-tired eyes to see at all said:

"This has been a most enjoyable evening. If all Flatwoods women are such wonderful cooks, I don't imagine many of them die single."

A blarey laugh exploded somewhere in the top of his throat and brought a gleam of white teeth through the heavily bearded lips.

He stopped a moment on the step and fumbled the tall hat.

"Miss—Colin, won't you please accompany me as far as your—ah—Whispering Spring and show me how to get a drink?"

The darkness hid the flush of color that played up into the girl's face. She glanced at the woodsman; turned to the preacher and followed him down the steps.

The big woodsman stood looking after them, stirred by an unfamiliar emotion to see Texie walk away into the dark with another man. Mrs. Curry and the banker went back into the house.

At the spring the preacher suddenly grasped the girl's hand in both his own, and held it with the same fervid eagerness he had shown that evening in front of the postoffice. She suffered her hand to remain slightly longer than before, then gently withdrew it.

"Miss—Texie—you will grant me the privilege of calling you by your first name, will you not?"

She did not answer.

"Your—brother, my—room mate, was very enthusiastic about his pretty sister. But even he did not do you justice. You are——"

He stopped abruptly, stared past her into the night, as if groping for words to clothe a thought unusual with him. The look of a tired student came slowly back to his face, and his shoulders drooped as if weary with bearing the burdens of others. Mumbling a further word or two he turned from her, crossed the foot-log with mincing step, and passed on through the orchard toward the parsonage.

The girl listened until there came the creak of a board as he climbed the fence, then walked back up the path and sat down on the porch step.

Words were never too plenty with the woodsman, even in his most fluent moments. He leaned against a post and looked down at her. She seemed busy with her thoughts. The silence was so deep that the clink of the dishes, as Mrs. Curry put them away, and the crinkle of the old banker's letters, as he sat reading them at the head of the dining room table, carried to them out on the porch. The lap of Eagle Run, pitching under the bridge at the River road, came up out of the park-like orchard and across the yard; the hoot of a distant owl boomed down out of the woods.

The man roused himself from the spell of the silence; stepped off the porch and sat down by the girl's side.

"What d' y'u think of him?" she asked.

It was characteristic of the woodsman that he should answer by another question. He ran his big hand up along the porch post and stared out into the dark.

"What d' you?"

The girl laughed—a contented little laugh like the lilt of the happy water at the bridge.

"Oh, I think he's——"

There came a groan from the dining room, and the sound of a heavy fall. They sprang up and dashed into the house, just as Mrs. Curry ran in from the kitchen. The money-lender lay sprawled on the floor, in one hand an open letter, in the other an empty envelope.

The girl darted across the room and bent above the shrunken figure.

"Jack——! Jack——!"

"Texie, no, don't be flustered. It's jist another one o' them faintin' spells. He'll be all right in a minute."

There was calm reassurance in the level gray eyes, in the big hand he dropped upon the girl's bowed head. He raised the old man in his great arms and laid him on a sofa at the side of the room.

Mrs. Curry had hurried back to the kitchen for cold water and cloths, and Texie was urging Jack to run for the doctor, when the old banker opened his eyes; stared around him in blank surprise; tried to rise; seemed astonished that he couldn't.

"Doctor!"—he panted hard for breath. "Who wants a doctor. It's jist another one o' them fainty spells. Look there——!"

He held up the letter. The girl glanced at it carelessly; then with a quick exclamation turned it toward the woodsman. And thus holding it between them they read it slowly, word by word.

"Somewhere in New York, May 2.

"Simon Colin, Buckeye, Ind.

"Sir: I caught a fellow with a card up his sleeve and called him. He beat me on the draw, and here I am. This girl here says I can't last till the ink's dry, and I'm not doubtin' her. She's always played

Experience Letters

Dear Mrs. Barland: Will you please print in THE FARMER how to take the stain of raw linseed oil out of linen?

Your different remedies and recipes have helped us many times. A. W. C.

Dear A. W. C.: Linseed oil after it dries in is hard to remove, but perhaps some of the bright women who read this page will tell us how to do it.

Dear Mrs. Barland: Our family have been subscribers to THE FARMER for a good many years and have had many helpful suggestions from your page, so am asking for more information.

We are to shut up our house for the winter and possibly until next May and would like to know what to apply to our stoves so they will not rust. The climate here west of the Cascade mountains is very damp and everything made of iron rusts badly. MRS. P. M. R.

Dear Mrs. P. M. R.: Make a mixture of two-thirds boiled linseed oil and one-third coal oil and apply it carefully to all parts of your stoves and I think you will avoid the damage by rust. Leave your oven doors open. Go over a second time, if it seems necessary, with the mixture. A. W. B.

Dear Mrs. Barland: I have been a reader of THE FARMER for years, but have never had the courage to write. Since you have asked us to tell of our camping trips, I will tell you of mine.

How many of you have ever been to Hood's canal, which is located about 50 miles southeast of Olympia, Wash.? We went there several times the last summer and we certainly had a lovely time digging little rock clams and also butter clams, which we like better than the razor clams, which are found down on the ocean beaches.

My husband, who is a logger, has to work all week days, but when he would get home on Saturday nights I would have lunch enough put up to last all day Sunday and we would take the children and get into the car and go for our outing to the canal. Leaving home about 7 in the evening, we would arrive at the camping grounds about 10 o'clock and it is surely a beautiful ride.

We live in a small town which has two stores, a postoffice and our church. My husband works for the logging company, who employ 1200 men; the mill runs with two shifts, day and night.

Washington. MRS. J. C. M.

Dear Mrs. Barland: This is an answer to a question by "A Happy Sister" as to what goats are good for.

Milk goats are the poor man's friend and take the place of the cow. The milk is excellent for invalids and has saved the lives of many babies.

Goat's milk is very much richer than the milk of a cow and has a delicate flavor. In butterfat it is much richer than the cow's milk and makes good butter and fine whipped cream for cakes. It makes the finest of Swiss cheese, though the cream doesn't rise as fast as on cow's milk. Swiss cheese sells at $1 a pound and the goat's milk sells here (Eugene, Ore.) at 50 cents a quart. There is not near enough to supply the needs of the sick. It is so easily digested that the most delicate babe can digest it.

The goat will eat all kinds of weeds and kill them out and they will eat small brush and so are useful in clearing land. The male kids make excellent meat.

The goat carries her young five months, less two weeks, and is bred the same as a cow. She brings from one to three kids at each kidding.

I have one doe that brought me four kids in 11 months. She gave very nearly six quarts of milk a day. The Samman and some others breed only in the fall, but I prefer the Nubian, as they can be bred at any time of year. They also give far the richest milk of any breed known and have a furry coat instead of coarse, scraggy hair. The milk goats don't require so much of a fence as do the mohair breed. A good goat sells for from $50 to $150. MRS. IDA WALKER.

Eugene, Ore., 1989 Franklin boulevard.

Family Circle Girls

Dear Mrs. Barland: In seeking for new subjects to discuss on our page I recall that we have discussed about everything from the value of an education to "puppy love." It has made quite a mixture and has left a somewhat hazy idea of things in my mind.

In an honest effort to suggest some new subjects I think of the inexhaustible subject of better Christmas presents for fewer friends. Then what do you think of a discussion on ways to help others, to the end that all love-sick youngsters may forget their troubles in dealing out happiness to others, and thereby become just happy boys and girls again. Let us discuss the question, "What Can I Do for Others?" It is a question absolutely endless and we certainly can be helped by the answers given to the question.

Do you particularly enjoy writing letters? Do you write interesting letters? There are a great many sick boys and girls in various hospitals who would like very much to get a long, interesting letter to read and think about. Many have no relatives to write to them.

I have written many letters to these children and I hope they enjoyed reading them as much as I did writing them, for it is lots of fun.

Are you a wall flower? Many of us are and there seems to be no remedy for it. Suppose you try to help the wall flowers to have a better time at parties. Spend a few minutes talking to them. Make a little effort to cultivate their acquaintance and perhaps you will find them quite interesting. Ten chances to one they are just needing a little friendly attention to bring them out into the merry circle. Try it, boys and girls; you will at least be sure of making friends of them.

Let us not spend so much time thinking what can be done for us, but give more thought as to what we can do for others. I am sure we can make this old world a better place in which to live.

Idaho. Z. B.

Dear Mrs. Barland: In a recent number of THE FARMER I read an article about girls and boys going to high school. I am longing to go, but my father doesn't believe in an education; he says about the time I finish my schooling I'll get married.

What would you do in a case of this kind? Thanking you for advice, I am one who is longing for an education.

My Dear Girl: I always dislike to go against the opinions of parents, but in this case I must say that I think any parent who discourages a girl from going on with her education, for the reason that she may possibly marry soon after leaving high school, has a wrong idea altogether as to the value of an education.

The happiest marriages I have ever happened to know about have been between young people who became acquainted either in high school or in college. Suppose a girl does marry soon after she leaves school, that is all the more reason why she should have had that training.

The old idea that a wife and mother has no need for an education is entirely out of date among the best and deepest thinkers.

The more knowledge of a useful kind a woman has the better she should manage her home and the better mother she is able to become.

I would try to have a teacher take up the matter with your father and it may be he may be brought to see that you will be better able to manage your life if he sends you to high school. Your friend,

A. W. BARLAND.

A good old Friend

Remember the good old-fashioned mustard plaster Grandma used to pin around your neck when you had a cold or a sore throat?

It did the work, but my how it burned and blistered!

Musterole breaks up colds in a hurry, but it does its work more gently—without the blister. Rubbed over the throat or chest, it penetrates the skin with a tingling warmth that brings relief at once.

Made from pure oil of mustard, it is a clean, white ointment good for all the little household ills.

Keep the little white jar of Musterole on your bathroom shelf and bring it out at the first sign of tonsillitis, croup, neuritis, rheumatism or a cold.

To Mothers: **Musterole is now made in milder form for babies and small children. Ask for Children's Musterole.**

35c and 65c jars and tubes; hospital size, $3.

High Points in News of the Week

Elsewhere in this paper is a digest of the first message of President Coolidge to congress. Congress met early last week, but for three days failed to organize because of differences between the regular republicans and the so-called progressive republicans over matters of rules and regulations in the house of representatives. Reorganization of the senate has not yet taken place, that body beginning the session with Senator Cummins of Iowa, president pro tempore, in the chair formerly occupied by Mr. Coolidge as vice president. In the house 17 so-called republican progressives refused to vote for Congressman Gillett of Massachusetts for speaker until agreement had been reached between members of the regulars and the progressives over matters of rules governing the operations of the house. This agreement being entered into, Congressman Gillett was elected by a vote of 215 to 197 for Congressman Garrett, the democratic candidate. Following organization of the house both houses met in joint session to hear the president's message. A large number of bills were then introduced and both houses adjourned until Monday of this week out of respect to the late President Harding and members of congress who have died since adjournment of the previous session.

Among the measures of importance that have been introduced are the following: Continued restriction of immigration; amendment to the transportation act so as to restore the powers of state railroad commissions and to repeal the rate and consolidation sections; prohibiting the appointment of members of congress to federal positions within two years following their retirement from office; deportation of aliens who violate the prohibition laws; a preliminary draught of the treasury department's tax-reduction bill as approved by Secretary Mellon and President Coolidge.

* * *

Announcement of the candidacy of President Coolidge for the republican nomination for president in 1924 was made Sunday night by Frank W. Stearns of Boston, who is known as his closest personal and political friend.

William M. Butler, republican national committeeman for Massachusetts, also a close personal and political friend of Mr. Coolidge, it was stated, will act as the president's personal representative in the campaign.

* * *

Second only to the opening of congress and the delivery of President Coolidge's first message, political interest centers in the election in England last week. Premier Stanley Baldwin was reelected to his seat in parliament, as were also former Premiers Lloyd George and Asquith. Nevertheless, neither the protectionist program of Mr. Baldwin nor the liberal programs of Lloyd George and Asquith were indorsed. The conservatives, headed by Mr. Baldwin, will have 259 members in parliament, the labor party 185, the liberals 148 and other parties 10. This results in a situation in which no party has control. Whether or not Premier Baldwin will resign in view of the fact that his protection platform has been defeated, together with six members of his cabinet who failed of reelection, is problematic, though his early resignation is considered probable. In such event, it is believed that the king would ask J. Ramsay MacDonald, labor leader, to form a cabinet, the labor party being second in strength. The possibility exists that the leaders of the several parties will join together and agree upon the formation of a coalition cabinet.

* * *

Secretary Work of the department of the interior stated last week that a new policy of administration of reclamation projects must be adopted, if abandonment of many projects is to be prevented. He gives figures covering 28 projects to show wherein estimates of the reclamation service on cost of development have been far below the actual cost. The cost of the 28 projects was originally estimated at $93,435,000, but up to June 30 of this year nearly $142,000,000 had been expended upon them. The original estimate of acreage to be irrigated was over 3,000,000, while the amount actually irrigated in 1922 was only 1,200,000 acres. The total amount unpaid by water-users on construction, maintenance, operation and water rentals on June 30 was over $132,000,000. The original estimate of cost per acre for all the area of the 28 projects was $30.57; the actual cost per acre on land actually irrigated up to June 30 was $117.94.

* * *

The tariff commission has reported findings from investigations showing that while the people have been paying from $8 to $11 per hundred pounds for sugar the total cost of it laid down in New York or other Atlantic coast cities has been a little more than $5, meaning that the sugar trade has been making enormous profits.

* * *

Senator Gooding of Idaho has introduced a bill in congress to create a $300,000,000 government corporation to handle wheat, a minimum price of $1.50 a bushel for No. 1 northern spring wheat being provided.

* * *

Five Mexican states are reported to be in rebellion against the central government under President Obregon.

* * *

Secretary of War Weeks is asking congress to enact a special measure permitting General Pershing to remain in active army service owing to his wide experience in military affairs. General Pershing will, under existing law, automatically be retired when, in 1924, he reaches the age of 64 years.

What It Costs To Make the Wheels Go Round

Electric light and power companies, being engaged in the business of generating and selling electric energy, are constantly making every effort to locate new industries in Washington, to use their output.

The cost of power is, however, not the determining factor in securing these new industries. The U. S. Census Bureau made a survey of over 275,000 industries which shows that the cost of power is on the average only 2.8% of the cost to produce the manufactured article. This is only 28 cents on an article costing the manufacturer $10.00.

However, there must always be sufficient power to take care of new industries. This is provided by the companies in maintaining at all times a reasonable surplus. Over-development in advance of the needs of the district would result in higher rates to the present consumers to take care of the idle investment.

We are cooperating with every community in the state to obtain new industries.

Bits of Fun for Everyone

A Vivacious Engine.

An engineer was giving evidence in a case in which a farmer was suing a railway company for damages resulting from the death of a cow which had been run into by a train.

The farmer's lawyer was heckling the engineer, and kept reverting to his pet question, which was:

"Now, tell me, was the cow on the track?"

At last the engineer became angry, and answered the question:

"Well, if you want me to tell the real truth, the cow was bathing in the stream the other side of the track. But the engine saw her, leaped off the rails, dashed over the bank, and landing right on top of the cow, strangled her to death without a word."—Milwaukee Journal.

No Luxuries.

There's a fruit grower up near Rialto, who put his two children in the summer school at San Bernardino. Just a few days after their names had been listed a book agent called on him and said:

"Now that your children are going to school, you ought to buy them an encyclopedia."

"Encyclopedia? Be darned if I do! Let 'em walk like I did," was his retort.—L. A. Times.

Good Diplomacy.

A guest of a small southern hotel was awakened early one morning by a knock on his door.

"What is it?" he called drowsily without getting up.

"A telegram, Boss," responded a negro's voice.

"Well, can't you shove it under the door without waking me up so early?" the man asked irritably.

"No, Suh," the darky answered, with his mind on a tip, "it's on a tray."—Selected.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

Own a "SELECTED" Farm To Fit Your Needs Along the Lines of

More Money per Acre

Share In Prosperity

Canada produces one-fifth of the world's wheat supply. The 1923 crop breaks all previous records. In 12 years Canada has won 11 World Wheat Championships and many awards in Live Stock exhibits.

The Canadian farmer's income need not depend on crops or one kind of farming alone. Canada is the center of an ever increasing activity in mixed farming that is making it one of the world's greatest agricultural empires.

$20 Per Acre, Average Price, Easy Payments, Low Taxes, Increasing Values

You can buy rich land along the Canadian National Railways for an average of $20.00 an acre. Easy terms—low first payment—usually 10% or less—the balance over a long term of years with low interest rates and small land tax. No tax on buildings, improvements, animals, machinery or personal property. Railway rates are reduced for land seekers and their effects along the line of the Canadian National Railways. Personally conducted excursions arranged.

GET FREE BOOK TODAY

This FREE illustrated book tells what others have gained by going to Canada. It tells of success won in Canada — how natural opportunity combined with good average prices put them ahead. It gives you actual facts and figures of crop yields and many stories of progress year by year. It may show YOU THE SAME ROAD THAT BROUGHT THEM PROSPERITY. Read what those who have settled here have to say about Canada's farming opportunities, its educational and recreational advantages. You may find letters from friends or former neighbors. They tell in plain, simple words how little they had to start with, what happened when they got there and how they prospered. Get the booklet now. You may want to start at once. Just say "Send Free Book" and it will be sent without cost or obligation of any kind.

More Men Wanted NOW

To Earn $150 to $300 per Month

Learn Auto Tractor Engineering

We want 100 men who are willing to accept positions at above wage. No experience necessary, as we train you in very short time, as Engineers, Auto Mechanics, Electrical Experts, Truck Drivers, Chauffeurs, Salesmen, Battery, Tire Vulcanizers and Welders. Many good jobs now open. Before joining any other school it will pay you to see Hemphill's, the million dollar trade school system. We give free transfer and life scholarships to our 16 schools in U. S. A. and Canada. The largest and most practical system in the world. Write at once for free poster and list of jobs from Free Employment Dept.

Hemphill Auto Electrical & Tractor Schools

304 E. Pike St., Seattle; 1115 Granville St., Vancouver, B. C.; 228 9th Ave. E., Calgary, Alta; 580 Main St., Winnipeg, Man., Canada; 107 Nicollet Ave., Minneapolis, Minn. Write nearest branch to you. We pay railway fare to nearest branch.

LOOK AT THE GOOD FARM BARGAINS THAT ARE OFFERED ON THE FARMERS' "WANT AD" PAGE THIS WEEK.

Aunt Nellie received the following from Margie McNielly of Ferry county, Wash., a new cousin: "Dear Aunt Nellie: I am a new cousin. I stay with my cousin and go to school. I am in the eighth grade. I am a member of the Iyega Camp Fire and will soon be a wood gatherer, the first rank."

An interesting letter was written to Aunt Nellie by Delia Anderson. This cousin lives in Snohomish county, Wash. Delia was 12 years old on September 8 and received some nice presents. We will be pleased to receive the story at any time, Delia. Delia is in the seventh grade at school. Miss Castrine is her teacher's name.

Aunt Nellie and the cousins were sorry to learn that Helen Staadt's home was burned. We are sure it must be very unpleasant. Aunt Nellie and the cousins hope that by now everything is settled again and are glad to hear that no one was hurt in the fire. Cowlitz county, Wash., is where Helen lives. She goes to school in a bus and has never missed a day at school all last year or this.

Birthday Greetings

THURSDAY, December 13—Anna Ajax, 11 years old; Miriam Harper, 9; Gerrit J. Polinder, 10; Vernon Winterstein, 11.

FRIDAY, December 14—Marjory Iva Cress, 11 years old.

SATURDAY, December 15—Esther Thierman, 11 years old.

SUNDAY, December 16—Anna Blecher, 8 years old.

MONDAY, December 17—Elsie Anderson, 11 years old.

TUESDAY, December 18—Edwin Ensley, 10 years old; Robert Franz, 9; Virginia Teague, 9.

WEDNESDAY, December 19—Reta Houghton, 9 years old; Eino Pasma, 10; Wilber Van Leuven, 10.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Annie Anderson, Gladys Huffman, Helen Jacobson, Annie Pollari, Bernice Bahrs, Frances Flanik, Viletha Lorang, Freeda Dittmar, Hazel Jackson, Rebecca Morris, Virginia King, Ethel Lambert, Esther Kiehn, Mabel Wigley, Agnes Raft, Dorothy Graham, Emily Haataia, Nellie Powell, Ida Long, Aldena Dippell.

Mary Enroth, Maude Warfield, Beatrice Warfield, Ruth Top, Bessie and Helen Cyran, Elizabeth Anderson, Elsie Cooper, Lois Engleson, Gertrude Hough, Grace Menke, Lorene Taylor, Alma Diefe, Pearl Fletcher, Nellie A. Roberts, Helen Tomlinson, Lydia Gradwohl, Catherine Buck, Gladys Cook, Eva Thaden, Erna Heinrich, Beulah Orcutt, Howard Tomlinson, Alice Hilliard, Mildred Hendricks, Margaret Hendricks, Thelma Cruse, Delia Anderson, Edna Gronroos, Irene Barnes, Margie McNeilly, Fern E. Hodges, Helen Schaffer, Dorothy Baldwin, Esther Weston, Juanita Arrington, Eva Cade, Stella Cade, Nadine L. Hutchens, Faye Palmer, Doris McCaskey, Marie Fuchs, Caroline Wesch, Pauline Linbrink, Reuben Heimbigner, Helen Schaefer.

BEDTIME STORIES

By THORNTON W. BURGESS.

JUMPER AGREES TO DO HIS BEST.

When Peter Rabbit and his cousin, Jumper the hare, reached the tall pine on the edge of the green forest just after jolly, round, red Mr. Sun had gone to bed behind the purple hills they found a lot of little people waiting there and more coming from every direction. Prickly Porky the porcupine, Unc' Billy Possum, Danny Meadow Mouse, Whitefoot the wood mouse, Billy Mink, Little Joe Otter, old Mr. Toad, Jerry Muskrat, Reddy Fox, Old Man Coyote, Hooty the owl, Flitter the bat, Boomer the nighthawk, Bobby Coon, Mocker the mockingbird, Stickytoes the tree toad and Buster Bear were all on hand.

"I'm not afraid of being beaten!" declared Jumper indignantly.

Not all were in plain sight. Oh, my no! Such little people as Danny Meadow Mouse and his cousin, Whitefoot, were in secure hiding places where they could see all that went on, but were themselves unseen. You see they were taking no chances with Old Man Coyote and Reddy Fox and Hooty the owl about, although Buster Bear said in his deep rumbly-grumbly voice that he would permit no one to be harmed as this was a friendly meeting. Then he growled in the direction of Old Man Coyote and he growled in the direction of Reddy Fox, and both suddenly decided that back seats would suit them best.

Jumper the hare, who is very timid and bashful, was quite upset when he found so many there to look on. He hadn't known anything about the invitations to the jumping match which Jimmy Skunk had sent out, and he was for running away at once. But Peter Rabbit pointed out to him how this would make him the laughing stock of all his neighbors. They would say that he was afraid of being beaten.

"I'm not afraid of being beaten!" declared Jumper indignantly. "If one does the best one can there is no disgrace in being beaten, not the least bit. I've never claimed to be the best jumper in the green forest."

"Very true!" exclaimed a voice. It was the voice of Jimmy Skunk, who suddenly appeared from nowhere in particular. Then Jimmy made a little speech and explained why he had arranged this jumping match. He was careful to make it clear that Jumper never had boasted. Then he made Peter Rabbit feel very foolish by telling how Peter had boasted that his cousin was the best jumper in the green forest and wouldn't believe him when he, Jimmy, had told him that he knew of at least two who were better jumpers than Jumper the hare.

"That," explained Jimmy, "is why I called this meeting, and also because I think it likely that there are others who don't know who the best jumpers are. But, of course, if you are not willing to jump, Mr. Hare, we won't urge you. But we would, we truly would, very much like to see you jump your very best, because while there may be others who can jump farther than you can, there is none who can jump prettier. Will you jump as a special favor to us?" Jimmy bowed very politely to Jumper the hare.

"Certainly, Mr. Skunk, since you put it in that way," replied Jumper the hare, bowing in return. "If it will please my neighbors to see me jump, why, of course I'll jump, and I'll jump my very best. And I won't feel a bit bad at being beaten, for I know, Jimmy Skunk, who you have asked to jump against me, and they are both friends of mine. So bring them along and we three will show the rest of you what real jumping is like."

CHEAPLY-MADE COAT HANGERS.

For the mother who does not wish to go to expense of many coat hangers for her little one's nicest clothes, here is an item.

Cut the round stick that comes in rolls of oilcloth, into pieces 10 and 12 inches long. Mitre ends of upper side, and either paint or paste white paper or muslin around them daintily. Fasten one-inch cup hooks in middle or upper side. These hooks will cost you 10 cents at hardware store, thus making the hangers cost about 2 cents each and will be a joy and help in keeping ironed garments in perfect shape. If you have several girls, make the colors different on each belonging. This encourages daintiness. MRS. J. C. D.

WHOLESOME ENTERTAINING READING
For Winter Evenings

The period of long evenings is with us again. The result in most homes is that there is a greater desire and demand for good, wholesome reading. Your state farm magazine supplies this need with entertaining fiction, an exchange of ideas and opinions, a thorough report of live happenings throughout the state, special articles on scores of important subjects, a special corner for the kiddies, and a variety of departments filled with helpful, interesting matter.

You want THE FARMER. It entertains, it informs, it instructs; and it is gratifying to know that as a result of its cooperative plan its cost is exceedingly low.

If you believe in cooperation we are confident that we can count upon your assistance during the season ahead in making our plan a success in your neighborhood as it has been in all parts of the state. What we ask is that you send in your own subscription order at least sixty days in advance of the expiration date on the label, that you include your neighbor's order with your own, and wherere your own subscription is attended to, to find at least one new subscriber for our lists.

By doing this a great deal of needless expense is eliminated and the subscribers get the benefit of every penny which is saved. Please give cooperation a little boost in your neighborhood.

Dec. 13, 1923.
THE WASHINGTON FARMER, ... 1923.
Review Building, Spokane, Wash.
I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.
I enclose herewith $..... for a .....year subscription to
THE WASHINGTON FARMER.
(Rate: $1 for five years; 50c for three years; 25c for one year. In Canada 1c a copy extra.)
Name .....
Postoffice .....
R. F. D. ..... Box ..... State .....
If your subscription is already paid in advance, it will be extended from the date to which it is paid.

"I'm not afraid of being beaten!" declared Jumper indignantly.

High Testing Herds

Washington dropped to second place among the 10 western states for the average of its association-tested cows during September and Oregon and Idaho ranked fifth and sixth, respectively, but a Washington herd had the best average of any of 49 large herds reporting, and an Oregon herd the best among small herds. These leaders were the Holstein herds of J. A. Folsom, Mt. Vernon, Wash., which averaged 50.1 pounds in the Skagit county association, and of J. O. Conville, Westport, Ore., which averaged 56.1 pounds in the Columbia county association.

The highest large herd in Oregon was that of Durrer & Son of Tillamook, while the highest small herd in Washington was that of A. E. Moore of Fall City.

A small herd from Idaho, that of H. G. Gommer of Jerome, ranked second to Conville's for the entire territory, and Idaho's highest large herd was that of L. P. Linch of Weiser. A purebred Holstein from Hollywood farm was the highest individual cow in the northwest for September, and third highest for the territory. One owned by L. J. Tencknick of Twin Falls was highest in Idaho and fourth for the territory, and a grade Jersey owned by E. C. Gienger of Tillamook led in Oregon.

Pork Product Exports

The total exports of pork products for the nine months ended September 30, 1923, were 1,480,000,000 pounds, compared with 1,080,000,000 for the same period last year. This is an increase of 400,000,000 pounds, or about 37 per cent. This production of pork products in establishments under federal inspection for the first nine months of this year was approximately 6,700,000,000 pounds, compared to 5,310,000,000 pounds in the same period last year, or an increase in production of 1,390,000,000 pounds. Cold storage holdings at the end of September of this year were 678,000,000 pounds, compared with 739,000,000 pounds on the same date last year. From these facts it appears that domestic consumption of inspected pork, including lard, has increased during the nine months by more than 1,000,000,000 pounds, or nearly 25 per cent. This increase appears to be due to the general employment and remunerative wages.

More Range Cows Marketed

Range cattlemen have shown a noticeable tendency this fall to market a larger proportion of cows and heifers than usual, a survey recently made by the United States department of agriculture reveals. The increase in the proportion of female stock marketed up to October 1 ranged from 5 to 10 per cent, as compared with the corresponding period a year ago, the department says. A survey covering 26,737 cattle marketed from 12 range states during the last two weeks of September showed 56 per cent were cows and heifers, compared with shipments of 22,588 cattle from the same states during the corresponding period of 1922, of which 46 per cent were female stock.

A department report covering several hundred thousand cattle slaughtered at a great many establishments throughout the United States shows that in August, 1923, 48.29 per cent of the cattle slaughtered were females, as compared with 40.16 per cent in August, 1922. In September, 1923, 49.52 per cent were females, compared with 43.84 per cent for the corresponding month a year ago.

BERGSMA'S TWO RECORDS.

Piet Bergsma of Ferndale has made two new state records with milk from Nore Segis Prospect, a junior two-year-old, and Mt. Vernon Oregon Newman Rose. The first cow mentioned is a junior two-year-old, and won the placing by the production of 521.8 pounds of milk and 21.164 pounds of fat in seven days. This is also the second highest fat record in the state for this class. The second cow produced 574.1 pounds of milk and 19.225 pounds of fat as a junior four-year-old.

WORLD MILK RECORD.

A world record of 646.1 pounds for milk production in 7 days 10 months after calving has been credited to Steilacoom Inka Posch, the remarkable young cow in the Western Washington State hospital at Steilacoom that made 30,610 pounds of milk as a 4-year-old last spring. She was bred at the state hospital, being sired by a son of Sir Johanna Ruth Fayne, Todd & Sons' old herd sire, and out of a daughter of Sir Colantha Prilly from a 32-pound (butter) dam.

PLACED ON HONOR ROLL.

Nooksack Irma Segis, owned by H. J. Evans of Ferndale, recently won a place on the honor roll for junior three-year-olds, with 139.2 pounds of milk and 4.61 pounds of fat.

CLARK BUYS GUERNSEYS.

For foundation purposes, James Clark of Satsop, Grays Harbor county, Washington, recently purchased from O. A. Johnson of Buckley, Pierce county, five purebred Guernsey heifers, all daughters of Chicona Hannibal, and three of them bred to the Johnson herd sire. The latter is a son of Langwater Khedive, W. A. Goodin's herd sire at Cornelius, Oregon, and is out of Oregon Queen, state champion in class CC with 544 pounds of fat, second highest priced female in the recent Pacific International sale, and now the property of Troutmere farms in California.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Some doctor friends of mine have written a fine little book about infectious diseases. It is intended to be a guide for mothers, and on this account it is filled with wise and useful suggestions which are bound to be gratefully received by every mother.

Dr. Copeland.

The authors write about the need of using a lot of water. Free use for bathing and the drinking of large quantities of water are urged upon the parent.

In all fevers poisons are formed in the body and there can be no restoration to health until these are carried away. Their presence in the body keeps up the fever and causes the symptoms of prostration which always accompany fever. The skin, kidneys and intestines are the chief organs of elimination. All these must function freely or else the poisons generated by the fever are dammed up in the tissues, to add to the misery of the sufferer. They can not act unless there is abundance of fluid to dissolve the poisonous substances. Water is the universal solvent and its free drinking will aid the organs of elimination to do their work.

You know how thirsty you are when you have fever. There is no agony much worse than thirst. Poor little babies must suffer terribly and they are unable to ask for the water they yearn to have.

The authors I mentioned think water should be given as a matter of routine—just as medicine would be administered. They suggest that when a child under one year has any infectious fever the amount of water should be from one-half pint to one pint a day. Every 15 minutes the baby should have from two to four teaspoonfuls of water. When older, three or four times as much water should be given.

There is an old-fashioned notion that water will "drive in the rash" and, somehow or other, cause disaster. This is absurd. Bathing can do no harm to anybody. Bathe the child, but be sure the bath is taken in a warm room, and dry thoroughly. No bad results can take place, no matter what the disease may be.

Frequent bathing keeps the skin clean and active. In this way the removal of the poisons is hastened.

Drinking plenty of water helps to keep the bowel contents soft, and in this way promotes the free escape of poisons.

Everybody should drink water in quantities. Everybody should bathe frequently. Cleanliness inside and out is essential to health and vigor.

The Red Lock

(Continued from page fourteen.)

square with me. I reckon you wouldn't know her inside of your little old synagogue down there in the Flatwods, but she'd be the whitest one there—except Sis.

"You've been one hell of a father to me. I've heard you pray by the yard, and I've heard cussin' that was more religious. You starved mother's life out, and you're starvin' the life out of Sis, but you didn't starve my life out, damn you. I've got a drop of ol' Red Colin in me—him that brought all this cussed red lock mess into the family. I've had my fling—and that's more than you can say, with all your money that you've wrung out of better men.

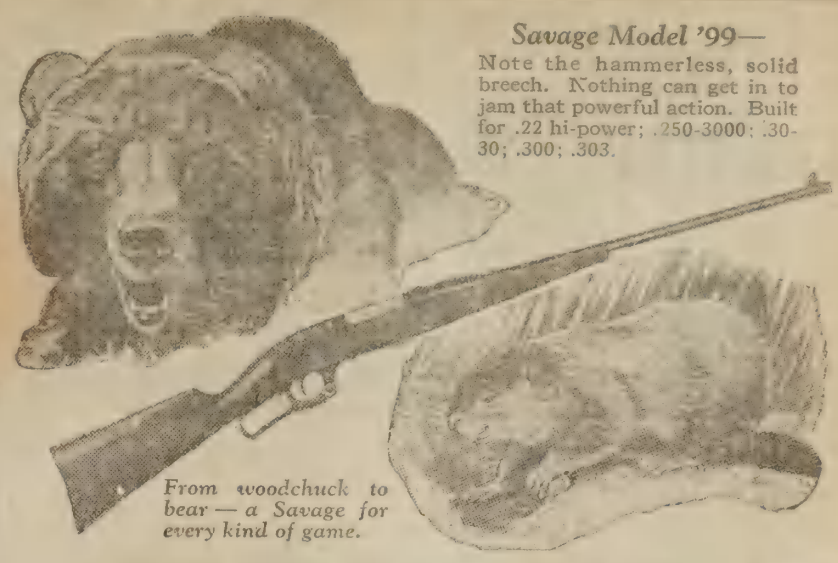
"I reckon I've got but a few minutes to live. I'd give half of them to see Sis. But if you'd come in right now, I'd try to get up and kick you out. I'm dyin' as old' Red Colin died—with my boots on. I'm expecting to meet him and you both—in hell—— KEN CO——

"P. S.—Mr. Colin is dead. He died before he could quite finish signing his name. You can see the blot where the pen fell. I am respecting his wishes and sending this letter without any street address, or other marks, whereby you might trace him. His confidence I shall never betray. I will only say that he shall have decent burial. THE GIRL."

(To Be Continued.)

COMPARATIVELY RECENT.

Passenger steam turbine ships have been in use only since 1901.



Savage Model '99—
Note the hammerless, solid breech. Nothing can get in to jam that powerful action. Built for .22 hi-power; .250-3000; .30-30; .300; .303.

From woodchuck to bear — a Savage for every kind of game.

. . . handles fast, holds steady as a rock

You can depend on the smooth, sure action of a Savage. It functions *right*.

And accuracy—the most important thing in *any* rifle. You can't beat a Savage for deadly, lasting accuracy.

And it's light—a Savage high-power doesn't carry an extra ounce—*but* it's proportioned and hung to hold as steady as a rock.

This perfect balance is always the same. For the Savage magazine is of the box type—full or empty—its balance is unchanged.

A Savage for every kind of American game

.22 hi-power. The amazing *Imp*—ideal for woodchuck, fox and wolf. Accurate at long and unknown ranges.
.30-30. The choice of many seasoned hunters for deer and medium size game at moderate ranges.
.303. A hard, knockdown hitter—has dropped deer, bear and caribou for 20 years.
.250-3000. An all-around rifle. Terrific speed and accuracy make it *the* gun for mountain sheep, goats, and deer at extreme ranges.
.300. Delivers a crashing blow that will drop the great Alaskan brown bear in his tracks. Powerful enough for any American game.

And the Savage .22s—the *Sporter*—the new bolt-action repeating .22—the gilt-edge accuracy of the finest target rifle built into a sporting model. Or the slide-action, Model '14—every feature originally and distinctively Savage—sturdy and accurate.

Savage manufactures ammunition for every Savage high-power rifle. Savage ammunition is advised for use with Savage high-power rifles. Savage is now also manufacturing other well-known cartridges. Look for the Savage Red Box.

Breeders' Department

HOLLYWOOD HOLSTEINS
Registered Holstein bull calves out of yearly record dams, excellent individuals, well marked, thrifty. By getting them young you can get better stock and for half as much money as when you buy yearlings. We have bred bulls that have sired daughters with records up to 1508 pounds butter in a year, and each of our last two herd sires has sired one or more world record daughters. Buy from the famous Hollywood herd that was the highest record large herd in the highest record C. T. A. in the United States last year. A few heifer calves suitable to mate with above bulls. A CALF OR A CARLOAD.
HOLLYWOOD FARM (Near Seattle) Hollywood, Wash.

Milking Shorthorn Bull
Dropped June, 1922. This is a young bull of much quality, sired by Foothills Corporal, grand champion Pacific International stock show, 1919, of richest milking strain, from Corporal Clay, dam Glenrose Pearl. The dam is a good producer.
$125 for quick sale.
KIRTLAND FARM, Central Point, Ore.

Imported and American Bred Jerseys
Blood lines of phenomenal production and most perfect Jersey type.
CRANDALL & LINN, Salem, Ore.

Richly Bred Young Jersey Bulls
Sired by Gertie's St. Mawes and out of tested dams with good records.
C. F. BATES, Rt. 5, Salem, Ore.

Gold and Silver Medal Jersey Breeding
Heifers and bulls, offspring of the great gold and silver medal bull, Silver Chimes of S. B.
DEL PERKINS, Carlton, Ore.

Guernsey Special $125 will buy a son of Amy of Mound City, A. R., 11893.3 lbs. milk, 546.5 lbs. fat at 4½ years.
VALLEY GEM FARMS, Arlington, Wash.

Brown Swiss Stock Farm
Breeders of Brown Swiss cattle, the farmers' dairy cow. Young stock for sale.
THEO BRUGGER, Route 3, Gresham, Ore.

Pioneer Herd Hampshire Swine
10 head choice boars; 10 head of sows and gilts, backed by show records.
J. M. FRUITTS, Cambridge, Idaho.

Hampshire Swine We have purchased the entire herd of wonderfully bred Hampshires from Dr. H. K. Stockwell of Monroe. Boar and sow pigs, gilts and a few bred sows for sale. Double treated for cholera.
VALLEY GEM FARMS, Arlington, Wash.

Poland Chinas Bred gilts, one or a carload. Best of blood lines. Also fall pigs of either sex. Priced very reasonable.
FRED D. ENTERMILLE, Baker, Ore.

Poland Chinas That Win
Young boars, bred gilts, fall pigs for sale Satisfaction or money back.
R. J. STILLINGS, Hermiston, Ore.

Turner's Durocs
For sale—Registered spring boars and gilts, sired by grand champion boar. Also booking orders for fall pigs. Prices reasonable.
H. W. TURNER, Sunnyside, Wash.

For Sale--O. I. C. Swine
Large, smooth fellows. Price is right and the pigs are right. Write for prices.
JAMES STAFFORD, Sumner, Wash.

Rambledale Rambouillets
Can spare a carload of registered Rambouillet ewes of highest quality, to lamb in February and March. Bred for wool and mutton, Rambledale ranch.

"My Happiest Christmas" Contest

WINS FIRST PRIZE.

I was a boy of 12 away at school, and the days were dragging toward Christmas, with no prospect of going home, when mother wrote me that there was to be a grand family reunion at grandfather's home in northern New York and that I was to come. I still remember how I whooped and hurrahed and turned handsprings!

It was snowing in proper northern fashion when we arrived that Christmas eve and were welcomed in royal fashion by our grandparents. And such a hubbub at table that first night, as fathers and mothers, cousins and aunts all talked at once, until stilled by grandpa's bowed head as he said grace!

A great fire roared up the chimney as we gathered about it, the elders chatting, with much pleasant gossip, while we six cousins popped corn or cracked the tough old hickory nuts, or roasted chestnuts in the fire. We danced and sang and hoedowned to the tune of grandpa's fiddle, whose "Money Musk" and "The Indian's Lament" were played as only he could play them.

Then we cousins, after hanging our stockings about the vast chimney, fairly fell upstairs and to bed, worn out with the excitement, and fell asleep, three abreast in the depths of feather beds, covered with grandma's pieced quilts, very likely.

Morning found us diving down the great stairway to get our stockings and empty them before the embers of the fire. Shivering we were, but happy. Finally came daylight and our tardy elders. Then breakfast, with golden piles of hotcakes, with maple sirup, and plates of crullers, which old black Katie heaped and reheaped.

Again we were before the great fire, and gifts were given, while we cousins, impatient to be out in the crisp air, took the deep-rimmed snow path to the stable, where old Bess and Dobbin whinnied as though they knew us. Snowballing, building snow men, we frolicked till crimson, then raced in to the fire, and here was grandma calling us to dinner.

Christmas dinner at grandpa's meant suckling pig, with a red apple in his mouth, four kinds of jell, three kinds of pickles, and so on, double and triple joys right through to mince and pumpkin pies, plum pudding, nuts, raisins and candy.

Neighbors came in, stepping from sleighs with a jingle, to welcome the long absent. There was more fun and dancing, while grandpa and grandma were persuaded to dance a minuet, to the utter delight of their children. And joy and gladness held sway, while the chimney roared and the snow fell softly outside!

Before we knew it, the week was almost gone, what with jolly coasting, with grandpa sometimes as starter, laughing over our spills till his cheeks were red as apples. Then, hungry always, we'd slyly hie to grandma's great cookie and doughnut jars, plumb full to overflowing, so it seems to me now. Then spicy barrels of apples were beyond, and here black Katie would catch us and shoo us away, calling us good-for-nothing boys. Tiny cousin Jim made the rounds once too often, and lay on the sofa, while solicitous aunts suggested castor oil.

Oh, how hard it was to say goodby, with grandma wiping her eyes, and grandpa's eyes, too, a bit misty! We children little guessed it to be the last home coming, as it proved to be, and so remains my happiest memory down the years.

RALPH H. BOYD.

Kirkland, Wash., R. F. D. 1, Box 81.

Prize Awards

The Washington Farmer is pleased over the fine response to its request for readers to tell of their happiest Christmas. The first prize of $5 is awarded to Ralph H. Boyd, Kirkland, Wash.; the second prize of $3 to Mrs. Earl Brittain, Inchelium; the third prize of $2 to Mrs. Marion Warren, Chesaw; and five prizes of $1 each to Mrs. Agnes Dannan, Ellensburg; Mrs. Eva J. Peck, Endicott; Selva Hanson, Vancouver; Mrs. LaRue Clark, Sumas and Ronald Marchant, Lynden.

Read these prize contest letters and you will agree with us that it is one of the happiest and most educating of Christmas features ever published by us. The Washington Farmer only wishes it had the space to give other letters in this contest which are most interesting, and wishes every one of those who entered the contest, as well as every one of our readers at large, the happiest and merriest of Christmases.

Among Her Dear Ones

WINS SECOND PRIZE.

It was the Christmas of 1915. My mother, for 30 long, hard years a widow, had finally sold the old home in Maine and come west to live with me—her baby, happily married and in a home of my own.

(Continued on page six.)

Western Washington Horticulturists Meet---Page 3

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Sometimes we meet persons who laugh at the germ theory of disease. They say it is ridiculous to think bacteria and germs are responsible for human ills.

Dr. Copeland.

It isn't surprising that some folks sneer at germs. The vast majority of accidents where wounds are made heal at once and never cause the slightest trouble.

The other day a man employed a manicurist, who was a rare variety—a careless and unclean one. Let it be said to the credit of most manicurists that, being women, they are naturally clean, neat and conscientious.

But this man met the wrong sort. She trimmed his cuticle, inflicting fully a dozen cuts, and finished her work with an unclean buffer in polishing the nails. She must have rubbed a million germs into the tissues. For from two to three days the fingers were very sore, but they didn't even fester. In a week there wasn't a sign of trouble remaining.

I know a woman who went to a very cleanly and particular manicurist, who takes great pains to keep her instruments clean. A tiny cut was followed by serious infection and a severe surgical operation.

Why did the man escape and the woman suffer?

It is largely a matter of the degree of natural resistance. The man had greater power to ward off disease. This is a somewhat mysterious quality possessed by some much more than by others.

Of course, it is not entirely a matter of resistance. There are certain germs much more to be dreaded than others.

Sometimes our powers of resistance are much lower than normal. This may be due to overwork, to loss of sleep, to worry or to sickness.

We never know what particular species of germ has been forced into our tissues by an accident which breaks the skin.

You see that every injury producing a wound has in it the prospect of rather serious results, don't you? On this account you can not afford to neglect injured tissues. You may break your skin, or scrape your elbow. What should be done?

In every household and in every shop or factory there should be a bottle of iodine and a package of gauze. The injured part should not be touched with unclean hands, but with the greatest care it should be swabbed with iodine, covered with clean cotton or gauze and bandaged.

There Is, Also, a Non-Detonating
Gasoline

Note this important difference in the way gasolines explode. One kind explodes instantaneously—**detonates.**

It depends upon a single crash to pound the piston down.

Compression is limited by the tendency of such gasoline to **explode prematurely.** This means loss of power and efficiency.

It means increased vibration also, thus more wear and tear. Some explosives would work this way on guns, to the ruination of the guns.

The Prolonged Thrust

Union Gasoline explodes in a different way—like smokeless powder in big guns—with a progressive and sustained explosion—**non-detonating.**

It **thrusts** the piston down with a powerful but **continuous** impulse.

This permits higher compression, for, as authorities know, compression is limited by the tendency of a gasoline to **detonate.**

So more power and higher efficiency result from Union **Non-Detonating** Gasoline in motor cars and tractors. Smokeless powder is used in big guns because it doesn't detonate and its better **power** carries the projectiles farther.

Snap in the Pickup

This increased smoother power in motors means more speed and a stronger rush in the pickup.

You find more power on the hills—a new "lift"—with no "knocking" due to gasoline.

The sustained impulse reduces vibration, which means less wear and tear.

And the higher, all-'round efficiency means increased fuel economy.

So Union **Non-Detonating** Gasoline affects your car or tractor in several desirable and important ways.

Union is always uniform. It doesn't disintegrate, thus doesn't deteriorate in storage. All the power that is put into it at the Union plants is delivered when you want it in your car.

Union Oil Company

Believes in Fruit-Growing Industry

W. H. Paulhamus Declares There Never Was Brighter Prospect Than at the Present Time

By RALPH ERSKINE

The best and largest attended convention ever held in the history of the Western Washington Horticultural association was put on at Everett December 6, 7 and 8. The exceedingly complete program was a good drawing card to the crowds, which numbered 225 at the largest meeting during the three days.

The program was particularly interesting, since it included addresses on the vital subject of marketing as well as many educational papers along fruit growing lines. The display of fruit grown in western Washington, which was arranged by members of the association, gave the visitors an opportunity to study the varieties that have been recognized as the best for western Washington conditions.

The city of Everett did itself proud in making the fruit growers feel at home and went a step farther in extending an invitation to hold the convention there next year, which hospitality was accepted by a majority vote of the members attending.

Officers Elected.

The officers for the year 1924 were elected by the adoption of the report of the nomination committee, which placed George P. Stuart of Monroe in the president's chair. C. E. Fitzgerald of Ferndale was named as first vice president; Mrs. J. W. Roberts of Seattle, second vice president; R. T. Reid of Bellevue, secretary; B. A. Kilian of Birmingham, assistant secretary, and Charles W. Orton of Sumner, treasurer.

It took strong persuasion on the members' part to convince Mr. Reid he should not withdraw from the nomination, but to render his services with the help of an able assistant for another year. Mr. Reid contended that he had already served his second term in the same office and that some one else should have the honor.

The keynote of the convention was struck when Robert B. Miller of Startup gave his talk on "Forecasting the Work of the Convention." While not a member of the program committee, Mr. Miller gave much valuable assistance in getting the plans completed.

"The program this year is a radical change from what it has been in the past," began Mr. Miller, "and we are having more talks along the line of cooperative marketing. This is a subject that the fruit men as a whole do not have a chance to talk over as a body and we feel that this is a good place to thresh out such problems.

"The law of supply and demand should govern the price of the farmer's products, but we find that our fruits and other products have little value until they reach the point where they are resold to the consumer. Many of the crops are actually sold below the cost of production and it is up to the producers to do something to better their own conditions or go out of business.

"It is my opinion that we as producers can create an organization that will be as strong as the labor unions, if we will but work together with one accord along the line of cooperative marketing."

More Than One Crop.

"It is my experience that the banker is inclined to favor the man who has more than one crop to depend on," said Robert Moody of Everett, who was asked to give his views of the fruit industry from the standpoint of a banker and grower. The bank must make all loans on dependable security and they are inclined to favor any kind of stability such as is created by a system of farming that will bring in returns from more than one source. This is why we like to see a man that can raise a crop of fruit and at the same time keep a few chickens or a cow or two because we feel that he is more able to make a better living than the man who carries all of his eggs in one basket and has nothing to fall back on.

"As far as the fruit industry is concerned, I feel that it has a bright future here in the Puget Sound district. We have markets that are more stable than they have ever been before and we are putting up our surplus fruits in such a way that there is not the loss that there use to be. The barrelled fruit industry has done more to stabilize the soft fruit industry than any other plan that has been tried out and it is going to mean more money in the growers' pockets than has been the case in past years."

"Long Pruning."

An interesting explanation of the "Long or High Renewal System of Pruning" was given by Clayton L. Long, extension horticulturalist of the Oregon Agricultural college. Before he began the explanation he mentioned the value of having ideal physical conditions of the soil, since this is considered of prime importance to any system of pruning.

In the explanation of the high renewal system, Mr. Long told of the different methods that could be used in forming the frame work of the young trees and explained how each one would work on different kinds of trees. He emphasized the constant pruning of any tree to maintain the right balance and to keep the shape that is most desired for ripening and picking of fruit.

"Experiments with this system as carried on in Oregon are proving that a moderate amount of pruning is giving the best results," said Mr. Long. "If a young tree is pruned too heavily it causes a tendency toward dwarfing. A good strong tree can be had sooner and a heavy crop can be secured earlier if the tree is not pruned too heavily. It is even a good plan to leave a part of the sucker growth in order to keep enough leaf surface to furnish plant food for the season's growth. When too many limbs are removed there is a greater loss of leaf surface than the tree can stand and the result is a smaller production of fruit.

"As far as the size of the fruit is concerned, this can best be accomplished by fertilization, cultivation and thinning of the fruit. Pruning is not a profitable way to increase the size of the fruit. Another point which we proved to our own satisfaction was that heavy pruning produced the smallest increase in the size of the main trunk, while no pruning gave the greatest, and light pruning gave slightly smaller growths than did the heavy pruning."

Transportation and Marketing.

"There never was a brighter prospect for the fruit industry than there is at the present time," asserted W. H. Paulhamus, president of the Puyallup and Sumner Fruit Growers' association, who gave as his talk a "Survey of Fruit Marketing." "The growers are better able to put their fruit on the market in a way that the eastern buyers want it and there has been a tremendous call for both canned and barreled berries.

"Transportation has much to do with the marketing of our soft fruits and in many cases the entire market in one certain district depends on whether or not the refrigeration during transit is sufficient to carry the fruit without loss. Much of the loss during this last season was due to improper refrigeration for the amount of berries each car was supposed to carry. This is a problem that all berry growing districts should help to remedy. A lower minimum of fruit to each car will help in getting the fruit to its destination in better shape.

"Better grading of all fresh fruit that is shipped will also help the growers to put their berries on the market in a better condition. We are planning on having all overripe and broken berries kept out of the packages that are to go out on the fresh fruit shipments. If such a grading system can be carried out in other districts as well it would help to stabilize the fresh fruit industry, which is one of our three important means of marketing our berries.

"The cannery is another factor that handles a large part of each year's crop. Here, too, the grades play an important part and there is always a sale for high quality packs as well as another grade which takes the broken berries and those that will not stand up as whole berries after processing. The canneries have found that they can pay a price that will net the grower a fair price for his labor and investment and there are many growers who sell a large part of their crop to this market.

"The last and newest method of putting the soft fruits on the markets is the barreling method. This is perhaps the quickest way to handle berries of any kind. They are sorted over, graded and put in barrels with sugar and frozen solid, which prevents their spoiling as long as they are kept in cold storage.

"This plan has developed to an astonishing degree during the last two years and we have a report of 40,000 barrels having been shipped from the Portland territory alone. There have been many shipped from western Washington, but as yet the figures are not complete. The big jam factories in the eastern states are beginning to call for our barreled fruit because they know that we can supply them in large enough quantities to depend on."

In conclusion Mr. Paulhamus made an appeal to the growers' cooperative organizations and canners to work for a higher type of cooperation which would enable all that are concerned in the industry to sit down and work out their problems in a way that would be more satisfactory to all. This, he said, would be much better than the present plan of each man working merely for his own interests in spite of how the other fellow was affected. This would be cooperation of the highest type and would mean more money to all in the long run.

As to Cooperation.

"Confessions of a Cooperator" was the subject given to Robert Paulus, manager of the Oregon Growers at Salem, Ore., who dealt with the vital problems that are met in any growers' organization. His strongest statement was that he did not believe in cooperation as a cure-all or as an absolute corrective for serious mistakes that are made in planting crops and resulted in overproduction, but that cooperative marketing will do more than anything to relieve such a condition as overproduction will create.

"I do not favor the elimination of the middlemen, but feel that the speculative dealer should be discouraged and not be patronized by the growers except in extreme cases," said Mr. Paulus. "I do not blame the cannerymen for getting all they can for their product when they can do so, since this is just what the grower will do when he has a chance."

Soil Conditions.

Some of the sidelights on the berry industry in British Columbia were explained by H. H. Eddie of Sardis, B. C. In his talk he emphasized the importance of soil conditions, cultivation and fertilization as factors to lower the cost of producing berries. Many of the growers in Canada, he said, are finding that they can maintain the fertility of their fields by keeping some kind of stock in connection with their berries. Chickens make a good combination with any farm if the grower can give them proper management. For some of the smaller farms they manage to keep a cow and a horse and a few chickens.

The best arrangement they have found is to have one cow, a horse and a pig on a five-acre farm. This is about the right number of animals to furnish a part of humus to the crops and yet not require too much work from the berry crops. A flock of about 250 chickens is not too large to handle in connection with five acres of berries and it will supply much fertility and humus for the crops.

Strawberry Weevil.

"When the ravages of the strawberry root weevil began to be a serious question in the berry sections of British Columbia it was found that most of the growers were following certain cultural practices that were favorable to the weevil. The first thing to do then was to suggest that the growers leave the old crops that they intended plowing up, until after the weevil had laid their eggs," according to Lee W. White, district horticultural inspector for Vancouver island. "The old method of plowing the fields in June or July was one of the worst practices that could have happened, since it gave the weevil a better chance to migrate to other fields.

"The growers found that by waiting until September to plow up their older fields the weevil would not be forced to leave, but would lay their eggs, which were destroyed when the field was plowed up. The working of the soil after plowing also helped to destroy what few eggs were left.

"It is fortunate for the farmers that the weevil does not fly. If he could, it would have spread much further than it has, but we can use the barriers to prevent their spreading to other fields that are free from the pest. This, of course, is a costly method, but many of the strawberry men are finding it a practical method.

"The use of poultry is another method that has shown good results among the fields of this district and it is one of the less expensive methods that have been found. The weevil are all out of the ground soon after the crop is off and by having a flock that can be turned loose at this period, the birds will pick up a large part and in some cases most all of the weevils.

"A rotation system is also a good method of eliminating the pests and it is one of

(Continued on page ten.)

Adams Heads Farmers' Union

A somewhat smaller attendance than in years of greater prosperity for wheat growers marked the 15th annual convention of the Farmers' union of the Washington and northern Idaho division in Spokane, December 11 and 12. About 100 members of the order were in attendance. Interest in the affairs of the union was probably no less keen than in previous sessions, and in some respects was more vigorously in evidence.

A sharp division of sentiment became evident on certain policies of administration when O. T. Cornwall of Walla Walla launched a movement for the reorganization of the union, the movement being directed against the administration of President J. Q. Adams and its policies. The Walla Walla delegation comprised most of the strength of the anti-Adams movement. After a vigorous discussion of the subject from numerous angles, lasting until after midnight on the 12th, the present administration was indorsed by vote of the delegates present and President Adams and Secretary-Treasurer A. D. Cross reelected by large majorities. S. O. Pool of Wenatchee was elected member of the executive committee, succeeding E. D. Knight, and H. J. Herman of Genesee, Idaho, was reelected. These officers, together with the following hold-overs, comprise the executive committee; R. H. McMillan, Sandpoint, Idaho; A. C. Moore, Walla Walla, and Almer McCurtain, Davenport. Mr. McMillan was elected vice president.

The issue as fought out at the convention was generally understood as being between the so-called progressive element and the so-called reactionary element, with the former victorious. Incidental to the criticism of the policies of President Adams and his executive committee was an attack upon Carl S. Evans as editor of the official paper of the Farmers' union for this jurisdiction. This criticism was based on the assumption that his appointment to the position of editor indicated something of a farmer-labor program on the part of the administration. Mr. Evans is president of the Spokane Central Labor council.

At the opening of the session, President Adams delivered his annual message, in which he stressed the importance of harmony within the organization and the acceptance of responsibility for the organization's welfare by each member. Other speakers at the opening session included D. F. Mitchell of the Farmers' Union Egg and Poultry association; S. O. Pool of the fruit marketing division of the union; Carl S. Evans of the Spokane Labor council; George M. Barnhart of the Railroad Brotherhood's Cooperative bank of Spokane; E. L. French, state commissioner of agriculture; A. C. Whisler of the poultry association and the insurance department; Mayor Fleming of Spokane, who delivered the address of welcome, and Almer McCurtain of Davenport, who responded.

The Resolutions.

A number of resolutions were adopted, as follows:

Favoring abolition of tax-exempt securities;

Favoring repeal of the so-called guaranty section of the railroad transportation act;

Indorsing Senator Robert M. La Follette for chairman of the senate interstate commerce committee;

Favoring the taxing of municipally-owned public utilities;

Favoring the adoption at the polls next November of the anti-oleomargarine bill referred to the people following the last session of the legislature;

Urging the federal department of agriculture to hold hearings in the northwest on northwest wheat grades;

Authorizing appointment of a committee to investigate the advisability of the formation of a corporation to enable Farmers' union members to secure loans when desired through the federal intermediate credits banks;

Favoring the reduction of income taxes from the present normal tax of 4 per cent to 2 per cent, keeping the surtax at the present rate and restoring in revised form the excess profits tax;

Favoring the creation of a federal export commission and the marketing of American surplus wheat in a manner similar to that proposed by the American Wheat Growers, Associated;

Urging members of the Farmers' union to join the Farmers' Union Egg and Poultry association;

Favoring the formation of a state sales agency for the Farmers' union fruit department;

Indorsing the Farmers' union contract for cooperative marketing of wheat.

Urging the government to use every legitimate means, including navy equipment, to enforce prohibition.

Among the resolutions that were defeated was one opposing reclamation projects until production had been reduced to domestic needs. A paragraph in one section, urging adjustment of production to domestic needs, was stricken out before the resolution as a whole was adopted.

ERADICATING MORNING GLORY.

A simple method of eradication of the wild morning glory is being carried out by C. T. Manhart of the Selah district, near Yakima. The smothering method has been tried, but the results have not been as successful as a few hogs on the affected spot of ground and let the porkers root out the weeds.

"They go right to work and eat every bit of root they can find," said Mr. Manhart, and dig deep holes and pretty nearly stand on their heads in them to get at the pieces that they root out.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unpaid portion of the amount paid for the subscription will be refunded. You must be satisfied.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complains must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Cows for Wheat County

Brick Burford, secretary of the Whitman County Farm Bureau, believes in the development of dairying in the Palouse section, which has heretofore been given up largely to the production of wheat. A series of dairy meetings have been held in his county, in cooperation with E. V. Ellington, head of the dairy department at Washington State college, and an initial shipment (one carload) of grade Holstein cows has been purchased in western Washington for distribution there.

Our National Dairy Interests

Our national dairy interests are rooted in some $47,000,000,000 worth of farm land, buildings, and equipment, and the average American family spend one in every $5.00 of their food budget for milk and milk products. These figures indicate how highly the American people regard the dairy cow, and they are paying more attention to her than do the Hindus, who worship her and hold her sacred. Sturdy, healthy boys and girls are the best assets that a nation can have, and since the dairy cow is the best guarantor of child health, she has been taken into a full partnership in the great business of making men and women fit. In the words of Herbert Hoover, there is nothing so important to the American public as the realization of the necessity of the proper nutrition of children and the responsibilities of the community to it.

Make Treatment Effective

"Too much attention is being paid to discover how little of any compound can be used instead of determining how effective can be made the treatment."

This is a statement in a letter from a manufacturer of copper carbonate for the treatment of seed wheat to prevent smut. The writer adds: "The wheat grower is really interested in producing clean wheat and he must use enough of any compound to get it.

The letter was written in defense of one of the so-called "20 per cent" copper carbonate dusts and set forth the manufacturer's arguments in favor of it over the so-called 50 per cent products. Official tests in this state have resulted in the announced conclusion that four ounces of the 20 per cent product is as effective in the treatment of wheat as are three ounces of the 50 per cent kind. At any rate, we are not so much interested in the controversy as in that basic principle that the manufacturer laid down in the sentence first quoted above. That principle applies to treating seed wheat, plowing, raising hogs, preparing three meals a day and to every other essential activity in life. Results are what we are after and it requires good judgment and conscientious, continued effort to get results. They are not obtained by trying to see how little work one can expend upon the job. They are not obtained by speeding through an operation that normally requires time. They are not obtained through haphazard methods or even well-thought-out methods if half-heartedly or indifferently applied.

The saving of a few cents and a few hours in the treatment of the season's seed wheat is tremendously costly if it results in unclean wheat when harvest comes. Likewise the saving of time, effort and thought frequently renders whatever labor we expend upon our common tasks ineffective, futile.

Farmers, Keep Your Pencil and Your Purse in Your Pocket

Taxes are going to come down, by heck! We know it because a slick sort of solicitor has been telling some of our folks about it. And the beauty of it is that congress is going to bring 'em down and up to this hour doesn't know a thing about it.

You see, it is this way: A certain farm paper published 3000 miles away and which circulates more or less from the stern and rock-bound shore of old New England to the cactus fields along the Mexican border is circulating a petition "to the honorable members of congress" requesting said members to lower costs of government and, consequently, taxes. There is a sizeable army of clever gents carrying the petitions around in the country towns and communities of Washington right now, signing up every unsuspecting advocate of reduced taxes that they can grab.

We used that word unsuspecting because we meant just that, for there is a string to that petition. After the solicitor has convinced you (if he succeeds) that his paper is doing you a great service by circulating this petition and signs you up, he has you coming his way, and then, with the leverage secured, extracts two of your hard-earned dollars to pay for a subscription to the national farm magazine above referred to, which magazine, being under obligation to farmers of Alabama, Kentucky, California and elsewhere, as well as to you, tells you all about how to combat the cotton boll weevil, how to grow U. S. No. 1 tobacco, how to prune orange trees and so on. All of which is no doubt delightful reading, but hardly what you would strain your eyes over after a hard day's work.

For fear some of our readers may be caught unawares, here is the wording of this petition that is going to tell congress something so new and startling:

To THE HONORABLE MEMBERS OF CONGRESS:
GREETINGS: We, the undersigned, who are directly interested in Farming and the welfare of the people, do hereby respectfully petition or request Congress through the (name of the paper appears here) to pass LEGISLATION which will CUT THE COST OF RUNNING THE GOVERNMENT BY REDUCING ALL NON-ESSENTIAL EXPENSES, ELIMINATING ALL UNNECESSARY EMPLOYEES AND VOTING AGAINST ALL INCREASES IN SALARIES.

And then there's the dotted line for your signature and address, right down to your township. There are 21 lines on the petition that we saw—room for $42 worth of signatures at $2 a chance.

Won't it jar congress to discover that folks want the cost of government reduced! Strange that nobody ever thought about it before. If it wasn't for that two bucks for an Atlantic coast paper that we don't want, blamed if we wouldn't almost sign that petition ourselves. But as it is, we'll just have to let "the honorable members of congress" struggling along in blissful ignorance of the fact that they were all elected on platforms of economy and tax reduction.

Seriously, did you ever hear of such a piece of tommyrot in your life as this idea of telling congress (at two dollars a line) that we would like to get out from under some of the unnecessary costs of government? The place to tell congress something is at the polls, and if we didn't tell 'em last time, let's hang onto our two dollars when the solicitor brings the petition around and tell 'em next election, when it will do some good.

If one of these fellows buttonholes you, our advice is to keep your pencil and your purse in your pocket.

Washington State Gleanings

County Agent E. E. Hupp announces that 71 farmers of Pend Oreille county have ordered 22 tons of sodatol, war salvage explosive offered by the government. One car will be delivered at Newport at $7.50 for 100 pounds, one at Usk for $7.80 and one at Ione at $7.95. All orders for Pend Oreille county's shipment must be in County Agent Hupp's office by January 2.

CALF CLUB BOY WINS SCHOLARSHIP.

Christopher Verstrate, Moxee calf club member, has been awarded the Union Pacific scholarship for Yakima because of his excellent standing in boys' club work. He will have his transportation and expenses paid for a short winter course at Washington State college.

BOND ISSUE CARRIED.

After a warm campaign the $2,000,000 bond issue proposed to develop the Wynooche power project was carried by a majority of 100 votes at the election here December 1, it was shown by final and complete returns. The vote stood 1092 for and 992 against. Six councilmen were elected, the only contest being in the First ward, where E. E. Wieland was elected over V. G. Skinner.

In the school election balloting W. O. McCaw and N. D. Coons were elected directors.

In the port district election W. J. Patterson was elected commissioner without opposition.

WENATCHEE GROWS PEANUTS.

From a half acre of sandy soil between two and three tons of peanuts have been harvested by a Japanese gardener at east Wenatchee. Jess Thompson, grocer, who has been watching the peanuts all summer, said:

"They have required but little water and attention except that it has been necessary to hill them. They are worth 10 cents a pound, wholesale. We are having a quantity of them roasted. Those that have been tried out are as good as the best we have seen on the market. At 10 cents a pound, with four to six tons an acre, peanuts will bring to the grower $800 to $1200 an acre."

CAPE HORN GRANGE ELECTS.

Cape Horn grange met at Stevenson recently, where a farewell dinner was served, given in honor of Mrs. Shields, the master, who is leaving this vicinity for the winter. She has been master of this grange for two years.

Election of officers was held, and the results were as follows:

Mrs. Lillie Miller, master; Mrs. H. Miller, overseer; Mrs. B. Stevenson, lecturer; E. Stevenson, steward; Sam Angelo, assistant steward; Miss Hanlon, treasurer; Ida Stevenson, secretary, and Mrs. Dell Grosso, lady assistant steward.

SUGAR BEETS PASS TEST.

That the sugar beets harvested in Kelso from the plot of ground set aside for experimental purposes under the auspices of the Kelso Chamber of Commerce made a return of better than 15 per cent in sugar content, showing that a commercial sugar beet can be raised to advantage in Cowlitz county, is the announcement made by Secretary J. W. Collins. He says that now if 5000 acres of sugar beets can be pledged in this county there is no question but that negotiations for a sugar factory to cost about $1,500,000 could be opened at once.

The beets in question were raised under the supervision of T. Y. Blanton. A carload of the product was shipped to the factory at Toppenish, where the tests were made under the direction of the Utah-Idaho Sugar company. V. W. Pettingill, field representative of the company, was in Kelso to look over the field and to give directions for the harvesting of the vegetables.

WANT MORE SUGAR BEETS.

Growers and business men in a mass meeting at Sunnyside December 1 indorsed a resolution affirming the need of the sugar beet industry in the Yakima valley and pledging assistance to the Utah-Idaho Sugar company in securing 1500 acres of beets for next year's campaign. The meeting was presided over by H. B. Miller of Toppenish, chairman of the committee appointed at a general conference held in Yakima some time ago.

Paul Kirker of the Utah-Idaho Sugar company stated that if there could be secured 1500 acres of beet land among the growers of the Yakima valley for next year the company would organize for a campaign.

There was good attendance at the meeting and among the growers who spoke were Lee Chamberlain and H. E. Nicolai. Some of the growers said that they should have a somewhat better price for their beets. Fred Arrowsmith, member of the committee, said, following the meeting, that there should be no difficulty in securing the needed acreage.

SAWDUST DYNAMITE.

Farmers of this state are permanently assured of an inexpensive blasting medium as the result of the invention of "sawdust dynamite" by Professor William M. Dehn of the University of Washington department of chemistry, says a report from Yakima.

Plans are now under way for the manufacture and distribution of the powder, at a low cost, under auspices of the Washington state grange. The grange already has approved of the product, now known as "dehnite," as part of the farmers' cooperative movement, and a company is to be organized as soon as necessary financial arrangements are completed.

Shortly after the feasibility of his new explosive for land clearing was demonstrated Dr. Dehn offered a license under his patents to the state department of conservation and development, whereby the people of the state might buy blasting powder at a state factory for approximately one-half the cost of the commercial powders now used. The bill providing for the enterprise passed the senate, but was not presented to the house and consequently failed in passage.

After the meeting of the legislature the Washington state grange inquired if the proposal made to the state might be considered by the farmers' cooperative movement. After several months of discussion by the local granges the proposal was approved by the state convention of the grange in Bremerton in August. A comparative test by a committee of the grange was made near Bothell of the new explosive along with those now in common use and it was the unanimous opinion of this committee that the new explosive was equivalent or superior to equal weights of the commercial explosives.

Plans are now under way for the pledging of the necessary finances, after which a company will be organized under the name of "Dehnite" and distribute it in accordance with the cooperative rules of the organization.

Bounty on Export Wheat

Protect the Growers by Increasing Tariff on Foreign Product

Western wheat growers are going to the president and congress with an urgent petition for relief, and that petition will be supported by many of their friends—commercial clubs in the towns, state agricultural colleges, fair and friendly newspapers and many bankers, too.

But the essential fact should be kept in mind that a majority of the American people have not our point of view. There are in congress many senators and representatives who are elected from big industrial centers where the people want cheap food. Then, there is the south, a region growing little wheat, and the big and influential corn belt of the Mississippi valley. These are formidable influences and, taking stock of them, we have felt that there was slight prospect of success for the Gooding bill to guarantee a price of $1.75 a bushel.

We believe that there is a good chance of getting a substantial measure of relief, provided the wheat growers and their friends do not go down to Washington with impossible demands. In the first place, it would not be good political policy for either the democratic or the republican party to ignore the wheat growing states in the next presidential election, and control of the next congress may turn upon the votes of these states.

President Coolidge and other leaders, both of the republican and democratic parties, express sympathy for the western wheat growers, and we believe they will help if a sound, reasonable plan can be put forward by the united wheat growers and their friends.

That plan should be devised to meet the position announced in President Coolidge's message—namely, "No complicated scheme of relief, no plan for government fixing of prices, no resort to the public treasury will be of any permanent value."

In our judgment that disposes of the Gooding plan.

We think, too, that it disposes of the "Montana plan" The gist of that plan is in Section 2, as follows:

"A government export corporation or commission to be created, which (a) calculates (using the department of labor index) what prices wheat should bring to restore the pre-war ratio, and (b) announces its readiness to buy at that figure."

That goes into direct conflict with President Coolidge's formula of "No complicated scheme of relief, no plan for government fixing of prices, no resort to the public treasury."

We believe, however—and this is the hopeful phase of the situation—that the simplified premium or bounty plan adopted at the recent conference in Portland of wheat growers, cooperative societies, bankers and representatives of commercial bodies, does not conflict with the points laid down by President Coolidge. It would not require a complicated scheme of relief; it would not be a plan for government fixing of prices; it would not require a large appropriation out of the federal treasury. This is substantially the plan, as we understand it, that is advocated by the American Wheat Growers Associated. The idea is this:

We are growing more wheat than we consume, and the surplus must be exported and sold in the open markets of the world. Although this exported surplus is only a fourth or a fifth of the total crop, the price it brings in world markets substantially fixes the price that the American wheat growers must accept for wheat consumed in the United States. So it is proposed:

1. To increase the tariff on foreign wheat, so that Canadian and other foreign grain can not come into the American markets.

2. The government to collect a tax on all marketed wheat, through railway and certified mill reports, and then, from the fund provided by that tax, pay a premium or bounty on exported wheat. The theory—and we believe it is sound—is that this plan would bring up the price of all wheat in the United States to a level with that paid for exported wheat. This would be the world price, plus the bounty. We think it would work, because millers and others needing wheat, finding that they could not get it from Canada, and finding that the growers would not sell for less than the price they could get if they exported their wheat, would be compelled to come into market and buy on the basis of the world price plus the bounty.

If, for illustration, the crop were 800,000,000 bushels and the exportable surplus 200,000,000 bushels, the government commission, by collecting a tax of 10 cents a bushel on the total crop, could raise $80,000,000 and with that fund could pay a bounty or premium of 40 cents a bushel on exported wheat. The growers' net gain, therefore, would be 30 cents a bushel.

The bounty method could be reduced to a simple basis: (1) of determining what the bounty should be a bushel; (2) of leaving the marketing of the exportable surplus to existing private agencies, and (3) of the government commission's merely paying the established bounty on the wheat thus exported out of a fund to be created by laying a tax on the entire American wheat crop.

We believe that if the western wheat growers and their friends will unite in support of this plan, and press it vigorously at Washington, it will win the support of the administration and a majority of congress. All things considered, it is the best remedy that we can see anywhere on the horizon.

This is a big, practical problem and must be solved in a practical way. It isn't just a matter of what we would like to have; it is essentially a matter of what we can persuade the administration and congress to approve.

Fear Is a Destroyer

Both Theory and Experience Urge to Be Not Afraid

But straightway Jesus spake unto them, saying, Be of good cheer; it is I; be not afraid.—Matt. 14:27.

Fear in one form or another, directly and indirectly, takes more lives and causes the failure of more undertakings than all other causes combined. Fear weakens the will. It unsteadies the hand at the steering wheel and palsies mind and body. It makes one falter and hesitate when decision and action are necessary to safety or success.

Perhaps it was something deeper and more fundamental to life than the foregoing that Jesus had in mind when he so often urged upon his followers to be not afraid. Of that we shall not now speak, but only of the apparent consequence of fear.

In the verse quoted above Jesus was calming the fears of his disciples when he came to them walking upon the water. Peter, perhaps a little less fearful than his fellow-disciples, said to him: "Lord, if it be thou, bid me come unto thee on the water." Jesus bade him come. Then how significant are the next few verses of that interesting bit of history: "And when Peter was come down out of the ship he walked on the water to go to Jesus. **But when he saw the wind boisterous he was afaid, and, beginning to sink, he cried, saying, "Lord, save me."**

What part was fear playing in Peter's failure? The words seem to indicate that he was successfully walking on the water until he became conscious of the boisterousness of the wind, a real or imaginary danger, when he became afraid and began to sink. Was it fear that caused him to begin to sink? The words of Jesus in the next verse are suggestive of the answer. He said to Peter: "O, thou of little faith, wherefore didst thou doubt?" Was that not almost equivalent to saying, "If you had believed and not been afraid you would not have failed"?

It will be a great day when individuals and nations adopt as their governing motto the words of the psalmist: "Though an host should encamp against me, my heart shall not fear."

Light Asked on Farm Loan Board

If information coming to a number of senators is true, a timely and proper resolution has been introduced by Senator Borah. It is based on information that the federal farm loan board has created the office of fiscal agent and appointed thereto a farmer member of the board, Charles E. Lobdell, at a salary of $25,000 a year, and that there has been a general raising of salaries.

The meritorious purpose of the federal farm loan act was to help agriculture; to enable farmers to borrow money on mortgages at a reduced rate of interest. Thus far that purpose has been achieved. But if the law is to be a continuing benefit to farmers, it must be administered with sound judgment, economy and the minimum of overhead expense. If an extravagant spirit is creeping into the organization, it should be nipped in the bud. In any event, the turning on of the searchlight will do no harm.

FARM BUSINESS AND MARKETS OUTLOOK

ALTHOUGH the market has sagged in the last few days, cattle prices have advanced 25 cents to 75 cents in the last month. Receipts have expanded this week, but for three weeks nearly 30 per cent fewer cattle have been going into the market hopper than during September and October. Western rangers have practically disappeared from all markets and the supply of heavy shortfeds is much less burdensome than it was a month ago.

Much of the decline in the supply has been in thin cattle suitable for further feeding, but slaughter steers also are less numerous. On the other hand, pork remains extremely cheap, poultry is abundant and beef is by no means scarce, so that the prompt recovery in cattle prices has been gratifying. Yearling steers are scarce and reached $13 at Chicago last week. Cows and heifers have staged a more animated rally than steers. Veals are 50 cents to $1.50 above the recent low point occasioned by a glut of heavy killing calves.

Demand for prime and choice steers to furnish holiday beef is practically over and after the first of January the $12 quotation may disappear at Chicago because of the absence of such cattle from the supply.

Feeder cattle buying has been on a conservation scale during the last three weeks.

Hog Movement Near Seasonal Peak.

Over a million hogs arrived at the 11 leading markets last week, making the high water mark for the year to date. Prices sagged under the weight, dropping below an average of $7 at Chicago once more.

Prices of pork products are low, but they are resulting in rapid distribution of hog meats and lard into consumptive channels. Pork loins have dropped nearly 50 per cent since the September high point.

Industrial conditions favor the maintenance of a high rate of consumption during the next few months and exports should be large as long as hog meats and lard are on the bargain counter.

Lamb Market Absorbs Big Run.

Receipts of sheep and lambs last week were the heaviest in a month, but prices are practically the same as a week ago This probably represents a final spurt in the season's movement, otherwise killers might not have taken hold so freely.

Wool Market Strong.

The spurt in buying in the last month has cleaned up most of the accumulations of wool at Texas points and the rather large holdings in the west. Prices asked for the remainder in these sections have advanced and buying has slowed down.

Wheat Trend Indecisive.

The advance in wheat prices a week ago was short lived and most of the gain has been lost. On moderate dips, sufficient speculative support develops to prevent any severe decline, but the large quantity of wheat in commercial channels in this country, Canada and elsewhere is too much of a burden for any decided upturn.

The international market for wheat is dominated by the heavy offerings from Canada and the knowledge that a large surplus is still available in that country and that both Argentina and Australia will begin to ship generously from their new crops shortly after the first of the year. About 300,000,000 bushels of wheat have been marketed by Canadian farmers since September 1, which is a substantial increase over last year, and some estimates of the Canadian yield are being raised. This enormous movement has been absorbed rather promptly as the Canadian visible supply is only 1,000,000 bushels more than a year ago. Both the Argentine and Australian crops have progressed without mishap in the last few weeks and the exportable surpluses are still estimated at a total of around 250,000,000 bushels. Australia had an old crop surplus of 15,000,000 bushels on December 1, and there is no sign of exhaustion in the rate of exports from Argentina.

Based on the rate of disappearance to date, importing countries will require 30,000,000 to 50,000,000 bushels more wheat than they were expected to take earlier in the season. Evidently the European crop was overestimated and non-European importing countries are taking much more wheat than last year. Low prices in this country and Canada undoubtedly will stimulate domestic consumption as feed. Substantial reduction in the acreage planted in this country this fall followed by a moderate cut in the spring wheat acreage, which seems likely to take place, will reduce our crop for 1924 unless the season is exceptionally favorable. These conditions give at least a faint promise of a better price level during the next crop year than in the present one.

Receipts of corn are running slightly heavier than last year and above the average for the corresponding period in the last 10 years.

Oats are not reaching primary markets as fast as they are disappearing and reserves accumulated at terminals are being whittled down steadily. The visible supply has dropped from 20,488,000 bushels five weeks ago to 18,058,000 bushels at the present time.

Cash Grain Markets.

The range of cash grain prices for the week ending December 12 was:

CHICAGO—Wheat—No. 2 red, $1.06@1.09; No. 3 red, $1.08 3-4@1.11 1-4; No. 2 hard, $1.03 1-2@1.09 1-2; No. 3 hard, $1.04@1.06. Oats—No. 2 white, 44 1-2@47c; No. 3 white, 43 1-2@45 1-2c; No. 4 white, 41@44 1-2c. Rye—69@71 3-4c. Barley—55@81c.

Seed and Feed.

The cloverseed market is dull and prices have sagged partly under the influence of the weakness in grains.

Demand for byproducts feeds from retailers and consumers remains light.

Hay Markets Generally Firm.

Hay markets are holding rather firm on the better grades which are unusually scarce. Demand is not considered broad. Owing to high freight rates, local conditions as to supply or demand have more than their usual effect on prices. Pasturage has been available until late in the year in the southern states, reducing the demand from that section, although high prices for cotton have made southern buyers more willing to pay good prices for hay.

Sharp Decline in Eggs.

Egg prices declined sharply last week. Mild weather recently has favored production and fresh eggs have been received from sections which usually are not shipping at this time of year. Within a month a seasonal increase in receipts can be expected so that prices probably have passed the high point for this fall and winter, but the market is unlikely to go much lower in the next few weeks.

Receipts of heavy fowls are light, with demand for them active, so that prices have been firm at higher levels. The supply of turkeys, ducks and geese is liberal.

Butter and Cheese.

Butter prices lost the advance scored early in the week, but a firm undertone was apparent at the close, as receipts were well cleaned up. High prices are causing consumers to cut down slightly on their purchases, however, and reports indicate that butter production is increasing, so that prices probably will not seek much higher levels.

Cheese prices were unsettled last week and the undertone of the market was exceedingly soft.

Fruits and Vegetables.

Carlot shipments of potatoes in the last two weeks have declined about 40 per cent and are running about 15 per cent below the corresponding period last year. Eastern markets were lower last week, with midwestern centers practically steady. Northern round whites, United States No. 1, are quoted at $1 to $1.10 per 100 pounds sacked, with sacked Russets at $1.75 to $1.85 on the Chicago market. Prices are likely to strengthen during the next two months if shipments from producing sections do not enlarge again.

Carlots shipments of apples have declined about 50 per cent in the last two weeks, and in the last few days, have been smaller than at the corresponding time a year ago for the first time since the end of August. Consuming markets remain rather dull, however, with prices practically unchanged. Midwestern Northern Spies are quoted at $5.50 to $6 in Chicago, Jonathans and Greenings at $5 to $5.50, with Baldwins at $4 to $4.50. Northwestern extra fancy medium to large Jonathans are bringing $2 to $2.25 per box on midwestern markets and Delicious $3.15 to $3.35. Based on records for previous years, a further decrease of 25 to 40 per cent in carlot shipments of apples may take place in the next month or two, which may cause prices to strengthen.

LATEST QUOTATIONS.

The Live Stock Market.

PORTLAND, Ore., Dec. 15.—Cattle—Beef steers, good grade, $6.75@7.75; medium grade, $5.50@6.75; common, $4.25@5.50; beef cows and heifers, good grade, $4.75@5.65; medium, $3.50@4.75; common, $3@3.50; canners and cutters, $1.50@3; bologna and butcher bulls, $2.75@4; feeder steers, $5@5.50.

Calves—Medium to choice, 100 pounds down, $9@10; 190 to 260 pounds, $6.50@9; 260 pounds up, $4.50@6.50; culls and common, $3.50@4.50.

Hogs—150 to 200 pounds, medium, good and choice, $7.10@7.60; 200 to 250 pounds, $6.50@7.10; 250 pounds up, $6@6.50; packing hogs, smooth, $5@6.50; packing hogs, rough, $4@5; slaughter pigs, $6.50@7.10; feeder pigs, $6@7.

Sheep and lambs—Lambs, 84 pounds down, medium, good and choice, $10@11; culls and common, $7.50@10; yearling wethers, medium to choice, all weights, $6@9; wethers, $5.50@8; ewes, medium to choice, $3.50@6.50.

SPOKANE, Wash., Dec. 15.—Cattle—Prime steers, $6.75@7.25; good to choice steers, $6.25@6.75; medium to good steers, $5.50@6.25; fair

My Happiest Christmas--Prize Contest

(Continued from page one.)

Christmas had always meant denial and sacrifice, for there were four children to be clothed and fed and kept in school. And mother worked awfully hard to keep her family together and give us an education. There wasn't much money over and above the necessities of life. And now we were all grown and married, and in homes of our own, and she could spend her money as she wanted to and do some of the things she had longed to do for such a long time. There were no taxes to be paid, no water rent, nothing except the fun of spending, where she had always had to save.

My oldest sister lived in the same town I did, married and with two small sons, but mother thought it would be more fun to have all come to my house for Christmas, and it was so decided.

For about a week mother worked on that dinner. Mince pies, cranberry jelly, pumpkin pies, plum pudding, everything in the old way. The house was fragrant with spices and all the good Christmas smells. And then the turkey, grown on my sister's ranch. And gifts!—one for every one she had ever given gifts to and for some she had always wanted to, but couldn't afford to. Cards to every one she ever knew. And how she did buy things for her children, to make up for some of the things she hadn't been able to do when we were small! Her dear old face just beamed with love and joy at being alive and well.

Christmas day came—cold and clear, with snow squeaking under the sleighs—and Molly and the boys. And every one talked a great deal, and had such fun! Dinner was duly appreciated, and then it was time for them to go, and when the house was quiet again mother drew a long breath and said, "This is the happiest Christmas I can remember since you children were all small and your father was living."

And before another Christmas she had joined that husband and father in the Big Beyond. Now, when Christmas comes, I think of that last one that she was with us, and believe it brings the happiest memory of any.

MRS. EARL BRITTAIN.
Inchelium, Wash.

In Spite of Her Dress

WINS THIRD PRIZE.

Looking back and reflecting over my Christmases, I find the one with my first Christmas tree looms up with the most pleasant memories.

I was 16. The program committee had asked me to recite. My teacher selected the piece—a long poem. When I saw it I said, "It will take me a year to learn that." But I learned it well in the two weeks.

The afternoon before I helped decorate the tree and labeled presents. Of the hundreds of packages I wrote names on, not one for poor little me! Yes, I was little for my age, and very poor; an orphan—not a relative within 40 miles of me; working for my board, going to school. As I walked home that evening I was feeling blue. I had to wear a dark dress, not new by two winters, but made over. All the other girls that were to take part in the program had told me they were going to wear white dresses. I went to the kitchen and took a good cry before I could prepare the evening meal.

A young man called, just as we were sitting down to supper, to ask if he could take me to the Christmas tree. I was so surprised, so pleased! How my heart pounded—my first beau! When I went to dress and took another look at the old green-and-plaid dress I had another cry. Then I donned it and was on my way. As we stepped into the church the sight I'll never forget. The most beautiful, dazzling sight I had ever seen! As I walked down the aisle and the young man sat beside me, the envy of all the girls, I forgot the old green dress and my red eyes. But I was soon to be reminded. I had to go up behind the curtain with nine other girls, all dressed in their nice, white dresses. I begged the committee to excuse me, but they would not. Presently my number was called. I walked out under an arch between two laden trees and faced the audience. Some one said, behind the curtain, "Now do your best!" I guess I did, for there was laughter, then tears in the crowd as I went on. When I finished, imagine my surprise when I was caught in somebody's arms and carried off the stage, saying all sorts of complimentary things in my ear, the girls hugging me and saying nice things!

I went out into the crowd, and Santa handed the presents to little girls that carried them to the persons as their names were called. How surprised I was when my name was called, not only once, but again and again! I left the church with my arms full of packages, so happy—oh, so happy!—that if I cried it was for joy; so happy and excited I could not sleep.

The next day (Christmas day) I was invited out to dinner where were all the boys and girls of my class in school and the neighborhood. I had the jolliest, happiest day of my life.

The beauty of it is, I learned it doesn't take fine clothes to make real friends and true happiness.

MRS. MARION WARREN.
Chesaw, Wash.

Faces at the Doorway

WINS A PRIZE.

As a comparison of conditions that were with conditions that are, I am attempting to tell of my most happy Christmas—one that stands out most vividly in memory's storehouse.

It is the memory of a small, rude log cabin on an infertile homestead in northern Wisconsin, near the border of the lumbering industry. Everything was crude inside and out. There were times when it even became a question as to the source of the next meal. Poverty? Yes!—from the modern standpoint. No telephones nor electric lights; no movies nor joyriding; nothing but nature and nature's God and the inner man, not necessarily unhappy because of the lack of things.

It took perseverance to acquire even the rudiments of an education under such conditions, but some way it was accomplished for the writer of this, so that in due season she took a place among the teachers. Later it became advisable to find employment a little more distant, where there could be no week-ends at home—only the Yuletide visit—for transportation had its difficulties.

This new location was in an older, settled community, with well regulated farm homes and better social conditions. How old was the writer? Well, about 22—a mere girl.

It was not possible to reach home entirely by train. A shorter way was by sleigh, a goodly number of miles of which led over a winter logging road. As time approached the Christmastide, the longing for home—the mother and father—became so intense the waiting was painful. But Christmas dawned at last and soon the cutter and bells were at the door, and the journey of 50 miles over the snow and through the woods was begun. It was an ideal day—good sleighing, good weather.

You who have been in a similar situation will understand how the sweet anticipations just tumbled over each other. There was nothing in this world that half equaled that rude, unhomelike pile of logs that sheltered father and mother. Home was wherever were father and mother.

In that sleigh were tucked away a few presents—a little better in grade, perhaps, than usual. But of what consequence were presents! They were only things! There was something better being given—a daughter's love.

But every journey comes to an end—even life's journey—and one of the dearest pictures on memory's wall is the father and mother in the doorway of that rude log cabin.

MRS. F. AGNES DAMMAN.
Ellensburg, Wash.

Wi.h Husband and Children

WINS A PRIZE.

As I look back over my 35 Christmases I believe the one a year from the last was my happiest, or it will always seem so to me.

We lived nine miles from the town of Republic. My husband carried the mail and stopped at home for his lunch at noon. So we planned I would go on into town the day before Christmas and come back with him in the evening, after he had routed his mail for the following Monday. The ride into town was dreadfully cold—quite a lot of snow on the ground, and one of those blizzard days when the cold stings your nose and chills to the very bone.

Well, we got to town about dark and I went to buy presents for the children, whom we left at home, and my husband cared for mail and horses. He had two rooms rented that he bached in, and while I did my trading he started his fire and supper and came down looking for me, whom he finally found in one of the stores.

I'll skip the washing of dishes and supper-getting, but we made short work of them, as we had nine miles to drive that night. But we got started at last, and when we reached home it was cold and snowing, with a pale moon trying to show us the way. I went into the house, while my husband put up the team. There was a nice fire burning. The children had put on a big kettle of soup. It was hot, and popcorn was on the table, with our presents that they had saved their money to buy. I looked at the children, who were all in bed, to see if they were covered and warm. Little sister was asleep on big sister's arm and they were all asleep.

Next morning there was some great excitement, as Santa forgot to mark his presents and Mrs. Santa's hands were too cold.

That doesn't seem much of a Christmas, dear friends, but my good husband never saw another, for he was killed before another year rolled by, while logging. And as I look back it will always seem the happiest, yet saddest Christmas I ever had.

Endicott, Wash. MRS. EVA J. PECK.

Snappy Old Santa Claus

WINS A PRIZE.

The day after I had come from school I ran to the Lyadells' home and heard the children discussing Christmas presents, and I made up my mind to see that they should get them.

* * *

It was Christmas eve. The night was cold but lovely, in its coat of white—not snow, but frost. A slight wind was rustling the leaves to and fro, as I was walking briskly, with heavy packs of presents under my arms.

At last the house could be seen and merry laughter heard way into the woods. My heart began to beat loudly, as the thought came of being the "Santy." I ran up the porch steps and made much racket, but dropped about two presents only; and while the children pushed and laughed to see who could get to the door first I ran around the back way and into the kitchen.

"Oh!" said Luis, the oldest, with much surprise.

"Tanta Claus!" said Robert, half in fear and half in joy.

The children were very much surprised, to be sure, but I told them. "You know, children, I'm a snappy old Santa Claus, and while you were outside I jumped from the chimney, and here I am. Now," I said, "let us all sing 'Silent Night.'"

The children quickly responded to this, and to me never had a song sounded more beautiful. SELVA HANSON.
Vancouver, Wash.

Watched for Santa

WINS A PRIZE.

Would Santa Claus never come? I had been waiting on this certain Christmas after every one else had retired, to see if just this once I could see Santa put the presents into the stockings, but it didn't seem that he was coming. There were four stockings hung up before the fireplace, which my little brothers and sisters and I had hung there, but they had gone quietly off to bed, to wake in the morning and enjoy their toys, while I had stayed up, thinking I should get to boast of seeing Santa to them.

Instead, it looked as if I were to be fooled and no Santa Claus would come.

Squeak! squeak! What was that? I heard a noise as if some one were sneaking up on me. I looked quickly about, but no one was in sight, so I resumed my former position and continued to watch. I must have fallen asleep almost immediately after that, as I began to dream a terrible dream about Santa. I dreamed that he was chasing me around and around a huge stocking, which he had filled with snakes, toads and switches and had put my name upon.

I don't know how long I continued to dream, but I finally was awakened by a terrible bump. I awoke and found I had fallen out of my chair. I looked around in surprise and found that all the stockings were full but mine. Oh, how terrible! Santa had visited while I was asleep and, having found I was such a bad boy, had left mine empty.

I began to cry and crept off to bed and cried myself to sleep, but when I found, in the morning, that my stocking was as full as the rest I resolved never to try that again. RONALD MARCHANT.
Lynden, Wash.

Money Goes a Long Way

WINS A PRIZE.

The happiest Christmas I ever had was when I was 12 years old. As there were five children at home to clothe and feed, and wages were very small those days, there was not much money to spend on Christmas presents.

We were living on a little rented farm, and we raised quite a number of chickens. A few days before Christmas my father gave me 10 young roosters and said if I sold them I could have the money for them to buy myself a dress and what other things I could get. So my 9-year-old brother and I got two gunnysacks and put the chickens into them. We had to walk and carry them about five miles to the nearest little town.

As the roads were very bad those days, and especially in the winter, we decided to walk the track. We got along well until we were nearly at our destination, when two of the roosters got away from us. Such a time we did have catching them, for there were only brush and woods all around us! But we finally caught them and proceeded on our way.

We tried to sell them at the stores, but could not, so we went from house to house until we had disposed of them all at 25 cents apiece. I now had $2.50 to spend and it was a good deal of money, I thought. I felt proud, for I never had had so much money before.

We then went to the store to do our shopping. It had been my intention to buy my dress first and then buy what I could with what I had left. I had also planned on getting each one of the family some little present, too.

As soon as I got into the store and saw all the Christmas things I forgot about my dress. I commenced looking around at all the things, and studied and figured how much I could spend on each one. But I finally got a present for each one. Maybe it would be interesting to hear what I bought for such a small amount of money, so I will tell you what I got. A shaving mug for father, a fascinator (or shawl) for mother, a rubber ball for each of my two older brothers, a small set of dishes for my little sister and a little cup and saucer for my baby brother. Besides, I got a few oranges, some candy and nuts and a few candles and also my dress. But, as I had waited until the last to get my dress, I did not have much money left. I bought some 2-cent calico to make me a winter dress. But I did not mind that, as we were satisfied with almost any kind of dress those days.

My brother and I walked home with our hands and arms full, but happy. Father and mother laughed at me for getting such a nice, warm winter dress, but they did not scold.

We had a tree put up in the front room, and then every one had to stay out until I got the tree trimmed and everything ready. As soon as I got the candles lit I called them all in. They all came in dressed up in their best, as we always did on Christmas eve. We all sang Christmas songs and then I gave each one his present and bag of nuts and candy. Every one was pleased, but I think I was the happiest of all. MRS. LARUE CLARK.
Sumas, Wash.

In the Minnesota Woods

HONORABLE MENTION.

There is one Christmas that stands out brightly in my memory. I had just finished high school and had gone to spend a few months with an uncle in northern Minnesota, where he had taken a homestead near the Canadian line. It was a place of "moskegs" and heavy timber—a land of homesteaders and log cabins.

On Christmas morning many of the settlers gathered at the little log schoolhouse, where services were held. There was no minister, but some of the older members read a few chapters from the Bible and everybody sang—and how they did sing! It seemed their voices filled that vast woodland.

After the services the bachelors—and there were many—were taken home by the different families to share their Christmas dinners.

At my uncle's home, neither goose nor turkey graced the festive board, but since he owned a band of sheep, there was roast leg of mutton, which had been boned and stuffed with dressing—a most appetizing dish. There were choice cuts of venison cooked to perfection and it was then that I tasted my first bear meat—meat of a cub bear—which I thought at the time to be a tender, juicy pork roast. Blueberry pies, cranberry sauce (small fruits of this wooded country) delicious home-made candies and countless other goodies vied for the place of honor, for there was no dearth of good things to eat.

Since my uncle's cabin was the roomiest in the country, early in the evening sleighs loaded with people—old and young—began to arrive for the Christmas dance. They came bundled in furs, for the weather was stinging cold, but it seemed that it only served to increase their gayety and high spirits. The air of the cabin was redolent with a pine fragrance and lanterns on all sides furnished a mellow glow of light. The cabin walls were beautifully festooned with boughs of red fir gathered from the woods and some sort of lovely green vine bearing clusters or bright red berries.

Two squeaky violins and a wheezy old organ furnished glorious music (or so it seemed then) for the jolliest crowd I ever saw. They danced and laughed and lunched and chatted until the first gray of early morning shone in the sky.

At the time I believed that sheer novelty had made that Christmas so delightful, but, now that passing years have given me clearer vision, I realize that that alone was not the chief reason for my enjoyment, but rather the spirit of good fellowship that permeated everything. Those men and women, living the quiet and lonely life of the woods, were hungry for companionship and whether they met to sing praises or to indulge in good, wholesome pleasure—an indefinable something—an atmosphere of sincerity, a spirit of appreciation and genuine comradship was there at its best. And with that knowledge has come the realization that no matter where or what the conditions may be, there can be no real Christmas where the true Christmas spirit is lacking.

Fairfield, Wash. AMATA MARION.

Even as a Grain of Mustard Seed—

Long ago it was written that faith, even tho small as a grain of mustard seed, could remove mountains.

Henry Ford, with unbounded confidence, has labored for more than twenty years to remove the mountain of difficulty standing in the way of modern transportation. He has sought always to give the world practical transportation at low cost.

Many have wondered why Ford products, whose remarkable value time and use have proved, can be produced, sold and serviced for so little.

It is because from forest and mine to finished product there exists a marvelous coordination of every phase of manufacture. From scores of widely scattered Ford-owned sources the raw materials are brought by Ford transportation units to Ford plants, moulded, machined and assembled into cars, trucks and tractors.

At no time is the high quality of manufacture or workmanship beyond the supervision of the builders. Unhindered by changing market conditions, Ford products are built uniformly sturdy and dependable year after year.

This unusual development of industrial economy delivers your Ford car, truck or tractor at the lowest possible cost.

LIVESTOCK AND DAIRY

To Test Milk

By E. V. ELLINGTON, Head Department of Dairy Husbandry, W. S. C.

Is it an unusual feature for a cow to test 8 per cent butterfat? Could you give me the figures in butterfat of the highest testing cow in the state? I have a Babcock tester, but have no directions with it. Could you tell me the strength of acid to use? J. A. C. Tiger, Wash.

It is not unusual for the milk of cows of the Jersey or Guernsey breed to test as high as 8 per cent butterfat at certain times of their lactation period. Especially will they test high when the end of their lactation period approaches. It is unusual for any cow to average 8 per cent for their entire lactation period.

The highest average test for the state of Washington that we have a record of in this office was made by a Jersey cow named The Pickle of St. Mawes, owned by Carlyon & Hogg, Bellingham, Wash., who as a 2-year-old averaged 7.04 per cent during the year. In order to average this, her milk tested above 8 per cent during certain months.

The specific gravity of sulphuric acid used in testing milk should be 1.82 to 1.83. The following directions should be followed in securing an accurate butterfat test for milk:

1. Clean all glassware with washing powder and hot water and rinse with clean, hot water.
2. Secure a representative sample of milk and mix thoroughly by pouring from one vessel to another. Have the milk at 60 degrees to 70 degrees F.
3. Measure out 17.6 cc. of milk with pipette and transfer to whole milk test bottle. Be sure to get all of milk in bottle. Blow out the last drop in the pipette.
4. Always run tests in duplicate.
5. Measure out 17.5 cc. of commercial sulphuric acid with specific gravity of 1.82 to 1.83 and add to test bottle. If acid is too strong, add less. If too weak, add more.
6. Mix the acid and milk by a rotary motion of the bottle. The above amount of acids should give the desired coffee brown color, which on standing turns black.
7. Label bottle on glazed surface to facilitate identification.
8. Place the bottles in centrifugal machine so that the machine is properly balanced, and start machine slowly.
9. After attaining proper speed, continue for five minutes.
10. Stop machine slowly to prevent breakage.
11. Shake contents of bottle and add clean, hot water (180 degrees F.) until contents are brought up to the base of the neck.
12. Replace bottles in centrifuge and whirl for two minutes at proper speed.
13. Fill bottles with clean hot water (180 degrees F.) until fat column lies between the 0 and 8 per cent marks on the scale.
14. Place in centrifuge and whirl again for one minute at proper speed.
15. Place bottles in hot water bath (120 to 140 degrees F.) and leave here for five minutes. The water should come just above the fat column.
16. Measure length of fat column with the aid of a piar of dividers by placing each point at the extreme ends of the column.
17. Without changing speed, transfer one point to the zero point of the scale and other point will fall upon the division representing the actual per cent of butter fat in that particular sample of milk.
18. Record tests and color of fat column and empty contents of test bottles in stone waste jar or ground immediately, shaking bottles up and down while draining.
19. Thoroughly clean all glassware with washing powder and hot water. Rince with hot water.

VETERINARY

By DR. S. B. NELSON.

Foot Rot—My cows suddenly go lame. Their feet swell and crack from the heel through between the toes. Their feet seem hot and very sore. There is a mattery substance in the cracked places. A. A. R.
Yelm, Wash.

Your cattle are affected with foot rot, due to a bacterial infection. A simple treatment which has frequently given results is to take a small rope and draw between the claws or toes until the wound is broadened. Wipe off the blood and apply tar daily.

Caked Udder—I have a heifer that had a badly caked bag when she freshened. The inflammation has gone but there are two hard lumps about the size of an egg between the two front teats. C. B. F.
Loon Lake, Wash.

You may get pretty good results from painting the two lumps with tincture of iodine after each milking. The iodine frequently assists in absorbing growth formations of this kind.

Scours—I have a heifer that has had scours for several months. She has lost weight. R. R.
Startup, Wash.

Give the heifer a tablespoonful of listerine in a quart of water and then follow with teaspoon doses morning, noon and night. After giving that for two days, then give it twice a day and then once a day as necessary. You will possibly also find it helpful to give her a little later one ounce of compound tincture of gentian in a pint of water once daily.

Abortion—I have sold my herd milk cows because of abortion. Can you tell me how and what to use to disinfect my barns, etc., so that other cows may be brought on the place without danger of contracting this disease? Will the rain and sunlight disinfect the pasture so it will be safe after a few weeks?
Moffetts, Wash. R. V. C.

A very good way of disinfecting your stable is to clean out all the contents and litter, sweeping it quite clean; then follow by making a solution of one quart of corrosive sublimate (which is a very deadly poison) to 1000 quarts of water. Use a broom and scrub the floor, mangers and walls just thoroughly. In three or four days follow this with a similar treatment, except use a saturated solution of bluestone copper sulphate; use plenty of it. Five or six days later give the barn a through whitewashing, putting it on the floor, gutter, mangers, walls and everything. The strong sunlight will generally disinfect anything, and destroy nearly all bacteria. The rain will not.

Two-Day Dairy School

A two-day dairy school was held at Olympia December 5 and 6 with the cooperation of E. B. Stookey, the county agent, and a number of the prominent dairymen of the county.

The following men took part on the program: Robert Cowan, county agent for Grays Harbor county, spoke on the balanced ration; E. B. Stookey, on the feed value of the common feeds; T. A. Rutledge of Little Rock, told how he raised the butterfat production of his herd over 100 pounds during the last year; C. C. Aspinwall of Olympia handled the tuberculosis test; and Otto J. Hill, county cow tester, discussed the value of records in regard to the balanced ration.

GENERAL ADVERTISING.

NEW LAMP BURNS 94 PER CENT AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 95% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 161 Union Ave., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

POULTRY AND RABBITS

Poultry Show

By Puget Sound Association

The Puget Sound Poultry association at Seattle will stage another show this winter, January 1 to 6.

Arthur C. Smith of St. Paul has been chosen to judge the show. Mr. Smith has judged at Madison Square for five consecutive years; five years at the Chicago National; at St. Louis, Buffalo, Topeka, California State fair, Tacoma; Great Falls, Mont., and Minnesota State fair eight times in 12 years. He is a member of three standard revision committees; edited the last two Standards of Perfection and was principal author of the American Plymouth Rock Standard and Breed book.

The premiums will be 40, 20 and 10 per cent of all entry money, and in addition there will be $20 in cash prizes. There will also be a great many specials given to the third, fourth and fifth prizes, which are being donated by merchants of the city. Three $50 cups will be donated; two will be given by Seattle news publishers and one by Mayor Brown of Seattle.

An interesting feature of this year's show will be the drawing of several heavyweight fowls, a chance being given each visitor when he purchases his ticket. A similar chance will be given for a turkey which will be given away at the end of the show week. Members of the association have donated a number of lightweight birds, which will be auctioned off during the show and the proceeds given to charity.

Poultry Management

The six weeks' course in poultry management on a commercial scale offered each year at the western Washington experiment station at Puyallup, will open Monday, January 7, 1924. The work includes practice and lectures in poultry management, construction of poultry houses and equipment and the control of poultry diseases. Last year more than one hundred persons were enrolled in the school.

The students taking the course this year will have access to all flocks maintained at the station except the contest flocks.

In the contest houses will be entries from New York, Kentucky, Tennessee, Ohio, Iowa, Illinois, California, Idaho, Montana, Oregon, Washington and Canada.

Laying House

Allows 3 1-2 Square Feet to Bird

There are many commercial poultrymen in western Washington who have adopted the Shoup plan of laying house and they are finding it a practical house for this climate. L. C. Beals Jr. of Vashon, King county, has just erected a new laying house which he believes is an improvement over the Shoup house although the general features are unchanged.

The building has a capacity for 500 hens which allows 3 1-2 square feet for each bird. It is built in three sections and the birds in each division are kept apart from the others largely to even up the floor space. The advantages as suggested by Mr. Beals are:

1. The floor space is four feet wider, which allows four feet more of feed hopper and more space per bird.
2. There is an extra set of trapnests fitted to one side of the partition.
3. The drinking fount is in the center of the front section and is protected from winds and cold weather.
4. Glass ventilators are placed at the top of each section, which open both to the north and south, thus affording more perfect ventilation.
5. The roof is lower and keeps the house warmer in winter yet stays cool in summer because of the ventilators.
6. The open front is raised just 15 inches, which is just enough to keep the draft off the birds, the curtains being used only in extreme bad weather.
7. The height of the drop boards has been lowered two inches, thus making it a little more accessible to the birds since no ladders are used.
8. Glass windows at each side of the drinking fount and below the wire front afford more light on the floor.

The curtains are in sections and tacked on frames, which are stored in the feed room when not in use. The water troughs are made from caves troughing, but the water is regulated by a spring tap that trips from the weight of the water. The dropping boards are kept covered with sand to aid in cleaning. The trapnests are the Shoup type, but each section has two batteries, one under the drop boards and the other along the side of the partition.

The feed and litter carrier extends the full length of the house and can be used for the egg container and record sheets. The house is built a few feet off the ground and the bottom is boarded up, leaving only enough space between the boards for ventilation. The birds kept in this house are under the State Accredited Trapnest association and the records are kept in duplicate.

Mr. Beals has a total of from 3500 to 4000 birds on the farm and the pullets are trapped an entire year before they are placed in the laying house, from where the eggs are sold as hatching eggs. The greater part of the eggs in the spring months are sold for hatching and they go to all parts of the United States. Incubators are used and a number of chicks hatched each spring, but these are used largely to supply the increase of the flock.

WHATCOM POULTRY SCHOOL.

The third annual Whatcom county poultry school will be held at Meridian in the high school building during the three days beginning December 27. The speakers that will appear this year are W. D. Buchanan, Mrs. George R. Shoup, B. C. Young of Bellingham; A. D. Foster, D. S. McDole of the Seattle office of the Washington Cooperative Egg and Poultry association; Dr. W. T. Johnson of the Western Washington experiment station at Puyallup, and H. B. Carroll Jr., the county agent.

CARBIDE RESIDUE DISINFECTS.

That the residue left after carbide has been used for gas lighting and cooking has a value as a disinfectant is claimed by those who have used this form of lighting. One user says that he disinfects his stables and poultry houses with it and has no trouble with any of the common pests of live stock and poultry. He also uses it on his garden soil in the same manner as lime, not as a fertilizer, but as a sweetener of the soil to make available the fertility elements already in the soil.

Vita Gland Tablets Start Hens Laying in Twenty-four Hours

Hens have glands just like humans and also require vitamines. Because they directly stimulate the organs involved in egg production the mysterious newly discovered VITA GLAND Tablets, crushed into hens' drinking water, turn winter loafers into busy layers almost over night. Science has discovered how to control egg production with essential vitamines, and gland extract that works directly on the OVARIAN or EGG producing gland of the hen. The wonderful effect of gland stimulation is shown by a simple test. Government experiment stations report that hens properly fed vitamines, etc., lay 300 eggs as against the sixty of the average hen. "Leg weakness of baby chicks due to insufficient Vitamine B," says The Official Bulletin. Also says: "Hens start laying at an average age of 139 days when fed vitamines."

Get One Box Free

EGGS, EGGS, EGGS and fine healthy chicks, prosperous flocks without fuss or bother or drugs or expensive feeds can be had. Just drop these tablets into drinking water. So simple, to double your profits. Chickens now full of pep and life. Nests full of eggs. Summer production at winter prices. So confident are the Alexander Laboratories, the manufacturer of the original and genuine VITA GLAND tablets, that you will be amazed at results that they offer to send a free box for your own use. This is how. Send no money, just name. They will mail two boxes, each regular one dollar size, a generous supply. When they arrive deposit only a few cents postage and one dollar with postman. When your neighbor sees the wonderful increase of eggs in your nests let him have one box for a dollar and thus your box has cost you nothing. $5000 in big Kansas City bank guarantees your satisfaction or money back without question, so write today and get dozens of extra eggs this simple easy way. Write ALEXANDER LABORATORIES, 9037 Gateway Station, Kansas City, Mo.

ORCHARD AND GARDEN

Believes in the Fruit-Growing Industry

(Continued from page three.)

the first methods that was used. We worked out a six-year rotation plan that showed good results on one of the worst infested fields we had. The crops used were strawberries the first two years, plowing the patch up after harvesting the second crop. The second year a crop of fall wheat was seeded after the land could be gotten in shape and clover was seeded in the following spring. The fourth year was a crop of hay or grain and the fifth year clover, which was plowed up and a crop of potatoes planted the sixth year.

"This plan got results in a community where the weevil had practically ruined one crop of healthy vines that had grown a good crop of fruit the year previous.

Effect of Temperature.

An interesting paper on the "Temperature as a Limiting Factor in Fruit Growing" was given by Professor O. M. Morris, head of the department of horticulture at the state college. He pointed out the fact that the trees in the northwest get a greater number of hours of sunlight than those in other sections because of our being closer to the North Pole. This helps the growth of the trees to a certain degree and it has its effect on the resultant fruit crop.

"High temperatures often cause soft fruits, which in some cases have poor flavor. When there is low humidity and high temperature combined there is more apt to be a high flavor in the fruit. Milder temperatures will sometimes cause fruit to have poorer quality, while the maximum amount of sunlight will often increase the sugar content of the fruit and therefore lower the storage qualities.

"Temperature has much to do with the condition the tree goes into the dormant period and the mild weather that is prevalent in the coastal section results in a longer growing season and less winterkill than is common in the inland states. A careful study of temperatures and their relation to fruit growing will reveal many solutions to problems that have so far been unsolved."

Home Nursery Stock.

"Prior to the war the nurseries in this county secured practically all of their seedlings from Europe because they could buy them cheaper than they could grow them at home. When they were forced to grow their own after the war began they found that it could not only be done easily, but that there was a greater percentage of the plants that would grow, when reset," according to F. A. Wiggins of the Washington Nursery company at Toppenish. "Large plantings were made in the middle west, but when it was tried in the northwest it was found that they would grow well here also.

"One of the advantages in raising seedlings at home is in keeping out all plant and insect pests that are sure to come in with the imported stock. Much damage has already been done in this regard and the result has been a state quarantine that prohibits all outside importations. The nurseries are now growing practically all of their own seedlings and are getting help in an educational way from the United States department of agriculture.

"In fact, it has been a godsend to the industry because it is giving the nurseries an opportunity to carry out investigations that would otherwise be impractical. For instance, we have found that root stalks can be started from root cuttings by simply planting short pieces in the ground. By selecting these plants we hope to be able to find a variety of pear that will be immune from blight. Other qualities are possible, even though some of them may take several years to perfect.

"As for real improvements in propagation methods, the nursery industry has made more progress in the last 10 years than it had in the previous 50 years and there is no telling what can be accompublished by consistent efforts."

Other talks were given by J. A. Scollard, president of the United Dairymen's association; D. S. McDole of the Cooperative Egg and Poultry association and Majorly, manager of the Washington State D. O. Lively, manager of the Washington State Chamber of Commerce.

Enjoyable Banquet.

One of the bright lights of the convention was a banquet given complimentary to the members by J. J. Sullivan of Everett. There were close to 100 who attended. F. W. Wiggin of Toppenish acted as toastmaster and called on the following men: W. O. Eckert of Grapeview, president of the association, T. A. Noble of the Everett Chamber of Commerce, Thomas J. Hill of the Seattle Chamber of Commerce, F. W. Graham of Seattle, Dr. E. S. Barnes, president of the North Pacific Berry Growers, and J. J. Sullivan. The last day of the convention was put on with the cooperation of the extension service of the state college, the western Washington experiment station at Puyallup, M. D. Armstrong, extension horticulturist of the state college, and Arnold Z. Smith, the county agent. Two very interesting talks were given on the subject of orchard practices by M. E. McCollam and H. D. Locklin, both from the experiment station.

The subject of disease control was well handled by Arthur Frank of the experiment station at Puyallup, and Miss Nell M. Barnett of Seattle gave the viewpoint of a fruit picker. The growers took advantage of this opportunity to ask questions during the discussions, which helped to make the talks all the more interesting.

When Pear Trees Bear

By O. M. MORRIS,
Department of Horticulture.

Please let me know through your paper the number of years it takes before the different varieties of pears bear and when they will have a full crop. J. C. S.
Edmonds, Wash.

The local environment conditions modify somewhat the age trees attain in different districts before coming into fruit production. The methods of tillage and the type of pruning given also modify this to some extent.

If Bartletts are pruned no more than is positively necessary to select the main frame work branches and give them the advantage, the trees will usually begin bearing about five years of age and will be in commercial production by the time they are 8 years old. Bosc will average one or two years later. Flemish Beauty, Winter Nellis, Clairgeau, Seckel and Le Conte will average about with the Bosc. The Anjou is usually two or three years later than the Bartlett in coming into bearing. Heavy pruning of the young trees generally tends to delay fruit production.

Wapato Fall Sown Lettuce

Although results from fall sowing of lettuce around Wapato, on the Yakima Indian reservation, have not been all that was expected this fall, some late August plantings were taken off early in November and with moderate weather it was hoped to move 18 or 20 carloads before the season closed. Some of the shipments netted growers $1 per crate of three and one-half to four dozen heads. About 150 acres have been seeded to lettuce this fall for the spring harvest, and it is expected that about the same acreage will be set next spring with plants grown indoors during the winter.

PLANNING SMALL ORCHARD.

The home fruit plat should be planned carefully and, in general, with a view to supplying fruit continuously throughout the year, either in the fresh state or canned or otherwise conserved.

SEATTLE'S home-like hotel

A famous land mark—the favorite hotel for out-of-town shoppers, business people and visitors. Noted art collection now a permanent attraction. Only a few minutes walk from all steamers, convenient to railway depots, close to shopping center.

About Farm Machines *and the* McCormick-Deering Line

THE U. S. Department of Agriculture has shown that farm equipment is one of the smallest items in the cost of farming, the yearly average being only 4 to 8% of the total.

Farm machines are sold for less money, pound for pound and quality for quality, than any other similar manufactured article. Yet in profitable farming there is nothing more important than good equipment.

Check the cost of your farm machines against the rest of your investment — land, buildings, labor, live stock, etc.— and your figures will probably agree with the average.

Now is a good time to inspect the condition of your machines. Most of them have been used lately. Are any of them worn out? Are some of them so out of date that it does not pay to use them? Are there new methods on the market you should be adopting? Have you been getting along without certain machines that would save you money and labor?

To help you take an inventory of your needs, we are printing the full McCormick-Deering line.

The purpose of all McCormick-Deering machines is to make farming better, easier, and more profitable for their owners. They are all useful, modern, and efficient. The Harvester Company's work of standardization has simplified the variety of lines, combining many good features in fewer essential machines. Power farming is at its best where McCormick-Deering Tractors [15-30 and 10-20] are used with McCormick-Deering machines for drawbar and belt work. They are made to work together.

We will send you descriptive material, catalogs, details as to sizes and styles on any machine or line that may need attention on your farm. Write the address below. Call on the McCormick-Deering dealer; he will always be at your service.

"BACK OF EVERY SACK IS THE SPERRY SPIRIT OF RESPONSIBILITY"

He's there to back you up!

When you open a sack of Sperry Surelay—or any other Sperry Feed—there's one thing you *don't* see. Yet, it is the most important "ingredient" in the feed—RESPONSIBILITY. Not yours—ours! The responsibility of the Sperry Flour Co! The responsibility of its men, its mills, its methods!

And this "spirit" of Sperry responsibility is there to back *you* up! It is unseen and unheralded. But it is a living thing just the same. And on the job every minute!

Nor does this feeling of responsibility end when the sack of Sperry Feed is delivered to you. It is not enough, in the eyes of the Sperry Flour Co., to produce a top-grade, uniform feed at a fair-square price. We go further than that! We make it our business to back up not only the *feed* but the *feeder!*

Remember that whenever you say "Sperry" to your feed dealer. It is the one thing in the poultry business that never "lays down" on the job—the Sperry Spirit of Responsibility!

Whether you are a beginner or a veteran in the poultry business—

We want to back you up with real help! That's why we maintain numerous service headquarters. Put your poultry problems up to us! Get the benefit of our years of practical experience, together with our laboratory and research work. No charge! No obligation! And send for the Sperry Service Bulletin, *"Why Mixed Feeds"*—written by Dr. Kaupp, a great national authority. Use the coupon—it's free!

Poultrymen Have Chicken Dinner

Frequently the producer, the distributor and the consumer get together, but all too seldom in a spirit of harmony and concord. One evening recently, however, all three gathered about the board and sang "Blest Be the Tie that Binds," figuratively speaking.

The occasion was the first annual chicken dinner of the Farmers' Union Egg and Poultry association. The place, Spokane. The time, December 11. Eggs were not served—for two reasons: Only "boarder" hens were killed for the dinner and eggs such as those produced by the association members were worth a nickel apiece that day and the producers needed the money.

About 50 poultrymen were present, and nearly that many non-producing consumers, among the latter being President Carl S. Evans of the Spokane Central Labor council and a few ladies, members of the Spokane Card and Label league. One of the women explained that the Card and Label league was composed of those who "spend the dollars earned by members of labor organizations," and declared that they were anxious to buy the "union-made" eggs of the Farmers' Union association.

Egg Dealers Tell Why.

Present also were two Spokane egg dealers who have espoused the cause of cooperation to the extent of buying their eggs from the cooperative association. These dealers, F. H. Fuller and H. L. Shand, told those present why they used association eggs and their reasons seemed to please the officers and members of the associations: First, they could depend on the quality of the graded eggs as marketed by the association, which has put into practice the system of grading similar to that employed by the larger association on the west side of the state that has made good in a big way; second, they like to deal with an organization because it is more economical and efficient than buying here on a sort of "orchard run" basis, as Mr. Fuller expressed it; third, organization tends to stabilize supply, quality and market.

While egg production and marketing were the chief topics of the program that followed the chicken dinner, other products were represented by those present. W. J. Robinson, manager of the Washington Wheat Growers' association; S. O. Poole, manager of the fruit marketing department of the farmers' union, and Charles Waggoner, director of the Inland Empire Dairy Producers' association, were among the speakers who delivered two-minute talks.

Other speakers included Professor C. F. Cassels of the poultry department of the state college; Carl S. Evans of the Spokane Labor council; R. H. McMillan, director of the farmers' union; A. C. Whisler of the poultry association, and J. Q. Adams, president of the farmers' union. The meeting was presided over by D. F. Mitchell, president of the poultry association.

Fruit Growers Meet

Earl F. Barnhill of Wenatchee was elected president of the Washington Horticultural association at the annual meeting at Yakima last week. Other officers elected or reelected are: Luke Powell, Yakima, vice president; L. M. Hatch, Alderton, second vice president; C. L. Robinson, Olympia, secretary-treasurer; and J. S. Peterson, Omak, and C. M. Lockwood, Spokane, directors for three-year periods. The next annual meeting will be held at Wenatchee on a date determined by the executive committee. The next summer session will be held at Spokane.

Cooperative marketing was the outstanding subject of the convention, though the usual educational addresses on problems of production were heard. A comprehensive report of the convention by a staff representative will appear in a later issue of The Washington Farmer.

VITAMINES RESPOND VARIOUSLY.

The cooking of milk lessens the amount of vitamine available in it; the cooking of tomatoes does not destroy their vitamine content.

HAVE MOVED TO CALIFORNIA AND WILL trade hundred thirty acres land near Manson, Yakima county, Washington, for lots or other property in California; Los Angeles section preferred. Write for full details, L. W. Clark, 423 Sharon bldg., San Francisco, Cal.

A Tale of the Flatwoods

THE RED LOCK

By DAVID ANDERSON
Author of *The Blue Moon*

Copyright, 1922, by the Bobbs-Merrill Co.

SYNOPSIS.

Red Colin was a sea pirate away back when piracy was ruler of the sea, and his heart was as black as his head was red. Once in a while in the generations of his descendants a drop of his devilish blood broke out in a victim, evidenced by a lock of red hair and a nature of wickedness or worthlessness. The victim in which this story is interested was Ken Colin, brother of Texie Colin, one of the most loveable of lovely girls. Ken, Texie and big Jack Warhope, the orphan boy bound out to Texie's money-lending father, old Simon Colin, were childhood playmates, but when they had grown up Ken wanted to see the world and left the Flatwoods along the Wabash for adventure in the east.

Our story begins on the evening when the new preacher is to arrive to take the place of Minister Mason, who has just died. Jack and Texie are greatly excited about his arrival because he is from the college which Ken attended a short time after leaving home and from which, as the president of the college had reported, the boy with the red lock was expelled after he had committed a series of crimes. The new preacher, the Rev. Caleb Hopkins, had known Ken in college, and they anxiously waited further word as to the waywardness of the misguided lad. That evening after supper he told them of the misconduct of Ken.

"Then came his sensational killing of a gambler over a card game and his escape into the great underworld of the city, since which nothing has been heard of him," he told them in concluding the unhappy story.

Supper over, Mr. Hopkins went over to the home of the Widow Mason, leaving Jack, Texie and Simon Colin to reflect upon what he had told them. The young people sat upon the kitchen porch while the old man in the parlor opened letters that came on the evening stage. Suddenly the housekeeper screamed for help and Jack and Texie rushed in to find Texie's father collapsed on the floor, a letter grasped in his hand. A fainting spell had seized him, and when he was made comfortable the young folks discovered the cause, a letter from Ken Colin, written, it said, on his death and cursing his father for long-cherished grievances.

"I reckon I've got but a few minutes to live," the letter closed. "I'd give half of them to see Sis. But if you'd come in right now I'd try to get up and kick you out."

CHAPTER VI
The Room Was Deadly Still

BUCKEYE was the capital of the Flatwoods. Snugged away in a packet of the bluffs where Eagle Run breaks through into the valley of the Wabash, it never woke up but once—when a rumor trickled in from somewhere that a railroad was headed that way. But the rumor subsided, Buckeye went back to sleep, and the big world forgot that it was there.

Zeke Polick's general store was the largest in the place. Zeke sold everything, from onions sets to grindstones, including whisky—barrels of it, from "squirrel" to mellow old Bourbon—right from the spigot. A flatwoodsman could buy it as he wanted it, from a drink to a jugful, but "furriners" had to be identified to get it in quantities less than a quart—an identification quite as exacting, though of a different sort, as that required to borrow money from Simon Colin—which is another way of saying that a man's face went as far in the Flatwoods as his note.

In the mellow evening of the day following the old banker's collapse over the remarkable letter—no syllable of which had been allowed to get beyond the red-roofed cottage—Uncle Nick Wiffles, a tall, iron-gray old man with twinkling eyes, sat smoking a quietly meditative, profoundly reposeful pipe in the one chair of the store, his accustomed seat, a sort of post of honor that no one else dreamed of occupying when he was present—his by right of age, of wit, of wisdom—dean of the rustic university, the village store.

It was a variegated company that grouped around him in the dim half-light of the feeble coal-oil lamp, with its charred wick and smoke-stained chimney.

There was Zeke Polick, the postmaster and proprietor of the store, a little old rag of a man, half lying across the counter and leaning on one skinny elbow, his scraggy hatchet face thrust forward with an air of alert sharpness, as if on perpetual lookout for any chance nickel that might happen to stray in range.

Al Counterman, a one-eyed fisherman, with a complexion like a smoke-dried bacon rind, dangled his long legs from a half emptied goods box, more waggishness twinkling from his one eye than twinkled from most other men's two.

Then there was the blacksmith, with his hard arms, and hands so horny they could hold a piece of iron hot enough to sizzle water. Village loafers were there—aimless, doless drifters who had nowhere else to go; whose shabby clothes and empty heads would admit them to no society except that shifting, cosmopolitan circle at the village store.

Besides these, Loge Belden, said to be a Kentucky mountain man, tall, lanky and just comfortably in his prime, with a reddish-sandy mustache and goatee, leaned on the end of the counter nearest the door, before him the fast disappearing remainder of an uncorked bottle of "squirrel" that he had bought earlier in the day. Little was known of him except that he and his sister had lately moved into an old cabin on one of Simon Colin's farms up at the head of Eagle Hollow, and that he had taken the job of clearing the timber from an upland field and making it ready for the plow. Some said he had been a pearl fisher, others that he was "wanted" down at Vincennes. The Flatwoods held him at arm's length—and waited.

"Ricollect Jim Rummidge, don't y'u, Zeke?" Uncle Nick remarked as the postmaster, during a lull in the noisy talk, shifted to his other elbow.

"Jim Rummidge, reckon I do that," piped Zeke's thin voice, as he leaned forward across the counter, pulling nervously at two straggling tufts of slate-gray whiskers that struggled for existence upon the sapless parchment at either corner of his bony chin. "Ain't go'n t' f'rgit 'im, nuther, not right soon I ain't. Went off t' M'souri owin' me a dollar and thirty-four cents, and, I never did git it."

"Aw, well, Zeke, don't worry none," Uncle Nick rejoined, "y'u've wormed it outen some other pore devil b' this time, more'n likely."

The blacksmith slapped his heavy hand down on his thigh, the other laughed, the fisherman's frisky eye twinkled and he swore merrily.

Zeke said never a word, but the expression in his little rat eyes might have meant any number of things. He hung sprawled across the counter fumbling the two straggling tufts of whiskers, and one could almost imagine that his dry face crackled as it wrinkled up in a stingy grin.

"Blamedest feller—that Jim Rummidge," Uncle Nick went on. "Ther' werdn't nothin' but what him an' that brother Si o' his'n wus up to when they wus youngsters. Ricollect one Sund'y Jim tuck it into 'is head t' yoke up a couple o' calves ol' man Rummidge wus calc'latin' to' save f'r oxen, an' 'e coaxed Si t' play off sick with 'im so's they wouldn't haf t' go t' church. Well, the ol' folks werdn't more'n out o' sight when up jumps Jim, an' Si right after 'im, an' they breaks f'r the barn-lot t' yoke up them yearlin's.

"The calves wus purty tame, an' they gits the yoke on 'em all right. Then Jim gits b'hind 'em an' commences t' slap 'em with the rope. But they jist stood thar, leanin' ag'inst one another, feet all sprawled out, an' nary a budge could 'e git out'n 'em.

"'Thunder!' says Jim—y'n know, Zeke, what a lisp 'e had on 'im—'Thunder,' says 'e, 'I kin outpull them calves m'thelf.'

"'Cayn't,' says Si.

"'Kin,' says Jim.

"An' what does 'e do but ups an' ties the rope around 'im.

The grimy blacksmith roared; the crowd joined in; the fisherman laughed till a tear stood in his one eye.

"Sh-h-h—!" warned Zeke, in the midst of the uproar, "hyur comes the parson."

Almost with the words, the dapper, nervously alert young preacher entered the door. In spite of his studious air of riper years, he couldn't have been more than six or seven and twenty. The trade-mark of his calling was hung all over him. His shiny boots, elaborate frock coat, neck stock, high hat and enormous spectacles fairly shrieked schoolmaster.

And yet one could not help wondering why fate had set such a man as the Reverend Caleb Hopkins to the business of keeping school. Dissociated with all suggestion of theology and chalk, his figure was about all that could be desired in a man—height a trifle above medium; well set up; lithe and graceful—and his face—nothing short of handsome, only for a certain air of peering severity.

To look at him as he entered the door—six feet of lithe young manhood smothering under its ascetic, not to say somber, investure—one would never have guessed that there was anything wrong with his health, and yet that was precisely what had brought him to the Flatwoods.

And now as he walked past Loge Belden slouched against the counter, he stopped and stood staring curiously at him.

Belden straightened, pushed his bottle back, and seemed on the point of resenting the look, when the Reverend Caleb quickly turned away, and with a nod passed the group around Uncle Nick and went on to the postoffice window at the rear of the room.

"What d' y'u say we ask 'im t' g' 'long," whispered Al Counterman to Uncle Nick as the young minister stood waiting for Zeke Polick to adjust his dirty spectacles on his thin nose, turn up the smoky lamp and laboriously sort over the meager bunch of letters and postcards.

"Y'u da'sn't," Uncle Nick answered guardedly.

"Watch me, an' y'u'll see whuther I da'st. I ain't a-feared of no parson.

"Mr. Hopkins," he called a moment later, stepping in front of the young preacher as he passed toward the door, "a passel of us fellers is goin' a-seinin' up around Alpine island in the mornin'. I reckon y'u

"Thar set this hyur new parson an' that Texie gal on that bench."

wouldn't like t' go long, n'r nothin', would y'u?"

"Who are going did you say?"

"Oh, me an' Uncle Nick, thar, an' Big Jack Warhope."

"When do you expect to start?"

"Aw, some'r's around the near side o' seven, I reckon. Y'u nee'n't bring nothin' but some ol' boots an' ol' clo's t' wade in."

"I have promised to be at the social tomorrow evening at the schoolhouse, which, I am informed, is always held in celebration of the last day of school. Do you expect to return in time for that?"

"Aw, we'll be back by noon—easy."

"Let me see," pondered the preacher, not willing to compromise his dignity by appearing overanxious. "This is Wednesday; tomorrow is Thursday—I believe I may safely allow myself this recreation. I shall be most happy to avail myself of your kind invitation."

The fisherman stood fingering his hat and staring at the door long after the minister had passed out, the twinkle gone from his puckered one eye, a puzzled look on his smoked bacon rind of a face.

"Well, I'll be derned! Wouldn't that singe y'ur whiskers. I dunno yit whuther he said 'e'd come 'r not."

Uncle Nick threw his head back and fairly roared, while the postmaster rumpled up his dry countenance into a half begrudged grin.

"Course he said 'e'd come. Whar wus you brung up at, anyhow? Didn't y'u hyur 'im say he'd 'vail 'imself of y'ur kind invytation? Course he's calc'latin' t' come. Zeke, we'll haf t' git Al a new spellin' book an' start 'm t' school next fall."

"Well," muttered the fisherman, as his face cleared and the twinkle came back to his waggish one eye, "all I got t' say is: he can use up more dictionary a-sayin' yes than any man I ever hear'd. But ain't 'e some looker—barrin' that killin' rig he's hobbled up in?"

"Most too good-lookin'," piped Zeke.

"Aw, I dunno, Zeke," Uncle Nick observed, "'tain't go'n t' hurt 'im none. Only drawback I can see is: it's a pity t' waste all them good looks on a preacher."

"Anyhow," put in Al, his rakish eye dancing at Uncle Nick's remark, "if he wus ugly enough t' tree the devil up a thorn bush, I don't 'low it'd he'p 'is preachin' none. An' I reckon he shore must be some preacher, 'r he wouldn't be where 'e is—teachin' in a college that makes preachers. I bet y'u he can cipher plum' through any 'rethmetic you can hand 'im, an' they say he's posted on purt nigh ever'thing that's goin' on, r' ever went on."

"That ain't neither hyur n'r there," argued Zeke. "That ain't no more'n his duty, an' what the taxpayers back whar 'e come from 'r' payin' 'im f'r."

"Duty 'r no duty," rejoined the fisherman, "it's a dern' good sign."

"All the same," snapped the postmaster, "if I had a gal—which I ain't got, n'r never had—I wouldn't want 'er throwed with 'im like Sime Colin's gal is, an' she shouldn't be, nuther."

"Aw, well, Zeke," drawled Uncle Nick, "if she tuck after 'er daddy in looks, I reckon they wouldn't be no great danger."

The raucous laugh that followed from the crowd jarred the postmaster. If the blood could have shown through the dry parchment of his cheeks, his face would have flushed. As it was, he squirmed around off the counter, nervously twisting his two tufts of ragged whiskers, his little black beads of eyes snapping excitedly.

"I don't care what y'u say," he shrilled in his high, thin voice, "Texie Colin's got good looks enough, if that's what y'u want. It ain't like 'im, t' take in a teetotal furriner that-a-way, preacher 'r no preacher—don't keer if 'e was a classmate o' Ken's. That ain't no recommend, nohow—bein' a classmate o' Ken's—f'r he wus as orn'ry as the devil makes 'em. They're boun' t' be throwed t'gether more'n they ough't' be, an' nobody else about the place but ol' Mis' Curry—an' her back in the kitchen half the time, an' the other half out about the smokehouse 'r garden."

"Ain't much more'n a kid, nuther," the blacksmith remarked, apparently thoughfully impressed, as he searched his pockets for a match.

"Som'er's around 17 'r 18——"

The postmaster glanced across at Uncle Nick, as if for confirmation of his statement. The old man took the pipe from between his lips and sat tapping the stem against his thumb nail.

"I 'low y'ur not fur off," he answered meditatively to the postmaster's look, the pipe stem against his thumb nail seeming to tick of the years as he cast them up. "Big Jack's 20 past, an' I've hear'n say Texie wus three years younger to a day. That would bring 'er right around 17 'r 18."

"An' s'poson' she is—every lick of it," the postmaster went on. "A gal ain't got none too much sense at 18—an' ther' ain't no gal but what can be drawed on, if the right feller comes along."

"Hol' on thar, Zeke, hol' on!" Uncle Nick had been leaning back against a cracker barrel. His chair came down with a bang, and his voice rang like struck metal. "You're goin' a leetle too fur. They's thousan's an' tens o' thousan's o' gals that can't be drawed on, no matter what feller comes along.

"Ther's a heap more nice gals than men, ther' never wus a bad gal but what ther' wus a bad man first. An' after it's over—she's done. All endurin' the years t' come her heart has t' be drug in the dust, while the man—no, I won't call 'im man, an' I cayn't call im beast, f'r the beasts 'r clean compared—carries 'is head as high as b'fore. I tell y'u, people hain't never looked at them things right. The man d'serves t' be judged accordin' t' the same way the gal is—only more so."

A hush fell over the group. The blacksmith sat patting his foot softly on the floor. Presently his calloused hand came down upon his knee with a sounding slap, while his eyes, dull at most time from long looking into the forge fire, lighted with the fervor of his feelings.

"Good f'r you, Uncle Nick! I agree with y'u complete. That's my kind o' preachin'—right t' the p'int. The new parson 'imse'f cayn't beat that, let 'im do 'is dern'dest."

"My sentiments to a hair," chimed in the fisherman. "I alw'ys takes the gal's part an' be damn'd t' the man. That's how I lost this eye. It wus when—but no matter, I hain't never b'grudged it——"

The fisherman's lone eye settled into a vacant stare at a crack in the floor; the hard lines of his face deepened. Could the others have glimpsed back of that seamed and weathered-beaten mask they might have read there the deep graven memory of a day that was dead—a dream and an awakening, a romance and a tragedy—that had driven him, as the storm drives the driftwood, with what the world

(Continued on page twenty.)

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

Dear Mrs. Barland: How glad I am that the letter of Mrs. E. C. B. was not entirely lost. I think she has done a good work by writing it, when so many for political reasons are trying to make it apparent that the farmers are prospering and are only "professional grumblers."

Now that a few of our senators are trying to change conditions and adjust matters so that we can make a living, why not let the truth be known instead of keeping quiet and allowing the real estate men and the bankers to do our advertising for us.

Many of us are too tired and heart sick to do anything and others are like Mrs. E. C. B., afraid their letters will not be published. I am sure they will be. The editors depend upon reports from the farmers, so why not tell them the truth?

An article from Boise published in The Farmer a few weeks ago, entitled, "Liquidation by Farmers Shows Good Increase," recites how a banker in a near-by community is quoted as having told one of his farmer patrons that he would no longer carry his note, and goes on to say that "the farmer sold his potatoes and began to cash in on his dairy products, and paid off his note." Now we know just how that banker had watched the farmer until he made enough to pay him. No matter how much he lost on his potatoes or how little he had to take for his cows, he was forced to sell them, just as they all have been.

Everything is the same here as Mrs. E. C. B. writes, and several other places. It is not only the ones who are buying their farms who are suffering, but the oldest residents who had their farms all paid for. At the beginning of the war we were urged, as a patriotic duty, to buy more land and implements to raise more wheat for the starving nations; some went into debt and when payments could not be met they were sold out. These same places are now being offered for sale and people from other states are being urged to come and buy them and get rich.

Mrs. E. C. B. speaks of praying. Dear friend that is one thing that is not denied us and although we can not attend church or take part in the regular and popular form, we can pray silently and continually, for prayer is the earnest desire of the heart, or communion of the spirit of God within us. He is a God of love and unchangeable and we should take a few minutes every day to be still and feel His love and accept the peace which He promises to give to all who ask it.

We all desire better times and we should work toward the end of making them better and I believe they will come; let us trust they come before long.

Best wishes to the Circle friends and Mrs. Barland.

MRS. C. J. B. Idaho.

Mrs. G. E. H. desires very much to know how to make hair switches. Can some of you tell her how? If so, make your directions very clear. A. W. B.

Dear Mrs. Barland: Will you please publish a good recipe for chocolate caramel and coconut filling for cake. Also will you tell me if there is a Bible school in any of the following states: Virginia, Ohio, Illinois, Iowa and Missouri? I would like to attend a school where nothing but the Bible is taught. Ever your friend, "SUNKIST."

Dear "Sunkist": There are Bible schools of much merit in Chicago, Ill., and in Minneapolis, Minn. I am not able to say if there are any in the other states you mention. But if you will address a letter of inquiry to the Moody Bible institute, Chicago, Ill., I am quite sure you can get all needed information concerning the matter. Watch home recipes for other information. A. W. BARLAND.

Dear Mrs. Barland: In answer to a question as to how to keep geraniums over winter I will say that after digging them up I place them in cans or pails or anything that will hold soil, and put them in the cellar and water them, but do not keep them wet, as that will rot them.

Early in the spring I pick off all the dead leaves and set them outdoors in the day time and carry them in at night while nights are cold.

Geraniums grown in the house may also be kept in the cellar this way.

I have kept mine in this way for years, but have never tried hanging them up.

Oregon. MR. C.

Dear Mrs. Barland: You letter sent out to all of us has more sense packed into one paragraph than many of us can put into a whole letter.

Now will some of you experienced mothers tell me, should a child of 20 months be punished or not?

My boy is a lively one; he takes anything he can lay his hands upon to play with and doesn't care for toys. If he sees me build a fire he tries to build one, too, and this is dangerous.

I taught him to feed himself and now he wants to feed the baby, who is but 6 months old. He doesn't talk, so how can I tell if he understands when I talk to him? He does understand somewhat, but I hate to punish him unless I am sure he knows what it is all about.

He is my first child and I do want him to mind and I really want to know if he is just full of mischief or really naughty.

Washington. MRS. M. V. C.

Home Recipes

Watercress sandwiches—Chop the cress coarsely and season with salt, pepper and a few drops of vinegar. Blend with cottage cheese and spread between bread.

Chopped hard-boiled eggs and chopped pickle or olives, or both, mixed with salad dressing also makes a fine filling for sandwiches. A. W. B.

Bran muffins—Two cups bran, 1 cup graham flour, 1-2 cup molasses, pinch of salt, 1 small teaspoon soda, 1 cup sour milk, if sweet is used add heaping teaspoon of baking powder mixed in a heaping tablespoon of white flour (but don't omit the soda as the molasses requires its use), 1 egg. These eaten at least once a day are better than medicine.

MRS. N. R. C.

Bran muffins, No. 2—Two cups each of bran, flour and sour milk, 2 teaspoons of soda, 2 tablespoons of molasses, 1 teaspoon salt, 1 egg. Bake in gem pans in a hot oven. EMMA HINSDALE.

Easy White Cake—Place the unbeaten whites of 2 eggs in a measuring cup. Fill to one-half of melted butter, then fill to the top with sweet milk. Add 1 1-2 cups flour, 1 heaping teaspoon baking powder, 1 cup sugar; add teaspoon vanilla and a bit of salt. Beat all these together for at least 5 minutes as the success of this cake depends on the beating. This is an easy cake for a little girl to make.

A. W. B.

Circus cookies: One-half cup butter, one cup sugar, yolks of four eggs, one teaspoon of vanilla, two cups of flour, two teaspoons baking powder a little salt. No other shortening should be used in place of butter for perfect flavor.

To make: Cream butter and sugar, add yolks of eggs without beating, add vanilla and put salt and baking powder in the flour and mix it with the other ingredients into a dough. Do not attempt to roll, but with a teaspoon take out a little of the dough, just what you can lift easily on the teaspoon and pat it out round, put a raisin or a nut meat in the center and lay on a buttered pan and bake like any cookies. This recipe will make about three dozen.

MRS. J. A. W.

Peanut fudge: Two cups sugar, one-half cup peanut butter, one-half cup of water; bring to a boil slowly. To test, when it boils up thick take a little on a plate and stir and when it will stand up take off the fire at once and beat till thick, but not too thick to run when turned into the tin. Just before it is too hard check off into squares. This is very easy to make and is cheap and excellent. Try it.

Wash. MRS. H. S. D.

Hot Lunches

Hot lunches for school children and the necessity for a supervised lunch period were topics discussed in the parent-teachers' meeting at Short's schoolhouse two miles out of Snohomish Tuesday night. Mrs. Harriet D. Stow, home demonstration agent for Snohomish county, stated that the practice of having a supervised lunch period was proving commendable because it not only did away with the children's habit of playing ball with one hand and carrying a sandwich in the other, thus making too hasty a meal of the lunch, but is also coming to mean that the lunches will reach a higher standard of nutritive value. In schools where it is impossible for the hot lunch plan to be developed, the supervised lunch period is the next best thing in establishing a better balanced meal for the children.

The growing, gathering and using of mangels as an important item in the dairy cow's menu, are receiving special attention at the western Washington experiment station at Puyallup, according to M. E. McCollam, agronomy expert. The work is being done along the line of investigation of gathering and production costs and storage experimentation.

"Soap and Water"

Whenever you wash anything with soap and water—woolens, silks, cottons, linens, woodwork, tiling, dishes or glassware: whenever you scour anything with a cleanser—pots, pans, stoves, sinks—always add 20 Mule Team Borax.

It's Nature's Greatest Water Softener and Cleanser. It is a solvent and an antiseptic. It prevents woolens from shrinking. It protects colors from fading. It dissolves grease and dirt. It cleans antiseptically clean.

20 Mule Team Borax is as valuable an addition to soap as soap is to water. In washing anything use soap and water AND 20 Mule Team Borax. Sold at Grocers and Druggists. Any grocer you buy soap from has 20 Mule Team Borax. Ask him.

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade Which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores.

Wells & Richardson Co., Burlington, Vt.

Free to the Ruptured

Reduced Fac-Simile Medal

STUART'S PLAPAO-PADS are different from the truss, being mechanico-chemico applicators made self-adhesive purposely to hold the distended muscles securely in place. No straps, buckles or spring attached—cannot slip, so cannot chafe or press against the pubic bone. Thousands have successfully treated themselves at home without hindrance from work—most obstinate cases conquered.

Reduced Fac-Simile Grand Prix

Soft as velvet—easy to apply—inexpensive—awarded Gold Medal and Grand Prix. Process of recovery is natural, so afterwards no further use for trusses. We prove it by sending trial of Plapao absolutely FREE. Write name on coupon and send today.

Plapao Co., 991 Stuart Bldg., St. Louis, Mo.

High Points in News of the Week

That a small number of senators and representatives in congress will be able throughout the session at least to retard action upon matters that have the support of the regular republicans or the regular democrats is indicated by the difficulties encountered in both the senate and the house during the first two weeks of the session. As reported last week, the house was enabled to organize, electing Congressman Gillette of Massachusetts speaker, only after a deadlock of three days, during which the small "progressive" membership refused to vote for either the republican or the democratic candidate. Election finally came about following agreement by the republican organization that the adoption of certain rules under which the house would operate would be a matter of open action on the floor of the house. At this writing procedure in the house is being retarded by the failure of the so-called progressive element to agree to the committee memberships planned by the regular republican organization. Agreement will probably be reached in a few days, however, so that the house can proceed with business.

In the senate a deadlock existed during the last week equal to that which delayed organization of the house. This deadlock followed an attempt to choose a chairman of the interstate commerce committee. The democrats supported Senator Smith of South Carolina, the regular republicans Senator Cummins of Iowa, and the "progressives" of both parties Senator La Follette of Wisconsin. On one ballot the democrats came within one vote of electing their candidate. When adjournment was taken at the end of the week there was little visible evidence of likelihood of early compromise, but it is probable that before this reaches the reader the organization will have taken place, so that the new congress can proceed to the discussion of the many big problems that are before it.

* * *

That America will participate in an unofficial way in investigating certain of the basic economic problems of Europe is indicated by a statement issued by President Coolidge last week. The allied reparations commission is establishing two committees of experts, one to consider means of balancing the budget of Germany and the measures to be taken to stabilize German currency and the other to take up the question of the capital which has been removed from Germany. In his statement President Coolidge said that this government would look with favor upon the participation of American experts on these committees, but made it clear that they would be acting in private capacities and not as official delegates from these countries. European countries with membership on the reparations commission have indicated pleasure at the possibility of having these Americans on the committee, even in the private capacities suggested.

* * *

A case has been brought in the supreme court of the District of Columbia which will test the constitutionality of the provision in the present tariff law which permits the president to increase the tariff on an imported product when he deems such increase justifiable within the protective purpose of the act. The case is brought by the Norwegian Nitrogen Products company of New York, importers of sodium nitrate. It is a specific application that a proposed increase of 50 per cent in the tariff on nitrates, as requested by the American Nitrogen Products company at Seattle, Wash., be denied on the grounds of the unconstitutionality of the act.

* * *

The outstanding feature of the annual meeting of the American Farm Bureau federation in Chicago December 10, 11 and 12, was the victory of J. W. Coverdale, who had resigned as secretary over the Peteet-Sapiro group and the resignation of Walton Peteet as director of marketing, Mr. Coverdale later being elected secretary and treasurer of the federation with the additional office of director of organization. Next week THE FARMER will publish an informative article by a staff correspondent on the American Farm Bureau situation as revealed by this fifth annual meeting.

* * *

Senator Borah of Idaho has introduced a bill in congress for the repeal of the Panama canal tolls in so far as they affect American coastwise shipping. He has also introduced a bill amending the transportation act to prohibit a greater freight charge for a short haul than for a long haul in cases where the short haul is comparatively long. This latter measure would, if passed, prohibit the charging of a higher rate from the east to interior points of the Pacific northwest than from the east direct to Pacific coast terminals.

* * *

Premier Baldwin of England has called for an assembly of parliament on January 8. Whether or not he and his cabinet will resign depends largely upon the spirit of cooperation or antagonism manifested, when parliment assembles, by the labor and liberal parties. The labor party has more members in parliament than either the conservatives or the liberals, but no party has a majority.

* * *

Representative Sterling of South Dakota has introduced a measure in congress providing for an increase of 50 per cent in the tariff on wheat. This would make the tariff 45 cents a bushel.

More Men Wanted NOW

To Earn $150 to $300 per Month

Learn Auto Tractor Engineering

We want 100 men who are willing to accept positions at above wage. No experience necessary, as we train you in very short time, as Engineers, Auto Mechanics, Electrical Experts, Truck Drivers, Chauffeurs, Salesmen, Battery, Tire Vulcanizers and Welders. Many good jobs now open. Before joining any other school it will pay you to see Hemphill's, the million dollar trade school system. We give free transfer and life scholarships to our 16 schools in U. S. A. and Canada. The largest and most practical system in the world. Write at once for free poster and list of jobs from Free Employment Dept.

Hemphill Auto Electrical & Tractor Schools

304 E. Pike St., Seattle; 1115 Granville St., Vancouver, B. C.; 228 9th Ave. E., Calgary, Alta; 580 Main St., Winnipeg, Man., Canada; or 107 Nicolett Ave., Minneapolis, Minn. Write nearest branch to you. We pay railway fare to nearest branch.

$5,013,851 In New Taxable Property

The electric light and power companies expended $5,013,851 during the year 1922 in Washington for additions and extensions to serve new customers.

All of this property has gone upon the tax rolls of the state, helping to share the burden of taxation.

If permitted to go ahead with their plans for serving the people of Washington, it is conservatively estimated the electric light and power companies will, within the next ten years, expend over $100,000,000 --all in taxable property. This is practically 6 per cent of the entire assessed valuation of all property in Washington as shown by 1920 census.

Compare this with the "Seattle program," which would have all of these companies owned and operated by the state and all tax-exempt.

Seattle now has over $108,000,000 of tax-exempt property and its tax rate is the highest in the state. Every tax-payer in Washington is now contributing to Seattle's experiment in Municipal ownership.

Bits of Fun for Everyone

The Absent-minded Rector.

"How will you have your roast beef—rare or well done?" the rector was asked by his host.

"Well done," replied the rector, and added absent-mindedly, "good and faithful servant."—Union News.

Cleanly Spoken.

The boy was home at last. He had tried his luck out west in the mines for five years with little success. And now he was broke.

"John," cried his old mother, seizing both his hands in greeting, "you have hardly changed at all."

"I know, mother," he answered in tremulous tones, "but there ain't no laundries out there."—Swamp Angel.

Foolish Question.

A young lady entered a fur store and a polite salesman came forward.

"I want to get a muff," she said.

"Yes'm," said the salesman. "What fur?"

The young lady looked surprised.

"Why," she said, "to keep my hands warm, of course!"—Pittsburgh Christian Advocate.

Old Satan Himself.

The daughter of a certain strict-principled old deacon had attended a dance the previous night, much against her father's wishes. When she appeared for breakfast the next morning he greeted her with the words:

"Good morning, daughter of Satan."

To which the maiden respectfully replied:

"Good morning, father." — Cornell Widow.

Wanted to Collect.

Irate customer—I bought a car of you several weeks ago, and you said if anything went wrong you'd supply the broken parts.

Dealer—Yes.

Irate customer—I'd like to get a nose, a shoulder blade and a big toe.—Manitoba Free Press.

Barbara Chesnut is a 10-year-old girl living in east Washington, in Spokane county. Barbara is attending training school and is in the third grade. Barbara's father takes THE FARMER. Barbara has a real twin, her sister Shirley. Welcome to the Corner, Barbara.

Irene Bilyou lives in northeastern Washington in Ferry county, near the Kettle river. She is 11 years old and had a birthday on Thanksgiving. They had a fine time at school on Halloween, Irene says.

Paul A. Fox lives in Franklin county, Wash., and tells us of his sow and seven pigs. They are Duroc Jersey purebred pigs. Paul took them to the county fair and won two first prizes and a second prize. He is quite a farmer, we think. Paul also has a colt named Chubie.

An interesting letter has been received from a little 7-year-old Washington boy whose name in Bruce Bain. He lives in southwest Washington, in Cowlitz county. Bruce has a nice horse and sometimes he goes after the cows. His mother is his teacher and he is in the third grade. Aunt Nellie welcomes you to the Corner, Bruce, and will look for another letter.

Almeda Reagan tells Aunt Nellie in a letter received recently that she would like to join the Corner. Aunt Nellie welcomes Almeda.

Fern E. Hodges is a new Washington cousin and sends Aunt Nellie an interesting letter. Fern is a Camp Fire girl. This is her letter: "I am a member of the Iyega Camp Fire. I have 70 honors now and I will soon be a fire maker; that is the second rank. Arlowene Riggin is a guardian, also a fire maker. I have been reading the letters of the cousins and would also like to be one. My cousin, Margie McNielly, is staying with me and going to school. We surely have lovely times together."

Birthday Greetings

THURSDAY, December 20—Idella Bernice Johnson, 10 years old; Lois Larsen, 10; Bert Smith, 8.

SUNDAY, December 23—Milford C. Salmons, 11 years old.

MONDAY, December 24—Bill Cettla, 11 years old; Erick Cettla, 11.

TUESDAY, December 25—Ethel Hinderbrandt, 8 years old.

WEDNESDAY, December 26—Beryl McCarthy, 11 years old; Mildred Pendleton, 11.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Sybil Moe, May Hilliard, Belle Dufur, Mildred Stockett, Aldena Dippel, Anna Mae Tarter, Lawrence Gallagher, Bruce Bain, Almeda Reagan, Barbara Chesnut, Irene Bilyeu, Paul A. Fox, Edna Eller, Mellie Florence Reid, Ira Fossett, Edith Spurgeon, Evelyn Starr, Dorothy Ruger, Anatha Reimann, Marion Little, Florence Geiger.

BEDTIME STORIES

By THORNTON W. BURGESS.

THE JUMPING MATCH.

Who does the very best he can,
Of him no more we ask.
'Tis all that any one can do,
Whatever be the task.

Jumper the hare had guessed who it was that Jimmy Skunk had found to jump against him, and Jumper knew that he hadn't a chance in the world to beat them. But Jumper didn't mind. He was perfectly willing to admit that they were better jumpers than he, but he was also perfectly willing to go out and try if it would give any pleasure to his neighbors who had gathered to see the jumping match. This was the right way to feel. Jumper didn't know it, but right away, as soon as he said that he would jump his best in spite of the fact that he knew that he would be beaten, his neighbors began to think more of him. Their respect for him grew immensely. It always is that way. Everybody admires those who are ready and willing to do the very best they can, although that best may not be very much.

Peter Rabbit was to be the judge. Ordinarily Peter would have felt very proud and important, but this time he didn't. You see, he had been made judge so that he couldn't claim any unfairness on anybody's part if Jumper should be beaten. Jumper went back a little way, ran a bit, and then made a beautiful, long jump. It really was a wonderful jump, and everybody said so. They clapped their hands and some of them began to say openly that they didn't believe any one could beat it. Then Jumper tried again and did a little better than before. A third time he tried, and this was the best jump of all, and he knew and everybody knew that he had done his very best.

"Next!" called Peter Rabbit.

There was a great stretching of necks to see who was going to jump next, for, like Peter Rabbit, none of the others had been able to think of any one who could possibly jump as well as Jumper the hare. Jimmy Skunk disappeared among the trees of the green forest for a few minutes, and when he returned who do you think trotted at his heels? Why, Lightfoot the deer! Everybody but Jumper looked very foolish. They had forgotten all about Lightfoot and how wonderfully he could jump.

Then he ran swiftly and bounded into the air.

He went back a little way, just as Jumper had done. Then he ran swiftly and bounded into the air. It seemed to Peter as if he never would come down again. But he did, and where his sharp hoofs struck the earth was a great deal beyond the last mark of Jumper the hare. Everybody clapped, and Jumper clapped loudest of all.

"What did I tell you?" he cried to Peter Rabbit. "Didn't I tell you that there was a friend of mine who could outjump me?"

Lightfoot, holding his head up proudly, went back and tried again, and this time everybody cried "Ha!" his jump was so high and so far. Surely there was no one else in all the green forest who could jump like that. Lightfoot looked as if that was his opinion, but Jumper the hare merely looked at Jimmy Skunk and winked. Jimmy winked back. Then Jumper knew that Jimmy was going to bring forth the greatest of all jumpers in the green forest.

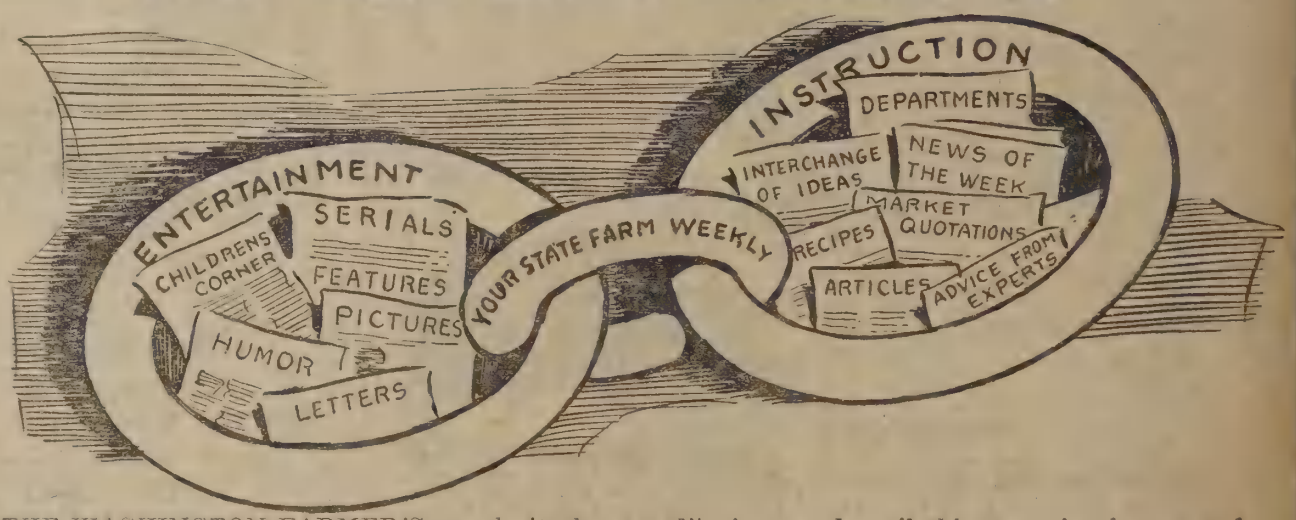
LINKED TOGETHER

TWO GREAT ESSENTIALS FOR THE FARM HOME MAGAZINE-



THE WASHINGTON FARMER'S popularity has steadily increased until this magazine is now welcomed in every nook and corner of the Evergreen state.

The reason is that it is just suited to the needs and likes of the thousands. It offers an ideal combination of informative and entertaining matter. It gives the facts which you can use in solving your problems, and also prints live fiction, interesting pictures, bits of wit and humor, side-lights on forceful personalities and other entertaining matter.

This variety of worth-while articles can be obtained at a low subscription price on account of our cooperative plan. For the eighth season we ask our readers to assist us in eliminating the subscription agent. We say to you, "Send in your subscription orders direct." Get your neighbors to do the same. If your own order is attended to for the year, send us at least one new subscription. We will and do give you and your neighbors the benefit of every penny saved, both in the form of a low subscription price and by giving you a magazine of high quality in every department.

In your neighborhood will you please act for us in giving our cooperative plan a real boost?

Subscription Rates of The Washington Farmer:

$1.00 for Five Years

In Canada add 1 cent a copy for extra postage.

Reduced Rates

Victory for Western Washington Fruit and Berry Growers

Strong objection to further increase in express rates led fruit and berry growers of western Washington to request a hearing before the interstate commerce commission. The result of that hearing, held in Washington, D. C., was made known Monday, December 3, when word was received by W. H. Paulhamus, president of the Puyallup and Sumner Fruit Growers' association, that the commission had ruled in favor of the shippers, with a reduction of 10 per cent on rates that were in existence in 1920, instead of an increase of 12½ per cent on the present rate, which was being asked by the American Railway Express company. The existing rate is $2.90 per hundredweight to Mississippi and Missouri river points.

The constant increases in express rates granted during the last two years have been most disadvantageous to the consumers whom the fruit growers must reach. For example, the present rate on a carload shipment of red raspberries to Mississippi and Missouri river points of $2.90 per hundredweight plus the tax plus the refrigeration costs, means 64 pounds of raspberries and 36 pounds of package. In other words, two-thirds of the transportation is paid on the actual fruit content and one-third on the containers—figuring four crates of berries to a hundredweight. If the minimum carload is 15,000 pounds, it means 10,000 pounds of fruit and 5000 pounds of lumber.

Washington produces certain commodities—such as berries—that are so extremely perishable that it is necessary to move them at the fastest possible rate of transportation. It doesn't make much difference what can be produced, or its value, unless it can reach the consumer in good condition so as to allow a price that the consumer can afford to pay.

Stevens County Dairy Plans

Meeting in Colville with F. W. Kherli, assistant dairy specialist of the extension service of the Washington State college, and R. N. Miller, farm management demonstrator of the same service, the problem of the low-producing cow was the first one to be discussed and it was decided that cow testing should be effectively organized in Stevens county as soon as possible, although the difficulties in the way are serious.

To further increase interest in good dairy cattle several community tours of dairy herds will be made. A very successful tour was put on in the Addy Marble Valley community last year. For the coming year the dairymen propose to hold similar tours at Colville, Rice and Chewelah, besides holding the Addy tour again.

The organization of bull clubs or blocks in the various communities for the purchase of improved purebred dairy sires was urged. It was pointed out that one of the tragedies of the dairy business in Stevens county was the fact that proven sires in almost all cases when their period of usefulness in one herd is at an end go to the block.

The keynote of the entire meeting could be said to be the complaint that lack of interest in good dairy stock on the part of the rank and file of dairy farmers in the various communities was the big obstacle to success. It was pointed out that the most potent means of overcoming this indifference was the boys' and girls' club work. It was decided that six dairy calf clubs should be organized, in the following communities: Marble Valley, Meyers Falls, Chewelah, Addy, Arden and Kettle Falls.

The following dairymen indicated a willingness to act as local leaders: J. H. Zodrow at Chewelah, Heze Skeels at Marble Valley, Mrs. Joe Reynolds at Meyers Falls, Rolla Fisher at Addy, W. M. Hudleson at Arden, Oliver Leiser at Kettle Falls.

The following dairymen took part in the meetings: T. C. Bell, Colville; Mr. and Mrs. Rolla Fisher, Addy; H. T. Skeels and Heze Skeels, Addy; H. S. Hunt, Rice; J. H. Zodrow, Chewelah; W. M. Hudleson, Arden; Herman Josefsky, Kettle Falls; Oliver Leiser, Kettle Falls. County Treasurer W. L. Biggar and F. L. Reinoehl, Chewelah banker, also attended. The meeting was held as a part of the Stevens county extension service office work.

Walla Walla Farm Bureau

A definite program of work for the coming year was mapped out at the annual program of the Walla Walla county farm bureau in the middle of December. The application of more business principles on the farm, together with production of a diversity of crops, was among the points emphasized.

W. S. Hedges was elected president and Arthur Cox vice president. The organization committee is F. R. Fields, W. A. Ritz, F. M. Benson, Harve Yenney, Ellis Laidlaw, O. C. Plaquet, S. P. Maxson, Arthur Bergevin, Mrs. C. E. Morgan, J. W. Yenney, O. M. Beatty and H. S. Brewer.

The executive committee is W. H. Kirkman, R. L. Cline, Ralph Rander, C. N. Eaton, P. C. Shemwell, Harry Riffle, G. B. Dague, Charlotte Reynolds, J. D. Taggart, C. B. Auker, Mrs. H. H. Marshall, Mrs. Frank Yenney, Mrs. C. I. Fleming, H. D. Eldridge, G. W. Weber, W. G. Cordiner, J. E. Painter and J. H. Compau.

News for Breeders

HAS HERD OF 70 HOLSTEINS.

"We have one of the greatest dairying counties in the northwest," challenges M. B. Cunningham, dairyman of Vancouver, Clarke county, who has a herd of 70 purebred and grade Holsteins, with a purebred sire at their head, down on the Columbia. "We can produce good ensilage, oats and vetch hay, some alfalfa and clover hay, and lots of good grass. We are at the door of one of the greatest live stock shows in the world, and we have Portland and Seattle, as well as Vancouver, for markets if we need them, though during the 10 years I have lived here the local market has been as good as any. We do need a condensery in the county seat, though. Enough milk is produced in this district to support a big one, for tons of milk are hauled to Portland every day, not to mention the butter and cheese that are made up locally and shipped out."

Cunningham leases a farm of 110 acres at East Fifth and T streets, Vancouver, within the city limits and just a mile from the center of the city. Since his purchase recently from F. R. Beals of Tillamook, Ore., of eight head of purebred heifers his herd numbers 43 grade cows and heifers and 27 purebred females. He was unfortunate enough to lose in September, by the baling wire route, a young bull from the Ed Hoem herd at Snohomish, a sire whose three nearest dams averaged over 1100 pounds of butter in a year, and one whose propensity for getting twin calves earned considerable local recognition in the press. He sired six sets during his year of service, and Cunningham has had from him 44 calves, 35 of them heifers, with more to come. The bull was only 2 years past when he died.

Clover Leaf deary, Cunningham calls his farm, and he is a member of the Clarke County Holstein Breeders' association that was organized last spring, with 10 members owning 123 purebreds over a year old and 66 grades. Other members are Lloyd G. Whipple, W. C. Groth, J. M. Beveridge, Kasper Jenny, G. E. Whipple, B. O. Case & Sons, Ray Hancuff, Mark H. Fellers and J. M. Tooney.

A FIRST PRIZE WINNER.

Herewith is a picture of Comet Sensation, the junior yearling Duroc Jersey boar at the head of the herd of the Garfield Stock farm, owned by S. W. Shoemaker of Garfield, Whitman county. This animal won the blue ribbon in his class at the Lewiston-Clarkston fair at Lewiston, the Washington state fair at Yakima, and the Garfield Live Stock show at his home town. As he appeared in the show ring, he stood 38 inches high, weighed 640 pounds and measured from eye to tail over six feet.

ADDS TO DAIRY HERD.

Success with purebred Herefords in western Lewis county is being attained by G. Korevaar of Meskill, Wash., who recently added four head from the Chandler herd, purchased at the Pacific International, to his herd of grades and purebreds. The addition included a cow, a 2-year-old heifer, a yearling heifer and a yearling bull.

BUYS IOWA HERD BOAR.

F. M. Curtiss, proprietor of Cedar Canyon Farms at Fruitland, Wash., writes to The Farmer that he has bought a new herd boar from his brother, C. F. Curtiss of Ames, Ia. The boar was farrowed April 12, 1923, and is kiown as Ames Epoch 17th, No. 322780. He is sired by Laurel Epoch 291100, a son of Laurel Champion and an Epochal sow.

ANOTHER STATE RECORD.

The Western State hospital at Fort Steilacoom has made another state record with Canary Snowball Gettie, a junior 3-year-old. Her record for seven days was 588.2 pounds of milk and 26.47 pounds fat, which is almost twice as much as she produced as a junior 2-year-old. Her fat record a year ago was 13.86 pounds.

The Red Lock—*The New Serial*

(Continued from page fourteen.)

calls a crime slated against him, to bury his life here with his dog and fishing gear, alone in his bachelor cabin on the river shore.

"Yes, them's mighty fine sentiments," cut the thin-edged voice of the postmaster across the silence—and the dream dissolved in the fisherman's eye—"an' I mostly agrees with 'em an' says amen to 'em, an' the new parson may be all 'e's cracked up to be, but still I ain't takin' back nothin'."

Zeke's thin voice ceased, lost somewhere in the cavernous labyrinth of his sharp, inquisitive nose. He leaned down across the counter again, thoughtfully fumbling the two tufts of wiry whiskers that poked forward from the corners of his dry and furrowed chin.

Uncle Nick prodded down the contents of his pipe with his finger and smoked a while in silence. Taking the stem from between his lips after a time, he blew the smoke away, slowly, as if to get the full taste of it, and waved the pipe across toward the postmaster—a well understood preliminary to a renewal of the argument.

At the moment Loge Belden took another gulp from his bottle of "squirrel," put the cork in, slapped it tight and slouched up along the counter.

"Say, I'd jist like t' put one t' that. This evenin' as I come up the River Road this hyur Warhope homestead an' Sime Colin's house I stopped a little bit on the bridge acrosst Eagle Run an' happened t' look over in the orch'id b'twixt ol' Sime's an' the parsonage. Y'u know ther's a spring along the crick thar under the edge o' the hill—Whisperin' spring, I've hear'n tell y'u-all calls it—an' ther's a bench t' set on under the maple tree by the spring.

"Well, as I come a-past, thar set this hyur new parson an' that Texie gal on that bench, an' as near as I could make out, bein' purty well along tow'rds dark, had 'is arm around 'er. You fellers 'r wastin' a lot o' breath on that gal. I 'low the parson——"

The room suddenly was deadly still, with every eye turned toward the door. Belden felt the stillness; hesitated; turned——

In the open door, framed in sharp outline against the dark background of the nightfall, stood the tall form of Jack Warhope.

With the reach and spring that only the woods and hills can give, Warhope walked into the room. Al Counterman slipped off the goods box and hitched up his overalls; Zeke Polick slid down behind the counter; the blacksmith smoked hard; Uncle Nick slowly rose from his chair, no detail of the scene escaping him, while the glint that had leaped into his eyes carried him back 20 years toward the days of his manhood.

The woodsman drew a step nearer.

"I 'low y'u must 'a' be'n mistook about that—arm."

"Not a damn bit."

Like lightning came the sharp smack of an open hand that fanned Belden's head back. He leaped away from the counter and struck—a good smashing swing, clean from the hip; but it didn't land. The jaw it was aimed at wasn't there when it came across.

Belden lost his temper—the mistake of many a better man—and lunged viciously. He ran into an uppercut to the chin that doubled him back over a barrel of salt. He whirled up, and his right hand clawed the butt of a pistol out of his pocket.

The pistol came out, but that was all. A heavy six-gun leaped from the woodsman's side, a bullet crashed into the pistol butt, gashed Beldon's hand slightly and tore on into the salt barrel.

The woodsman stuck the six-gun back into the holster at his hip, hidden by his hunting blouse, snatched Belden by the collar and jerked him out into the middle of the floor.

The woodsman dropped the other's collar, talked a moment or so with Uncle Nick and Counterman about the seining trip next day—the matter that had brought him into the store—and passed out at the door. The crowd gathered around Belden.

"Y'u ort 'a' had more sense than t' pull on him. He ain't no ways spry on talk, but he can pick hick'ry nuts with a six-gun."

(To be continued.)

General Motors Trucks

Stay On The Job

Because they are built oversize and overweight in every part of both engine and chassis GMC trucks provide a surplus of strength that easily withstands the jolts and strains and heavy going that every farm truck must endure.

More—this extra strength keeps GMC on the job continuously. Wearing parts last longer—parts that bear the strain do not break.

And, GMC engine power is in keeping with GMC strength of construction. It will move the truck fully loaded any place where wheels can get traction.

Write for free booklet "Motor Trucks on the Farm".

GMC Trucks are "Seven Steps Ahead"

The "U. S." Walrus. Its all-rubber surface gives you complete protection

Complete protection at a minute's notice

Slip the "U. S." Walrus right on over your shoe—its smooth rubber surface is as watertight as a boot

You can stand any amount of slush—mud—barnyard mire with the "U. S." Walrus.

For the odd jobs that take you from house to barnyard and back again a dozen times a day — slip the "U .S." Walrus right on over your shoes. You can put them on as easily as you slip into an overcoat. And you avoid tracking all the outside dirt and muck into the house.

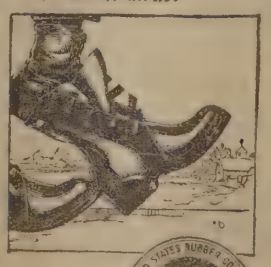
That's something every farmer's wife will appreciate!

What's more, when you're through with a job—one good douse under the faucet washes the hardest caked mud clean off that smooth rubber surface.

Tough, rugged, with a heavy fleece lining that keeps your feet warm in all kinds of weather, you'll find the "U.S." Walrus the greatest footwear convenience you've ever known.

The "U. S." Walrus can be washed clean instantly. Its surface is as smooth and waterproof as a boot.

Easy to slip in and out of! One of the big convenient features of the "U. S." Walrus.



Trade Mark

Other "U. S." Models—all built for long, hard wear

"U. S." Boots, built so strongly they're famous wherever boots are worn—Rubbers and Arctics, all styles and sizes for the whole family—"U. S." Bootees, the all-rubber lace shoes for spring and fall use—every kind of rubber footwear you could possibly need is included in the big "U. S." line.

Every single one is backed by 75 years of skilled experience. It will pay you to look for that "U. S." trademark—the honor mark of the largest rubber organization in the world.

SPOKANE. SEATTLE.

Jerseys Prosper on Wynooche River

For 14 years John H. Taylor and family have been developing a dairy farm on the Wynooche river seven miles above Montesano in Grays Harbor county. They selected Jerseys as their foundation, and have built up an excellent herd of purebreds, some of which have brought the farm honor in the form of gold medals and high records and all of which have contributed to the general prosperity of the farm through consistent production. In the 14 years that the Taylors have been breeding Jerseys, they have invested about $5000 in foundation animals. They have sold $14,500 worth and now have a good herd of about 40 head. Golden Massypolo 3d, a cow of Mr. Taylor's own breeding, made a world record in production as a junior four-year-old. In 1914 there were 12 Jersey cows in the United States holding gold medals and the Taylor herd contained two of them.

This farm comprises about 150 acres, of which half is hill land like that shown in the back of the picture herewith, half being rich bottom land that produces enormous crops of feed. The mountains give the place increased picturesqueness and its general attractiveness makes it one of the widely known farms of that region.

The original foundation for the Taylor Jersey herd came from the farm of Adam Stevens of Ellensburg.

Whitman County Is Beginning to Balance Its Farming---Page 3

Went to Chicago

To Represent State of Washington

One of the greatest gatherings of club boys and girls in the history of club work in this country took place at Chicago during the International Live Stock show and the hay and grain show early in December. Hundreds of boys and girls from various sections of the United States were present and took part in the club activities. Notable among the gatherings was a group of 41 girls, representing 41 states. They had won statewide contests which entitled them to be known as the champion domestic science club girls of their respective states. They were the guests of Montgomery Ward & Co. and were royally entertained by that concern during their 10-day stay in Chicago.

The state of Washington was represented in this group by Miss Selena Deno of R. F. D. 1, Spokane. Miss Deno is too well known in her home state among those familiar with club work to need introduction. However, an enterprising reporter for Ward & Co. interviewed her while she

Miss Deno.

was the company's guest and what he reported will be interesting to her friends. Describing her as a "western breeze," he quotes her in part as follows:

"Of course Chicago is bigger than Spokane and may have more interesting things to look at, but I can assure you that what we have out there is just as good as any other place in the world.

"I won my right to this trip in sewing and community work, and when I finish normal school and after I have had my four years in college I hope to be a club leader or demonstration agent. I think club work is the best kind of employment for a girl who has to earn her own living. Club work gives a practical education to the young folks and I sincerely hope the membership continues to grow until every farm boy and girl in the country is numbered on our rolls. By diligent study of the necessary qualifications I hope to become a part of this most useful work, so that I may be able to assist in developing such a worthy movement."

Plan Dairy Plant

Continuing its program of preparation to dispose profitably of all its surplus milk, the Inland Empire Dairy Producers' association is now taking steps looking toward establishment of a powdered milk plant in Spokane. At a meeting of members in Spokane December 8 the board of directors was authorized to establish and equip such plant at a cost of not to exceed $95,000. The funds for this purpose will be raised by sale of stock to members, the price of the stock being deducted from the price of the milk sold to the association, a few cents per hundred pounds.

President H. S. Findley and Manager G. D. Railsback reported to the membership meeting the results of their investigations of powdered milk plants in western Washington and California, where this method of handling surplus milk is carried on successfully. They stated that powdered milk had a market value of from 9 to 14 cents per pound, and that 100 pounds of skimmed milk made about nine pounds of the powder. Thus they predicted an increase to members of not less than 50 cents per hundred pounds for their surplus milk when the plant was placed in successful operation.

The members at the meeting were practically unanimous for the establishment of the plant. "We have all helped to build three or four big dairies for somebody else," said one member. "Now let's build one for ourselves." And his attitude was reechoed by most of the other producers present.

FAVOR KITTITAS PROJECT.

Word has been received from D. W. Davis, United States commissioner of reclamation, announcing that the engineers who inspected the four pending units of the reclamation program in the Yakima river valley have reported in favor of developing next the Kittitas high line canal project. This unit, when completed, will irrigate about 70,000 acres in Kittitas county.

Skagit Fair Shows Gain

The Skagit County Fair association recently turned in a report showing a gain of $1400 for the year. With the building of the huge cattle barn the association now has one of the largest buildings of its kind in the northwest. Other improvements have been made on the grounds and it is believed continued growth will be shown in the annual exhibitions.

The following directors have been elected for the coming year: Tom Lockhart, W. S. Deighton, A. P. Johnson and W. J. S. Gordon, for three years. Hans Knutzen was named to take the place of Nels Anderson, who died recently. Mr. Knutzen will serve one year.

Attended by 6000

Skagit County Dairymen's Jubile

There were at least 6000 people who attended the third annual jubilee of the Skagit County Dairymen's association at the Burlington Milk Products plant. The program consisted of talks by prominent dairymen and entertainment features. Two orchestras were kept going the entire evening before the long tables were spread with the picnic lunches.

President W. J. Knutzen was introduced by L. A. Turner, who acted as announcer for the program, and gave the welcoming address, and told the audience how the dairymen were now standing on their own feet. Mr. Knutzen was followed by J. A. Scollard of Chehalis, president of the United Dairymen's association, who reviewed briefly the work of the Skagit organization and how dairying conditions had improved since the association had been functioning.

"Cooperation has won its place in the state," he declared. He stated that in 1913, 1914, 1915 and 1916 the price of raw milk was $1.59 for 4 per cent test, and for the last three years, the average price had been $2.04, or 51 cents higher. With a production of 75,000,000 pounds a year, he continued, at 50 cents, gives $365,000 increased revenue to the dairymen of this county.

The program consisted of nursery rhymes, featuring Skagit dairymen and others, and read by the "Darigold Twins," two men in black-face, kept the audience chuckling for several minutes. Ralph D. Nichols, formerly of the port of Seattle, showed motion pictures of the Skagit dairy plant, which were appreciated very much. Leonard Hanson recited "The Days of '21," concerning the dairymen.

A "battle royal" was next staged between a Darigold milk can and a competitors' can. Peter Omdahl talked on "Cooperation," and spoke highly of the efforts of the association and its manager, J. M. Humphrey, to help the dairymen. F. E. Bertrand sang "Skagit County," his own composition, which was heartily encored. S. W. Butler and Manager Humphrey gave short talks and invited every one to stay for dancing.

KITSAP FARMERS ORDER SODATOL.

Six cars, or 60 tons of sodatol, have been ordered by over 400 ranchers of Kitsap county, through their county agent, G. N. Worden, and additional orders are being received at his office daily. The cost of this material delivered at Kitsap points is only $3.20 per box.

GREAT NORTHERN EXTENDS SEASON'S GREETINGS

While in volume of traffic the year 1923 has been the largest in the history of the Great Northern Railway, the net results of the year have been less profitable to the owners than in some former years, owing to the fact that increases in the cost of things which comprise transportation, its sole product, have been greater than those in freight and passenger rates.

The Great Northern thanks the people who so liberally patronized it in 1923 and at the same time extends its thanks to those faithful, loyal and efficient employees who made it possible to handle this large volume of business. The Great Northern has great faith in the men and women who serve it, in the fairness of those whom it serves, and in the ultimate prosperity of the territory it traverses. It has endeavored to render good service to its patrons and hopes to continually improve that service and to merit further patronage.

To all—patron and employee alike—in the spirit of the season, the Great Northern Railway wishes a joyous Christmas and a happy and successful New Year.

LOUIS W. HILL,
Chairman of the Board.

Talk No. 11

Organize, Standardize, Advertise, Say Orchardists

Tentative Plan for Federation to Market Northwest Apples Is Approved

By GEORGE N. ANGELL

Confidence in the ability of the fruit growing industry of Washington and the northwest to recover from the temporary depression into which it has been thrown by disorderly marketing, and intense interest in any plan for organization, orderly marketing or advertising which offered assistance in recovery, were the outstanding expressions of the 19th annual meeting of the state horticultural association at Yakima December 10 to 12. Pessimism and discouragement, which threatened at first to cast a shadow over the most largely attended session in recent years, were quickly dispelled by the inspiring talk on cooperative marketing by Isaac D. Hunt, vice president of the Ladd & Tilton bank of Portland, Ore., on the afternoon of Tuesday, and from then until the close of the equally inspiring address by N. B. Coffman, banker, of Chehalis and president of the Washington State Chamber of Commerce, with which the program following the annual dinner ended Wednesday night, the atmosphere was one of hopefulness, the talk all of methods to be followed in working out salvation. Educational addresses were listened to with respectful attention, but the real meat of the gathering for fruit growers who have marketed at a loss for two or three seasons past and who already are beginning to realize that possibly the present shipping season will be more disastrous than any in the history of the business was in the constructive suggestions made by growers, bankers and marketing specialists as to how best to make effective the slogan of the session, "Organize, Standardize, Advertise."

Oregon Growers Present.

Indicative of the sectional nature of the marketing problem and of the wide interest it has aroused, Oregon fruit growers took a prominent part in the convention. There was a large delegation present from Hood River, and R. H. Kipp, manager of the marketing committee of the Portland Chamber of Commerce, attended also. Practically every fruit growing section of Washington was represented in the attendance.

As foreshadowed by his remarks at the annual meeting of the Oregon Horticultural society at The Dalles the previous week, Mr. Hunt, who assisted in organizing the largest cooperative in Oregon, who is personally an orchard owner, and who is chairman of the marketing committee of Oregon's $300,000 development fund, "took off his coat" on behalf of the Portland bankers' plan for federating the various fruit growers' associations of the northwest into one large body that could work intelligently for all of them on such mutual problems as handling exports, standardizing the northwest pack and telling the world of the superiority of the northwest apple. He reminded growers of the meeting that was held in Portland last summer when three of the leading banks, knowing that the industry faced ruin, proposed a plan that nearly every one present at the conference agreed to as sensible. Committees were appointed, but no further action was had, and he came to Yakima, he said, to try to revive the plan.

A Common Problem.

"I am not advocating a great big organization of all the fruit growers. Frankly, I doubt if it is a possibility to get every apple producer into one association. They have too many different problems. But all northwest apples are of about the same grade and quality, therefore they all have a common marketing problem, and a federation of existing associations was the plan we proposed. Lay aside your suspicions and your sectional jealousies. Get together first in your associations, then in a federation that can control distribution, and you'll not be sitting around with long faces wondering how far you'll be in the red after each season's returns come in. But don't put too much trust in cooperative marketing. The remedy is in your own hands. You've got to wake one another up and do whatever is done for yourselves. You've got to do it now, and if you fail to do it, I'm here to tell you that it's goodby to the apple business. In four or five years, at the present rate, 60 per cent of the apple trees in the northwest will come out by the roots."

Lively applause greeted the pointed statements of the Portland banker, the careful diagnosis of the farmer's ills made by President J. H. Auvil of the Wenatchee District Cooperative association, the suggestions for caution made by E. L. French, director of agriculture, the carefully thought-out and calmly presented observations of W. L. Steinweg, president of the First National bank of Yakima, and the synopsis of marketing fundamentals made by E. F. Dumler of Washington State college. Growers present—there were more than 500 of them each day—took leading parts in the debate and committee work; both Hunt and Coffman promised to render all assistance possible; and the upshot of the meeting, in a few words, was that the best obtainable thought in Washington and Oregon on the subject of cooperative organization and marketing will be focused on the preparation of a definite program to be submitted to the statewide agricultural conference called at Yakima January 16 and 17 by the state chamber. Out of this conference it is now hoped will come some recommendation for action that can be indorsed by the "co-ops" of both Washington and Oregon, the problem of getting the fruit growers of the northwest—Idaho and British Columbia included—appears to be nearer solution than at any time in the last decade.

Federate Existing Agencies.

Specifically, the committee on markets and advertising, which Dan Williams of Yakima was chairman, recommended the federation of existing agencies identified with the apple industry in the northwest, with regulations providing for orderly distribution and marketing; that the federation be requested to adopt and put into use a uniform sale contract as a corrective for rejections; that it give consideration to an advertising campaign based on the apple production; and that Hunt be requested to collaborate with a committee interested in the industry and present an outline of the proposed federation for consideration at the January meeting in Yakima. The existing committee was continued for that purpose, J. L. Dumas of Dayton, D. L. Pearson of Hood River, I. A. Van Volkenborgh of Wenatchee and C. A. Long of Spokane being members with Williams.

Four Committees Work.

This was one of four committees on marketing (including advertising), transportation, storage and byproducts, appointed on recommendation of President Paul Weyrauch and on authorization of the opening session Monday evening to gather all possible information on the respective subjects during the session and afterward, and to report at the January conference. The committee on storage, consisting of Howard Wright of Yakima, Roy Larsen of Wenatchee, A. G. Craig of Spokane, Gordon S. Brown of Hood River and H. S. Denison of Walla Walla, reported that there is immediate need for greater storage, but recommended that since there is a difference of opinion as to the location, whether here or in the east, a careful survery be made for the benefit of the January meeting. The committee on byproducts, consisting of F. A. Wiggins of Toppenish, Gallock Maxey of Selah, Ira D. Cardiff of Yakima, Percy Butler of Hood River and John S. Peterson of Omak, made no report, nor did that on transportation, consisting of A. W. Stone of Hood River, C. H. Swigart of Yakima, Robert Cumming of Spokane, A. A. Prince of Walla Walla and F. E. DeSellem of Wenatchee.

Resolutions Adopted.

Resolutions of the convention reported by the committee of which J. H. Auvil of Wenatchee was chairman were adopted in most cases without much dissent. They indorsed the tentative report of the marketing committee just referred to; "okehed" the movement for reduction of existing freight and other railroad charges that is being pushed in Yakima by Dr. J. S. Kloeber of Selah, and indorsed the effort for establishment of a basket rate on apples, pears and peaches and a bulk rate on apples from Washington shipping points to all points where the rates are effective for competing districts, notably Idaho. The latter resolution brought forth lively discussion, an effort to table it on the ground that it was a sectional matter in which Yakima was chiefly interested, being unsuccessful, and the arguments of Yakima proponents, notably Dr. Kloeber and H. M. Gilbert, serving finally to effect passage. Another resolution registered the association's protest against a policy of national isolation and urged federal officials to restore to prewar conditions "markets which have been destroyed to the disaster of fruit growers." Still another indorsed the Purnell bill, which is before congress, providing for additional appropriations for investigational work by state colleges; and another favored the reestablishment of the license system in vogue during the war, as applied to wholesale fruit and produce dealers both at destination and point of shipment.

Consider Advertising Plan.

The so-called Garfitt plan of taxing northwest boxed apples (the jobbers also contributing) to pay for advertising and "servicing" the product was indorsed by resolution as being "a constructive method of stimulating consumption and sale, deserving of support when a feasible working organization is perfected." This

Wheat Will Always Be King in the Palouse

But What About a Queen? Indications Point to an Alliance With the Royal Dairy Cow Family

By J. E. NESSLY

Whitman county, claiming to be the greatest wheat producing county in the United States, had a crop of 13,000,000 bushels of wheat in 1923. It was the largest crop in bushels and average yield this wonderful county has ever produced. The general average for the entire county was 32 bushels per acre. This, too, is claimed to be a record: "I have lived in Whitman county 40 years and never before saw an average of 32 bushels of wheat per acre for the entire county," said a pioneer citizen of Colfax, who has farmed and been in close touch with agricultural conditions in the county for two-fifths of a century.

Yet, despite this enormous crop of wheat, which is worth, even at present quotations, a price that was never dreamed of by Palouse farmers 30 or even 25 years ago, times are not as prosperous as they should be in Whitman county.

Only a small portion, comparatively, of the 1923 crop has been sold. The price started off at about 85 cents a bushel. It held pretty close to that figure and it is believed that the average price paid for the wheat sold up to November 15 was about 85 cents. This would have been a price that would have meant enormous profits 25 years ago, but it spelled loss to many Whitman county farmers this year. The cost of production has more than doubled in 25 years. Then land was worth from $35 to $50, the latter being a high price. Much of the 1923 crop of wheat was grown on land for which the owners paid as high as $150 per acre. Little of it was valued at less than $100 per acre. Taxes on this land are several times what they were 25 years ago. Everything costs more. Wages are much higher. It is probably true that wages have increased the cost of wheat more than any single factor.

"I made a little money farming this year," said a farmer near Colfax, "but I made it by doing my own work. I raised 4,000 bushels of No. 1 wheat, on 100 acres, an average of 40 bushels per acre. I did my own work until it came to threshing and there is where I learned what labor costs. I paid $686 threshing bill on that 100 acres, an average of $6.86 per acre. Yet I don't think the thresherman made any great profit at that. I raised some hogs and some colts and a few other things besides wheat and I made some money. But if I had been compelled to hire all my work done as many farmers were, I would not have made anything. And, speaking of colts, I think the Palouse farmers are overlooking a bet in not raising more horses. We will soon be out of horses. My horses are now from 7 to 10 years old and it will take four years to raise a colt and make a work horse of him. At that time my horses will be from 11 to 14 years old and horses will be scarce. I think Palouse farmers would do well to pay more attention to replenishing their work stock and the sooner they begin the better it will be for them."

Successful Producers.

I asked a banker at Pullman about farming conditions and he made a statement that I believe contains much truth. He said: "There are two kinds of farmers who are getting along pretty well. One is the farmer with 640 to 1000 acres or more, who has good equipment, considerable home help, and is fixed to raise wheat on a large scale without hiring too many men. I think those who have a small combine and can handle their own crops are making money. The second class is the farmer with 80 or 160 acres or possibly with 320 acres, who raises some wheat and some hogs, has some cows and some chickens and raises most of his own living and has a little of several things, including milk and butter and eggs and potatoes and other small stuff to sell. That man is getting along all right. But I think it has been fully demonstrated that few men can make money raising wheat and wheat alone, on 160 or 320 acres of Palouse land."

I talked with Horace Comegys, of near Thornton. He was born in Whitman county. He is farming 640 acres near Thornton, part of the big farm his father, the late Judge George Comegys, accumulated, part of it when Washington was a territory, and he has 80 acres of summerfallowed land rented and has put it in fall wheat. Mr. Comegys is a good farmer—a careful farmer and a successful farmer. He raised purebred cattle, but now the beef cattle business is not as profitable as the wheat industry.

Raise Something Else.

"A Palouse farmer must raise something more than wheat," he said. "I tried sheep on my farm a few years ago and find they pay better than anything I ever tried. I sold out most of my flock when prices were high. I got around $20 per head for them. They had paid me well while I was raising a flock and they paid me well when I sold them. Many of my neighbors bought sheep from me at the top prices, around $20 per head, because they saw that sheep made money for a Palouse farmer. But only one or two of them stayed in the game. I am building up another flock. It costs very little to keep them. I think many more sheep could be raised in connection with wheat farming in the Palouse country, to good advantage."

Agitation for government help in rais-

(Continued on page nine.)

Wheat land is beginning to produce feed for the dairy cow, a step toward a better balanced system.

Freight Rates and Farm Profits

The statement was made in a public hearing the other day that if the railroads hauled wheat free of charge from warehouse to market, the wheat farmer would still be conducting a losing game. Representatives of the railroad interests seized upon the statement as evidence that there was no justification for the plea for reduced rates on wheat.

This is a ridiculous assumption. Just because the grower is losing 50 cents or some other amount per bushel because of a multitude of unfavorable conditions is no reason that his loss should not be reduced a few cents per bushel by the reduction in freight rates where they are shown to be excessive. One might as logically say that the farmer need not undertake to remove any of the unfavorable conditions affecting his business because freight rates remain high and tend to decrease wheat profits anyway.

No Factory-Made Cow for Henry

Not long ago the feature writers in newspapers and magazines were telling about Henry Ford's plan to drive the milk cow out of business by manufacturing milk from various commercial products—synthetic milk, they called it. That the noted automobile manufacturer has given up that idea in favor of the kind of milk upon which mankind has thrived since Noah put a cow aboard the ark is indicated by the fact that Mr. Ford now has a high-class herd of milking Shorthorn cattle on his farm in Michigan. The other day he added 14 head to it when he spent several thousand dollars buying the entire herd of this breed exhibited at the Chicago International Live Stock show by Bachelder farm of New Hampshire. This famous herd made the cross-continental tour from New Hampshire to Portland, Ore., recently, showing at the Pacific International in November.

Accredited Hatcheries in Washington

The growing interest in poultry as one of the leading by-products of the farm is noticeable. In this connection it is with much pleasure that one notes the fact that Washington stands first in the quality of the breeding stock represented by its accredited hatching and breeding associations. It is the second state in the Union to have a state accredited hatchery under state supervision. It is the only state that demands that all females shall be mated with males with a guaranteed breeding back of them of 200 eggs or better. The chicks produced by these hatcheries are under supervision of the state college.

However, the selection of breeders, male and female, is only one step in the direction of securing good chicks. The Washington association has adopted rules and regulations for the feeding and management of breeding stock that are calculated to produce the most vigorous chicks possible.

These rules and regulations are being rigidly enforced by the state supervisor; that they are sound is attested by the results obtained under them in the demonstration hatcheries last year. From the report, it is learned that the eggs produced by these hatcheries hatch better by 15 per cent than the state average, and that the chicks showed a mortality much lower than the state average.

It is also interesting to note that December 1 there were 165 accredited flocks, representing 76,015 breeders; 47 accredited hatcheries, with a total hatching capacity at one setting of 774,578, and that there were 31 flocks representing 29,166 pullets being trap-nested under state supervision for next year's cockerels.

Good for the Children

One of the big manufacturers of a coconut oil substitute for butter is advertising its product widely in the city papers throughout the country. "It is good for the children," reads the advertisement.

That strikes us as being about the last straw. Good for the children!

If we could save the children from the evils of this substitute business we should be less strongly opposed to it. Grown folks need less protection. They have passed through the building stage. Their bodies and minds are developed. But the boys and girls are still in the making. The vigor and strength of their minds and bodies depend in great degree on the quality and quantity of the foods that they receive.

Good for the children! Yes, good compared to no food or insufficient food. But as compared to real cow butter it is pitiably poor for the children. This has been proven so often and so irrefutably that repetition seems unnecessary. To be sure, these butter substitutes look like butter and taste like butter. It is easy to palm them off on the children or even old folks. The more is the pity of it. They are imitations and counterfeits as cleverly made as the worthless greenback from the counterfeiter's printing press.

Why imitate butter? Why not sell coconut oil in its original condition? Why accompany every package with a dose of coloring matter to make it look like the natural product of the dairy cow? Why flavor it with milk to give it somewhat the taste of the real article?

If coconut oil is good for the children, why in the name of all that is reasonable and honest and fair in business should it not be sold openly and above board as coconut oil and not as an imitation of butter?

You know; everybody knows. Butter is one of the best foods the world produces for children or adults. It is one of the most palatable and delicious and one of the most healthful and beneficial. That is why it is imitated. It is exceptionally valuable just as money is valuable, and it is significant that the counterfeiters select the two of them to imitate.

It is less than a year till the people of this state will have to decide between butter and coconut oil as the spread for their children's bread. Next November we must vote on the bill that was passed by the last legislature prohibiting the manufacture and sale of this counterfeit article. We suspect that the advertising that the manufacturers of and dealers in the butter substitutes are doing has a two-fold motive behind it—immediate sales of the make-believe butter and the misinformation of the general public with a view to defeating the anti-oleomargarine bill at the next election.

The dairymen and the city people who realize the menace of these imitation "spreads for bread" have a lot of educational work to do during the next 11 months. The people of the cities must be made to see the damage that will result to the state and its people if the counterfeit is permitted to replace the genuine—an irreparable damage to both the health and the industry of the state. The dairy cow and the children of the state must be upheld by the vote of the people next November.

Washington State Gleanings

The Washington Berry Growers' association, whose headquarters are at Sumner, a short time ago sent out final statements and remittances for all fresh fruit shipped during 1923. Secretary J. A. Forehand announces that the association will send to its members, many of whom reside in Puyallup, an additional advance on cannery berries, amounting to a total of $75,000. This amount includes advances of 2 cents on strawberries, 1 1-2 cents on raspberries and loganberries and 1-2 cent on blackberries.

LA CENTER GRANGE OFFICERS.

The La Center grange has elected the following officers: J. H. Leverett, master; Adella Vail, lecturer; Mrs. Beasley, chaplain; Anna Rashford, secretary; Mr. McFarlane, treasurer; Forence Bacon, Ceres; Gladys Bradway, Pomona; Mildred Spady, Flora; J. C. Newman, steward; Thomas Beasley, gate keeper; William Zeider, assistant steward; Mrs. J. L. Leverett, lady assistant steward.

CANNERY ENDS APPLE WORK.

Work on apples at the Baker Canning company at Sumner is completed for this year. The women employees worked their last day December 10. About 150 women have been at work putting up the apples this fall and during the summer much larger crews of women were employed to work on raspberries, blackberries, strawberries, loganberries, cherries and peaches. A small crew of men will be retained to do the repair work and help get the factory in good condition for next year.

TRY OUT NEW WHEAT.

The new "Burbank" wheat was raised by a few farmers in the vicinity of Ritzville last season. Fred Kramer, near Odessa, brought the first sample to the mill to have it ground and tested for baking purposes. His wheat went 30 bushels an acre and tested 59 pounds.

If is spring wheat, maturing 10 days earlier than Bart. It stools a fourth more and raises about five bushels to the acre more than any other wheat grown here. Henry Borgens, Packard, had 10 acres sown to this wheat, and the yield was high. Laney brothers, near Odessa, raised 50 bushels an acre.

IRRIGATION DAM FINISHED.

The wing dam across the Snake river, built by the Burbank irrigation district, has been completed at a cost of $24,500, as against an estimate of $43,000, it was announced at Walla Walla by R. Mauvais, chairman of the board of directors of the district.

With low water in the Snake river the canal which supplies water for irrigation carries 13.4 feet of water, where before 10 feet was the maximum during high water. The dam was built to save a large sum each year for electric power to pump the water.

STEVENS FARM BUREAU.

At the annual meeting of the Stevens County Farm bureau, held in Colville, the following officers were elected to serve for the ensuing year: E. G. Kohlstaedt, Colville, president; Mrs. Ray W. Hall, Orin, vice president. Executive committee: Earl Ogden, E. G. Kohlstaedt, A. E. Skidmore, Colville; J. H. Newhouse, Ford; J. O. Streeter, Chewelah; P. A. Rasmussen, Bossburg; Mrs. Ray W. Hall, Orin; Abe Heidegger, Rice; H. T. Skeels, Addy; John McDaniel, Addy; Wilbur Dupuis, Orin; E. A. Barnett, Springdale; J. H. Zodrow, Chewelah.

DAIRY FARMERS BUY STOCK.

For the improvement of their already high record herd of grade Jerseys, Munn & Son, dairy farmers near Olympia, have purchased two fine registered Jersey cows. One of these, Dahlia Forest Girl, has won two gold medals in succession the last two years for production, with records of 773 and 736 pounds of butterfat per year, respectively.

The other, Firwood Holly's Pet, is due to calve soon for the first time. She combines two of the most popular strains in the country, St. Mawes and the Stoke Pogis families.

Munn & Son have the leading grade [illegible] Thurston county, the association tests [illegible] of 421 pounds of butterfat average per cow for the year. They are now going in to build up a herd of registered stock.

APPLICATIONS FOR GRAZING.

Supervisor P. T. Harris of Okanogan has announced that applications to graze stock on the Chelan national forest next season will be received up to January 20. Applications after that date will be considered only for surplus range. Applications from permittees delinquent for fees can not be considered until the delinquencies are paid.

Henry Wallace, secretary of agriculture, has announced that no change in rates will be made for next season. The present rate on cattle is 90 cents a head from April 1 to November 1, with reductions down to 66 cents for periods beginning as late as June 1. On horses, the rate is $1.12 from April 1, with reductions graduated to 82 cents from June 1 to November 1. Special rates from April 15 to June 15 are 27 cents for cattle and 33 cents for horses. Sheep rates are 12 1-2 to 14 cents, depending on the length of the season.

TO BUILD APPLE WAREHOUSE.

A warehouse with capacity of about 200 cars will be built either at Wenatchee or at Yakima by T. J. Poupart, Ltd., London, England, to handle export apples from eastern Washington, according to S. P. Birch, representative of the firm. The purpose is to make it possible for the company to have a steady stream of apples going from this section to England, which is impossible in existing circumstances.

Under present plans the storage plant will be erected in time to handle the trade next year. The size of the building has not been determined. A branch office of the firm was recently opened at Portland to care for the Pacific coast exports of northwest boxed apples. The company can handle, it is said, 500,000 boxes of apples from this section.

"People here talk about cold storage in England," said Mr. Birch, "but they don't realize it is impossible. People in our country don't want cold storage fruit when they can get fresh fruit from European countries in 24 hours after it arrives at London. Cold storage is nearly impossible to get in London. Meat and butter are about all that have that class of storage.

"The only way to keep the market good is to have even shipments. London now is the dumping ground of the world. If any one has apples they can't sell they dump them in England."

To Help Wheat Growers

Plans Offered by Organizations and Committees

To THE FARMER it seems that various organizations in the Pacific northwest are bent on the same purpose of helping the wheat growers, though traveling different roads and proposing somewhat different plans.

In different ways they are all aiming at the bounty or premium method, substantially as proposed by the American Wheat Growers, Associated. Some term it "The Montana plan"; some "the Secretary Wallace plan"; some the "Oregon plan" and some the "Spokane or eastern "the Montana plan"; some "the Secretary plan"; some the "Oregon plan" and some the "Spokane or eastern Washington plan."

The plan first put out by the Wheat Producers' organization committee after its Spokane meeting of December 3 and 4 was construed as proposing government price-fixing, and drew considerable opposition. It has now been amended by the organization committee, and as amended has the approval of the Spokane Chamber of Commerce. It is as follows:

The committee recognizes that the ultimate solution of the economic situation in which the wheat farmer finds himself, depends on the adjustment of production to world's demands.

The committe urges emphatically the organization of the wheat farmers in cooperative or other associations whose objects will be the orderly marketing of wheat.

The plan:

Section 1. Tariff schedules to be provided high enough to cover the elevation of the domestic price of wheat products to its normal or prewar relationship with other prices.

Section. 2. A government export commission or corporation, whose duty it shall be to procure an adequate price for wheat (and wheat products) and maintain same through the export of surplus wheat.

Section 3. Wheat (and wheat products) protected in this manner, to pay its pro rata share of losses sustained in the disposal of surplus at the world's markets. For example: If the export of 140,000,000 bushels of wheat out of a crop of 700,000,000 bushels that move in trade is necessary in any one year to sustain the domestic price, and such export is at a loss of 50 cents a bushel below the domestic price, the loss would be $70,000,000 to be collected as a tax from the 700,000,000 bushels. That would mean a tax of 10 cents per bushel to finance an operation that lifted the domestic price of wheat 50 cents a bushel over what it would have been had the foreign market been permitted to fix the home price.

Section 4. Methods. In either of two ways. (a) It would offer a bounty or premium to exporters to cover losses incurred on wheat purchased in the United States and sold abroad, or (b) it would purchase and export wheat.

Section 5. The export commission to be financed as follows: The government to furnish a reasonable initial revolving fund, the commission itself levying the necessary tax to cover the season's loss on each bushel of wheat sold by the producer.

Arthur D. Jones of Spokane, a member of the committee and one of the large wheat growers of eastern Washington, offered a different plan (though aiming at the same remedy, of a bounty or premium on exported wheat. We think it has points of superiority over the plan adopted by the majority of the committee. It strikes us that it conforms closely to the views of President Coolidge as expressed in his message, and its meaning is clearer.

We give herewith Mr. Jones' plan in full, believing that the different organizations will find, when they arrive at Washington and sound out the views of congress and the administration that it will be the most acceptable. It is as follows:

1. An existing government agency, such as the United States department of commerce or the war finance corporation, to determine, as nearly as may be, in advance of the 1924 harvest, the production of wheat in the United States, the quantity required for domestic consumption, seed and carry-over and the quantity remaining for export.

2. The further determination by the same body, as nearly as may be, of the sum per bushel which, if added to the world price, would bring the price of American-grown wheat up to the same level with the general range of commodity prices in the United States.

3. Official announcement then that this government agency would pay the sum per bushel thus determined as a premium or bounty on American-grown wheat or wheat products exported to foreign markets.

4. Said premium or bounty to be paid from a fund to be derived from a tax on all marketed wheat, to be collected through railway, grain dealers and certified mill reports.

5. Tariff schedules to be provided that will be high enough to prevent an influx of foreign-grown wheat or wheat products to share unjustly in the benefits derived from taxing the American product.

Prove Your Faith

Preaching Without Practicing Will Get Us Nowhere

For as the body without the spirit is dead, so faith without works is dead also.—James 2:26.

One of the fundamentals in what we call religion is the fact that a religious principle is almost always directly and specificially applicable to the common activities of life. The New Testament writer was thinking in a religious sense when he declared that works are the proof of faith and that faith without works is dead. Belief and faith alone are insufficient to insure salvation. One must put into operation the principles in which he believes. "Show me thy faith without thy works," writes the apostle, "and I will show thee my faith by my works." One may believe that the Man of Galilee pointed the way of salvation, but unless he follows in the path pointed out he will never attain that salvation.

In our everyday lives, in the making of our daily living, we find this basic principle applicable. Where is the man who does not believe in his heart that honesty is the best policy? Or the man who does not believe that thrift and industry are essential to prosperity? Or that united community effort is better than single-handedness and jealousies? And yet in how many people are these beliefs, these facts, dead because they are without works! The man who believes in honesty is not saved by that belief from the penalties if he practices dishonesty. He who is lazy and indolent is not made prosperous merely because he believes in thrift and industry. And a man may attend community meetings every day and night in the week, shouting for cooperation, but accomplish nothing for himself or his neighbors because he does not cooperate.

It is time for us to quit saying one thing and doing another; believing this or that and disregarding our beliefs when we are brought to the test of our faith. If we believe in honesty, let us be honest in our every thought and deed. If we believe in thrift let us be thrifty. If we believe in cooperation with our fellows, let us cooperate. And, in the religious sense also—if we believe that Jesus the Christ was right in the principles that he set forth and practiced, let us put those principles into action in our daily lives. Is it not a sure evidence of hypocrisy to believe and not do, to preach and not practice? Were it not better we have no opinions, no faith, no belief, no knowledge than that, having them, we be too lazy or indifferent to put them to work.

COOPERATION IS A LANGUAGE.

St. Paul Farmer: However much we may differ on politics, or religion, or any other controversial questions cooperation is a language that we can all talk in harmony, and it is a system that we can all support.

FARM BUSINESS AND MARKETS OUTLOOK

RISING confidence in the business outlook for the first half of 1924 has been a dominant note in recent weeks. The new year is regarded as a year of promise. The dread of depression is passing and the pessimistically inclined, who have been describing the minor reaction in industry since last March as a depression period, even though volumes of production and distribution continued large and nearly every one remained employed at good wages, are beginning to look for a rally from the present level some time during the year.

The encouraging symptoms shown in the last two weeks include an increase in buying of steel for forward delivery and a reduction in excess production of oil. Automobile companies are enlarging their schedules for next year, even though production of cars and trucks in 1923 will reach 4,000,000. Large sales of copper have been made. Wholesale trade in some lines has grown dull because of the approaching inventory period, while retail buying is brisk because of holiday sales. The drop shown in the last report of car loadings was partly due to a holiday and partly to a normal seasonal tendency.

More fundamental signs as to the character of 1924 are to be found. One of these is the ease in money markets, which is the basic factor. There is no dearth of money for sound borrowers, and little danger of forced liquidation as long as manufacturers avoid overproduction and distributors follow present policies of cautious buying. Foreign trade is swinging around from an import balance in the early months of 1923 to a substantial export balance. In November our exports were the largest since February, 1921, and foreign countries sent us over $39,000,000 in gold, adding further to our already large reserves. Throughout the last year foreign ability to take our goods has been far larger than expected.

Assurance of good business probably in increasing volume as far ahead in 1924 as the momentum of present tendencies will carry us means continuation of the high rate of consumption of such farm commodities as meats, dairy and poultry products and choice vegetables and fruits, which are in demand when payrolls are fat. It also means, however, that the products which farmers themselves must buy will not cheapen much, if any, during that period.

Cattle on Feed.

Eleven corn belt states had about 2 per cent more cattle on feed on December 1 this year than on the same date a year ago, according to a preliminary estimate by the United States department of agriculture. In the western and Pacific coast states, about 15 per cent fewer cattle were being fed for market than a year ago and the Lancaster, Pennsylvania, district has around 20 per cent less.

A keen demand for yearling beeves to supply holiday trade carried prices sharply higher last week to a new top of $13.10 for the year at Chicago and lifted the general average on that kind about 25 to 50 cents. But another big run of heavy short-fed steers surfeited the market on such grades and caused a decline of 50 to 75 cents. Cows and heifers also lost ground in striking contrast with the stability shown a week ago.

Plain light stocker and feeder cattle are selling at bargain rates with many at $4.25 to $4.75 on the Chicago market. Such cattle usually have been money makers when put in condition for the late spring market.

Healthy Undertone in Hog Market.

Hog prices last week dropped to a new low for the calendar year as well as for this cycle. Combined receipts at 11 leading markets during the last two weeks totaled nearly 2,000,000 head, representing the heaviest run ever known with the exception of the corresponding period in 1918, when growers were rushing hogs to market as rapidly as possible in order to dispose of them before the "stabilized price" was removed.

Lambs on Feed.

About 3 per cent, or 170,000 head, more sheep and lambs were on feed for market in the corn belt and western states on December 1 this year than on the same date last year, according to an estimate by the United States department of agriculture. The total number this year is 5,170,000 head, compared with 5,000,000 head last year. The corn belt has 2,838,000 head, compared with 2,624,000 last year and the western states have 2,332,000, against 2,376,000. Indiana and Iowa account for most of the increase in the corn belt. Colorado, Montana and Wyoming show slight increase and Utah has the same number, but Idaho, California and Nevada show decreases.

Receipts of sheep and lambs increased sharply last week and prices declined, especially on heavy lambs and shorn offerings.

Steady Demand for Wool.

A steady demand for wool is reported in seaboard markets. Manufacturers wish to provide for their requirements during the heavyweight season before the market becomes entirely bare, even though the goods market is rather unsatisfactory at present and there was more or less overproduction during the heavyweight season last year.

Wheat Market Stable.

Wheat prices during the last four months have shown a degree of stability unknown for nearly a decade. The rule of market behavior applying in such cases is that the longer the period of narrow fluctuations the larger the movement up or down when a definite trend starts. Whether the next big move will be toward a higher or lower level is the important question. Gradually the evidence on the side of higher prices seems to be gaining weight, although the issue remains more or less cloudy.

Foreign interests are buying wheat sparingly in expectation of ample offerings from Canada and the southern hemisphere.

The rapid disappearance of Canadian wheat is a factor of importance in the future of the market. Canada still has a big surplus, however.

The final estimate of the rye crop was wheat was 786,000,000 bushels. This represents a small increase over the preliminary report and last year's final figure was revised upward to the extent of 5,000,000 bushels. The wheat acreage this fall is estimated at 12.6 per cent less than last year. The condition of the crop is much higher, however, being 88, compared with 79.5 a year ago.

Corn Crop Estimate Increased Slighty.

The corn crop estimate was increased slightly in the December returns to a total of 3,054,000,000 bushels, compared with 2,906,000,000 bushels a year ago. Prices were not affected by the revision, however, and the market seems to be on a fairly strong basis.

Oat prices seem to maintain a little greater strength than other grains, although primary receipts increased moderately last week and the decline in the visible supply was halted temporarily. The final crop estimate was substantially higher than the preliminary returns and 84,000,000 bushels higher than last year.

The final estimate of the rye crop was

(Continued on page sixteen.)

Range of Live Stock Prices for Week Ending December 19

	Chicago.	Spokane.	Portland.	N. Salt Lake.
CATTLE.				
Choice and prime heavy steers (1100 lb. up)	10.85@13.25

LIVESTOCK AND DAIRY

More Economical

To Market Veals at Three Weeks

H. W. A. Tramm, a dairyman of Chehalis, finds that he can market his veals more economically at the age of three weeks than if fed longer, since they require nothing but whole milk during this entire period.

He raises grade Holstein and Guernsey cows, and is therefore able to get veal calves which have good-sized frames and are better able to produce 100 pound veals than would some of the small breeds. The striking feature of Mr. Tramm's method, however, is that he can feed whole milk at a profit, while at the same time he is selling whole milk on the market.

For the first seven days the calf is fed an average of 16 pounds of milk a day, while the remaining 14 days an average of 20 pounds a day is given. This makes a total of 392, or approximately 500 pounds of milk. At $2.40 a hundredweight this would have a cash valuation of $11.35, which is deducting 65 cents, the cost of hauling 500 pounds of milk from his farm to town. If the veal weighs 100 pounds at the end of the feeding period it should bring $12, at 12 cents per pound.

While the above estimate shows only a profit of 65 cents, Mr. Tramm explained that the profit came in being able to feed a part of the first nine milkings to the calf. He pointed out that where the calf was killed at birth in an effort to save all the whole milk for sale, that these first nine milkings were a total loss. Mr. Tramm said that he had tried feeding calves a longer period, and working them onto skim milk as soon as they were able to make the change, but felt that the gains were not rapid enough to warrant so much expenditure of labor and going to the trouble of separating milk for this purpose. He also states that veal fed in the above manner made a better quality of meat than when fed a longer period on a cheaper ration.

Orderly Marke ing by "Zones"

George A. Pierson, president of the Union stockyards, has worked out a plan for the orderly marketing of live stock which he believes is entirely feasible. Mr. Pierson's method consists in having stock trains arrive from certain localities on certain days of the week and having the producers of those localities agree that they will not ship on other days. This requires the cooperation of shippers, railroads and stockyards. Mr. Pierson came to Portland from St. Paul, where he was long employed at the stockyards. He says that market used this system as early as 1912 and had it well lined up in three or four years. The Portland yards already have this system working with the Union Pacific system for two days in the week.

The first train reaches Portland for the Monday market. The train starts at Huntington about 10 a. m. on Saturday. This train, and the following sections as may be needed, picks up all live stock from eastern Oregon main line and branches. It gets into Portland on Sunday and is unloaded and all ready for the Monday market. It is the first train in for that market. At the same time the S., P. & S. has a train from the Bend branch. It also arrives about Sunday noon and is ready for the Monday market. The other Union Pacific train leaves Nampa, Idaho, about 8 a. m. Tuesday, gets in about noon Wednesday, feeds and rests over night and is ready for the Thursday market.

Mr. Pierson has a tentative similar schedule of trains for the entire week and is taking each one up with the different roads as rapidly as possible. The proposed weekly schedule is as follows, the day named, of course, being the one of arrival:

Monday—Huntington train, O.-W. R. & N. Co., and Bend train, S., P. & S., as outlined above—the first one.

Tuesday—Southern Pacific and Oregon electric, for western Oregon. Train to leave Ashland Sunday morning.

Wednesday—From Spokane, either or both Union Pacific or S., P. & S., for any stock from Montana or northern Idaho and eastern Washington that may wish to come to Portland. It gives the shipper time to try the Spokane market on Monday, before deciding to come. A through bill of lading, with the usual privilege of stopping, would obviate any extra freight rate.

Thursday—The Idaho train already arranged, as outlined above.

Friday—Various short-haul railroads and trucks. Because these shipments will be small Mr. Pierson wants them to avoid the heavy days.

Saturday—No schedule; cleanup day.

Mr. Pierson reports that railroads are responsive as far as he has taken it up with them and that in localities the system is in vogue it has greatly pleased the shipping.

At the beginning of the federal control of railroads during the war the government officials, together with the railroads and live stock exchanges, worked out a similar system called the "zoning plan."

Dehorning Calves

"The best way I have ever found to dehorn an animal is to do it before it has any horns to remove," remarked Harold Hansen of Enumclaw. "If taken when a very young calf, not older than three weeks, the knobs can be treated in such a way that no growth will take place.

"First clip the hair around the knobs, and apply either caustic or use a prepared horn remover. It is also a good plan to use a little vaseline around the knob, which prevents the caustic from running down onto the skin where it is apt to make a bad sore. Some cases have been known where calves thus treated have gotten out into the rain and the caustic has run down into the eyes, thus causing serious trouble and even blindness.

"If the calves are let go until after the age of three weeks, the dehorning should not be done until the animal is past a year old."

New Test Barn

A new test barn is being erected at the Western State hospital at Fort Steilacoom, which will accommodate 14 cows, a feed room, grain compartment and an office for the herdsman. The building measures 40x108 feet, has concrete floors, tile sides, high windows all around which will be screened in. The roof is made from 2x6s laid lengthwise to the building, and shingles will be put on top.

This structure will accommodate the cows that can not be handled conveniently in the main milking barn. The entire arrangement is built both for the convenience of the cattle and the attendants. All of the work is being done by the men who are at the hospital, and only two carpenters are employed to oversee the process of building. The barn will be ready for use early in December.

ANOTHER WOODEN HOOP SILO.

W. H. Chapman of Durvall has finished a 10x36-foot wooden hoop silo. This makes the third new silo for King county dairymen during the month of November. A. E. Calkitt, near Issaquah, built an 8x30-foot silo, while a neighbor of Mr. Chapman's put up another one. County Agent W. W. Henry assisted in the building and planning.

Canada's 1923 Crops Beat All Records

SHARE IN CANADA'S OPPORTUNITIES

In 1923 the wheat crop of Canada exceeded the 1922 crop by almost 100,000,000 bushels. In Alberta, the average yield was 26.5 bushels per acre and there were many individual cases where yields of 50, 60, 75 and 80 bushels were returned. Other crops showed a corresponding increase over previous years with equally high yields. These enormous yields on moderate priced land even at average prices for farm products have placed many farmers on the road to success.

AMAZING NEW FARM OFFER

LEAVES YOU A SURPLUS FOR COMFORTABLE LIVING

The Canadian Pacific Railway now offers you a Farm Home in Western Canada on a New Long-Term Plan of Easy Payments that is Extraordinary. The plan makes it possible to own a farm home without taking all profits to meet land payments and leaves a surplus for the comforts and enjoyments of life.

PAYMENTS EXTENDED OVER 35 YEARS

Under this plan all the settler pays down is 7% of the purchase price —One year's free use of the land without any interest chargeable whatsoever. The balance of principal and interest will be amortized on an easy payment plan of 34 equal annual payments which makes the second payment fall due two years after the purchase of the land, which is figured on the basis of 7% (including principal and interest) of the balance of the cost of the land. For example, on a purchase of 160 acres costing say, $3,000, the down payment will be $210 and the annual payments, commencing at the end of the second year, will be $195.30. After 35 years the settler will get clear title to the land—unless, of course, he wishes to pay sooner, which is his privilege.

FIRST YEAR FREE USE OF LAND

NO TAXES ON IMPROVEMENTS

Taxes are moderate and there are no taxes on livestock, buildings, improvements, implements or personal effects. Good markets, modern schools, roads, churches, amusements make farm life in Western Canada desirable and attractive.

IRRIGATED FARM LANDS

In sunny Alberta—a district that is especially adapted to mixed farming and where irrigation has been proved beneficial—a vast irrigation system with an unfailing supply of water administered under the direction of the Government, has been constructed.

Irrigation in Southern Alberta—insures you a crop every year—increases your crops each year—makes you independent of weather conditions—produces great quantities of coarse grains, pastures, alfalfa, roots, etc., thus developing the livestock industry which is safer and ultimately more profitable than wheat farming—tends toward closer development, well-cultivated farms, good neighbors.

These lands are also for sale upon the same amortization terms as our other farm lands. Full details on application.

YOU CANNOT BUY UNTIL YOU INVESTIGATE

You must inspect the land before buying in order to judge of its fertility. Special inspection trips from points Chicago and West will leave on the first and third Tuesdays each month. Single fare plus $2.00 for the round trip. Let us arrange details. Send this coupon now. It will give you without obligation complete information on this new and amazing plan. These terms are so easy that you can own your own farm home—instead of renting.

"Just What Cows Need To Increase Milk Yield"

Dairy experts say that an increase of only 10% in milk yield will double the net profit in the average dairy. How important it is then to get from every cow the last ounce of milk of which she is capable.

The milk-making functions of the cow—her digestive and genital organs—are the key to the milk yield. Sluggish organs mean low yield, plus a tendency to disease.

Kow-Kare has a definite medicinal action on these organs—tones them up to greater health and activity. As a preventive of disease and an aid to greater milk yield this famous remedy adds to its friends each year.

John Peters, Meservey, Iowa says: "One of my milch cows was giving about ten quarts to a milking, when she suddenly fell off to less than half that amount. I gave her the Kow-Kare treatment for six days and it brought her back to her full flow, and she is now better than ever. I gave some of the medicine to my other cows and every one of them improved. Kow-Kare is just what cows need. I shall tell my neighbors what a fine cow medicine this is."

G. P. Lanterman, Dexter, N. H., writes us; "I have used Kow-Kare for three or four years and recommend it to all having cows. With this alone I have cured all ailments that cows are subject to, and as a milk producer it has no equal."

Thousands of dairymen write us of the wonderful results of the Kow-Kare treatment for such cow diseases as Barreness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite. Its benefits are so prompt and sure that those who try Kow-Kare always keep it on hand.

As a general conditioner and aid to greater milk yield the usual dose is one tablespoonful twice a day, one week in each month—at a cost of one cent a day per cow. Our free book, "The Home Cow Doctor," tells how to add to your milk income through the aid of Kow-Kare.

Feed dealers, general stores and druggists sell Kow-Kare, large size $1.25, medium size 65c. If your dealer is not supplied, order direct. We pay postage.

POULTRY AND RABBITS

To Cull Pullets

"It is a more difficult matter to cull pullets than the laying hens and it is often a difficult matter to judge them accurately," according to W. D. Buchanan, poultry specialist of the state college extension service.

"The weight of a pullet should be about three pounds at five months old. If the bird is free from lice and mites and weighs less than two pounds she should be rejected. Leghorn pullets should be yellow legged and yellow skinned, the yellower the better.

"A pullet with dull eyes, long hooked or crow beak and poorly developed comb and wattles is likely to be a poor layer. If the pullet stands knock-kneed, with a hump in its back, or loose ruffled feathers it is usually lacking in vigor. This test, however, will not apply when the birds are molting.

"Solid well-meated bodies are the signs of good layers. The breast bone must be well covered with flesh. The bird's body must feel plump to the hand. If the muscles are loose and breast thin the pullet can not long stand the strain of egg production.

The good laying pullet must have capacity. A pullet with very short back or keel bone or one with a very narrow rounding back, or one that is greatly lacking in depth of body can not deliver the goods. The depth of abdomen is the almost sure sign of the quality of the layer. The bird with the good full crop is likely to be a good producer."

Hatch Own Eggs

"It is not always possible for the small poultry raiser to hatch his own eggs, but I believe that the commercial egg producer should keep a few breeders, even if there is a greater cost and more expense involved," remarked H. C. Quest of Enumclaw, one of the partners in the Questoy Poultry Yards. "The accredited hatcheries will be a great help to the small flock owner because he can then get his chicks in his own district or he may even sell some of the eggs from his own breeders to be hatched.

"We are only just getting started in the breeding game and have so far been spending all of our time with the production of commercial eggs. We have selected out 700 breeders that are from the Hollywood and Tancred strains, and are keeping the lights off their pens this fall. It does not pay to force them, even at the price of eggs, and we expect to get some quality chicks.

Mr. Quest explained how he expected to keep the yards of the brooder houses free from diseases by making the houses only large enough for 600 chicks and moving them to a clean place the following year. In this way there should be no trouble from losses, as where the same pen is used for two or more years without changing the soil. For the larger birds, however, the soil in the pens will be cultivated each fall and seeded to grain or some kind of a green crop and in this way kept in a sanitary condition for use during the summer months.

The buildings on the Quest farm are all the Shoup type houses and, in fact, all plans followed in feeding and care are taken from the directions given out at the experiment station at Puyallup. The laying house was originally built for trapnests, but the traps have been installed only in the one house where the pullets are housed for their first year and then selected out for the breeding pens. More of the traps may be put in during the next year, provided the flock is entered for the Accredited Trapnest Flock association.

"We feel that we have a particularly good district for the raising of poultry," said Mr. Quest. We are nearer to the hills and get slightly colder weather than do some of the districts down in the valley, but in one way it is an advantage, since we get enough snow to cover the kale and thus protect it from heavy freezing weather. We fed kale up until March last year, when most of the crops in other sections were killed down by frosts. It grows well here and we have to have it to get the eggs.

"There is another advantage in getting out here away from the main poultry districts. We are in a dairy community, where we can get buttermilk for a more reasonable price than in places where it has to be shipped in. We have to go to the creamery to get it, but we can get all we want and it is fresh. As for being farther away from the market, we ship to the association and get practically all of the feeds from them and both can be hauled on paved roads with the maximum expense."

Poultry Problems

By R. T. PARKHURST.

Will you please tell me what is the trouble and a remedy for my pullets? They seem to be doing just fine, look well and lay well, but I find one once in a while with something wrong with its eye. It seems that just one side of the head is swollen and the eye swollen shut. The eye seems to have foam and water in it. MRS. R. C.

The indications are that your birds are infested with contagious roup. I suggest that the worst cases be isolated or killed.

Place in the drinking water potassium permanganate sufficient to make it a wine color. Dip the heads of the sick birds once a day or oftener in a solution made by placing 7.3 grain mercury bichloride tablet in a pint of water. This solution is corrosive and poisonous and should not be used in a metal container.

The housing conditions should be so arranged that there is no draft in the house. At least three to three and one-half square feet of floor space should be allowed per bird. There should be sufficient circulation of air to take out all the moisture and impure gases from the house. It is much easier and more satisfactory to prevent contagious roup than it is to try to cure it.

I desire to know if it is profitable to run enough turkey hens in one band to require more than one turkey tom. How many hens will one tom serve and what age should tom be to get best results? MRS. S. P.

The number of hens to mate with one tom varies considerably, depending to quite an extent upon the individuality of the birds, the time of year and the opinion of the breeder. I would, however, suggest from 10 to 15 for satisfactory results.

The proper age of the tom is also a much-discussed question and birds of almost all ages are used. In order to get the best results I would suggest that you mate young or yearling toms to 2-year-old hens. It is often necessary to run a large number of turkey hens in one band and more than one turkey tom would be required under these conditions. More satisfactory results are usually obtained when small enough breeding pens are used that only one turkey tom is required. In large bands there is always the danger of turkey toms fighting.

Can you please tell me what is wrong with my chickens? They sneeze or cough every few minutes. There is no discharge from mouth or nose. Some look quite healthy, while others are droopy and have dark combs. They eat well. Only one was ailing three months ago and it died in a day or two. Now a dozen or more sneeze. I opened one dead bird and its meat and insides were a bluish color. Is there any cure? I have lost three birds so far. I have only 50 and they are on open range. L. E. M.

The indications are diphtheretic roup. I suggest that you confine the birds and use disinfectant in the drinking water of mercury bichloride to the amount of 7.3 stick on the small growths in the throats, grain tablet to a gallon of drinking water. This solution should not be used in a metal container and not over 10 days at a time.

Cases that are just starting can often be stopped by using caustic or styptic tongues or around the windpipe and mouth. Bad cases should be disposed of by killing.

All of the birds should have their throats swabbed out with iodine. The worst cases should be isolated immediately.

Plan Green Feed Crop

The poultry industry loses much every year for lack of adequate green feeding stuffs. This is true to great degree in the drier sections than in the territory of more moisture and more equable climate, but is true to a marked degree even in the latter. Now, and not next summer, is the time to plan for the green feed crop.

Probably no other plant is as well qualified for green poultry feed as the common so-called cow kale. On soil and in climate suited to it, it grows rank and will stand a great deal of adverse weather conditions. It may be seeded either in the fall or spring, preferably the latter. One may plant it in the field where it is to stand, later thinning it out, or may seed it in small seed beds for later transplanting. It would stand in the rows about 18 inches apart, with the rows three feet or 10 inches apart. Where hand-cultivation is to be practiced and where the soil is reasonably fertile, it may be planted closer. Some poultrymen in favorable sections allow a portion of their kale crop to go to seed the following spring, not only securing seed either for market or home use, but also providing feed during the summer for their flock.

Sore Ears in Rabbits

By E. E. WEGNER, W. S. C.

Would you please print in the paper what is the cause of rabbits having sore ears and what to do for them. E. M. S.
Goldendale, Wash.

This is probably what we commonly call canker of the ear. It is caused by a small mite burrowing into the skin. The scab which usually forms there should be softened with a 2 per cent solution of lysol, using a small brush or stiff feather. When soft it should be scooped out with a hairpin or other suitable object and burned. The inside of the ear should be freely dusted with flowers of sulphur. Repeat this treatment every four or five days. If the animal continues to hold its head on one side it probably means that the ear drum has been pierced. In this case the disease will probably be fatal and the animal had better be destroyed. This is, no doubt, the condition that you have present.

Be An Auto Expert
Earn $40. to $125 week

Why be satisfied with small pay when you can learn autos in a short time and then earn big money and enjoy the luxuries of life?

Big Demand for Trained Men

Because of the tremendous prosperity in auto business there's a big shortage right now in trained auto men.
You can step right into the big-pay jobs now open after short-time training at National Automotive. Practical system of shop training qualifies you in every branch of auto business—mechanics, machine shop and electrical work, auto construction, vulcanizing, etc.

$200,000 EQUIPMENT

You train in National Auotmotive's new $300,000 building, and have use of $200,000 worth of equipment. Cadillacs, Packards, Buicks, Fords, etc., furnished for practice work. Expert instructors teach you thoroughly. You know autos after National training.
Jobs guaranteed to earn your room and board while learning. Free catalog explains everything. 32 pages full of facts about National and your opportunity in the auto business. Make up your mind today to earn big money and enjoy life. Mail the coupon now.

Swedish Inventor Has New Oil Light

Claims Whiter and Much Cheaper Light Than Electric or Gas.

Edison enabled us to enjoy the benefits of electric light, Count Welsbach's mantle made it possible to have the incandescent gas light, but it remained for a Swedish engineer named Johnson, now living in Chicago, to devise a lamp that would burn ordinary, every day kerosene oil and produce a light said by the many scientists who have seen it to be whiter than electric. The lamp is as simple to operate as the old style oil lamp, burns without odor, smoke or noise and is proving a sensation where oil light is needed.

Mr. Johnson offers to send a lamp on ten days' free trial and will even give one to the first user in each locality who will help introduce it. A letter addressed to W. R. Johnson, 31 N. Fifth St., Portland, Ore., will bring full particulars about this wonderful new lamp. He has an interesting agency to offer, too.—Adv.

Hatch Eggs by SOFT HEAT
the New Method of Incubation

Result of 30 years study by L. N. Porter, the incubator master. Twenty-six superior features. Center-lamp, equal heat. Exclusive patented moisture device. Automatic control of heat, moisture, ventilation. One filling of lamp for complete hatch. Eggs turn semi-automatically. Twenty-one other distinctive features. Thousands endorse it. Make good guarantee. Your choice. Shipped prepaid.

ORCHARD AND GARDEN

Bordeaux Spray

Bordeaux mixture is used to control fungous diseases of trees, shrubs, vegetables and so on. While it has been to considerable extent supplanted for this purpose by lime-sulphur, it is still the most efficient spray known for such diseases as apple tree anthracnose, peach leaf curl, peach blight and the like, in the opinion of H. P. Barss, plant pathologist at the Oregon experiment station. In an article published in The Oregon Grower, Professor Barss discussed the Bordeaux spray in part as follows:

Bordeaux mixture is a combination of copper sulphate (bluestone) and lime. For winter use it is generally made up in what is known as the 6-6-50 formula: six pounds bluestone (copper sulphate), six pounds stone lime (best grade), 50 gallons water.

For trees in leaf it is often made up in the 4-4-50 formula: four pounds bluestone (copper sulphate), four pounds stone lime (best grade), 50 gallons water.

Other proportions are also frequently used.

It is of great importance that Bordeaux mixture be properly prepared. It should be made up fresh each time it is to be used. Stock solutions of bluestone alone or of lime may be kept almost indefinitely, but the mixed lime and bluestone solutions rapidly deteriorate on standing unless a special preservative is added. The barrels or tanks in which Bordeaux mixture is made up and the container for the stock solution of copper sulphate should always be of wood, since the copper will attack and destroy iron. On this account it is well to have wooden hoops on the barrels. The stone lime used should be of the best quality.

If large quantities are used, it is best to prepare stock solutions which contain, for instance, one pound of bluestone or one pound of lime for each gallon of water. For example, take a 50-gallon barrel of water and suspend near the top a coarse sack containing 50 pounds of bluestone. After a few hours it will have dissolved. Take also 50 pounds of quicklime and slake carefully with constant stirring, and the addition of water as needed to prevent it from becoming dry and "burning." When thoroughly slaked add water to make up to 50 gallons. These stock solutions then contain each one pound of the original material to one gallon of water. If kept for a long time the stock solutions may lose volume by evaporation. This should be made up with water before using.

Some of our spray authorities claim that excellent Bordeaux can be made by using fresh, hydrated lime in place of quicklime (stone lime). Use only fresh hydrated lime, since in standing for several months it may become worthless because of carbonation from the action of the air. Use one-third more by weight of the hydrated lime than would be required of quicklime and simply mix with the required amount of water, since it is already slaked.

The Bordeaux mixture may be made in a satisfactory manner by several different methods, but the two concentrated solutions should never on any account be mixed together without dilution. The following methods will be found to give good results, using the "one pound to the gallon" stock solutions mentioned above. The quantities given here will make 50 gallons of the common 4-4-50 formula. If a stronger or weaker solution is desired, the quantities of the stock solutions should be increased or decreased to correspond. Larger or smaller amounts may be made up, of course, using the same proportions.

1. Take four gallons of the stock copper-sulphate solution and add 21 gallons of water.

2. Stir up the stock solution of milk of lime thoroughly, take four gallons of this and add 21 gallons of water.

3. Pour off the two together slowly through strainer into tank or barrel, stirring thoroughly or pour one into the other, stirring thoroughly.

It is often convenient to prepare the two solutions on an elevated platform and to run them simultaneously from the dilution tanks directly into the spray tank.

Where spray tanks are provided with an efficient agitator excellent Bordeaux may be made by proceeding as follows:

1. Fill spray tank about full of water and add as much stock solution of bluestone as will be required for the tankful of spray.

2. Add stock milk of lime as [illegible] for the tankful of spray, [illegible] separate barrel or other container and water until fairly thin.

3. Strain the dilute milk of lime gradually through a strainer into the dilute bluestone solution in the tank while the agitator is running full speed.

4. After all the required lime is added fill the tank up to the top with water and begin spraying.

Sometimes it is not possible to use up all of a tank of Bordeaux at once after it is made. The left-over Bordeaux may then be prevented from spoiling by using common white granulated sugar, which, in small quantities, acts as a preservative and stops the rapid deterioration which usually takes place within a few hours after Bordeaux is freshly made.

Gooseberry Care

By O. M. MORRIS, Department of Horticulture, State College of Washington.

Would you kindly advise me how to take care of gooseberries. I am just starting out with 1100 new two-year-olds. What kind of spray and when to spray is what I would like to know, also what fertilizer to use.
Kent, Wash. H. H. S.

The gooseberry grows luxuriantly on almost any type of soil of moderate fertility with good water supply existing through the growing season. In your district if the plants do not grow reasonably well it is probable that you would receive some beneficial result of application of barnyard manure. That is the best fertilizer you can use in your district. If this is not available then you could probably use about 150 pounds of nitrate of soda and 400 to 600 pounds of superphosphate per acre with good results. Careful, thorough cultivation to avoid the results of any drought of the summer and keep down weeds should give you splendid results.

The powdery mildew is the most common fungi disease attacking the gooseberry. This can ordinarily be held in check by spraying with lime sulphate solution. The first application should be made as soon as the leaf cluster buds have begun to open. The leaves may be from one-fourth to one-half inch long, but spraying should be done before any leaves are open. The second spraying may be two weeks later and will ordinarily complete the work for the season. The efficiency of these sprays depends very largely upon the thoroughness with which the work is done. All parts of this plant must be thoroughly reached and covered with the spray. Additional sprayings are usually not profitable.

Thorough pruning out of badly infested twigs will assist greatly in the control of this and similar diseases.

Organize and Standardize

(Continued from page three.)

plan, which was proposed by Secretary William Garfitt of the Western Jobbers of Chicago had been favorably considered at a big meeting of fruit growers in Yakima some time ago and had attracted the attention also of Wenatchee, Hood River and Walla Walla. A committee had been appointed in each of these districts, had attempted to sound local feeling on the subject, and met in Yakima on Monday that the horticultural association assembled to discuss it and if possible make some recommendation regarding it to the state body. At this meeting O. A. Fechter, president of the Yakima Valley bank, brought discussion of the plan to a head with the statement that he could see no value in advertising until selling methods are improved. "First we should discuss our selling and distributing methods," he asserted. "If we can improve them, I think there will be no trouble in raising money for advertising." He moved that it be the sense of the meeting that the Garfitt plan is practicable and advantageous to the fruit growers of the northwest, but that to apply it a limited organization is necessary; that such an organization is necessary not only for advertising, but for stabilizing prices so as to make any advertising plain effective. In view of the fact that marketing would be thoroughly discussed at the horticultural association meeting, a committee which later became the marketing committee of the association was appointed to report on the feasibility of limited organization, and on its report the association's action was based, as outlined above. The Garfitt plan, which by some has been termed merely an attempt by the jobbers to throw dust in the eyes of the growers, was thereby classified as an issue subordinate to the general movement toward better coordination.

A Shining Example.

Mr. Coffman's address at the annual banquet was a banker's story—and he knows it from the very beginning—of the "tribulations, trials, growth and success" of the Lewis-Pacific Dairymen's association, the Lewis county "co-op" on the foundation of which was built the United Dairymen's association, and which is pointed to the state and country over as one of the most successful existing agencies for the cooperative marketing of farm products. It was a gripping story of the transformation of an enterprise which started out with a destructive program—the putting out of business of the Chehalis plant of the Carnation Milk Products company—into one with the constructive aim of doubling the number of dairy cows in Lewis county and providing a satisfactory market for their product. An enterprise that already has built around it one of the chief dairy centers of western Washington, where 15 years ago a purebred animal was hardly known, but where today there are 150 farmers interested in pure breeding, and three-fourths of their herds are purebred or high grade. "We never did anything in Lewis county that did more to raise the standard of citizenship," asserted the banker. "J. A. Scollard (the president) came out of it one of the best informed men, most skillful operators, in the entire state, and the men who stood back of him became men big in stability, in self-esteem—tolerant business men, meeting responsibility as it appears with the forethought and foresight of men of affairs. When American citizens take hold of a proposition like that, they've got the problem solved by the very fact of doing so, and that's just what you fruitgrowers must do. You have this splendid valley, this favorable climate, these interested railroads. I am not dreaming when I say that we are on the verge of a great inflow of capital, of population in this state, and this is no time to stop. Do this thing yourselves. Come in to this January meeting, say that you are ready to act, and in another year you will have forgotten that the discouragements under which you now labor ever existed."

Other speakers were three past presidents of the organization, J. L. Dumas, H. M. Gilbert and F. A. Wiggins, and the newly-elected president, Earl Barnhill of Wenatchee. Entertainment was furnished by the Rotary quartet and by Sam Kiefer, who gave a humorous talk as "agriculturist of the Yakima Valley Transportation company."

A list of new officers was given in a previous issue of this paper.

Adapt Variety to Climate

When getting a new variety of fruit started in any district, it is imperative that it be well suited to the conditions before it is planted in large numbers. This point is brought out in the case of grapes in the Yakima valley. William Lee Jr. of Yakima has tried out the Worden variety, which he believes is better suited to the general conditions than is the Concord.

"Grapes are wanted in mixed cars of fruit," said Mr. Lee, "but the Concord matures too late to be available. The Worden, however, is earlier and could be used in mixed cars, for which it would be in demand. In the lower valley especially they would mature in time for shipping in that way.

"The Worden is a seedling of the Concord, and is a larger and a better grape. I believe that fewer Concords should be grown since the Worden is a better variety for supplementing our other soft fruit in mixed cars and would thus bring additional money into the valley."

Protection to Fruit

There are certain wild berries which many birds choose almost invariably in preference to cultivated fruits. Planted in the vicinity of the orchard, those varieties which are in fruit at the same time as the orchard species will protect the yield of the latter. Among such wild berry-bearing plants are: Elderberry, eaten by 67 kinds of birds: raspberries and blackberries, eaten by 60 or more bird species; mulberry, serviceberry, dogwood fruits, nonpoisonous varieties of sumach, wild cherries and blueberries, all eaten by more than 30 birds. Red cedar and golden currant are also eaten. The mountain ash, in addition to its other virtues as a lawn tree, affords food for the birds. By offering them such alternatives to our cultivated fruit we enlist the willing labor of the birds very cheaply in our heavy task of keeping down the orchard pests.

Keeping Down Insect Pes s

Fruit growers in the fruit districts of the state are sparing neither time nor effort in keeping down the insect pests that lower the quality of apples. Harry Jones of the Wapato district, near Yakima, is doing a thorough cleanup job in his orchard. Scrapers made from mower sickle sections are used to scrape off the loose bark on the trees and butcher knives are used for cleaning out the crotches.

After the tree has been gone over with the scraper he follows up with a steel brush. This gets into the cracks and makes short work of any codling moth larvae which the scraper may not have dislodged.

To guard against mice injury to the trees, he cleans up for several feet around each tree.

LATE PLUMS MAY NOT RIPEN.

If you plant a variety of plum that is late in ripening you will get a flat and flavorless fruit in some sections of the state. Except in gravelly soil and under conditions otherwise favorable to early maturing, the Green Gage plum is a variety too late in ripening for the Spokane region, and the same may be said of several varieties.

LILLY'S
Crop Book
The most complete and authoritative publication available on crops and seeds for the Pacific Northwest will soon be published complete in the

Wheat Will be King

(Continued from page three.)

ing the price of wheat has almost completely stopped selling. Very little wheat is being sold. Farmers are hoping that congress, or the president, or somebody or something will do something to raise the price of wheat and are holding onto a goodly share of their crop. They sold enough to pay harvesting expenses and other pressing needs and are hoping for higher prices for the remainder. It is estimated that 60 per cent is still in the hands of the growers. That is one reason why business is not as good as usual at this time of year. Farmers had fondly hoped for not less than $1 per bushel for this season's wheat crop. The difference between 85 cents and $1 is 15 cents. That isn't much on one bushel of wheat, but when multiplied by 13,000,000 bushels it means $1,950,000, and that much added to the income from Whitman county wheat would have meant much to the growers and to the business interests.

Methods Are Changing.

Whitman county is experiencing a change that may prove beneficial. It is generally conceded that the old methods of raising wheat, summerfallowing one-third or one-half of the land every year, can no longer be made profitable and changes are inevitable. But those changes come about slowly and gradually. It is while these changes are being made that relief is needed and needed badly. Diversified farming will help to solve the problem, but that comes slowly. It takes time to get cows and build up a dairy herd. It takes time to get poultry and build up a profitable flock. It takes time to cut the big wheat farms into small, diversified farms and it takes time to get these farms occupied by men who will make a success of diversified farming. And then how about profitably marketing these diversified crops?

Whitman county, a county rich in agricultural wealth, is greatly deficient in dairy cows. A few farmers have gone in for dairying. I was surprised when shown a list of big wheat farmers whose sons are milking cows. There are a number of them raising from 640 to 2000 acres of wheat and milking from six to 18 cows each and paying their running expenses with cream checks. A Colfax merchant told me of the wife of an extensive wheat farmer who is a regular customer at his store and has bought some desirable things for her house in addition to the general store bills, and paid for all of them with cream checks.

Of course, all Whitman county farmers can not become dairymen, nor can all the wheat farms be converted into dairy ranches, but a large per cent of them can add some cows and some pigs and some chickens and some alfalfa and some corn to their wheat farms and make all of these add to the net profits of the farm.

A Pioneer Creamery.

Colfax has the oldest creamery in Whitman county. No one connected with it knows just how old it is. But I remember when it was running at Elberton, 28 years ago. It was later moved to Colfax and has been running there since 1896. It is called the Colfax Jersey Creamery. It was started by E. H. Hinchliff (deceased many years ago) and C. N. Hinchliff, now in Seattle. It is still owned by the Hinchliff estate. C. B. Bucher has been manager of it for 18 years and it was an old creamery when he took charge. There are 264 customers who are delivering milk to this creamery. Some of them have been delivering milk to it since 1897. They have found it profitable for 26 years. Some started recently. Among the recent converts are A. L. Crampton, one of the big wheat farmers of Whitman county, who is milking 14 cows; Ed Rinehart, another pioneer wheat farmer, and several sons of Henry Hickman, one of the wheat kings of the county. Here is a partial list of some of the oldest patrons of this dairy: P. R. Lair, W. J. McVickers, W. Van Gordon, A. Crow, W. W. Hubbard, G. M. Aldergott, William Alexander, P. R. Aschliman, J. H. Kirkman Adrian Hilty, J. V. Faires, J. G. Hoffman, J. W. James, U. Cronk, William Guske, Louie Hofer, I. B. Harris Jr. (his father, I. B. Harris Sr., began delivering milk to this creamery 26 years ago) and John K. Shireman. These names were picked from the list of 264 on the wall of the creamery and probably many other old timers who have been delivering milk for from 10 to 25 years were overlooked. Some of these men are getting as high as $150 a month. Many are getting more than $100 per month, and that comes in handy at seasons when cash is hard to get. Mr. Bucher told me of some of these men who are making payments on land with the cream checks they receive.

The "Milk House."

I also visited the "Milk House" at Pullman. This is a creamery started two years ago by three young men, Roberts, Carson & Austell. They had taken a course in creamery and dairy practice and they thought they saw an opening for a creamery at Pullman. They thought right, as subsequent events have shown. They opened their creamery two years ago and now have 419 customers who are supplying the creamery with milk. About half of these are local, live near Pullman and deliver the milk to the creamery by truck or team. The other half live on the Genesee branch of the Northern Pacific railroad, as far south as Genesee, Idaho, and ship the milk in by express. A few haul it from their farms south of Pullman. The creamery has paid as high as $7500 a month for milk and cream, for it uses whole milk as well as butterfat. One of the men who is supplying milk and cream to this creamery has drawn as high as $700 a month. This is at the rate of $8400 per year. Some of these men have been dairying for 20 years. When there was no creamery at Pullman they shipped their milk or cream to Spokane or other points. Here are the names of a few of the men who are selling milk and cream to the "Milk House":

C. H. Barclay, who has a herd of pure-bred Holstein cows and is taking dairying seriously (he is the one who got as high as $700 a month for the product of his dairy); J. D. Carson, "Bob" Germain, L. G. Thayer, H. H. Curtis and W. C. Glaspey. These are just a few of the oldest dairymen who live near Pullman and have been making the dairy business pay for many years.

Brick Burford, secretary of the Whitman County Farm bureau, is working with banking and other interests to bring a lot of good dairy cows into the county. He is being assisted by W. H. Tally, state secretary of the farm bureau. Both are graduates of Washington State college, at Pullman and Mr. Tally is a native of Whitman county, having been born on a farm near Oakesdale.

Fall wheat conditions in Whitman county are good. Many pioneer farmers say they never saw a better prospect at this time of year. There appears to be about the average acreage of fall sown wheat and, unless there is a big reduction in spring planting, the acreage in 1924 is not going to be much below that of this year. It seems a difficult thing for a Palouse farmer to reduce his wheat acreage. Wheat has been "king" for so many years he hesitates to dethrone this crop.

Wheat Is King.

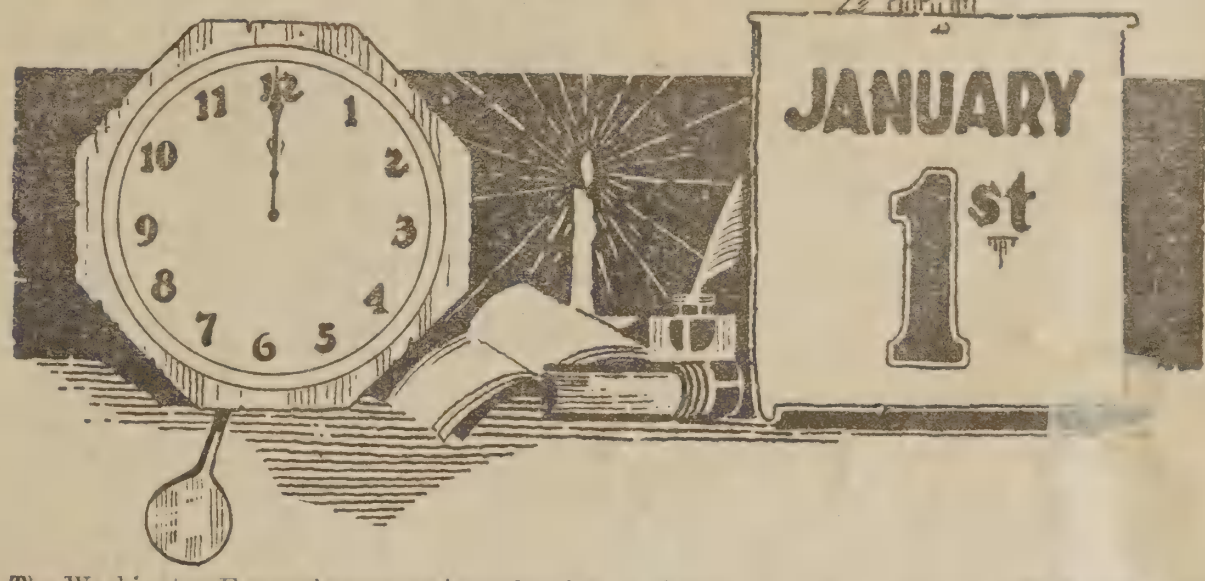
I was told an amusing story by a business man of Moscow, just across the Idaho state line two miles from Whitman county, where conditions are similar to Whitman county, and it illustrates the "ruling passion" of the average Palouse farmer. This man said:

"We had a wonderful crop of peas in Latah county and in eastern Whitman county this year. The crop was big, the yield being almost equal in bushels to the yield of wheat, and peas sold for as high as 4 cents a pound ($2.40 per bushel) while wheat was worth about 85 cents, or less than 1 1-2 cents a pound. Rain threatened and the Palouse farmers worked with great diligence, early and late, to save their wheat, worth less than 1 1-2 cents a pound, and let the peas, worth 4 cents a pound, remain in the fields. They can not get away from the idea that wheat is the most important thing in the world."

Low prices for Whitman county's "king" crop in 1923 have been a hard blow, but things are not nearly as bad as some pessimists paint them. Nor, on the other hand, are they as bright as they are painted by some optimists. Conditions are by no means as good as they ought to be in a county capable of producing (and that does produce and has produced) 13,000,000 bushels of wheat in a single season. But Whitman is still, and always will be, one of the greatest agricultural counties in the west and she will again see the return of the prosperity that has made her great.

A GOOD RESOLVE:

BOOST COOPERATION IN 1924.



The Washington Farmer's cooperative subscription plan has been a big winner in 1923, just as it was in previous years. Let's make a good resolution on January 1 to make this plan even more successful in 1924.

We say to our readers, "Send your subscription orders direct. Get your neighbors to do the same. We will give you and your neighbors the benefit of every penny which would ordinarily go to the agent handling the subscription." The idea has met with widespread response. Readers in every nook and corner of the state have done their share. The cooperative plan in subscription-getting has been demonstrated to be winner.

However, in looking forward to the great amount of subscription business which must be attended to in 1924, we are reminded that "to stand still is to go backward." A field has to be persistently cultivated or it will grow up to weeds. We must keep the pump handle going up and down or water will cease flowing from the well.

The same with our cooperative subscription plan. Its success could not continue if our friends and the friends of cooperation should cease their efforts. Every one has a part to play, and should do his share.

We have every confidence that you will resolve to continue to cooperate and repeat our request that you take thought as to your subscription renewal. Instead of waiting for a notification, mail in your order at least sixty days in advance of the address label of your paper. Tell your friends and neighbors about our cooperative plan and include their orders with your own. By all pulling together we can and will make 1924 a big year for cooperation. Let's do it!

Subscription Rates of The Washington Farmer:

$1.00 for Five Years 25 Cents for 1 Year. 50 Cents for 3 Years.

In Canada add 1 cent a copy for extra postage.

Dec. 27, 1923.

THE WASHINGTON FARMER,
Review Building, Spokane, Wash.

I desire to take advantage of your Cooperative Plan in securing new and renewal subscriptions.

I enclose herewith $.....for a.....year subscription to

THE WASHINGTON FARMER.

Name .....

R. F. D. ..... Box ..... State .....

If your subscription is already paid in advance, it will be extended from the date to which it is paid.

American Farm Bureau Federation Policies

By GILBERT GUSLER

The fifth annual meeting of the American Farm Bureau federation held at Chicago, December 10 to 12, closed with O. E. Bradfute again president, the election of an executive committee composed largely of members of the conservative group, and definite approval given to the policy of the American Farm Bureau to give cooperative marketing a less prominent place in its program of work for 1924 than it has held during 1923. It ended also with the problem of compromise, of harmony on some common basis with the so-called radical group entirely unsolved.

Cooperative Marketing.

For a year there has been a decided difference in opinion in the executive committee as to the line of work to be carried on by the farm bureau. The lines have been well defined. One group believed that the executive officials of the organization, particularly Secretary J. W. Coverdale, were not carrying out the mandate of the previous annual meeting with respect to cooperative marketing. This group believed that the promotion of cooperative marketing should be the major activity and that ample funds should be placed at the disposal of the marketing department to carry on its work.

The other group, while not minimizing cooperative marketing, backed up the officials in insisting that the farm bureau should follow a balanced program, laying equal emphasis upon transportation, marketing, legislation and education.

Secretary Coverdale's Resignation.

The feeling in the executive committee came to a head during its final meeting on the Saturday preceding the annual meeting when the resignation of Secretary Coverdale was accepted. On the same day at a conference on cooperative marketing called by Walton Peteet, in the course of discussion of the year's activities, Mr. Peteet made remarks to the effect that the officials of the American Farm Bureau were unfriendly to cooperative marketing.

That sentiment among the delegates was crystallizing in favor of the administration was apparent in the ovation accorded President Bradfute at the close of his address at the opening of the convention when he made a plea for an end to mud-slinging and said that the dispute over cooperativve marketing was a difference of opinion as to who instead of as to how, as to who should reap the glory and the pecuniary profits.

A set program, which included reports of the various departments and many speeches rather than a discussion by the delegates of the work for the coming year, afforded numerous dramatic moments and oportunities to test the prevalent sentiment among the delegates. One of these came when Secretary Coverdale presented a report from the records of the organization showing that the states in which cooperative marketing had been stressed as the chief activity had not maintained their memberships, at least so far as paying dues to the American Farm Bureau was concerned, as fully as those states in which the balanced program had been followed. Mr. Coverdale also was given a great ovation by the delegates.

Following this report, S. R. Guard, former director of the department of information of the American Farm Bureau federation, whose resignation was accepted several weeks previously by President Bradfute because of Mr. Guard's opposition to Mr. Coverdale, obtained the floor to present his plan for a general service program for cooperatives to be carried out by the farm bureau along such lines as organization, research, publicity, transportation, legislation, etc., these services

E. O. Bradfute.

to be paid for by the cooperatives as a means of financing the farm bureau.

Climax on Final Day.

The climax came on the final day of the session when Mr. Bradfute was reelected president by unanimous vote. E. F. Reed of Minnesota was elected vice president. Members of the executive committee were chosen by sections. Only three of them, two of whom voted against the resignation of Mr. Coverdale, were reelected and a fourth, Mr. Reed, was made vice president.

The committee follows:

Western group—A. C. Hardison, California; Frank Evans, Utah; Charles E. Gibson, Colorado.

Midwestern group—Ralph Snyder, Kansas; S. H. Thompson, Illinois; C. E. Hearst, Iowa.

Eastern group—Frank M. Smith, New York; George M. Putnam, New Hampshire; S. McLean Buckingham, Connecticut.

Southern group—E. P. Cohill, Maryland; W. D. Farris, Texas; and Edward O'Neal, Alabama.

Resolutions.

Following the election the resolutions committee presented its report. It included among other things a resolution recommending that the states and country farm bureaus should establish service relationships with cooperative marketing associations in order to encourage a more definite relationship between the farm bureau organization and the commodity organizations than has existed up to date, any services rendered by the farm bureau to be paid for by the cooperatives.

Another resolution recommended the discontinuance of tax free securities, and reiterated the objection of the farm bureau to a general sales tax and a reduction of income taxes. Cooperative marketing of farm products as offering the most practicable means of stabilizing agriculture on a profitable basis was again indorsed, but no policy or action was outlined. Other resolutions declared opposition to price fixing, favored a truth in fabric bill, adequate appropriations for highway construction, the Henry Ford Muscle Shoals act, the electrification of class A railways, an amendment to the intermediate credit act changing the minimum loan period from six to four months, limiting rediscounts on loans under the federal reserve act to 2 per cent above the basic federal reserve rate, favored a merchant marine without subsidy, adequate tariff on agricultural products, limitation of immigration, urged organization as the major activity of the American Farm Bureau for the coming year, urged the adoption by county and state farm bureau of such methods as are necessary to bring about a full transmission of membership dues regularly each month, and immediate adoption by the American government of a vigorous foreign policy.

Wheat Growers' Committee.

A final resolution presented by the resolutions committee without recommendation indorsed the formation of the National Wheat Growers' advisory committee and pledged earnest cooperation with that committee in its efforts to develop cooperative marketing of wheat. The resolution further indorsed the activities of the cooperative marketing department of the American Farm Bureau in the formation of the committee and instructed that department to work in closest possible harmony with the committee.

This resolution brought to a head the differences of opinion among the delegates. The National Wheat Growers' advisory committee was formed at a meeting called under the auspices of the National Council of Farmers' Cooperative Marketing Associations, which the American Farm Bureau officials are disposed to regard as a rival in the cooperative marketing field.

Mr. Peteet took the floor immediately upon the presentation of the resolution to say:

"If the convention should fail to adopt the resolution by an overwhelming vote, it will destroy the cornerstone of our program of cooperative marketing, since a marketing program which takes no account of wheat is a joke. The movement will go forward anyway," he warned. "The question is whether the farm bureau is to haul down its flag of leadership or continue to have a share in the movement."

Mr. Peteet went on to explain that the attitude of the farm bureau officials all through the spring was not one of support to his efforts to include a grain marketing plan in his cooperative marketing program. As a last resort, he had attended the meeting at which the National Wheat Growers' advisory committee was formed. He had pledged the support of the farm bureau to the committee's plan to organize the states to market wheat cooperatively and was made a member of the committee.

Storm of Opinion.

The resolution brought a storm of opinion from the floor.

S. H. Thompson, president of the Illinois Agricultural association, told how Illinois had supported loyally every movement toward cooperative marketing as well as the farm bureau. Her leaders had committed themselves to a strenuous program of grain marketing and Mr. Thompson felt that the farm bureau should indorse the national committee as a definite attempt to continue aggressively on the cooperative marketing of grain.

The conservative group contended that the farm bureau officials should have been given larger consideration in the calling of the meeting and in the formation of the national committee. Others of the group said that the indorsement had been asked for too late and that had there been any real desire for the counsel of the farm bureau it would have been given a greater opportunity to help formulate the policy of the committee. This group felt, also, that the interests back of the national committee, under the leadership of Aaron Sapiro, were not favorable to the U. S. grain growers fathered by the American Farm Bureau and which has finally begun to function in a small way.

The resolution was finally referred to the new executive committee with power to act. Since this committee is composed mostly of members of the conservative group, this was considered equivalent to pigeon-holing the resolution.

Peteet Resigns.

At the conclusion of the vote Mr. Peteet again took the floor, and, accepting it as a declaration that his cooperative marketing program of the past 10 months had not been in harmony with the desires of the delegates, resigned as director of marketing.

The report of the steering committee as to the program for the American Farm Bureau for 1924, which provided a reduced budget and discontinuance of some of the present activities, was referred to the executive committee with power to act. This report provided for a nominal secretaryship to be combined with the office of director of organization.

Illinois and Indiana were closely associated with the Sapiro-Peteet group all through the fight and it is still uncertain as to how the disagreement will be ironed out by them or whether it will develop into a division in the organization. Ohio and Iowa were leaders throughout in the conservative group.

Later in the week the new executive committee reinstated J. W. Coverdale of Iowa as secretary and treasurer of the federation. The committee gave him the additional office of director of organization formerly held by a separate official.

What is regarded as another blow to the anti-Coverdale forces was delivered when the committee, according to an official statement issued from the offices of the federation, indorsed indirectly the United States Grain Growers' corporation.

A Three-Horse Team

By E. L. POTTER.

Can you tell me how to work three horses satisfactorily on a wagon? J. D. T.

There is only one really satisfactory way to work three horses to a wagon and that is to have made for the wagon a pair of heavy shafts, such as would be used for one horse, only heavier and longer. The three horses are then worked with the middle horse in the shafts. The evener is a standard three-horse evener such as would be used for plowing or cultivating, only heavier. The shafts are supported by a long neck yoke, held up by the breast straps of all three horses. This is the type of hitch that is used by all the big three-horse teams in the cities and I may add that three-horse teams in the heavy trucking districts in the large eastern cities are very common.

Sometimes where it is desired to work a third horse only for a few days as an emergency proposition, he is hooked by attaching the single tree of the extra horse to a piece of wood or iron, extending from the tongue to one side about three feet. In order to give strength to this piece and to prevent side draft it is usually supported by running a rod or light chain from the outside end back to the rear axle of the wagon. This avoids any appreciable amount of side draft and makes a fairly satisfactory arrangement where something cheap and temporary is desired. It has, however, the disadvantage of having the third horse attached direct to the wagon and without any evener to equalize the pull between him and the other two horses. If he is lazy he will probably not pull very much, while if rather free he may pull too much.

Attempts have been made to make three-horse eveners which could be attached to the ordinary wagon in place of the regular two-horse evener and permit two horses to work on one side of the tongue and one horse on the other without side draft. These eveners, however, have all been failures, as they must be, since they are attempting the mechanically impossible. I do not believe there are any of these eveners on the market any more.

Canadian Thistle Control

Canadian thistles can be controlled and possibly completely eradicated by a good stand of alfalfa, according to Joe Ender of Lopez island, San Juan county, who reports the result of one year's trial with alfalfa. "This method, however, applies only to soils where good stands of alfalfa can be secured," said Mr. Ender, "and it would be useless to fight the thistle in this manner if the alfalfa does not get a good foothold upon first being seeded."

Other instances of the control of this weed by the use of alfalfa have been reported to H. J. Lechner, the new county agent, and some of the growers have even found that red clover can be used in the place of alfalfa.

NEED TO COORDINATE.

Manager W. L. Carver of the Kennewick-Richland Fruitgrowers' association thinks that the northwest fruit industry's greatest need is for cooperative associations to coordinate their selling activities, particularly on apples. Why organize more independents when existing cooperatives compete against each other? he asks.

Are United for Agriculture

Influential Bankers Confer at State College

By LINCOLN R. LOUNSBURY,
Agricultural Extension Editor.

A group of the most influential bankers in the state put on their hats and coats and left their big financial establishments for two days to listen to the problems of the farmers of Washington.

The result—a new organization? "NO!" But a unity of the present organizations and a definite method adopted to use the machinery of any organizations which are willing to cooperate with the farmer. Not to dictate to the wheat grower, the live stock man, the dairyman or any other specialized type of farmer, but to let him work out his own program, and lend a helping hand to cooperate.

After a two-day conference at the State College of Washington, going over the entire program of Washington agriculture as analyzed by the specialists of the extension service, they all agreed that by working together something could be accomplished.

Here is the scheme: All efforts of the American Bankers' association, state bankers' association, state chamber of commerce, state agricultural council, state department of agriculture and the extension service of the state college through a county council. Now that sounds like a new organization, but it is not in the sense that it is already in existence in Thurston county, and all the organizations are working in various counties of the state.

The county agricultural agent in counties where there is one will have the job calling these forces together under the following plan:

The Plan.

The extension service of the state college of Washington will be represented by the county agent, who is already on the ground and who has a very definite knowledge of the problems facing the farmers in his county. The state department of agriculture will be represented by one of their district or county horticultural inspectors. Then a group of farmers will be selected from among themselves to represent their interest, together with the agencies given above. This group will constitute one-half the group, which will be farmers and their representatives, the county agent and the horticultural inspector.

Now for the other half of the group: There will be a representative from each bank in the community or county; a representative from the chamber of commerce or commercial club or both if there are the two organizations. The bankers and business men shall have an equal part on the council, but shall not represent over half. It will work out that if there should be five banks in the county and a commercial club and chamber of commerce, there would be seven representatives from the business interests. Now to make up the balance of the council, there would be the county agent, as an organizer, the horticultural inspector and five farmers.

Suggestions and discussions will be presented from each group and they will be viewed from the standpoint of the best interests of the entire community. With a council of this kind in each county, it will voice the sentiment of the people interested in farming development, from the ground up and not from the top down.

It is the purpose of the action taken by the agricultural interests of the Washington bankers to unite all existing agencies and not make new ones in an honest endeavor to better rural development.

These are the results, backed by the financial interests of the state. I made the statement at the beginning that the group represented the most influential bankers in the state. Let's see who they were and what they represented:

The meeting was called by C. D. Rorer, commissioner of agriculture for the Twelfth federal reserve district. Similar meetings have been held in other states, but this is the first to be conducted in the coast states. There will be a similar one held in Oregon next month.

Those Present.

The extension service of the state college was represented by Dr. S. B. Nelson, director of extension; Dean E. C. Johnson, representing the experiment station and college of agriculture. The state department of agriculture was represented by E. L. French, director. N. B. Coffman and D. O. Lively were present for the State Chamber of Commerce. J. A. Scollard from the agricultural council; R. H. Macartney, president Washington Bankers' association; William Hatch Davis, secretary and general counsel, state association; J. T. Alexander, Chehalis; J. W. Bradley, Spokane; Senator T. J. Wilmer, Rosalia; H. B. Miller, Toppenish; J. N. Scott and F. C. Forrest of Pullman; D. H. Moss, Seattle, member of the American Bankers' association executive council; W. T. Triplett, Spokane, state vice president of the American Bankers' association.

Members of the state bankers' agricultural committee present at the conference included: W. A. Miller, Puyallup; L. N. Plamondon, Woodland; Robert Moody, Everett George Gannon, Pullman; and E. E. Flood, Spokane; Ralph Comegys, Thornton; and W. H. Linklater of the Western Washington Experiment station, Puyallup.

"I am fully convinced that the business interests of this state are soid to agriculture," said Mr. Rorer, commissioner of agriculture for the Twelfth federal reserve district. "This is shown by the fine desire of the business interests to assist the farmer. However, if this assistance is to be successful, it must be worked out from the farmer up and not from the business man down. The farmer knows his problems, and by taking up the problems of the farmer, the banker, the business man all together in united group, there is a chance for success."

Trapping Suggestions

By ISAAC MOTES.

To catch wolves, foxes, wildcats, opossums, skunks and coons in a steel trap take a barrel and knock out both ends. Drive a staple on the inside, about midway from the ends, and tie a live rabbit or chicken by the legs close down to the staple. Be careful to tie it so it will be as comfortable as possible. Then take the barrel out some distance from the house into the field, or wherever you have seen signs of any of these animals, locate it in a smooth place and prop it with rocks or pieces of wood, with the side to which the chicken or rabbit is tied resting on the ground. Then set four good No. 1 1-2 or No. 2 steel traps, two at each end of the barrel, so that an animal can not reach the chicken or rabbit inside without getting caught.

In winter, when timber wolves, coyotes and foxes are hungry, and inclined to prowl around farmhouses this is a good way to catch them, for when the animal in the barrel sees them approaching it begins to flutter or jump and jerk, and in the case of a chicken it will doubtless squall, and this will excite the night prowler, and in its eagerness to seize its prey it will rush up to it regardless of human scent about the place, which it might not do if the chicken or rabbit were not there fluttering or jerking.

It will be best to fasten the chain to a rock or good-sized piece of timber, rather than to a stake, so the animals can drag it away slowly. If fastened to a stake they may gnaw or twist a foot off and escape, but if fastened to something they can drag a little they will delude themselves into believing they are escaping, and will drag the weight until tired out, and you can easily follow them next morning.

Egg Men Meet

Three poultry meetings are being held in eastern Washington this week by leaders of the Farmers' Union Egg and Poultry association. The first is at Grandview Thursday, the second at Yakima Friday and the third at Walla Walla Saturday. J. Q. Adams, president of the Farmers' Union and active in the educational and organization work of the poultry association, is attending all three meetings.

Of special significance is the report that the Washington Cooperative Egg and Poultry association, which operates principally in western Washington, but which has a branch organization at Yakima, is soon to turn back the contracts of the Yakima members. Word from Yakima indicates that the poultrymen are considering signing up with the Farmers' Union organization, which has headquarters at Spokane. There are about 60,000 hens signed up with the present association in the Yakima district. The Grandview and Yakima meetings this week are taking up the probable realignment.

The meeting at Walla Walla is to take steps for the signing up of sufficient hens in that district to warrant the establishment of an assembling station at that point. I. D. Casey of Attalia, near Pasco, visited at the Farmers' Union office in Spokane last week and conferred with officers of the poultry association relative to possible membership. Mr. Casey is one of the largest producers in the state, having several thousand hens. He will participate in the meeting at Walla Walla Saturday.

The association at Spokane reports membership owning over 50,000 hens at the present time.

Coordinate Farm Bureaus

A coordination of the Spokane county and Stevens county farm bureaus has been effected by which the two will work out of the office of the Spokane bureau at Spokane. This is expected to eliminate unnecessary costs of operation and administration and will give to Stevens county members an opportunity to participate in the general marketing and purchasing program being carried on by the Spokane organization. E. A. Barnett will be the Stevens county representative on the joint board of directors. D. H. Ulrich, secretary of the Stevens county bureau, will transfer his headquarters to Spokane, where he will join forces with T. S. Brown, secretary of the Spokane bureau.

The Stevens county organization has elected new officers for the ensuing year, as follows: E. G. Kohlstaedt, Colville, president; Mrs. Ray W. Hall, Orin, vice president; Earl Ogden, Colville; J. H. Newhouse, Ford; J. O. Streeter, Chewelah; P. A. Rasmussen, Bossburg; Mrs. Ray W. Hall, Orin; Abraham Heidegger, Rice; H. T. Skeels, Addy; E. G. Kohlstaedt, Colville; John McDaniel, Addy; Wilbur Dupuis, Orin; E. A. Barnett, Springdale; A. E. Skidmore, Colville; J. H. Zodrow, Chewelah, directors.

Wins Consistently

The picture herewith shows one of John L. Smith's excellent Holstein cows, Hazelwood Leda Heilo Korndyke, on Hazelwood farm near Spokane. She stood first in the 2-year-old class at the 1922 Pacific International and repeated the performance in the 3-year-old class in 1923 at the same show. In a test which she finished a few months ago she made 15,997.5 pounds of milk and 824 pounds of butter, the test being finished when she was only a little

past 2 years old. Judge Moscrip, who placed the ribbons at the Pacific International in 1922, pronounced her one of the best 2-year-olds in America. Mr. Smith is not only proud of her as an individual, but proud of her breeding as well. Her sire was the good show bull, Hazelwood Heilo Ormsby Korndyke, whose dam, Heilo Ormsby DeKol, was second at the National Dairy show and three times made records of over 30 pounds.

The dam of Hazelwood Leda Heilo Korndyke was Hazelwood Leda Ormsby, with a record of 13,443 pounds of milk and over 620 pounds of butter in 305 days. Her granddam on the dam's side was Leda Hengervold Colantha.

Another interesting feature and one which gives this young cow an even more promising future is the fact that she is a sister to Idaho Violet Posch Ormsby, the famous University of Idaho cow that recently produced 26,812 pounds of milk and 1259 pounds of butter in a year.

Grading of Cream

Butter and Cheese Makers' Plan

The Washington Creamery Operators, Butter and Cheese Makers' association held their 16th annual convention at Seattle December 11 and 12. The convention was by far the best that has ever been held by any similar organization in the state and the well-arranged program held the interest of every one throughout the entire session.

Some of the prominent speakers were Professor G. L. McKay of Chicago; Professor Willard Sadler of Vancouver, B. C.; Chris Johnson of Salt Lake City; Governor Louis F. Hart; Dr. L. C. Pelton and Professor E. V. Ellington of Pullman.

Perhaps the most important questions taken up were the matter of grading cream and the question of supplying cans free to the producers. The latter was passed on in the negative by the delegates and will be acted on by a special committee at a later date. The grading problem was received favorably by those attending the convention and plans are being worked out to put the plan in practice.

The nomination committee recommended the reelection of all of the officers that have acted during the last year and the report was unanimously accepted. The officers were W. E. Turner, president; H. E. Turner, vice president; Carlyle Hall, 2d vice president, and L. W. Hanson, secretary-treasurer. All the officers are Seattle men.

GOES TO THE ORIENT.

C. L. Longwell, one of the pioneer fruit buyers of the Wenatchee district, who ships to Alaska and the orient, has gone on a four months' trip, during which time he will visit China, Japan, the Philippines, Java and other East India points, calling upon dealers with whom he has had transactions and arranging for future business in that rapidly increasing field for Wenatchee apples.

ELECTRIC INDUSTRY

Sets Pace for Progress

As new factories are built, as farmers increase their irrigation acreage, as new homes are constructed or as new projects are launched, the electric light and power service is ready for their use.

That's it; the power is ready. It has been developed beforehand. It has pioneered the way and literally set the pace for building, cultivation and home-building.

As rapidly as a city or community can absorb more electric power, the light and power company develops the necessary horsepower for the next progressive move in its territory. ***No industry has ever been turned away from your district through lack of adequate power.***

Money for new power plants, transmission lines and necessary properties are secured at fair rates of interest with comparative ease. All electric companies are glad to sell their stocks and securities to their customers and other fellow citizens. They want just such "partners."

The electric company strives to be more than just "ready." It sets the pace for progress.

NORTHWEST ELECTRIC LIGHT AND POWER ASSOCIATION

F-12

A Clever Game

In last week's issue of THE FARMER appeared an article regarding a new wrinkle in the game of securing subscriptions to farm papers. A small army of clever, smooth-tongued solicitors are traveling over the state avowedly in the holy cause of securing reduction of taxes for the farmer. The truth is, however, that the result of their operation is equal to increasing his taxes by $2, for as soon as they inveigle him into signing a blanket petition to congress asking tax reduction they explain to him that the alleged service they and the eastern farm paper they represent are thus rendering, together with a subscription to the paper, is worth $2.

Get that idea? Assuming that everybody wants taxes lowered, which they surely do, these solicitors flash the big tax reduction petition, get into the good graces of the farmer, and then spring the two-dollar subscription deal. Clever? Yes, but we doubt if many readers of this magazine will fall for the scheme, for our folks know a better way than that to get taxes lowered. The polls is the place to tell congress what we want. Congress is not going to pay any attention to a big, formal, job-lot petition, especially when secured as a subterfuge in a subscription-getting campaign.

It is evident that this petition game has been used elsewhere for recently there appeared in Wallace's Farmer an editorial exposing the method as used in that state. Wallace's Farmer, by the way, is under the editorial and business management of Henry C. Wallace, secretary of agriculture, and John P. Wallace. Here is the way that sturdy farm paper hits the same scheme that is being put into operation in this state by the hord of solicitors above referred to:

"Traveling solicitors of an eastern monthly farm journal seem to be at work in southwestern Iowa. They are going about in overalls, evidently in the hope that they may be taken for real farmers. Their first approach is by the presentation of a petition demanding lower taxes, the prevention of labor strikes, the licensing of commission men, and the reduction of freight rates. There are not many farmers who are not in favor of these four propositions, and consequently the solicitor gets a favorable reception. After signing the petition the farmer is told that a necessary part of the proceeding is the payment by him of the trifling sum of $2, for which he will receive this particular farm journal for 10 years.

"Of course it is the $2 subscription the solicitor is after. All the rest is merely window dressing. The payment of the $2 will not bring any lower taxes, nor lower freight rates, nor anything else except probably the monthly issue of this particular farm journal. It is simply a scheme for capitalizing the farmer's trouble for the benefit of this particular publication and not a very creditable scheme at that. One is inclined to wonder whether a publication that tries to work such a scheme is as sincere as it would like to have its readers believe. A paper that is worth reading ought to sell on its merits and the service it renders."

Should Raise Feeds

"I have always contended that a dairy farmer in western Washington should raise as many of his feeds as possible," said W. G. Grimm of Everett, who owns a Jersey herd near Arlington. "This is a natural grass country, and our timothy and clover mixtures grow well on almost any kind of soil. Alsike is a good clover to add to a hay or pasture mixture, and holds out longer than clover. In fact, we try to keep our meadows four years or more without plowing them up.

"If more of the farmers in western Washington would grow their own hay they would be money ahead in the long run. The pastures are a necessity, of coarse, but we should regulate the amount of land used for pasturing in the first part of the season. There is a disadvantage of a hay crop being hard to cure when we have a wet season, but there is a possibility of pasturing a few weeks on the early grass that comes up, thus throwing the hay crop a few weeks later to miss the rains.

"Some of the farmers in this section are discarding the silo, especially where only small herds are fed. This is perhaps justified where a large crew can not be had for filling the silo. In cases where Canadian thistles are troublesome the use of a silo should not be overlooked, since the thistles can be kept down much better by either cutting for hay if they are not too thick, or putting them into the silo. They will always make good silage even when partly mature, and the cows will eat the silage readily.

"Some of the farmers find that they can raise roots more profitably than silage, but such cases are for the smaller herds as a rule. A man can do his own work and not have to hire any extra labor during harvest as is often necessary when putting up silage. As far as the feeding value of the two crops is concerned there is little if any difference.

"Kale is a fine crop for succulent feed, but it has not been grown as much during the last few years because of the root maggot. It also takes more labor to feed green feed, as it has to be cut fresh every day. The plants do not mature until late summer at the best and by that time there are many other crops that could be used."

Mr. Grimm said that he had used vetch both as a hay crop and for silage, but did not like it as well as clover, since the crop has to be seeded every year and it is sometimes difficult to get an even stand. This difficulty may be partly due to inoculation since this is not always carried out with vetch, but the practice gives better results when carried out.

Want Rates Reduced

Two examiners for the Interstate commerce commission are holding hearings on the Pacific coast to secure evidence on which they will act concerning applications for reduced freight rates on wheat and hay. A hearing was also held in Spokane

The attorneys for the railroads at the Spokane hearing emphasized the claim that any reasonable reduction of the freight rates on wheat or hay would be of such slight advantage to the producers that it was scarcely worth considering. They declared that a 10 per cent reduction would result in practically no benefit in the way of increasing the farmer's prosperity, since his losses under present conditions were largely caused by the general disturbance of world affairs and a correspondingly poor market. Producers and their counsel took the opposite position that, while general conditions contributed to the depression in farm business, reduction in freight rates would be a considerable step toward the betterment of these conditions.

The railroads laid stress also upon the testimony of a number of bankers that the farmer's condition was less serious this year than last year, arguing before the examiners that this indicated a return to prosperous conditions without freight rate reductions.

Among several witnesses presenting the farmer's side of the case were W. J. Robinson, president of the Washington Wheat Growers, Associated, and L. A. Hunt, manager of the Northwest Hay Growers' association.

No recommendation from the board of examiners is expected for some little time and after their recommendation to the commission further time would elapse before action were taken on the application for lower rates.

Demonstrate With Sodatol

Stumping powder is again being furnished by the United States government to the farmers at reduced rates from war materials. A demonstration of what sodatol, the new powder, is capable of doing was put on near Lacey, Thurston county, by E. B. Stookey, the county agent. There is approximately 1760 pounds of explosive material in each ton of sodatol, the composition being made up of T. N. T. and one of the common forms of nitrates. It can be sold to the farmers for about 40 per cent of what ordinary blasting powder usually costs.

The government has contracted with the De Pont powder plant for mixing the new product, since the law requires that such materials be handled only by factories that are properly equipped and isolated from habitation. All orders are handled in carlots and it is expected that the county agents will be able to fill the demand from the supply on hand, provided it can be mixed in large enough quantities.

Governor Hart attended the Lacey demonstration and gave a short talk on the value of this new product to the farmer who was in need of large quantities of powder to clear his lands. There were about 200 farmers and business men present and all were well pleased with the ease with which the stumps were blown.

Hens Are Hard Workers

I noticed recently that some woman in Oregon had a White Leghorn pullet that had laid 54 eggs in 54 days. Now we have a Ringlet Rock that laid her first egg at the age of 5 months and 24 days, and laid an egg every day for 84 days, missed the 85th day, then laid every day until the 95th day, then she sat. Thus she made a record of 94 eggs in 95 days. We set her for a rest. She hatched and was back laying in 10 days and is at it yet, not even a complete stop for molting. (She is not for sale.)—G. T. Atkins, Chehalis, Wash.

Hens of high producing strains have been known to lay as long as 150 days without missing a day. Even higher records are reported.—Editor.

MULES IN THE UNITED STATES.

In 1910 the number of mules on farms in the United States was 4,209,769. The number on January 1, 1920, was 5,432,391, an increase, during the decade, of 1,222,622, or nearly 30 per cent.

Just Folks

Here are two sets of words and phrases which indicate two important parts of all human action:

Self.	Others.
Today.	Tomorrow.
Plan.	Execution.
Theory.	Practice.
Easy to see.	Hard to do.
What should be.	What will be.

Excessive planning, multiplied theories of doing, are rampant in our world. You can scarcely pick up a newspaper or a magazine or pass a day without finding one or more assumed solutions of political, social or religious problems. It seems as though more persons today were spending more time on telling you how to do than ever before in the history of the world.

Lessons of experience and history are largely forgotten. The world is largely overlooking the fact that glittering prospects are quite apt to result in brain-racking and back-breaking work; that many theories do not work out.

There is also much ineffective work due to defective preparation. It is folly to expect results if there is no adequate knowledge of performance.

Yet just now a voice is making itself heard in matters of higher education, declaring that so much time is being spent in high school, college and professional courses that the student is half way through life before he begins his life work.

Preparing to live can not only take up too much time, but may in a measure defeat itself. The very habit of preparation may dull the spirit of execution.

It seems almost as if all preparation should be on the side, that doing itself should be the larger part of preparation. Rules and principles may be learned on the side, while the chief work always is in getting facility and applying the rules and principles, and facility always comes from doing.

CHAPTER VII
Arrows of the River Gods

THE Reverend Caleb Hopkins was at the boat landing in good time next morning, under his arm an old pair of trousers, a faded straw hat and a pair of very light boots to wear while wading, all having been supplied by the good gray lady of the parsonage from the cast-off clothes of her late husband.

The others were already there, sitting in the long skiff, Uncle Nick in the stern, Jack Warhope and Al Counterman at the oars, the latter still holding the boat to the wharf.

In his nervous and mincing way the preacher scrambled in; Counterman shoved off; the oars dropped into the water; and, with the seine coiled up on the stern locker under the experienced care of Uncle Nick, the live box towing behind, the skiff slipped away up the river.

Alpine island divides the Wabash into two nearly equal channels. The skiff was guided into the north channel, and had glanced along nearly to the head of the island when Counterman rested his oars with the remark that just there would be a good place to make the first haul.

The skiff was accordingly turned in to the island, and the prow drawn up on the sandy margin. Each man, Uncle Nick excepted, hurriedly undressed, stacked his clothes in the boat and drew on his rough fishing garments.

In strict justice to the truth it must be stated that only Counterman and the woodsman hurriedly undressed. The preacher was far slower and quite noticeably embarrassed over the unusual experience, though he set about stacking the frock coat, high hat and shiny boots in the bow of the boat with the same orderly deliberations he probably observed in the proceeding from premise to premise of one of his sermons.

After a mild bit of urging, a prodigious deal of coaching, he was left near shore to hold the brail stick while Jack and Counterman rowed out around as great an expanse of water as the length of the seine permitted, with Uncle Nick in the stern, laying out the folds and looking to it that the lead line fell evenly to the bottom while the cork line held the net properly erect.

On nearing the shore at the completion of the circuit, the two rowers leaped into the water the moment it was shallow enough, leaving the boat to Uncle Nick, and raced for the bank at top speed, holding the brail stick to the bottom as they ran.

With the frantic river tribes thus forced to shore, the water began to be wildly agitated. Long ripples shot from side to side of the rapidly diminishing space enclosed by the net, as some panic-stricken swimmer plowed his reckless way near the surface.

Even the preacher's tired and studious eyes waked with the excitement, and he tugged eagerly at the brail as the bass and pickerel began to leap, glittering in the morning sun like silver arrows shot up by the river gods.

"Look," he cried, as a two-pound bass leaped the cork line, "they are escaping."

"Plenty left," grunted Uncle Nick, who had beached the boat and was now lending his strength to the brail.

"Thar, boys, haul'er easy," directed Counterman. "We got 'em. They cayn't git away now. Man! hain't ther' a wad uv 'em. I know'd this wus a good hole. Cayn't fool y'ur Uncle Al on fishin' holes, don't keer if e' hain't got but one lamp, an' cayn't sling dictionary like some folks."

The good fish were dropped into the live box, the others thrown back into the river—precisely as war claims the best men and leaves the defective—and the fishermen seined on.

Several hauls had been made, none of them quite so profitable as the first, and the sun was fast mounting toward midsky when, as a windup, they prepared to drag the famous Alpine hole that lay along the south edge of the narrow sandbar jutting far down-stream from the lower end of the island.

"This hyur's a hard hole t' fish," observed Counterman, handing the near brail to the preacher and taking his place at the oars with Jack, "but they're thar, an' we can git 'em."

"Bank's purty steep," called back Uncle Nick from his place in the stern. "Better not try t' wade out none."

The preacher nodded and the other stooped to his task at the seine. It was plain that unusual results were expected from the haul by the way the two rowers bent to the oars and the extreme care with which the old man laid out the folds of the great net.

But when the usual circuit was completed and they began to haul in on the seine, it was noticed that it did not bow out in the wide curve a spread seine should. Instead, as the men pulled, the sides drew in toward each other until the floating corks stretched out into the river in nearly parallel lines.

"Hung up, by thunder," growled Counterman, scraping the sweat from his grimy forehead with a grimier forefinger. "Snag 'r somethin' about 40 yards out thar—right whar the bottom's out, too, as the feller says. Must 'a' drifted in durin' the high water. Hit werdn't thar last fall."

Jack walked up the bank a short distance to where the boat was beached.

Stripped to the skin, a figure that might have been a model for those master sculptors who conferred immortality upon the gods of classic Greece, he was just slipping into the water when Uncle Nick came up the bar.

"You'll find the lead line fast on somethin'—a snag more'n likely," he directed. "Jist h'ist it off. 'Tain't no trick—but we've lost our fish."

Warhope glanced back over his shoulder and nodded. The next moment he was plowing through the stream with strokes so powerful it seemed his great shoulders fairly scorned the water and spurned it out of the way. But the task ahead proved harder than the light remark of his old friend had indicated. It was only after he had three times dived to the bottom of Alpine hole that he was able to locate the snag and release the seine.

When the swam ashore, following the hauled it in, the preacher, who had come up the bar, was seated on the forward gunwale of the boat, feeling over his clothes stacked in the bow, as if eager to assure himself that they had not come to harm.

The woodsman was putting his wading clothes on again when a slight thud, as of some heavy object striking the bottom of the boat, caught his quick ear. Without turning his head—he happened to be just then squeezing the water out of his hair before putting his shirt on—he was able to catch a glimpse of the ivory butt of a six-gun protruding from a pocket of the black frock coat as it was being tucked back in the pile with the tall hat and shiny boots.

Nor was that all—with a deftness that would hardly have been expected in one of his profession, the slim fingers were feeling over the other two stacks of clothes as if making sure that the six-gun he had just tucked away was the only one in the crowd.

Still, probably such an intention was farthest from his thought. Six-gun and all, it was likely merely another of the many eccentricities of a man who had the double drawback of being a professor as well as a tenderfoot—in the eyes of the woodsman, a combination about as bad as could be made. Warhope finished putting on his clothes, and, followed by the preacher, went down the bar to where the others were busy with the seine.

Snugged away under the tangle, in a manner that must have made it practically invisible, except from that one point, lay a small houseboat.

CHAPTER VIII
Hermit Houseboat

Uncle Nick and Counterman had just finished hauling in the seine when Jack Warhope, followed by the preacher, came down the bar and rejoined them. But the old man's prediction about losing the fish proved correct. The haul produced not a thing except a very surprised, highly indignant snapping turtle. Counterman kicked the turtle back into the water, and stared ruefully at the empty seine.

"Them fish has t' be made up"—he glanced up the river—"an' that's just one shore place t' do it——"

"Mud Haul," Uncle Nick finished.

"Egzac'ly. Hit's sich a nasty place t' fish that it ain't hardly ever fished, but they're thar."

He stooped again over the seine and began laying it out smooth and even on the dry sand, while the woodsman, always sparing of words and apparently in perfect agreement with the two older fishermen, went to the farther end of the great net to roll it up in readiness to be placed on the stern locker of the skiff.

The preacher had turned a quick look up the river; an expression of polite displeasure clouded his face.

"Mud Haul——" he muttered; "is it far?"

"Mile 'r so," grunted Uncle Nick, as he stooped over the seine, helping spread the meshes straight.

"I really should not remain away from the study so long," the preacher pursued. "I must have time to collect my thoughts somewhat, as I understand I shall be expected to make a few remarks at the—festival tonight."

Uncle Nick leered around at him.

"An' them remarks will be few, Parson. I 'low y'n nee'n t' worry y'ur head about them remarks none. Ther'll be another scent in the air t'night."

The old man winked at Counterman, trudged off down the sandbar to the live box, dragged it up along the edge of the stream and hitched it to the stern of the skiff. He had hardly finished when Jack and Counterman came to the seine, coiled ready to be unwound, stacked it on the stern locker and took their places at the oars.

The preacher came last, his eyes still drawn irresistibly up the river.

"Is there not some—other place?" he asked, reluctantly taking his seat in the bow, "some—nearer place?"

Uncle Nick studied him out of his deep-set eyes. He was a guest, in a sense, and he was—the preacher. The old man's face became thoughtful; he glanced at Counterman.

"Thar's Grassy Bar," he muttered. "Hit's better f'r spearin'. An' Yaller Branch"—he glanced up at the sun; swept sky and river with his puckered one eye—"t'day's too glary. Hit ain't deep enough. No, I'm f'r Mud Haul. They'll be scrooched in thar thick as bees around a haw tree."

The preacher glanced again up the river, and pulled the faded straw hat farther down over his head as if afraid of sunburn.

"Is it dreadfully—muddy?" he mumbled.

Guest and preacher though he was, he was still a tenderfoot. Counterman's raucous laugh exposed the huge wad of tobacco between his jaws; the woodsman grinned and dropped the blade of his outboard oar into the water., Uncle Nick took the unlighted pipe from between his lips, and his roar wheeled a wisp of sand snipe that happened at the moment to be glancing up the bar.

"Not as muddy as it—sounds," he chuckled, grabbed a match out of his trousers pocket.

Mud Haul is merely an arm of the river that reaches up behind a bramble-infested point of mud and sand jutting out and down into the stream. Ages ago it was probably the main channel. But in the long process of earth sculpture the river shifted and the old channel degenerated into a bayou. As time went on deposits of successive floods filled up the bayou, till at last only the lower point of it remained, fed and kept open by the tiny stream that oozed out from under the hills and crawled down through its bogs and swamps.

The fishermen landed at the sandy lower point of the prong of land behind which the mud draggled remnant of the bayou lay. The live box was hitched to a stake as before, the half reluctant preacher left to hold the brail stick, while the others rowed out and around the 50 yards or more of murky water that lay between the point and the shore.

The final haul proved to be much the best of the day. The good fish were dropped into the live box, the others tossed back into the river, and the fishermen sat about preparing to return to the village. The brail sticks were united, the seine rolled up, and the woodsman walked up the bar for the boat.

He stooped over the craft, possibly recalling the circumstance of the six-gun concealed in the frock coat; laid his hand to the bow to push it off; straightened after a moment, walked some distance farther up the bar and stood gazing intently toward the narrow upper end of the arm of water where it disappeared under the overlapping branches of trees and tangled vines. Snugged away under the tangle, in a manner that must have made it practically invisible, except from that one point, lay a small houseboat.

A trifling circumstance enough—houseboats were common on the Wabash—but why there? The place was dark and dank, the bank boggy, and there was no spring short of Alpine island. The woodsman turned and motioned to his companions.

They had been watching him and at his sign came trooping up the bar—the preacher fagged and lagging behind—and gathered around him. Following the direction of his finger, they peered in under the overlapping trees.

Counterman grinned around at the others after a moment and jerked his thumb back toward the skiff.

"S'posin' we row up an' pay 'im a visit? I'd like t' see a man with sich an eye f'r a campin' place."

Uncle Nick tossed up his chin, grunted, and led the way down the bar to where he had beached the boat.

The preacher appeared to be considerably vexed at the further prolongation of a trip that was growing more and more irksome to him. It might almost have been imagined that a frown ruffled the studious primness of his brow. But as the skiff glided up the narrowing arm of dead water, he appeared to get himself in hand again. The frown disappeared and his air became that of a man only mildly interested in what went on about him.

As they rowed in under the dense tangle of vines and branches they saw that the house-boat was small—small even for that class of craft.

There is little formality among men of the river and the woods—a fine enough delicacy, though, when big moments come. They brought the bow of the skiff up under the stern of the secluded little craft and climbed aboard. It was so light that it rocked with their weight.

There was both a fore and an aft door to the tiny cabin that occupied the whole mid-section of the deck, but no windows on either side. Both doors were heavily padlocked—a further proof of the owner's exclusiveness. A narrow gangway ran along the sides of the cabin and connected the diminutive fore and after decks. On the dusty boards there were a number of foot-prints, some of them—curiously enough—made by a boot that must have been stylish, even dainty.

Uncle Nick leaned upon the railing of the forward deck and prodded his pipe, while the one-eyed fisherman gnawed himself a fresh chew from a sweaty plug that he clawed up out of his overalls pocket, the two of them generalizing on the circumstance of stylish boot tracks no windows and padlocked doors.

The preacher had joined in the discussion and was just telling them, in his half bored drawl, that it might be some naturalist taking unusual pains to preserve his specimens, when Jack Warhope, still standing in the skiff and holding it to the stern of the house-boat, picked up one of the shiny boots from the preacher's stack of clothes in the bow, and, hidden from the others by the cabin, pressed the heel of it down hard beside one of the heel-prints on the dusty after deck.

The two prints coincided perfectly.

CHAPTER IX
Mettle of the Minister

THE Buckeye schoolhouse stood on the extreme west side of the village. Though it has since been replaced by a modern structure of brick and stone, 70 years ago it was a plain one-room building of the general type of the period—paint gone; weather-beaten; no belfry; no ornamentation; three windows on each side; a chimney at the back; a battered door in front.

The "festival" in celebration of the close of school was a distinct event at Buckeye.

The pupils' desks had been removed and placed around the walls. A long table extended across the rear. The rest of the room was clear, except for the great box stove that stood in the center of the

(Continued on page seventeen.)

FAMILY CIRCLE

ALICE W. BARLAND
EDITORIAL CONTRIBUTOR

SOMETIME.

Some time when all life's lessons have been learned,
And sun and stars forevermore have set,
The things which our weak judgments here have spurned—
The things o'er which we grieved with lashes wet—
Will flash before us out of life's dark night
As stars shine brightest in deep tints of blue.
And we shall see how all God's plans were right,
And how what seemed reproof was love most true.

And if some times commingled with life's wine,
We find the wormwood and rebel and shrink,
Be sure a wiser hand than yours or mine
Pours out this portion for our lips to drink;
And if some friend we love is lying low
Where human kisses can not reach his face,
Oh, do not blame the loving Father so,
But wear your sorrows with obedient grace.

God's plans, like lilies pure and white unfold.
We must not tear the close-shut leaves apart,
Time will reveal the calyxes of gold,
And if through patient toil we reach the land
Where tired feet, with sandals loosed, may rest,
When we shall clearly know and understand,
I think that we shall say, "God knew the best."
—Mary Rily Smith.

Experience Letters

Dear Mrs. Barland: You ask us to tell what we are doing. Women on the farms work very hard early and late; they raise almost everything in the garden that is used for canning and do can from 400 to 1000 quarts in a season.

I will mention four things that I raise for table use and for sale for pin money and perhaps it will help some one who wants to make money. I had a strawberry patch 15 feet by 20 feet which served the table for two meals a day for three or more people during the season and I canned 30 quarts and made 15 quarts of jam and sold five crates.

I own and attend several colonies of pure Italian bees, which supply my table and I have honey and bees to sell.

Women can attend to bees as well as men and bees are very interesting. The honey saves on sugar and jams and the bees pollenize the crops. All farmers should keep two or more colonies of bees for this purpose and to collect honey from their crops.

I have an asparagus bed of about 70 hills, two years old this spring, which provides an early vegetable very delicious, until peas mature. I expect quite a crop next year when the bed will be three years old.

I raise a white onion which multiplies from 7 to 21. My bed was a beautiful sight. This kind is a fine one for farmers to raise as there is little work to grow them and they ripen early. If set out in the early spring, they will soon be ready for use and when they ripen I reset them to use as green onions for fall and winter use. This way they provide us with onions the year around.

I will give several little discoveries that may be useful. To relieve the itching from nettles, rub on vaseline. It gives instant relief.

When canning place a cloth between the jars when boiling and they will not break.

To test a cake in baking, when it seems done press your finger in the center. If it presses in it isn't done; if it keeps its shape it is. MRS. ANNA HYATT.
Battle Ground, Wash.

Family Circle Girls

Dear Mrs. Barland: I received your letter and will write you about the Rogue river and surrounding country.

Our ranch is eight miles from Agnes and 24 miles from Gold Beach and Wedderburn, Ore.

We are living on the Wedderburn side of the Fogue river, which is just at the mouth and Gold Beach is on the other side, and is the county seat of Curry county.

Many people come here every summer to hunt and fish and camp. There is only a trail up the Rogue river now, but there is going to be an auto road through here in a few years on the Wedderburn side. Boats go up the Rogue as far as Illake and the mail boat goes up three times a week. From Agnes up mail has to be carried on pack horses.

There are many wild animals around here such as bears, cougars or mountain lions, skunks, bob cats, raccoons, squirrels, gophers, coyotes and deer.

There are seven in our family and I am the eldest and am nearly 13. I am in the seventh grade. I am 5 feet 4 1-2 inches tall and weigh 91 pounds.

We have two ranches, 1000 acres in all.
ELLEN.
Oregon.

Dear Mrs. Barland: I enjoy the circle very much and I wish we had more space. I am 23 years old and live on a farm of 272 acres and 200 acres are under cultivation. We have about 25 acres in clover and expect to harvest it for seed. We milk 10 cows and send the cream to Portland, Ore. The car line isn't very far away and the road is very good.

I help in doors and out doors, too. When haying time comes I help my father and brother in the field and I enjoy being out of doors very much.

I would like to hear some ideas from the circle as to how a boy or girl is to get an education when there is a large family. I think this would be interesting. Education is a very important matter for anyone to consider. T. C.
Oregon.

Dear Mrs. Barland: I am a girl of 20 years and live in the central part of Idaho. I think this is a beautiful country and I love it all—the mountains, rivers, plains and canyons.

We have discussed the question quite a good deal in school lately as to whether a married woman can take care of a home and also have a successful career. It is my opinion that all the career any married woman needs is her home. If she makes it a real home and not a boarding house for her family, she will have no time for any other career. No one can take the place of a mother to children no matter how good a nurse, school matron or maid she may be.

Don't misunderstand me and think I do not approve of women in business for I most assuredly do believe in single women having any sort of career they choose, but I believe if they want to follow one they should remain single. I shall be glad to hear the opinions of others on this subject. E. W.
Idaho.

Dear Mrs. Barland: Thanks for your card. What you said was true. I care more for my books, music and chickens and kittens than to be going somewhere all the time.

I walk five miles to take my music lesson but of course I get a ride sometimes. I will make a fine old maid for I like cats and I like my chickens, too, as they paid all my high school expenses last year, except for a few clothes.

You may picture me as very dignified and quiet, but I am not and if I am not laughing all the time I am called grouchy, so I try to have a smile always. I have enough freckles for a dozen girls.
E. B.
Oregon.

Family Circle Boys

Dear Mrs. Barland: I have been a silent reader of the circle for some time and at last have my courage up to write.

I am a boy of 19 and live on a 2000-acre farm. I believe a farm is the very best place for young folks. Many of the girls and boys are going to the cities to get positions in offices or stores. They are likely to be disappointed as there are many more looking for such work than can ever find places.

What the country needs now is more boys and girls to stay on the farms and help care for the crops. This will cut down the expense of hired help.

So many of the young people say that life on the farm is all work and no pleasure, but they are greatly mistaken because no one has better times than the outdoor girls and boys.

I think the family circle is a great benefit to all the girls and boys and I hope they will heed the good advice given by those older and more experienced.

I would like to hear from some of the boys and girls who are interested in outdoor life and I shall be glad to answer them.

A FARM BOY FROM OREGON.

Dear Farm Boy: Write again and tell us all about that 2000-acre farm. Tell what you raise, how much stock you keep, what you do with your beef or any produce and the whole story, and I am sure all will be glad to hear about it.
A. W. B.

"Mother Sacrifice"

By Edith D. Abbott.

"The day of 'mother sacrifice' is past—all the praise the farm mother or any mother of today should receive should be when she makes Johnny pick things up for himself instead of picking them up for him," said Mrs. Harriet D. Stow, home demonstration agent for Snohomish county, in an informal talk before the project leaders of that county.

"Not very many years ago it was generally conceded that when a girl married and lived on the farm, it needn't matter after that whether she had bright and pretty things to wear—she would never have a chance to wear them. But it does matter a great deal to farm women of today. The life of no mother or wife on the farm need be or should be one of constant sacrifice.

"You get sick of work, sick of yourself and sick of the family—and the family may get sick of you for all you know. What you need is contact with other women. One big thing in this community project work is that it gets the women away from home occasionally, and gives them an outside interest which is also an interest in the betterment of their homes."

Home project leaders from organized communities of Snohomish county have been meeting this week with Mrs. Stow for the purpose of outlining and scheduling their work for the coming year in the various projects and sub-projects.

Monday Mrs. Staw met with the project leaders in the home management work. Tuesday with the clothing leaders and Wednesday with the food and nutrition leaders.

The home management leaders will take up with the women in their community problems in room arrangement, choosing and placing of equipment, interior decoration, sewage disposal and such other matters as stain removal and the like. These leaders have scheduled their meetings for February. The leaders who attended the meeting Monday, December 3, were: Mrs. N. B. Newman, route 4, Snohomish; Mrs. Burt Mortland, route 1, Everett; Mrs. E. A. Henly, Florence; Mrs. C. E. Kuhlmann, Red Crossing; Mrs. E. M. Pearson, East Everett; Mrs. J. H. Vail, Red Crossing; Mrs. T. Sheil, Hartford; Mrs. John Maxwell, Oso; Mrs. Rees T. Jones, Marshland; Mrs. George Aken, Lakewood; Mrs. Lewis I. Jones, Marshland.

Twenty-seven communities have signed up for the class in millinery, which includes expert instruction in remodeling, designing and making hats. The actual classwork itself is more of a demonstration and exchange of ideas and suggestions relative to the use and fitness of various shapes and materials. This enables the women to get suggestions and training in the handling of materials so that when they work on their own hats they have very effective success. Last year the women taking this work in Snohomish county made more than 400 hats. The course also enables them when buying a hat to choose more wisely and economically.

Meetings for the women of the various communities were scheduled in millinery for March and April of the coming year, in pattern alteration for May and in garment finishing for July. Intensive courses will be held for the leaders themselves for two days the latter part of February and also in August.

The women at this meeting were:

Mrs. Frank Obenhofer, Stanwood; Mrs. F. H. McColl, Snohomish; Mrs. F. L. Couston, Sunnyside; Mrs. F. Frank, Snohomish; Mrs. A. Lindquist, Fobes; Mrs. E. Beckman, Riverview; Mrs. J. S. Carter, Riverview; Mrs. J. M. Modar, East Stanwood; Mrs. Alf Daniels, East Stanwood; Mrs. E. W. Shroeder, Snohomish; Mrs. W. G. Parker, Alderwood Manor; Mrs. Ray J. Porter, East Everett; Mrs. Rees T. Jones, Marshland; Mrs. W. F. Barnes, Machias; Mrs. W. L. Moore, Machias; Mrs. E. L. Bryant, Machias; Mrs. Chris Nelson, Hartford; Mrs. Mamie Carter, Hartford; Mrs. Eggert, Getchell; Mrs. O. D. Morgan, Granite Falls; Mrs. Lewis J. Jones, Marshland.

Meal planning and the school lunch are the two big projects under the food and nutrition group, leaders of which met Wednesday to schedule their meetings. Special stress is being put upon establishing the habit of milk-drinking for children. The women who represented their communities at the meeting Wednesday were Mrs. A. J. Love, Cedar Hill; Mrs. N. B. Newman, Cedar Hill; Mrs. G. G. Paine, Red Crossing; Mrs. E. T. Sutherland, Granite Falls.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

Has it ever occurred to you that too many of us are satisfied with past achievements? Because we have done fairly well in this and that field of endeavor, we rest on our laurels. Sometimes we are prone to think we have done our share.

Dr. Copeland.

I think I could forgive that particular mental attitude, although it strikes me as showing an unworthy complacence of mind. But there is another condition, all too common, which seriously impairs the progress of the race and which is fatal to the victim himself.

Some men who have really done well in the past settle down, gradually developing into human drones.

If they are office holders the community suffers because no new things are done and the old ones are neglected. If they are preachers the sermons grow dull and the sacred activities of the church are undertaken in a routine way. As a natural result the congregation drops off and the churchly spirit dies. If the doctor fails to refresh and replenish his medical knowledge by frequent pilgrimages to the sources of wisdom the new doctor gets the patients. Unless the merchant dresses his windows and showcases with new goods his more progressive rival gets the business.

Self-satisfied contentment and indifference to the progressing demands of life mean rust, rot and disaster.

It is expected of every man that he shall never stop in his course. Every day must be a new day and not merely another yesterday. You can't eat the food you ate yesterday. Neither should you govern your activities by what you did yesterday. The solid ground you stood on yesterday is soft today and it will be quicksand tomorrow. Unless you move you will be swallowed up and destroyed.

It is exactly the same in the matter of health. You may watch yourself for 30 years, you may take setting up exercises till you are 30 or 40, you may observe the rules of hygiene through this period, but unless you persevere everything you did in early life will become as nothing. "He that endureth to the end shall be saved."

It is a shame to see a man with a noble frame and upright carriage abuse his body and shorten his life by wrong habits. Strong drink, drugs, excessive use of tobacco, late hours, overeating, loafing, lack of ventilation, wet feet, careless exposure to the elements—what a lot of ways there are to undermine the health!

Fortunately, most boys and girls who are taught how to live are very likely to grow up into men and women who will continue to do those things which make for good health. Keeping the teeth clean, having them repaired when they need it, guarding the eyesight and getting glasses if necessary, making no improper demand upon the stomach and intestines, cleansing the skin, and by systematic, daily exercises keeping the heart and muscles in condition—these are essential things.

Unless these simple rules of health are observed every day and all the year, the beginning of the end is at hand. When you become a drone in the game of living you are warning the casketmaker that his services will be needed pretty soon.

Retirement from business will not prolong your life—it will shorten it. God intended that every man should labor and you are leading a normal life only while you strive as you always have striven.

High Points in News of the Week

Congress is now adjourned for a holiday recess until January 3. At the time of adjournment the house of representatives was fully organized and was ready for business, but the senate was still deadlocked over the choice of committee chairmen. The small number of senators designating themselves as "progressives" held the balance of power between the regular democrats and the regular republicans in the election of a chairman of the senate interstate commerce committee. The fight was waged largely against Senator Cummins for this position, the progressive republicans voting for others to compel the acceptance of a compromise chairman.

In the lower house the big issue is the so-called Mellon tax program as prepared by Secretary Mellon of the treasury department and approved by President Coolidge. This matter is expected to be the dominating question until it is disposed of by acceptance as it now stands or in modified form. Friends of the soldiers' bonus insist that the bonus should be taken care of before the tax legislation so that the latter could be made to include provisions for meeting the bonus should it be granted. It is generally predicted, however, that the bonus will be given second place in consideration.

Important in the Mellon tax problem are the provisions governing taxes on incomes. Here are a few of the points favored by the secretary in this regard, as announced in a prepared digest of the bill:

Earned income, defined as wages, salaries and professional fees, is given a credit of 25 per cent of the amount of the tax attributable to the earned income.

The normal tax on the first $4000 of net income is fixed at 3 per cent, and upon the remainder of the net income at 6 per cent.

The surtax rates begin at 1 per cent on net incomes from $10,000 to $12,000; an additional 1 per cent for each $2000 of net income up to $36,000; then 1 per cent additional for the next $4000 of net income up to $40,000, and then 1 per cent additional for each $6000 of net income up to a total of 25 per cent at $100,000 and over.

Income taxes to be paid during the coming year will be on the present basis, covering incomes for 1923. It is understood that the forms to be made out by the taxpayer will be much more simple than in previous years, eliminating much of the red tape that has made the filling out of the blank a nightmare for the average person.

A bill was introduced in congress last week providing for the creation of a fund of $50,000,000 to be loaned to farmers of the north and west.

* * *

Mexican women are not unlike women elsewhere. They do not like war. They are holding a convention in Mexico City now with a view to outlaw war and bring about peace between the various warring factions of their country. At this time the rebellion against the administration of President Obregon continues, with uncertainty as to its outcome. The uprising is one of the periodic disturbances of that hot-blooded country.

* * *

Flour is lower now than it has been for seven years. In Spokane last week northwest patents reached as low as $6.20 a barrel, with hard wheat patents $6.60, or $1.55 and $1.65 a 49-pound sack respectively. The high price of recent years was reached in January, 1920, when northwest patents reached $13.20 and hard patents $13.80.

* * *

Twenty-seven federal prisoners, who were sent to prison for violation of wartime laws, were released under order of President Coolidge last week. Three were held for deportation to their foreign homelands. This will clear the prisons of all so-called war prisoners.

* * *

Henry Ford last week announced that he would not be a candidate for president on any party ticket against President Coolidge. He declared that President Coolidge was the logical candidate of the republican party and that he should be elected in order not to disturb the country's business. Mr. Ford did not say that he would not be a candidate if Coolidge were not nominated, nor did he intimate that he would be. Difference of opinion exists as to the effect of the Ford statement. Some believe that it eliminates him from becoming the candidate of a third party even should Coolidge not be the republican nominee. Some who charge President Coolidge with "big business" ideas believe that it brands Ford as not a progressivve but a bona fide representative of "big business." Some say that it clears the atmosphere and insures the nomination and reelection of Coolidge, while others declare it will do Coolidge injury and prevent his election.

* * *

Premier Poincare last week publicly admitted that Germany was unable to make cash reparations payments, but declared that this only rendered more imperativve the ruling of the economic situation in the Ruhr district by the French. He declared that during 1923 France had secured from Germany 5,000,000 tons of coal, and that had she not occupied the Ruhr she would have received none. He predicted more than 20,000,000 tons in 1924, since passive resistance by the Germans has ceased. He said France was willing to negotiate with Germany at any time, but that France would not allow such negotiations to replace any of the authority of the regularly established reparations commission.

* * *

King George of Greece was last week dethroned, pending the decision of the Greek general assembly as to the form of government best serving the people of that country. It is considered doubtful that the king will be permitted to return. He has gone to Rumania. His removal is the outgrowth of a popular civil revolution in that country.

Potatoes

Rank High in World Agriculture

The importance of potatoes in world agriculture is emphasized in a special report published by the United States department of agriculture. The world crop was estimated at more than 5,000,000,000 bushels last year, exclusive of Russia. In countries reporting to date, the 1923 crop is 79 per cent of that in 1922.

The region of greatest potato production is in northwestern Europe.

Germany is the world's largest producer of potatoes, the report states. Production this year is estimated at 1,200,000,000 bushels, as compared with 1,494,181,000 bushels in 1922. Poland ranks second as a spuds producer with an estimated production in 1923 of 896,022,000 bushels, as compared with 1,220,576,000 bushels last year. Production of 15 countries in the northern hemisphere this year is estimated at 3,089,036,000 bushels, as compared with 3,900,730,000 bushels in 1922.

More than 60 per cent of American exports go to Cuba.

The Netherlands leads as an exporter of potatoes, and supplies at least 25 per cent of the world's total exports, the department says. Last year Italy exported approximately 5,000,000 bushels, Canada 4,000,000 bushels and Denmark 2,000,000 bushels.

Farm Business and Markets Outlook

(Continued from page five.)

63,023,000 bushels, compared with 103,362 bushels in 1922.

The flax crop estimate was reduced in the December estimate to 17,429,000 bushels. Last year's total also was revised downward to 10,375,000. The average farm price on December 1 was reported at $2.11 this year in spite of the increase in the crop. Last year's figure was $2.12

The range of cash grain prices on December 19 was: Chicago—Wheat—No. 2 hard, $1.07 1-2@1.10; No. 3 red, $1.09. Oats—No. 2 white, 41 1-4@46c; No. 3, 43 1-2@44 1-4c; No. 4, 44@43c. Barley—58@75c. Rye—71 1-4@71 1-2c.

Seed and Feed.

The cloverseed market is dull and little activity is expected until after the holidays. Prices are lower than a week ago, as retailers are slow to provide for their spring requirements.

Deliveries of wheat feeds by flour mills are rather heavy, although the rate of production is not high for this season of the year. Fresh offerings are liberal from both domestic and Canadian mills. Demand is only fair, although a little improvement has been noted in the southwest.

Hay Market Firm.

The hay market is a stereotyped affair, firmness ruling at most points as a result of light receipts. Demand is limited in most cases, although alfalfa suitable for dairymen finds a rather broad market.

Break in Fresh Egg Prices.

Prices on fresh eggs declined still further last week. Receipts were heavy and advices from the country report increasingly heavy production in many sections. Cold weather may strengthen the market and check the decline at any time. Prices of storage eggs declined to the low point of the season, as the movement out of storage was slow and receipts of fresh eggs were plentiful.

Butter and Cheese.

Butter prices were unchanged last week, although the undertone gradually weakened. Stocks moved slowly as consumptive demand slowed down.

Arrivals of foreign butter last week included 1252 casks of Danish, 3248 boxes Argentine, 500 boxes Irish and 118,140 pounds Canadian butter. Much of this was offered at attractive prices compared with domestic, and with the exception of the best Danish, competed mainly with the medium grades of domestic which were in liberal supply and hard to move.

Declines in prices of cheese in producing centers were reflected in reductions on nearly all styles at distributing points of 1-4 to 1 cent last week.

Fruits and Vegetables.

Potato markets were steady to firm last week. Shipments from producing sections showed a further falling off and have been light long enough to affect receipts at the leading cities. Northern round whites are quoted at $1 to $1.15 per 100 pounds for United States No. 1 sacked and $1.30 to $1.40 in bulk at Chicago. Idaho sacked Russets are bringing $1.65 to $1.75. Maine, Idaho, Colorado, Minnesota, Wisconsin and Michigan are the leading shippers at the present time in the approximate order given.

Carlot shipments of apples declined slightly last week, but are considerably above normal for this season of the year. Prices were steady and the prevailing level probably has fully discounted the large crop. Shipments of barrel apples have declined more sharply from the high point in October than have boxed apples. New York Baldwins are quoted at $4 a barrel in eastern cities and midwestern Jonathans at $5 to $5.50 in Chicago. Washington medium to large extra fancy Delicious are bringing $3.25 to $3.50 per box, fancy $2.85 to $3.15 and Jonathans medium extra fancy at $2.25 to $2.50.

LATEST QUOTATIONS.

H. Liebes & Co.

153 Broadway, Portland, Ore.

LET US TAN YOUR HIDE.

Horse or Cow hide, Calf or other skins with hair or fur on, and make them into coats (for men and women), robes, rugs or gloves when so ordered; or we can make your hides into Oak Tanned Harness or Slaughter Sole or Kid Leather; your calfskins into Shoe Leather. Colors, Gun Metal, Mahogany, Russet or lighter shade. Calfskins tanned in the lighter shades of shoe leather, also make elegant small fur table covers; great for birthday, wedding and holiday gifts.

LET US FIX YOUR WORN FURS

freshen, repair and reshape them if needed. Furs are very light weight, therefore it would cost but little to send them in to us by Parcel Post and get our estimate of cost; then we will hold them aside awaiting your decision. If you say "go ahead," very well; we will do so and hold them free of storage until you want them. If you say "no," we will return them post-paid.

Our illustrated catalog and style book combined gives a lot of useful information. It tells how to take off and care for hides. About our safe dyeing process on cow and horse hides, calf and fur skins. About dressing fine fur skins and making them into neckpieces, muffs and garments. About taxidermy and Head Mounting.

Bits of Fun for Everyone

Right.

"If you cut the lungs of a dog open, what would you find?"

"The seat of his pants."—Selected.

Or Any Other Maiden's.

"So that's Mrs. Jones, is it? By the way, what was her maiden name?"

"Her maiden aim was to be married, of course."—Gargoyle.

English as She's Spoke.

A woman from Neosho Falls dropped into John McCallon's emporium yesterday and inquired:

"Is this a second-hand store?"

"Yessum," said John.

"Well," said the lady, "I want one for my watch."—Burlington Republican.

She Knew It.

William—Are you sure your wife knows I'm going home to dinner with you?"

Johnson—Knows! I should say so! Why, dear man, I argued with her about it this morning for half an hour!"—Los Angeles Express.

Unclassified.

A violinist entered a little music shop in London. "I want an E string, please," he remarked to the man behind the counter.

Producing a box the latter said: "Would you mind picking one out for yourself, sir? I 'ardly know the 'es from the shes."—Mink.

Up-to-Date Music.

Elder Watkins of Muddy Hollow, just back from the city, was telling his wife of the church he had attended.

"Did you know any of their songs?" ashed she.

"No," replied the elder, "they didn't sing anything but anthems."

"Anthems!" exclaimed his wife. "What on earth is an anthem?"

"Well," answered the elder. "I can't tell you just exactly, but if I'd say to you, 'Betsy, the cows are in the corn,' that wouldn't be an anthem. But if I'd say 'Betsy—Betsy—Betsy, the cows—the cows—the Holstein cow, the muley cow, the Jersey cow, the spotted cow—all the cows are in—are in—the corn—the corn—corn—corn—corn. Ahmen!' why that'd be an anthem."—The Open Road.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you

4592. Misses' dress. Cut in three sizes: 16, 18 and 20 years. A 16-year size requires two and five-eighths yards of 54-inch material. The width at the foot of the skirt is two and five-eighths yards. Price 10 cents.

4600. Boys' suit. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size requires four and one-fourth yards of 36-inch material. Price 10 cents.

The Red Lock

(Continued from page fourteen.)

floor, rusty red, and huge enough and deep enough to swallow a stick of cord wood whole.

Everything was free, each family that sent children to school bringing a well-filled basket. And such a feast as the housewives of the neighborhood furnished forth could have been found nowhere else in the land except there in the great Flatwoods that lay, warped and wild, along the north bank of the upper Wabash.

Uncle Nick was there—which meant that things were not likely to drag, for he was the wisest, wittiest, and, as he himself said, "the no-accountest" man in the Flatwoods

Aunt Liza, the "other half" of Uncle Nick, was there too. But if he had an oversupply of jollity in his disposition, she had a far greater oversupply of grimness. Aunt Liza was the one person in the world on whom Uncle Nick's wit fell flat.

Reverend Caleb Hopkins arrived, as he had promised—he and Texie and Mrs. Mason. He had been anxiously awaited, since it had long been the custom to have the minister sit at the first table and launch the "festival" with a blessing.

Zeke Polick—likewise by ancient custom, a sort of self-appointed master of ceremonies—his sharp hatchet face scrubbed shiny with home-made soap perfumed with sassafras, the two tufts of whiskers bristling with importance at either corner of his bony chin, pounced on the preacher and hurried him to the head of the table.

Twenty years before, Zeke's coat, by the exercise of nimble imagination, might have been said to fit. But Zeke had shriveled and the coat hadn't. As he stood introducing the tall young preacher, swinging his thin arms in gestures vigorous if not eloquent, the coat cut more of a figure than Zeke. The crowd laughed—at the coat and not at the speaker. But the voluble postmaster applied the applause where it would do the most good and seized the chance to make a full grown speech—such a speech as only a Zeke Polick could make with impunity in his home town.

The preacher's remarks were far shorter And no speaker ever better improved his opportunity. The speech ended while the audience was still hungry to hear more—a trick that many a less brilliant speaker might well copy. He turned back to the table and raised his hand. The two long rows of youngsters stood in awkwardly decorous expectancy. The low tones of the solemn grace fell softly impressive; the minister resumed his seat; a deep breath swept down the two rows of hungry urchins; and—the "festival" was on.

A good length of the candles in the windows had burned away when Jack, sauntering aimlessly in the crowd, found himself, for the first time that evening, face to face with Texie, where she leaned over Mrs. Mason's chair.

The girl looked up and smiled. He was raking over his scant stock of words for one that would fit the occasion—words being about the hardest things he had to reckon with—when the young preacher, suave and affable, by odds the most popular man in the house, joined the group.

Through the mind of Jack Warhope flashed a comparison between the preacher and himself. The comparison showed dead against him. For the first time in his life he was half ashamed of his ungainly clothes, of the great limbs, the massive chest and shoulders—the "six-foot-three" of bone and brawn upon which the Flatwoods had exhausted its utmost imagination, its ultimate romance, when it bestowed the title: Big Jack.

Of a truth, the comparison between the two men could not well have been more striking. The young preacher was a very handsome man. The beard and spectacles, the mass of hair falling about his ears, seemed to invest him with an air of exquisite mystery—an air that has such power to compel the attention of women. He might have been a great tragic actor, had he turned his talents to the stage instead of to the pulpit.

The young woodsman, on the other hand, with his uncouth and ill-fitting clothes, though far from plain, owed whatever attractions he possessed to his magnificent physique, a bold regularity of features, and an honest, open frankness—a man's man.

With a jerky, elaborate bow to Jack and a light remark or two about the seining party—which he might just as well have left unsaid—the young preacher turned to Texie.

"I was just hunting for you, Miss Texie. They want you at the punch bowl."

Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade Which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores.

Just What You Want
may be offered in this week's want ads at a bargain. It's a good idea to look them over every week

Julia Leslie is 9 years old. She lives in central Washington, in Chelan county. Julia will have a birthday on the 24th of May. She likes her teacher very much.

Dear Aunt Nellie: May I join the Corner? I live on a farm and we have horses, cows, one cat and some chickens. I go to school and have five subjects. I like geography and reading the best.—Ernest Clark, in county, Wash. (Welcome to the r, Ernest.—Aunt Nellie.)

Aunt Nellie was pleased to receive a nice letter from Esther Boos. Esther has had her hair bobbed now and her sister has, too. They both have bangs and like them very much. Write again, Esther. This cousin is 10 years old and lives in Adams county, Wash.

"I am going to school and am in the fourth grade," writes a cousin from Chelan county, Wash., whose name is Ellis Sawyer. Ellis says he has a real nice teacher, and there are eight pupils in the school. He was at his friend's party and they had a fine time. Aunt Nellie was pleased to receive Ellis' letter and will look for another soon.

Loyd Fox celebrated his 7th birthday on December 8 by writing to Aunt Nellie, and we welcome Loyd to the Corner. He goes to school in the bus every morning. We were sorry to learn Loyd had the measles, but glad he is better now. Write again. Asotin county, Wash., is where this new cousin lives.

Aunt Nellie was pleased to hear from Jessie and Isabel Pettichord, two cousins from Whitman county, Wash. Isabel says she finds the letters, stories, jokes and riddles so interesting. Jessie has been unable to find a twin yet. She was 13 years old on August 4. Jessie has her hair bobbed and likes it. Write again.

for some
hear from

Birthday Greetings

THURSDAY, December 27—Doris Jones, 11 years old; Marie Wichert, 11.

FRIDAY, December 28—Opal Bridges, 10 years old; Bertha Osborn, 10.

SATURDAY, December 29—Lola Adam, 9 years old; Eunice James, 8.

SUNDAY, December 30—Lucille Jackson, 11 years old; Freida Klippert, 11; Doris Munson, 10; Sigrun Agnes Runolfson, 11.

MONDAY, December 31—Evelyn Lorraine Cronawert, 11 years old; Lester A. Piper, 7; Nelle May Shephard, 9; Caroline Wesch, 9.

TUESDAY, January 1—Elsie Crabb, 11 years old; Muriel Daugherty, 7; Irene Haverman, 8; Martha Keiski, 8; Ernest Michlund, 11; James Miller, 8; Maude Warfield, 10; Ernest Verner Wicklund, 11.

WEDNESDAY, January 2—Matilda Anderson, 9 years old; Vallborg Carlson, 9; Bert Florce, 10; Roy Linden, 8; Gertrude Stark, 7.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. And these will be published each week in regular edition of THE FARMER and will appear from time to time in The Farmer:

Helen Simmons, Mabel Hamilton, Mina Hampton, Esther R. Neff, Anna Ajax, Hugo Hakala, Annie Coons, Ellis Sawyer, Loyd Fox, Jessie Pettichord, Isabel Pettichord, Julia Leslie, Ernest Clark, Esther Boos, Hazel Schafer, Ora [illegible] Nelda Jackson, Helen Johnson, Carl Wildermuth, Otto Roth, Emory Shiplet, Nellie [illegible]

BEDTIME STORIES

By THORNTON W. BURGESS.

THE MOST WONDERFUL JUMPER.

It didn't seem possible to the little meadow and forest people watching the jumping match by the tall pine on the edge of the green forest that there could possibly be any better jumpers than Jumper the hare and Lightfoot the deer. There wasn't one but right down in his heart envied Jumper and Lightfoot. So when Jimmy Skunk announced that he would introduce the greatest jumper of all there was a great deal of wondering, and not a few shook their heads in doubt. Jimmy made a little speech in which he told them the last one who would jump was bashful and timid, and therefore he hoped they would one and all keep very still.

"Now everybody watch the top of that tall pine," he commanded.

Of course, everybody looked up at the top of the tall pine. They couldn't see any one there, and they didn't know why they should look up in a tree when the other jumpers had been on the ground, but they looked as they were told to do.

"Jump!" called Jimmy Skunk.

Then out from the top of the tall pine tree sailed something or somebody so small that in the dusk they could hardly see what or who it was. Away through the air it sailed, over the mark Jumper the hare had made, over the mark Lightfoot the deer had made, and on and on, coming nearer and nearer to the ground until, with a scratching of tiny claws, it landed on the foot of another tall tree.

"Timmy the flying squirrel!" cried Bobby Coon. "Hurrah for little Timmy! Why didn't we think of him before?"

"But he didn't jump, he flew!" protested Peter Rabbit.

"No such thing! He jumped!" declared Jimmy Skunk. "Use your eyes, Peter. Now watch if you see any wings."

Timmy had climbed clear to the top of the tree he had landed on, and as Jimmy spoke he sailed out from the top and back toward the tall pine. Down, down, he

"Now everybody watch the top of that tall tree."

came in a long slant right over Peter's head. Peter stared with all his might. Timmy's legs were stretched out just as far as he could stretch them, and while there seemed to be something between them which made him very broad and flat, he certainly didn't have wings. Down he sailed and landed on the foot of the tall pine and at once scrambled to the top. He had gone almost 10 times as far as Lightfoot had jumped.

Right away all the little people began to talk at once. Some said that it wasn't a jump at all, but that Timmy flew. Others said that it was a perfect jump, and that Timmy was the greatest jumper in the world. While they were talking about it Timmy jumped again. All the tongues stopped wagging so that their little owners might watch him. The minute he landed the tongues began to go again.

"Well, Peter, did he or didn't he jump? You know you are the judge," said Jimmy Skunk.

Peter scratched his head in a troubled way. "I suppose if he hasn't got wings he must have jumped. "It is just as if he slid down on the air, but how can anybody slide on air?"

"Easy enough," replied Jimmy. "Doesn't Ol' Mistah Buzzard slide down out of the blue, blue sky? And doesn't Redtail the hawk do the same thing?"

"But they have wings and you said that Timmy hasn't wings. That's different," replied Peter.

"Perhaps if you ask him Timmy will tell you how he does it," retorted Jimmy. He certainly hasn't got wings, and you must admit, Peter, that there are two better jumpers than your cousin, Jumper the hare, about whom you have boasted so much."

"I'll never boast again," declared Peter.

Just then Timmy jumped again, and this time Hooty the owl sailed after him. But Timmy reached a tree in safety and disappeared in the green forest, and thus ended the great jumping match.

Make It Attractive

By Demarest Glentworth Shumaker.

A young lady once remarked that the first thing she noticed about any house was the curtains at the windows, and that she judged the housekeeper somewhat by such draperies. If this item might be the gauge of the housekeeper, what about the impression the farmkeeper produces by the condition of the entrance to his buildings?

One day during my childhood I was riding with some older people who were critically observant of the driveways and barnyards of the farms we were passing, the most required to meet their approval being that both be well sodded and free from litter. With others it is nicely balanced flowers and trees or shrubbery.

One will always turn to take a second look at an entrance to a drive that is a little out of the ordinary. The lattice fence, just now so popular, adds much to the appearance of the drive and lawn. Fence rows kept free of grass and weeds is a wonderful improvement. The fences about the buildings, if kept well painted, are attractive, too. People who buy property and improve it so it will sell at an advance, know the value of paint.

Trees along the drive and about the buildings are worthwhile. It is not always possible to have many flowers, yet one can always have a few, and if these are well chosen they add to the beauty of the premises.

It is not necessarily the expense, but the results achieved by our efforts that increase our pride in our homes as well as improve the looks of one's community. May I be permitted to tell what we are doing in the way of fixing up our own drive? Out of cobblestones we are making entrance posts that are substantial, but not too ornate. The fence along the drive is of lattice construction, and over the two gates that open into the drive are pergolas, as we like them better than the older-fashioned arches, and they also go better with the lattice fence. With fence and pergolas painted the same as the trim of the house, they are distinctive, yet in keeping with the rest of the premises.

Two Country Boys

The late President Harding started as a boy doing chores on the farm.

His family then moved to town and he did chores there.

From 14 to 17 years of age he was in high school.

From 17 to 19 he was a typesetter, country school teacher, law student and insurance agent.

At 19 he was reporter and afterward owner and editor of the Marion Star.

At 35 he was state senator.

At 39 lieutenant governor of Ohio.

At 50 United States senator.

At 56 he was president of the United States—the highest office to which any man can attain.

* * *

President Calvin Coolidge's first job was doing chores on the farm. He attended the country school and afterward a preparatory school away from home.

Between the ages of 20 and 23 he attended college, working his way part of the time. Every vacation was devoted to earning his living.

Between 23 and 25 he was an apprentice in a law office.

At 25 he was a lawyer.

At 27 he was city councilman.

At 28 city solicitor.

At 32 county clerk.

At 35 state representative.

At 38 mayor.

At 40 state senator.

At 44 lieutenant governor.

At 47 governor.

At 49 vice president.

At 51 president of the United States.

Diet Is Important

"Our diet plays an important part in our health, and we are now finding that proper eating prevents diseases and even early aging. Many children eat too much sugar with their meals, either on cereals, which in some cases is eaten without milk, or by the use of too much sirup on hotcakes. Excessive use of sugar is apt to result in diabetes later on," according to Mary Sutherland, nutrition specialist of the state college extension service.

"Children especially should have a greater variety of foods, since they need more bone and muscle-building materials than do older persons. Some people get the impression that when a child is underweight and under-nourished that it is because not enough food is being eaten. They should bear in mind that a greater variety of foods will do much in supplying the necessary nutrients.

"Since the normal child grows very rapidly he needs large amounts of bone-building material to produce a strong frame. Too much emphasis can not be laid on the use of milk for this purpose, since one quart of milk contains as much calcium as 28 pounds of meat, 23 pounds of potatoes, or nine pounds of white bread. There are also life-giving vitamines in milk which assist in many ways in nourishing the body.

"Each child should have at least one quart of milk a day in some form or other. As far as lime is concerned, one pint of milk, buttermilk or skim milk will guarantee the right amount for the building of the bones and teeth, but one pint will not provide the greater needs for growing children. If the children do not care to drink as much milk as they should have, it should be given them in some other form, such as cup custards, chocolates, junkets and puddings in which milk is used.

"The use of vegetable is also important, and should not be overlooked. They can often be made more palatable by the use of white sauce, which, by the way, is another way which milk can be used.

"Such vegetables as cabbage, carrots, parsnips and the like can be served with white sauce, and it takes but a few minutes to prepare them in this manner. Cabbage is more digestible when sliced and cooked only for a few minutes than where boiled for a longer time. If served with white sauce it makes a very palatable dish.

"While bread and milk served in a bowl is an old-fashioned dish, it is something that could be used more in our diets today. In fact, if we ate more bread and milk we would have less digestive ailments."

STRAWBERRY PLANTS.

When planting strawberries only new plants, that is, those less than one year old, should be used, and these should be from the first sets rooted from runners.

Tractors Cultivate Huge Orchard

This picture does not show a battery of miniature tanks ready to go over the barbed wire entanglements of No Man's land. On the other hand, it is a picture of a battle scene of peace times. These little "track-layers" are used to pull cultivators in the 4000-acre orchard of the Bert Johnson Orchards, Inc., in the state of Arkansas. This orchard is famed for the peaches which it produces. Of the 4000 acres, 2500 are in bearing trees and the remaining 1500 in young trees that will soon be pro[illegible].

VETERINARY

By DR. S. B. NELSON.

Poor Appetite—I have a young cow fresh five weeks ago that suddenly lost her appetite. I have been feeding carrots, mill run and good, clear clover. She has salt and clean, running water. W. J. A.

Give the cow one and one-fourth pounds of epsom salts in four quarts of water. Then in addition to that I think it would be well if she could have a little tonic for a few days. Possibly as good a tonic would be one ounce of tincture of gentian in one pint of water daily.

Goiter—I have a hound pup 7 months old that has a goiter. Is there anything that I can do for him? J. D. H.
Renton, Wash.

Apply iodine ointment U. S. P. to the goiter morning and evening. Give the pup one-fourth of one grain of iodine in a little piece of meat night and morning.

Itch—I have a cow that began losing flesh about a year ago. She scratches and licks herself very much. I washed her with stock dip in May and she lost her calf a month later. She has lots of milk, but I dried her up and gave her special care. She is better, but still itches. She is with calf. F. J.
Chewelah, Wash.

Give your cow two tablespoonfuls of artificial Carlsbad salts once daily. I would not use any external treatment for the itch until after she calves. If the itch does not disappear after she calves I shall be glad to advise you.

Cough—I have a horse that coughs, mostly in the morning after having eaten hay during the night. I feed her oats in the morning, turn her on pasture during the day and feed a little hay in the evening, sprinkled with water.
Custer, Wash. M. C. H.

Give the horse one ounce of Fowler's solution of arsenic, morning and evening for 10 days to two weeks. Let her run two weeks and repeat.

Growth on Hock—I have a cow that has a growth from her hock resembling a parchment tobacco pouch. It is soft to the touch and appears to be full of fluid and the size of my fist. She is not lame nor seems to be bothered in any way. What can I do to get rid of this blemish?

Another cow 9 years old, milking, has trouble with her left hind leg. At times she has trouble raising her foot to step. She has to move her leg in a half circle to set her foot down and a distinct snap is heard. She is also troubled with numerous warts on her teats. What can I do to relieve her?
Kent, Wash. G. L. G.

Do I understand your question correctly, that the growth is a thin parchment pouch-like affair that hangs down from her hock? If it does I suggest that you tie it off short to the hock, tying it very tightly with a strong linen thread or string so as to cut off the circulation feeding it and allow it to slough off. I can not say that you can operate it because I don't know where it leads to, and when it drops off it is possible that the lips of the wound will have grown together so as not to cause you any difficulty.

As to the second cow, I think she is injured at the hip. You do not say how long it has affected her. It limits my opportunity to advise treatment. The fact that she swings the leg in a circle practically locates it in the hip, and since she swings it out it would indicate the trouble to be in the lower part of the joint. If she swung it inward it would indicate it as being in the upper part of the joint and vice versa, so as far as the leg bone fitting into the joint socket is concerned, I do not know of anything but a good plaster put on the hip and causing a cooling irritant effect that would be of value.

Regarding the warts on the cow's teats, I would suggest that you snip them off with a dull pair of scissors and then apply a little tannic acid to the stump, morning and evening. If, however, the warts are flat ones, I would suggest that you apply a little of the following prescription four or five times a day to the warts, applying the medicine rather liberally: Chloral hydrate, one and one-half drams; acetic acid absolute, one and one-half drams; salicylic acid, one dram; spirits of ether, one dram; collodion, four drams.

Wire Cut—I have a horse that was cut in the wire on the hind leg about seven days ago. Can you tell me what to do for it? T. J. M.
Colton, Wash.

Use the following treatment if it is in the muscles of the hind leg: Lead acetate, one ounce; zinc sulphate, one ounce; water, one pint. Apply morning, noon and night.

Wire Cut—I would like to know the best treatment for wire cut. I have a horse which was badly cut about a month ago and it does not seem to heal. He was fat at the time, but is getting poor. He was cut to the bone just inside the hock a little below the joint. It has run a good deal for about a week. Is the horse liable to be left with a stiff leg? E. B.
Nespelem, Wash.

It appears to me that your horse is in a very serious condition, because of the seriousness of the cut and the location of the injury. If he was cut to the bone and the bone is injured, the chances are that if it heals on the outside it may break and run again, because of the diseased bone inside. If the joint is not open and the infection does not get into the joint, the chances are good for your horse's recovery, but it will take a long, long time. I would think that his chances are three to one that he will have a stiff leg if the injury is pretty close to or at the joint. It is quite possible that it would be best for you not to try to inject any material into the wound, because if the joint is not open you might accidentally injure the joint and thus make the case a much more serious one than it is at the present time.

I would suggest that you simply keep the outside of the leg clean and paint the wound and around the wound with tincture of iodine morning and night, unless it begins to blister too severely, then stop for a few days and give it rest. Give your horse rather nourishing food, because these bone injuries draw on their vitality very heavily.

News for Breeders

CLACKAMAS GUERNSEY BREEDERS.

Guernsey breeders of Clackamas county, Ore., held their sixth annual meeting at Oregon City, December 12. There was a good attendance and two interesting addresses were listened to. E. J. Mahy, who recently came to the county from England with a fine Guernsey herd, mostly bred on the island of Guernsey, told in an interesting manner of the work done there and customs on the island. State Senator F. J. Tooze spoke on dairy legislation, giving particular reference to the anti-margarine bill passed by the last legislature and referred to the people. He strongly urged farmers to use every possible influence for the bill.

Officers elected are John Gaffney, president, Oregon City; R. I. Seely, Sherwood; J. T. Beckley, Boring; A. E. Shibley, Springwater, and A. I. Hughes, Oregon City, vice presidents; C. B. Sprague, secretary-treasurer, Estacada.

YOUNGQUIST'S NEW HERD BULL.

A new herd bull has been purchased by the Youngquist Brothers of Mt. Vernon, from Alec Todd & Sons of Yakima. The animal is only 10 months old, and the name Cascade Jessie Piebe has been applied for. He is a son of Cascade Nabob, who is out of Cascade Jessie, the latter being a dam of the young bull's sire. This close in-breeding runs back three times to Johanna Ruth Fayne.

The new bull will be used as junior herd sire, and will be bred onto the daughters of Lacona Pontiac Segis, the present herd sire at the Youngquist farm. There are at present 50 head of both old and young registered Holsteins on the farm, and from 20 to 25 head are milking the entire year.

MUNNS ADD TO HERD.

Two registered Jersey females have been purchased by Munn & Son of Olympia for their herd near Olympia. Dahlia Forest Girl has won two gold medals in succession the last two years for production, with records of 773 and 736 pounds of butterfat per year, respectively. The other, Firwood Holly's Pet, is due to calve soon for the first time. She combines two of the two most popular strains in the country, St. Mawes and the Stoke Pogis families.

WILL USE BULL JOINTLY.

J. W. Berns and Edward Valentine, both of Wynooche, purchased a new Holstein herd sire from the Beal's herd at Tillamook, Ore. The bull is an exceptionally good individual and carries much the same blood as Tillamook Daisy, the grand champion cow at Portland. The bull will be owned in partnership by both men and used on both herds.

BUILDS SHORTHORN HERD.

A pure bred registered milking Shorthorn bull and a registered heifer were recently purchased by George Spaulding from his two sons, Spaulding Brothers of Elma. Mr. Spaulding expects to enlarge his herd of milking Shorthorns as the opportunity permits.

BUYS WINNING JERSEY.

O. I. Compton of Wishkah recently purchased a first prize junior heifer calf from Parker Askew of Elma. The animal, a Jersey, won at the Grays Harbor county fair in September.

BUYS HOLSTEIN CALF.

A registered Holstein bull calf was recently purchased by T. O. Fenstermaker of the Satsop valley from Ira Smith of Montesano.

THICK, SWOLLEN GLANDS

that make a horse Wheeze, Roar, have Thick Wind or Choke-down, can be reduced with

ABSORBINE

also other Bunches or Swellings. No blister, no hair gone, and horse kept at work. Economical—only a few drops required at an application. $2.50 per bottle delivered. Book 8 R free. ABSORBINE, JR., the antiseptic liniment for mankind, reduces Cysts, Wens, Painful, Swollen Veins and Ulcers. $1.25 a bottle at dealers or delivered. Book "Evidence" free.

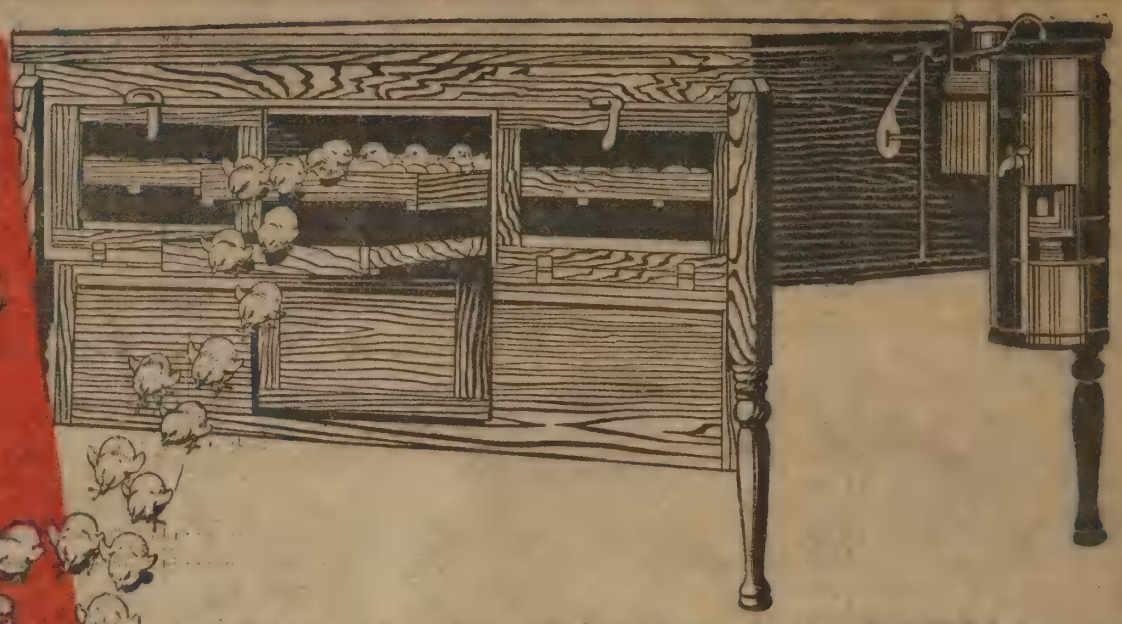
Chicks that Live after they are hatched

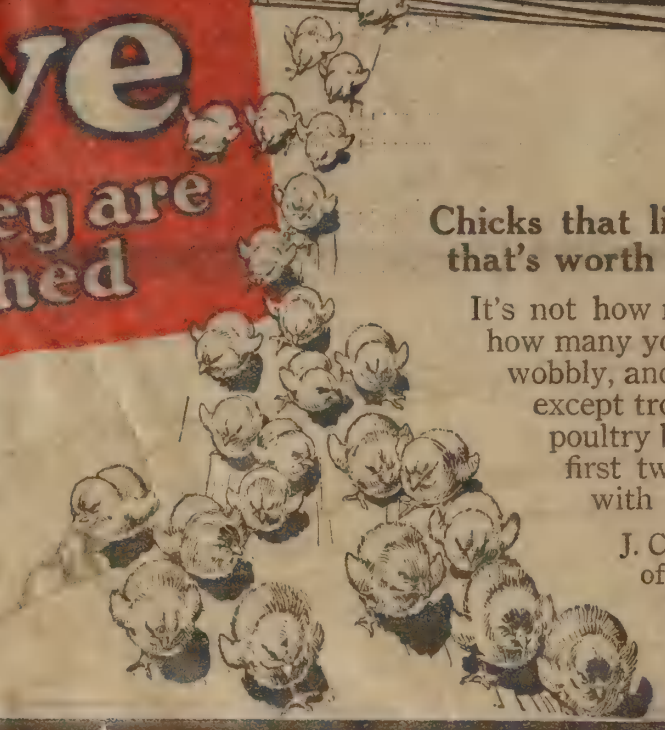


Chicks that live and grow—that's the only kind that's worth hatching.

It's not how many you hatch that counts after all; it's how many you raise. Chicks that hatch out weak and wobbly, and live but a few days, mean nothing to you except trouble and loss. They make one sick of the poultry business. Most of the chicks you lose in the first two weeks die because they did not hatch out with enough vitality or strength for a good start.

J. C. Coulter, Sardis, Ohio, summed up the experience of thousands of Queen users when he wrote us: "I have had my Queen 9 or 10 years and have made several 95% hatches. Made as high as 98%. It is easy to run—almost runs itself—**and chicks live after they are hatched.**"

Sizes:
70-Egg
and up



Queen Incubators

Are Famous for Big Hatches of

Strong, Healthy Chicks that Live and Grow

Three of the most important problems in constructing an incubator are Insulation, Moisture and Regulation. Queen designers long ago successfully solved all three problems, which is the reason why the Queen has such a wonderful reputation among poultrymen all over the country for hatching chicks with unusual strength and vitality.

Insulation Many incubators are not well insulated, as proper insulation adds considerable expense to the manufacturing cost and the manufacturers of cheap machines do without proper insulation or substitute an inferior material.

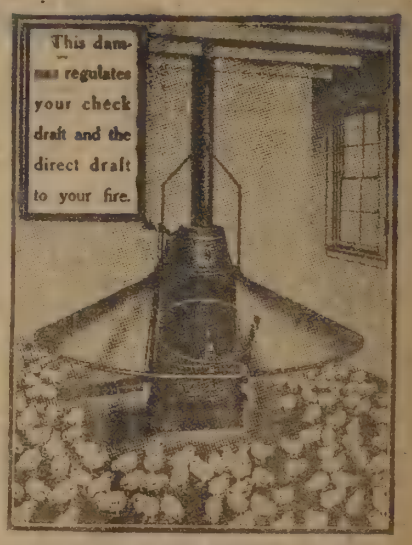
Good insulation means a proper maintenance of uniform heat throughout the hatching period, less fuel and stronger chicks. Poor insulation means a fluctuating temperature, more fuel and weak chicks.

The Queen is doubly insulated. First, we use double walls of California Redwood, forming a dead air space. Second, we use corrugated strawboard between the wooden walls.

Moisture With the Queen, there is no drying out during incubation, or no necessity to add moisture artificially. The circulation of water through the radiator, in the Queen hot water system, keeps the air at just the right degree of moisture for proper incubation.

Regulation It is not only necessary for an incubator to have the right kind and amount of heat, but it is highly important that the heat be uniform all the time. It must be accurately self-regulating.

We have designed and patented a regulator especially for the Queen with which we guarantee a regulation to within a small fraction of a degree.



Queen Self-Regulating Colony Brooder Stove
Even heat all the time

From all parts of the country we have reports that Queen hatches out chicks that are actually stronger and healthier, and that loss from weakness and disease is consequently much less with Queen machines. Read the following letters from people who know:

Galloway Poultry Farm, Pocatello, Idaho, writes: "Am using one of your large size incubators and it beats them all. Have four of another make but they do not bring off the hatches the Queen does. It is almost impossible to get a hatch of any kind in this dry climate but with a Queen we have splendid hatches."

Ellen Myers, Grace, Idaho, writes: "I have used the Queen Incubator for a number of years and like it fine."

Mrs. Dora E. Crawford, Ellensburg, Wash., writes: "I have always had good luck in my hatches with the Queen."

Elzo Gelms, Blaine, Wash., writes: We have Queen Incubators and like them fine."

Mrs. Earl Bowen, Strathmore, Calif., writes: "I have had a 75-egg Queen for three years and it has been so satisfactory I would like to have a larger one."

Thomas H. Martin, Loyalton, Calif., writes: "I have been very successful with my 180-egg size Queen. The first time my wife used the Queen she hatched 53 of the healthiest chicks I ever saw from 58 eggs."

A. Atkinson, San Francisco, Calif., writes: "Please send me your catalog and price list. I am familiar with the Queen Incubator, as I have used them in New Zealand for some years. We have lately come to this country."

H. R. Adams, Grace, Idaho, writes: "The White Leghorn chicks that I hatched in my Queen got most of the State prizes at our State Fair last fall."

Send your name for free catalog describing the full line of Queen Incubators, Brooders, Brooder Stoves, etc.

Sold by local dealers in almost every town, but if you cannot find them, JUST LET US KNOW.
